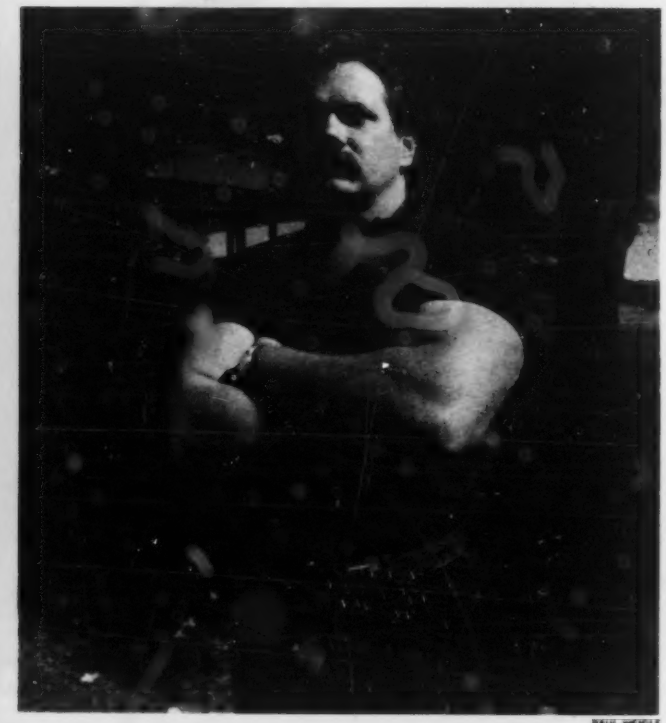
65th year—$65.00 per year, $2.00 per copy



PAUL WEIGLE

"The problem is that we need jobs down here, and Saturn won't hire us," says Jim Lawrence. "GM should've hired at least half or a fourth of the people from right here."

Write-off drags GM into red; Ford and Chrysler stagger

By Charles M. Thomas and Jim Henry
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors took a giant but painful step to reduce costs by taking a $2.1 billion charge against third-quarter earnings en route to the heftiest one-quarter loss in industry history.

GM's dramatic report of a $2.0 billion loss includes write-offs for as many as nine plants.

The announcement far overshadowed the company's dismal $109 million operating profit for the quarter, which was announced after equally dismal news earlier in the week from its two domestic competitors.

Poling: Tough year ahead, Page 3

Ford Motor Co., showing weakness at home and abroad, saw its earnings drop 79 percent to $102 million.

The company lost about $38 million on worldwide automotive operations, but had net profit of $140.5 million from its Financial Services Group. And Chrysler, hurt by changeover production losses on its popular minivans, lost $214 million for the quarter. Its red ink was expected.

An industry upturn is unlikely until at least sometime next year.

GM's write-off was for the closing of four unused assembly plants and the potential closing of five other plants during the next three years.

GM's $2.0 billion loss, on sales of $30.8 billion compares with earnings of $517 million on sales of $28.8 billion in the third quarter of 1989.

Analysts weren't surprised by the size of the write-off. New GM Chairman Robert Stempel has said that he wants the automaker's factory utilization brought to 100 percent of capacity by 1992. And bringing the company's cost structure in line with its production volume was overdue.

see RESULTS, page 44

279,100 vehicles cut from Big 3 forecast

High inventories and a lack of dealer orders have prompted the Big 3 to cut their U.S. fourth-quarter production schedules by 279,100 cars and trucks, temporarily idling 28 Big 3 plants, and partially idling three others.

One month ago, the Big 3 had scheduled production of 2,305,000 vehicles in the fourth quarter. The new estimate is 2,025,900.

General Motors slashed 171,000 units from its schedule; Ford Motor Co. cut 66,000; and Chrysler Corp. reduced its schedule by 42,000.

Friction in Spring Hill

Saturn socked for importing workers

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

COLUMBIA, Tenn. — The new television ads for Saturn Corp. conjure up images of Southern hospitality and down-home neighborliness around its mammoth new car plant in Spring Hill, Tenn.

But for the 3,300 new workers and their families who moved there to work, the reality has sometimes been different.

Crowds turn out for Saturn, Page 3

Ask Dietra Obard, the wife of a Saturn worker.

Since moving to the rural Saturn area last spring, Obard has encountered what she calls harassing behavior from the local police force. One officer reportedly warned her, "Ya'll aren't going to come down here and take my job away."

After six months of such incidents, she asked the newly formed local chapter of the National Association for the Advancement of Colored People for help. The group placed a call to police officials, and Obard says she's now waiting to see whether the problem is solved.

"We came down here because we wanted a change," the former Michigan native says of her family. "But it turned out a little different than I expected."

Other Saturn families have also felt a sting of resentment from local townsfolk who aren't entirely happy with Saturn.

"The review so far has been mixed," admits Anthony Kimbrough, editor of the *Columbia Herald* in nearby Columbia, Tenn., the town where most Saturn families have settled to date. "There's a real dissatisfaction that Saturn didn't hire local people."

In a special arrangement with the UAW in 1985, Saturn agreed to

Computer systems and satellite communications are becoming auto marketing mainstays, but rising costs are making some dealers see red. See Insight, which follows Page 24, for details.

ASIA IN THE '90s:

New products on way to U.S. as makers seek to grow without fueling fires of protectionism

Last in a series on automakers' product plans for the 1990s.

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — European and American manufacturers wish they had the Asians' problems. Skyrocketing sales, an aura of quality and customer-satisfaction crowns have helped give Asian-badged vehicles nearly 25 percent of the U.S. car and truck market. And given their track record, that share could grow quickly.

The Asians' problem? How to manage and milk that success without angering the American public. Companies from Daihatsu to Toyota will probably stage careful

Lexus SC300, pictured, is expected to be powered by a 3.0-liter six-cylinder engine and bow in the United States some time next year. The front of this car is camouflaged and shows considerable nicks and scratches from testing. A V-8 version, called the Lexus SC400, will go on sale before the SC300.

Honda adds output jewel to sales crown

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

Honda scored a double victory in the 1990 model year: Top-selling nameplate in the United States and top-volume assembly plant in the United States and Canada.

Neither of the individual titles is new for Honda, but winning both in a single year is unprecedented.

For the third year in a row, the Marysville, Ohio, plant of Honda of America Manufacturing Inc. produced more vehicles than any other assembly facility in the United States and Canada. It built 371,181 Civics and Accords.

Accord nailed down the sales crown Sept. 30 with a model-year total of 416,957. Accord was the top seller in the United States for the 1989 calendar year, but this was its first model-year win. Ford Escort led in sales for the 1989 model year. Accord sales included 149,411 imports as as well as

Crowds turn out for look at Saturns

Dealers crave more cars

Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

If its first week was any indication, Saturn Corp. has a feeding frenzy on its hands.

The first 29 Saturn car stores sold off their sparse inventories in a matter of days, leaving dealers hollering for more.

An *Automotive News* survey of the entire dealer network indicates that during the first week of operation, Saturn dealers delivered 190 cars and booked orders for 647 more. Dealers reported that customers were older than expected and owned a wide range of domestic, import and upscale vehicles.

The bad news: The company is sticking to a conservative production schedule that has left dealers without the line's sports coupe and short on cars with automatic transmission and just about everything else.

The newly opened stores — a couple of them showing signs of incomplete construction — have been swamped with customers since sales began Oct.25. Some dealers have counted 100 to 300 people in their stores at one time, while others talk of closing their doors at 11 p.m. with customers still arriving.

"I've been in the car business a long time, and I can't remember ever seeing a reaction like this," said Ed Chavez, general manager of Saturn of Reno, Nev. "It's a mixture of curiosity, anticipation, patriotism . . . over seeing an American company put out a good product. It's refreshing."

Dealers on the West Coast and in Florida and the Southeast signed up more than three buyers for every car that left the showroom. Most stores ended the week hanging on to as many units as possible, for fear of not getting replacements soon enough.

Saturn plans to withhold official sales figures until later this year, but the 190 sales and 647 orders reported to *Automotive News* mean the first 29 dealers are outselling current factory production by nearly a 3-to-1 margin. Saturn's new Spring Hill, Tenn., plant is expected to reach an output level of about 300 cars a week this month.

Saturn public relations Vice President Bruce MacDonald said that coupes would not be available in the market in "any large volume

Poling: Rocky road ahead for industry

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Next year is going to be tough for automakers, according to Ford Motor Co. Chairman Harold "Red" Poling.

Federal deficit reduction measures — including new taxes on gasoline, luxury cars and gas guzzlers — plus a recession that is likely to begin in December and last until next summer will hurt the auto industry, Poling said in an interview with *Automotive News*.

In addition, Poling said corporate earnings at all automakers will be squeezed by the increase in Medicare taxes and increased premiums on the pension benefit guarantee paid to the federal Pension Benefit Guaranty Corp.

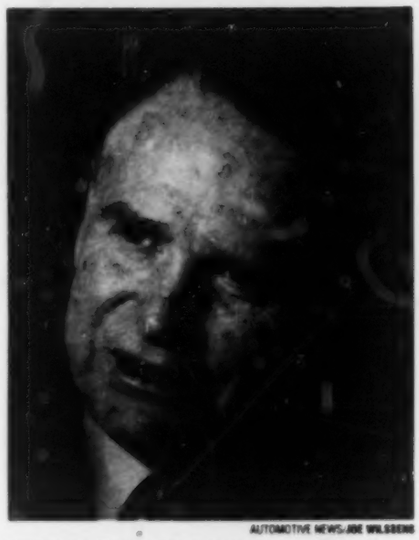
Ford reported third quarter earnings of $102 million, down 78.6 percent from $477 million earned in the third quarter of 1989. Ford's worldwide automotive operations showed its first loss in nearly eight years with a $64.5 million pre-tax loss. Ford's overseas automotive operations lost $89 million in the third quarter, while North American automotive operations earned $50 million because of an extended depreciation schedule on machinery and equipment.

The Ford chief expects the automaker to improve its profit performance in Europe sometime in 1991, when product development expenditures are expected to be lower. North American automotive profits are not expected to improve until the U.S. economy improves, Poling said.

He expects Ford to report higher truck market share but lower car market share for the 1990 calendar year. Poling expects Ford to grab more than 29.5 percent of truck sales and more than 21 percent of car sales in 1990. Ford had a 28.76 percent share of the truck market and a 22.4 percent share of the car market in 1989.

Industry sales should come in at 9.3 million cars and 5 million trucks in the 1990 calendar year, Poling said.

He declined to forecast the size of the 1991 market or Ford's share.



AUTOMOTIVE NEWS/JOE WILSEDINE

Ford's appetite for other automakers is satisfied for now, Chairman Harold "Red" Poling says.

Poling said Ford may acquire an additional financial services company but will not be shopping for another automaker in the near future. It will continue to look at joint ventures with other manufacturers.

Poling said that in the automotive business, Ford will focus on what it already owns. "But there remains a possibility of additional associations ," said Poling.

He said Ford must assimilate what it already has acquired. Last year the automaker purchased Jaguar.

Ford's auto business will face new, tougher federal regulations in the future, which also could reduce earnings. Poling said industry expenditures to meet the new clean air bill will be "measured in the billions (of dollars) as opposed to hundreds of millions."

GM to equip trucks, vans with new engines, safety items in next five years

By Joseph Bohn
TRUCK EDITOR

TROY, Mich. — Over the next five years, General Motors' light-duty trucks will get air bags, four-wheel anti-lock brake systems and engine and transmission changes.

According to Ralph Tredway, director of light-duty vehicles, Engineering Operation, GM Truck & Bus Group, GM will:

- Introduce a new style of center port injection in the 4.3-liter V-6 for the 1992 model year.
- Introduce new 6.5-liter diesel and turbodiesel engines in the 1992 model year.
- Introduce electronic controls on an under-8,500-pound gross vehicle weight automatic transmission and a new heavy-duty manual for over-8,500-pound gvw models next year.
- Introduce four-wheel ABS on most models by the 1994 model year.
- Introduce air bags in trucks in the 1994 or 1995 model year. Front-wheel-drive minivans will get them sooner.

GM has no firm plans to introduce multi-port injection in its V-8 truck engines, though that is being discussed by the Truck & Bus and Engine divisions, Tredway said.

He thinks multi-port injection will be adopted because fuel mixture requirements, driven by pollution standards, "just keep getting finer and finer."

Tredway

Meanwhile, GM is looking at more economical ways to do multi-point injection.

It will introduce a new centrally injected 4.3-liter V-6 in the 1992 model year. The 4.3 liter is GM's most widely used light-truck engine.

The new design uses a single throttle body injector with runners to distribute the fuel to each valve, as opposed to having injectors at each cylinder as in the multi-port design.

The engine will include a retuned intake manifold, or "ram air tuning," and alterations in the exhaust. It will generate 200 to 210 horsepower compared with 175 hp for the current version of the 4.3 liter, Tredway said.

GM has also been modifying the performance of its 6.2-liter diesel to compete with Ford Motor Co.'s 7.3-liter V-8 diesel and to meet stiffer diesel emissions standards in 1992.

The 6.2-liter engine will become a 6.5 liter for 1992 in both regular diesel and turbocharged diesel versions.

"We've been going through various versions of indirect and direct injection engines. At this point, we're still headed toward the

Extension of Hahn's tenure scrambles succession picture

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — An apparently successful bid by Carl Hahn to remain at the helm of Volkswagen AG for another two years raises new questions about who will comprise the German auto industry's new generation of leaders.

Hahn

Hahn, who was to have stepped down next year at VW's mandatory retirement age of 65, will now stay until the end of 1993 if directors ratify the recent recommendation of a special committee that he be kept on. Ratification of the extension, set for the Nov. 15 board meeting, is a virtual certainty.

The extension would be a popular one. Hahn, who has guided VW for nine years, is highly regarded both in and out of the industry. His energetic commitment to help rebuild the economies of the former East bloc has drawn wide praise, and it is known that he wants more time to see the monumental task off to a good beginning.

By at least temporarily blocking the road to the top at VW, however, Hahn's extension deals an entirely new hand to a small group of industry executives jockeying for industry leadership.

The group includes Daniel Goeudevert, who only last year came to VW as management board member in charge of purchasing after eight years as chairman of Ford of Germany, and Helmut Werner, deputy chairman of Mercedes-Benz AG, the vehicles unit of Daimler-Benz AG, Germany's largest company.

Goeudevert

Werner

Goeudevert, 48, is widely regarded to be the leading candidate to succeed Hahn, with Werner presenting the only serious challenge.

Goeudevert, a Frenchman, is a good communicator who draws praise for his tenure at Ford. Werner is also adept at projecting himself and his ideas, and earns high marks as a manager.

Others mentioned as possibilities include Martin Posth, Ulrich Seiffert and Dieter Ullsperger, VW's management board members for personnel, product development and finance, respectively.

Ferdinand Piech, chairman of VW's Audi unit, is, by most appraisals, no longer a candidate.

Goeudevert is now expected to receive what would be a newly created post under a changed organizational structure at VW group — head of the Volkswagen division. That would further position him as heir-apparent to Hahn.

But not everyone is convinced that the former Ford executive has an unchallenged shot at the chair-

Duking it Out for Market Share

The dealer systems industry may be mature and the number of players down, but the scuffle for sales remains intense

By: Charles M. Thomas

Nearly every phase of a modern car dealership is computerized — from the accounting department, to electronic parts catalogs in the service department, to the exchange of information between the dealer and vehicle manufacturer.

Officials at computer services vendor The Reynolds & Reynolds Co., based in Dayton, Ohio, peg U.S. sales of multi-application in-house dealer computer systems industrywide at about $550 million annually.

Competitor ADP Dealer Services Inc. of Hoffman Estates, Ill., places the figure closer to $750 million annually, but includes systems for heavy-truck and farm-machinery dealers and other kinds of computer systems.

But officials of both companies concede that industry sales the past two years have been relatively flat, growing at only 2 to 3 percent annually.

That differs greatly from the early 1980s, when industry growth ran at 10 to 20 percent annually, driven by dealers who were buying a multitude of software applications.

A peak was hit two years ago, according to Gary Butler, president of ADP.

"I would say 1988 was the industry high, but it was also a peak year for car sales," Butler said. "That had a lot to do with dealers buying bigger, more powerful computers to automate their dealerships."

Key computer markets include in-house dealership management systems, image-based communications (parts catalogs), dealer-manufacturer communications, and finance and insurance systems.

"Sales have slid overall for the industry because there are fewer dealers," said Jack Proud, senior vice president of automotive systems for Reynolds & Reynolds. "But the cost of computer systems has come down, too."

Computer sales since August have been weaker than normal because car sales have slowed.

"Automobile sales obviously have a strong impact on dealer profitability, and that has declined," said Proud.

Butler concurs, saying the decision to buy a computer system is driven by automobile sales.

"A dealer is very reluctant to make a six- or seven-year investment in a new computing system if he's not sure of what will happen with car buying," said Butler. "For the next 18 months, car buying will be down, so computer buying will be about the same."

Because it is a mature industry, purchases of computer systems are made primarily to upgrade existing systems in dealerships.

"There are some new buyers because there are some new points, but it is very much a replacement industry," said Proud.

Continued consolidation of dealerships has spurred sales somewhat by creating the need for bigger and more powerful computer systems by megadealers.

And as dealer profit margins narrow, the need for more computer capabilities and better information has increased so that dealers can remain competitive.

The need for exchange of information between manufacturers and dealers is also driving the computer industry.

"This trend is accelerating, and with the advent of satellite communications between dealers and manufacturers, a tremendous amount of information will be available to dealers," said Proud.

Butler says many dealers who bought or leased computer systems at the beginning of the 1980s have depreciated them.

"It's at that point that dealers generally make a change. There are a large number of those kinds of decisions in the hopper," he said.

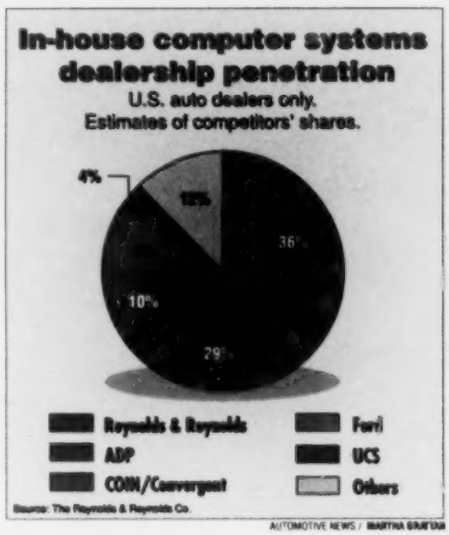
ADP and Reynolds & Reynolds are undisputed market computer-system leaders in overall dealer penetration and revenues. But Atlanta-based COIN Systems could be a contender.

COIN recently acquired Convergent Dealership Group, a division of Unisys Corp. Convergent specializes in turnkey systems for the entire automotive dealership, including front-end, accounting, parts and service, leasing and factory communications.

The purchase of Convergent puts COIN squarely in the No. 3 spot. It also gives COIN, which dominates the finance and insurance segment of the market, other products to sell the 9,000 dealers already buying its finance and insurance computer systems. As dealers upgrade or replace their computer systems, COIN will be a competitor.

Market shares become fairly fragmented in the next tier down. Ford Motor Co. and General Motors' Electronic Data Systems Corp. offer dealer computer systems.

EDS's entry into dealer software systems two years ago was late and rocky. Its Dealerline system suffered setbacks at the same time that its computer supplier, IBM Corp., introduced a new generation of products. Consequently, EDS retreated from the market and to date has not made a serious effort to sell computers to dealers.



Yet, the GM subsidiary has such a huge industry presence that few competitors have written it off entirely.

"I don't think you can ever dismiss something like EDS, and I have respect for them," said Butler. "They did have some false starts, but I don't doubt their commitment to being successful, and they are a player if they want to be."

Operating quietly from Houston is Universal Computer Systems Inc., a niche marketer specializing in computer systems for megadealers.

And there are a host of regional computer companies.

Reynolds & Reynolds has the biggest dealer penetration of in-house computer systems at 36 percent.

Although ADP, with a 29 percent share, does not dispute that, Butler said his competitor likes to position itself with only those statistics that favor itself. Butler said ADP has a bigger share of dealerships that deliver the most cars, and that when it comes to selling megadealers, most decisions are made between ADP and UCS.

But Reynolds & Reynolds contends that Butler is half right — that most of those decisions by dealers are made between itself and ADP.

The two giants do agree on one battlefront — laser-printing technology, which could replace the need for preprinted forms.

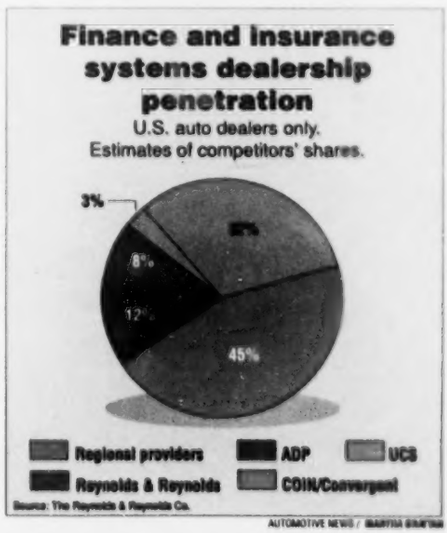
Dealers spend millions of dollars buying hundreds of thousands of forms, a market Reynolds & Reynolds has dominated for decades.

But laser printers, when linked to computers, could spell the demise of some preprinted forms.

According to Butler, laser printing can reduce a dealer's cost for preprinted forms by 20 percent.

Other hot issues are quality and the ability to use one printer for multiple forms.

It is believed laser printers could be the high-tech solution of the future for reducing dealer costs. □



RESULTS

FROM PAGE 1

"Stempel met with analysts in 1988 and said the company had to achieve 100 percent operating rate by 1992," said Wendy Beale Needham, analyst with New York-based Smith Barney Harris Upham & Co.

She said it was clear that GM had to either boost market share or bring manufacturing capacity down.

In his first quarter as chairman, Stempel has reduced manufacturing capacity.

But analysts want bolder actions.

"This was a necessary — and a difficult — action. ... They need to do more in terms of competitiveness," said Ann Knight, auto analyst for Paine Webber Inc.

Maryann Keller, analyst for Furman Selz Inc., sensed more urgency on the part of GM management. But she too, thinks the company needs to go further.

"They haven't done anything that would have meant really eating into costs," she said. "Did they announce they'll consolidate the GM10 cars into two plants instead of four? No. Did they shut one plant and put another one on three shifts? No. Did they consolidate anything else? No."

4 closed, 5 iffy

The four plants that had been idled previously and will now be officially closed are in Framingham, Mass.; Lakewood, Ga.; Leeds, Mo.; and Pontiac, Mich. The Pontiac plant built the Fiero.

Other plants that could be closed are the Pontiac West light-truck plant, the Scarborough, Ontario, van plant and the Lordstown, Ohio, car plant. Also on GM's list are a 2.0-liter engine plant in Pontiac and an AC Rochester Division component plant in Flint, Mich.

*Unconfirmed

Analysts and Big 3 executives say the industry is in for more rough months.

David McCammon, treasurer of Ford, painted a bleak picture. He said the invasion of Kuwait, higher oil prices and sinking consumer confidence have hurt profits.

"Consumer confidence in the U.S. is the lowest it's been since 1982," he said. "We will probably have difficult times for a while."

Ford Chairman Harold Poling is predicting a recession beginning in the fourth quarter and continuing for six to nine months.

GM told stock analysts last week that dealers are ordering vehicles at snail's pace — even slower than they are selling cars.

"Dealers are being very conservative," said analyst Needham.

Said Jean Claude Gruet, analyst with UBS Securities Inc. in New York: "The rate of dealer orders has slowed, and so have fleet sales."

Ford profit dives

As a result, the car companies have cut production schedules in the fourth quarter, a strategy they used in the fourth quarter of 1989 to reduce high inventories.

Last week, Ford cut its planned fourth-quarter production by scheduling additional downtime. Ford would not say which plants or how many units would be affected. Ford had originally forecast building 372,000 cars and 373,000 trucks at its U.S. plants in the fourth quarter.

Hurt by economic uncertainties in Brazil and Argentina, Ford posted a meager $102 million profit in the third quarter, down from $477 million last year. U.S. automotive operations generated $50 million in earnings in the quarter, compared with a loss last year, but the 1990 third-quarter results included a $67 million gain from a change in depreciation schedules.

Ford had sales of $22.9 billion in the third quarter, up from $20.2 billion in the third quarter a year ago.

Strikes by Ford workers in Europe early this year also took a toll on profits. This is the first time since the fourth quarter of 1982 that Ford lost money on worldwide sales of its core business — cars and trucks.

McCammon said the dismal profit picture probably means no bonuses for executives or profit-sharing checks for employees for 1990.

Chrysler deep in red

Chrysler's $214 million loss compared with a $331 million profit in the third quarter of 1989. But the year-ago profit included a one-time gain of $309 million from the sale of 75 million shares of Mitsubishi Motors Corp. stock.

Chrysler's third-quarter sales dipped to $6.5 billion from $7.6 billion for the third quarter of 1989.

Another traditional hobgoblin dogging profits was high incentive costs.

Ford's McCammon said incentives averaged $1,000 per Ford vehicle during in the third quarter. Analysts pegged GM's incentive costs at $1,300 per vehicle and Chrysler's at $1,250.

Financial services and subsidiaries provided some brightness for automakers.

General Motors Acceptance Corp. and its subsidiaries reported net profits of $293 million, up from $235 million last year.

Electronic Data Systems also performed strongly. Profits were $128 million in the third quarter, up from $111 million in the third quarter of 1989. And GM Hughes Electronics Corp. reported third-quarter net income of $158 million, up from $148 million a year ago.

Subsidiaries help

Ford Motor Credit Co. had third-quarter profits of $159.3 million, up $37.1 million from the third quarter last year.

But the combined profits of Ford's Financial Services group dropped to $141 million from $189.8 million a year ago, partly because of an increase in the loss reserves at Ford's First Nationside Bank, a savings and loan.

The financial group includes Ford Credit; First Nationwide; U.S. Leasing International Corp.; and The Associates Corp. of North America, a finance company. McCammon said First Nationwide had to increase its loss reserve to offset declines in real estate values.

Chrysler Financial Corp. reported record earnings of $83 million in the third quarter, up from $76 million in the third quarter of 1989.

For the first nine months of 1989, Chrysler Corp. had profits of $37 million; GM posted a loss of $368.7 million; and and Ford Motor Co. had a profit of $1.4 billion.

Imports end 18-year absence from Brazil auto show

RIO DE JANEIRO, Brazil — Visitors to this year's Salao do Automovel, Brazil's biennial auto show held in Sao Paulo, will be able to feast their eyes on something not seen here in 16 years: imports.

Although names like Ferrari, Cadillac, Saab and Audi are taken for granted in most international auto shows, Brazilians have not seen them — or dozens of other badges — since 1974, when car imports were banned by presidential decree. Imports have not been shown at the show since 1972.

The ban was lifted in March by the new government of President Fernando Collor de Mello, who made headlines at the time by labeling Brazilian-produced cars "ox-carts."

The 11-day show, which began Thursday, is open only to companies that manufacture cars or trucks in Brazil. In addition to a handful of Brazilian companies, the group includes Volkswagen AG, General Motors, Ford Motor Co., Fiat S.p.A., AB Volvo, Saab-Scania AB, Mercedes-Benz AG and Toyota Motor Corp.

To the delight of showgoers, each is exhibiting a range of home-market cars in addition to their Brazil-produced models.

GM, for example, is showing the Chevrolet Lumina and Cadillac Fleetwood among the eight models it shipped in; Ford has the Argentine-built Escort Ghia and the Thunderbird and Aerostar van from the United States, among others; and Fiat, in addition to its namesake offerings, is displaying Ferraris and Alfa Romeos.

VW, Ford's partner in Autolatina, is exhibiting the supercharged Corrado and a concept car, the Futura. Volvo, which produces only trucks in Brazil, is showing its new 900 series.

Meanwhile, several importers excluded from the show by the "manufacturers-only" rule met last week to discuss the possibility of holding an "imports-only" show in December. Participants included representatives of BMW AG, Porsche AG and Lada do Brazil.

TOP PLANTS

FROM PAGE 1

267,546 cars built at Marysville.

During the 1990 model year, sluggish sales and high inventories slowed output at many assembly plants as manufacturers whacked production to keep it in balance with sales.

U.S. and Canadian production totaled 11,269,861 cars and light trucks in the 1990 model year, 13.65 percent below the 13,050,930 built in the 1989 model-year.

In the January-March period alone, the Big 3 closed 38 plants to scale back output in attempts to adjust a 92-day supply of new cars reported on Jan. 1, 1990.

Second-highest output came from General Motors' Oshawa, Ontario, No. 1 plant, which cranked out 335,562 Chevrolet Lumina and Buick Regal models.

The third-largest producer in the 1990 model year was a truck plant — GM's Pontiac, Mich., factory — which built 284,154 Chevrolet and GMC S pickups, S sport-utilities and medium-duty trucks.

Chrysler Corp.'s top-volume plant — Windsor, Ontario — was fourth with production of 274,611 Caravan and Voyager minivans.

Ford Motor Co.'s top-volume plant was Wixom, Mich., which built 233,730 Lincoln Town Car, Mark VII and Continental models. The plant ranked 8th overall and 6th in car production.

Of the Big 3 plants, the lowest-volume producer was GM's Reatta Craft Centre in Lansing, Mich., which reported assembly of 8,515 cars. The plant closed in July for changeover to the 1991 model, which is scheduled for Job 1 on Nov. 21.

The lowest output reported in the model year was at Volvo Canada Ltd.'s plant in Halifax, Nova Scotia. The facility reported assembly of 8,271 cars for 1990.

The Big 3 producers opened no new assembly plants in the United States or Canada in the 1990 model year. Transplant and joint-venture companies added four plants. They are operated by Honda in East Liberty, Ohio; Subaru-Isuzu Automotive Inc. in Lafayette, Ind.; CAMI Automotive (GM-Suzuki) in Ingersoll, Ontario; and Hyundai Auto Canada Inc. in Bromont, Quebec.

The 13 transplant/joint-venture facilities consist of 10 car and three car-truck plants. They reported 1990 model-year production of 1,715,934 units, 51.55 percent above the 1,132,247 produced in the 1989 model year.

The second-highest-volume transplant factory was the Flat Rock, Mich., plant of Mazda Motor Manufacturing (USA) Corp. It produced 232,382 cars with the 626 added to the model mix alongside the MX-6 and Ford Probe.

Third-highest transplant output came from Nissan Motor Manufacturing Co. U.S.A. in Smyrna, Tenn. The plant assembled 227,015 Sentras and pickups.

Only one Big 3 plant — Chrysler's Jefferson Ave. plant in Detroit — was shuttered during the 1990 model year, leaving 73 assembly plants in operation in the United States and Canada. During the 1989 model year, one Chrysler plant and three GM plants ceased production.

GM has 31 assembly plants in the United States and Canada — 18 producing automobiles, and 11 producing trucks and two turning out both cars and trucks.

The company switched production at the Tarrytown, N.Y., facility from Buick Century and Pontiac 6000 to the new plastic-bodied minivans for Chevrolet, Oldsmobile and Pontiac.

Ford Motor Co. has 18 assembly plants; nine build cars, eight build trucks, and one builds cars and trucks.

Production of the Bronco II was replaced by the new Ford Explorer at Louisville, Ky.; output began Feb. 15. Ford also produces the Mazda Navajo at Louisville. The Navajo is an Explorer two-door which Ford builds for Mazda.

The company retooled its Edison, N.J., plant to assemble the 1991 Ranger pickup at the facility, which formerly produced Escort.

Chrysler operates five car plants and six truck plants.

Chrysler transferred all Omni and Horizon production to its Detroit Jefferson Avenue plant early in the 1989 model year when it closed the Kenosha, Wis., plant. Chrysler dropped Omni and Horizon and closed the Detroit plant in February 1990.

Joining the manufacturers in the 1991 model year is Saturn Corp. in Spring Hill, Tenn. The plant is producing subcompact coupes and sedans.

Diamond-Star Motors has added two models to its lineup for the 1991 model year: The Eagle Summit and the Mitsubishi Mirage have joined the Chrysler/Mitsubishi joint venture.

Subaru includes '91 models in incentive plans

Subaru of America announced new buyer and dealer incentives last week.

Buyer rebates on 1991 Loyales are: front-wheel-drive sedan, manual transmission, $500; fwd, automatic transmission, $1,050; fwd wagon, manual and automatic transmission; $500; and four-wheel-drive wagon, manual and automatic transmission, $300.

Payments to dealers are $2,000 on 1989-91 XT and $500 on 1990-91 Justy models. Also, depending on performance against quotas, dealers earn $900 to $1,400 on 1991 Legacys; $1,500 to $2,000 on 1990 Legacys and $800 to $1,500 on 1990 Loyales. Subaru's program began Nov. 3 and expires Jan. 3, 1991.

INCENTIVE WATCH
CUSTOMER INCENTIVES

	Rebates	Expiration Date

Subaru (1990)		
Loyale	$300-1,050	1/3

Note: Some makers offer rebates to buyers of 1988 and 1989 models. Those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

Chrysler workers ratify CAW pact

TORONTO — Chrysler Canada workers have overwhelmingly ratified a contract with the Canadian Auto Workers union.

About 95 percent of the voting members approved the deal, which closely resembles earlier pattern agreements worked out with Ford of Canada and General Motors of Canada.

The Chrysler deal calls for hourly wages to rise an average of 6.4 percent annually during the three-year contract, going from $17.81 ($15.27 U.S.) to $21.41 ($18.35 U.S.). The rate for skilled tradesman will go to $25.41 ($21.78 U.S.) from $20.68 ($17.73 U.S.).

CLEAN AIR

FROM PAGE 2

80,000-mile warranty, up from five years/50,000 miles.

- A second tier of doubly stringent tailpipe standards, which, according to the EPA, would cost an additional $500 per vehicle, would take effect in the 2003 model year if the EPA deems it necessary.
- The industry would be required to manufacture cars and light trucks that run on cleaner fuels — such as better reformulated gasoline or alternative fuels such as methanol — beginning in the 1996 model year. The pilot program in California mandates 150,000 clean vehicles annually until 2001 when the sales mandate jumps to 300,000 vehicles annually.
- A program for fleets with 10 or more cars that obtain fuel from a central source begins in the 1998 model year. In the 24 smoggiest cities, these fleet cars will have to run 80 percent cleaner; trucks must be 50 percent cleaner. But the program can be delayed for three years if the California program has not produced cars clean enough to meet the standards.
- Cannisters that capture fumes during refueling could be required if a U.S. Department of Transportation study finds them safe. Automobiles would also be required to have gauges that indicate if pollution equipment is not working.
- Cleaner fuels must be sold in nine metropolitan areas because of smog problems: Los Angeles, Houston, New York, Milwaukee, Baltimore, Philadelphia, San Diego, Chicago and Hartford, Conn.
- Factories must install so-called "maximum achievable control technology" to lower the emissions of 189 toxic chemicals by 90 percent by 2003. Paint shops would be the most effected because the compounds they emit would be classified as cancerous and toxic.

EPA could require further control of these toxics to provide an additional margin of safety by 2008 if it determines there is still a risk of cancer. Additional standards will be imposed in 2008.

ROBBINS

FROM PAGE 2

McCann-Erickson Detroit, and the regional television account supporting dealers, which had been at The Competitive Edge.

Robbins, who heads the fifth largest of McCann-Erickson's 17 agencies, reports to John Dooner, president of McCann-Erickson North America in New York.

Under the new partnership, GMC Truck and McCann-Erickson/SAS will integrate strategies at the planning stage. Robbins will attend staff meetings conducted by John Rock, GMC Truck general manager.

Marianne Fey, director of client services for the agency, and Jan Leon Woznick, director of marketing services, will attend meetings conducted by Ray Rota, GMC Truck general sales manager.

In turn, Rock and his staff will sit in on executive committee meetings at McCann-Erickson/SAS.

Fey was president of The Competitive Edge, and Woznick was director of marketing at McCann-Erickson Detroit.

According to some industry observers, the new agency is the result of GMC Truck's unhappiness with recent offerings from McCann-Erickson Detroit.

Dooner denied that. He said the new entity is "more of an opportunity than a problem." The agency and its hand-picked staff, he said, are the culmination of six months of meetings and negotiations between McCann-Erickson and GMC Truck. He said the idea is to create a more focused communications resource and then direct all energy toward that resource.

"Everybody is a winner," he said. "She (Robbins) gets to manage a company; GM gets an opportunity to have its employee get new and broader experience; and we get her expertise," said Dooner. "The biggest winner is GMC Truck. They have all the best talent in Detroit working for them. It will be one the more powerful agencies in Detroit."

Chevrolet and GMC Truck dealers were notified last week that Robbins was being transferred to "GM personnel services" for a "special assignment."

Larry Carter, a Las Vegas GMC Truck dealer and Chevrolet and GMC line group chairman for the American Truck Dealers Division of the National Automobile Dealers Association, said, "I think Candace is a sharp young lady" and that her new assignment will be beneficial for GMC Truck dealers.

Robbins said she is excited about the move and that it "opens the door for all sorts of things" at GM and McCann-Erickson.

TOYOTA

FROM PAGE 2

and educating, local American suppliers.

"The pressure is very intense," said Kevin Sweasy, assistant production control manager. Ichikoh hopes to hit 50 percent local content by December, Sweasy said, but "finding good suppliers is difficult."

Sweasy said the company is trying to help suppliers improve efficiency. But, he said, there is "a lot of resistance" to learning new production systems.

According to a Toyota spokesman, the North American suppliers' group represented 4 to 5 percent of the company's total purchasing needs. But many representatives said they expected an increase in business.

Bendix-Jidosha Kiki Corp., a joint venture that produces brake boosters, provides about 1.4 million units a year to Japanese transplants in the United States, said President Thomas Reigle. In addition, he said, the company exports 36,000 units a year to Toyota for use in pickup trucks.

"It takes five to seven years to actually get into production," said L. Alan Winslow, vice president of Asia-Pacific for Bendix Automotive Systems. "A couple of years to establish relations with Toyota's engineers, a couple of years to establish your product and a couple of years to get it into the product cycle."

For Carborundum Co., a maker of ceramic insulation products, it took three years to wind up with 2 percent of Toyota's total potential business, according to J. Glenn Wrap, automotive market manager.

COMING EVENTS

General

Nov. 12-14 — Supplier Quality Enhancement, Management Institute, Lowell Hall, Madison, Wis., (800) 362-3020 ext. 2-8890 or (800) 262-6243

Nov. 14-18 — U.S. Pavilion at the Korean Automotive Parts and Accessories Show, U.S. Department of Commerce, Seoul, South Korea, (202) 377-5479

Nov. 27-28 — NADA/ATD Service Absorption Seminar, Ramada Renaissance Hotel, Atlanta, (703) 821-7121

Dec. 4-5 — NADA Service Management Seminar, Stouffer Concourse Hotel, Los Angeles, (703) 821-7121

Dec. 6-7 — NADA Parts Management Seminar, Stouffer Concourse Hotel, Los Angeles, (703) 821-7121

1991

Jan. 18-20 — Automotive Engine Rebuilders Association Midyear Management Institute, Alexis Park Resort, Las Vegas, (708) 541-6550

Feb. 5-7 — Pacific Automotive Aftermarket Show, Pacific Automotive Parts, Anaheim, Calif., (818) 376-0014

Feb. 18-21 — Composites Institute Conference and Expo '91, Society of the Plastics Industry, Convention Center, Washington, (212) 351-5410

Dealer conventions

Nov. 11-13 — Minnesota Automobile Dealers Association, Radisson South Hotel, Bloomington, Minn., (612) 291-2400 or (800) 652-9029

1991

Feb. 9-12 — NADA Convention and Exposition, Atlanta Marriott Marquis, Atlanta, (703) 821-7143

Auto shows

Nov. 7-11 — Greater Sacramento International Auto Show, California Expostion and State Fair Grounds, Sacramento, Calif., (617) 536-8152

Nov. 7-11 — Seattle International Auto Show, Kingdome, Seattle, (206) 623-2034

Nov. 9-11 — Auto Expo '91 — New Haven's International New Car Show, New Haven Veterans Memorial Coliseum, New Haven, Conn., (516) 368-8000

Nov. 9-12 — Rhode Island Auto Show, Providence Civic Center, Providence, R.I., (401) 732-6870

Nov. 16-18 — Jacksonville International Auto Show, Jacksonville Convention Center, Jacksonville, Fla., (617) 536-8152

Nov. 16-18 — Connecticut International Auto Show, Hartford Civic Center, Hartford, Conn., (203) 246-6566

Nov. 21-25 — Central Florida International Auto Show, Orange County Convention/Civic Center, Orlando, Fla., (407) 352-3420

Nov. 21-25 — Long Beach International Auto Show, Long Beach Convention Center, Long Beach, Calif., (213) 301-9019

Nov. 28-Dec. 2 — Florida International New Car Show, Tampa Convention Center, Tampa, Fla., (813) 932-7015, (813) 734-4336 or (813) 867-4586

Dec. 1-3 — Caribbean Auto Show, Roberto Clemente Coliseum, San Juan, Puerto Rico, (809) 724-1530

Dec. 26-Jan. 1 — Indianapolis Auto Show, Hoosier Dome and Inianapolis Convention Center, Indianapolis, (317) 266-8455

Dec. 26-Jan. 1 — National Capital Area International Auto Show, Washington Convention Center, Washington, (301) 670-1116

1991

Jan. 3-6 — Auto Expo '90 — Northern New Jersey's International New Car Show, Meadowlands Convention Center, Secaucus, N.J., (516) 368-8000

Jan. 4-6 — Greater New Orleans International Auto Show Sale, New Orleans Convention Center, New Orleans, (504) 831-8863

Jan. 5-13 — Delaware Valley's Philadelphia International Auto Show, Philadelphia Convention Center, Philadelphia, (215) 985-0012

Jan. 5-13 — Greater Los Angeles Auto Show, Los Angeles Convention Center, Los Angeles, (213) 444-5965

Jan. 9-13 — Greater Toledo Auto Show, Seagate Center, Toledo, Ohio, (419) 843-2611

Jan. 10-13 — Utah International Auto Show, Salt Palace, Salt Lake City, (801) 484-8845

Jan. 10-20 — Montreal International Auto Show Ltd., Olympic Stadium, Montreal, (514) 331-6571

SATURN

FROM PAGE 3

until late this month."

He said the company had started with mass production of sedans only because of expectations that it will constitute two-thirds of Saturn sales. Production has been slower than desired for all models, he added, but factory output is increasing steadily.

He also said that automatic transmissions are in short supply because "late design changes" forced the company to begin production later than planned.

"Those changes have been taken care of, and we should be getting a lot more automatics out in the next few weeks," he said.

The vehicle shortage could be exacerbated as more dealerships come on line in the next eight weeks. Saturn expects to have 60 stores open by year-end, and 105 in business by next spring.

Dealers scrambled the first week to handle floor traffic. Saturn of Irvine, Texas, quickly increased its sales staff from six to eight after being overwhelmed by customers, said dealer David McDavid.

Chattanooga, Tenn., dealer Nelson Bowers II promised to bring in a barber and a dentist and pick up laundry for sales personnel working overtime.

At Saturn of Burlingame, Calif., General Manager Tony Venti said his store was still under construction when the onslaught began.

"We should have waited to open until the building was completed, but Saturn announced Oct. 25 as the date, and the (Saturn service) 800-number said we'd be open, so we were," Venti said.

Customers appeared undaunted last week. Bowers said 600 people passed through his dealership on the first Saturday, 200 of whom were on site at 9:30 that evening. Gary Porter, manager of Saturn of Charlotte, N.C., said that about 200 people a day have been passing through that store.

Company officials announced last month that factory production will increase slower than planned to ensure product quality. The decision meant that fewer cars were delivered to dealers, and only a few sports coupes were available. Most dealers said Saturn had provided them with only one coupe — and Saturn had retained the title to it to prevent its sale.

Despite the lack of inventory, dealers seemed to support the production decision.

"I'd rather have a few perfect ones than lots of bad ones," said Randy McCallister, sales manager for Saturn of Orlando, Fla.

Saturn started its sales effort with 250 to 300 cars. Dealers received new shipments late last week — as many as 20-40 units, and as few as two or three.

John B.T. Campbell III, president and chief operating officer of Campbell Automotive Group, said his Saturn of Santa Ana, Calif., had sold eight cars from his inventory of 14, but had taken deposits from another 58 customers.

"My experience has shown that prospects will stay out of the market two to four weeks for the car they want," Campbell said. "If we can fill most of the orders by the beginning of December, we'll be OK, but it's unclear whether the cars will arrive that fast."

Saturn officials have predicted from the beginning that about 65 percent of first-year sales will come from outside General Motors, with most of the business coming from current import owners.

The dealers said the numbers were difficult to determine last week. Most said many sales came from customers who bought without trading in anything. Of those who did trade, about half traded imports and half domestics, several dealers said.

Jerry Hodge, owner of Saturn of Knoxville, Tenn., noted that his first three trade-ins were GM products. "I don't think that's what the company wanted, but we'll take them," he said.

Most dealers reported a wide range of trade-ins that defied explanation. At least four Jaguars, two Mercedes-Benz and a Lexus model were swapped for Saturns, a line with a base sticker price of $7,995. Sales personnel said that parking lots were filled with a wide spectrum of vehicles, from Hyundais to Cadillacs.

Dealers also reported being surprised by a large number of older shoppers. Saturn initially projected reaching a market of mostly 18-to-49-year-olds. "We saw a lot of older customers come in," Chattanooga's Bowers said. "My first thought was, 'Saturn has missed their market.' But it's really too early to tell about these things."

Automotive News Staff Reporters Kristine Stiven Breese in Los Angeles and Jim Henry in New York plus Special Correspondent Greg Bowens in Detroit contributed to this report.

Slow sales shut 15 U.S. plants

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. vehicle production will plummet this week with 15 Big 3 assembly plants idle because of slow sales. Three other plants are partially idle.

Automakers scheduled 144,889 units last week, 1.24 percent below the prior week and 0.17 above the year-ago week.

Year-to-date, 5,352,709 cars have been produced, 9.77 percent below the year-ago total.

Last week, U.S. truckmakers scheduled 79,358 units, 0.84 percent below the prior week and 5.05 percent below last year.

The following GM car plants are scheduled to be idle this week and next: Wilmington, Del.; Van Nuys, Calif.; Kansas City, Kan.; and Oklahoma City.

GM truck facilities scheduled to be idle are: Tarrytown, N.Y.; Fort Wayne, Ind.; and Pontiac, Mich. (East).

In addition, the Lordstown, Ohio, truck line is scheduled to go down today for four weeks, and the Detroit-Hamtramck, Mich., Allante line is scheduled to go down today for three weeks.

The Flint, Mich., truck facility is in the midst of four weeks of downtime. It will reopen Nov. 26.

GM also scheduled the Bowling Green, Ky., car facility and the Moraine, Ohio, truck plant to be idle for one week starting today.

Today, GM's Arlington, Texas, car plant drops to one shift until Nov. 19.

Chrysler Corp.'s Grand Wagoneer line in Toledo, Ohio, is scheduled to resume production this week following three weeks of downtime.

Chrysler's St. Louis No. 1 plant remained idle last week and is scheduled to resume production today.

Ford Motor Co. scheduled shifts of overtime at the Louisville, Ky., truck facility last Saturday.

Ford announced several plant closings effective today: the Atlanta, Chicago and Kansas City, Mo., car plants and the Wayne, Mich., truck plant will be down for one week and the Lorain, Ohio, car facility will close for two weeks.

Ford extended downtime at the Norfolk, Va., truck facility for one week. The plant was idle last week and is scheduled to resume production Nov. 12.

Ford's Lorain truck plant is cutting back to a single shift today and is expected to resume full production Nov. 19.

In Canada last week, car production was 2.36 percent above the year-ago week while truck output fell 17.03 percent from the year-ago figure.

Chrysler Corp. eyes Mitsubishi now that Fiat liaison is off

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. will expand its relationship with Mitsubishi Motors following the collapse of talks with Italy's Fiat Auto S.p.A.

Chrysler and Mitsubishi are likely to increase joint product development and production in the United States and possibly in the Far East following Chrysler's failed bid to strengthen its presence in Europe via Fiat.

The talks between Chrysler and Fiat collapsed Nov. 2. Both sides blamed poor global economic conditions for thwarting a deal.

The demise of the Fiat talks imperils Chrysler's planned production of the 1993 Jeep mini sport-utility code-named JJ.

> "Are we still telephoning the dating services? The answer is no. We never really were desperately seeking a spouse."
>
> **Robert Lutz**
> Chrysler

Chrysler Motors President Robert Lutz said the JJ has not been cancelled but that the vehicle is up for review.

"That project was always planned to be executed with a partner," Lutz said. "We will be meeting very soon to review the financials and the feasibility ofdoing it alone. At the present time

KEN HEINEN

"I must tell you that it was personally disappointing," says NHTSA administrator Jerry Curry about the Jeep CJ probe. "Because with all that smoke, there should have been some fire."

Curry has had it with safety trio

Fruitless Jeep CJ probe was last straw for NHTSA chief

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Consumer auto safety groups have lost credibility with the government's top auto safety official.

Jerry R. Curry, administrator of the National Highway Traffic Safety Administration, is furious with the Center for Auto Safety, Public Citizen and the Institute for Injury Reduction, a trial lawyers' organization.

Curry said NHTSA was misled last January into launching a fourth investigation into Jeep CJ rollovers — the most extensive and costly in the agency's history.

The latest probe cost NHTSA $75,000 and took 2,000 hours, Curry said. It tied up two lawyers, four engineers and computer time and required three trips to Detroit to inspect documents in Chrysler Corp. files. NHTSA went through every CJ accident report, interviewed police officers and talked to state and local safety authorities. "We turned the dogs loose," said Curry.

And in the end, the verdict

Saturn timetable: expand line to 10 models by '94

And after '95, maybe trucks

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Saturn Corp. has ambitious plans to offer 10 models by 1994 and build a company that is truly independent of parent General Motors.

New plant in Saturn's future? Page 43

Already looking beyond its three initial offerings — single-cam and twin-cam sedans and a 2+2 fastback with the twin-cam engine — Saturn aims to add at least two vehicles in each of the next three model years, according to a product plan developed in June, *Automotive News* has learned.

The additional models scheduled to reach full production by 1994 include luxury-sport versions of the existing sedan and 2+2, a 2+2 convertible, two station wagons and a pair of two-door hatchbacks.

There also are tentative plans for light trucks and a second assembly plant by the mid-1990s, according to Saturn dealership officials.

"They (Saturn officials) said they wanted to give us a minivan and a small pickup, but they said they couldn't do that before 1996 because they'd need to build another plant," said a Saturn dealership official who did not want to be identified.

Saturn officials declined to comment on the company's future plans. "We are focused on the launch of Saturn now with our current products," said Bruce MacDonald, vice president of com-

Volvo stained by monster truck ad flap

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — As its embarrassed officials looked for someone to blame, Volvo Cars of North America tried to put the best face on an advertising fiasco that muddied its reputation for cars "you can believe in."

Volvo President and Chief Executive Officer Joseph Nicolato was expected to finish this week an internal inquiry into how his people oversaw an ad that showed a "monster truck" squashing other cars flat while a Volvo 240 station wagon kept its shape. Volvo dropped the ads Oct. 31 after the Texas attorney general charged that the Volvo 240 had been specially reinforced while the other cars had been weakened.

The disclosure was particularly galling — and potentially damaging — to Volvo, which has until now enjoyed a credible image for safety.

Volvo wants to complete its internal investigation by the end of this week, spokesman Robert Austin said. The company will share its conclusions publicly.

Truck sales falter as economy wavers

By Joseph Bohn
TRUCK EDITOR

Higher oil prices and economic concerns have begun to cut into truck sales which, for the most part, have held up as well as cars.

For the three months since the Middle East crisis began in August, light-duty truck sales totaled 1,102,13[illegible], down 9.59 percent from the same period last year. Car sales were off 7.24 percent during the same period.

But fleets are a bigger buying influence in the car market at this time of year, so seasonally inflated fleet car purchases tend to mask some softness in the car market.

Fleet truck purchases are spread more evenly throughout the year.

Joel Pitcoff, Ford Motor Co. sales analyst, said that fleet buyers account for about 30 percent of Ford's truck sales — and the percentage rarely varies by two points, up or down, from month to month.

By contrast, rental companies and other big fleets are prone to cause big month-to-month gyrations in car sales, particularly during the fall.

Comparisons of truck — and car — sales with year-ago figures also have been clouded by a change in incentives.

Last year, makers offered heavy dealer and customer cash incentives that ended Sept. 30, making August and September look exceptionally strong and October weak.

This year, light-duty truck manufacturers reverted to more traditional end-of-model-year programs that have spread sales more evenly.

With 4,013,673 sales for 10 months of calendar 1990, off 1.58 percent from a year ago, light

Gains by GM, Chrysler spark October upturn

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

General Motors, which lost three percentage points of car market share to the Japanese makers last October, regained those three points this October and sold 35 percent of all cars delivered in the United States last month.

And Chrysler Corp. beat American Honda Motor Co. by 14,610 car sales in October to regain third place in the U.S. market for the year to date. Chrysler is 336 units ahead of American Honda for the January through October period.

Combined domestic and imported car sales for October totaled 787,279, up 6.62 percent over last year.

October sales topped those of a very weak year-ago month that found many showrooms empty because of enticing late summer sales. But auto analyst Tom Webb said this year's figures should not be dismissed. "They're higher than a lot of people expected," said Webb, senior analyst for the National Automobile Dealers Association.

A strong final 10 days helped domestic manufacturers, including the transplants, sell 591,944 cars in October, a 13.71 percent hike over last year. As in 1989, rebates covered many of the newer models; dealers also offered big discounts to move 1990 models.

In the final 10 days of October, sales of cars produced in the United States totaled 227,678, up 11.17 percent over a year ago.

Every domestic automaker reported a sales increase for the month, while only nine of the 39 import makes reported sales hikes. The imports delivered 195,335 cars, down 10.31 percent, or 22,451 units, from October last year.

Declining import sales were due, in part, to the Japanese makers shifting the sales mix from imported vehicles to cars built in the

JAGUAR IMAGE: *Ford modernization plan keeps craftmanship aura*

By Richard Feast
SPECIAL CORRESPONDENT

LONDON — A couple of throw-away remarks by Jaguar Ltd.'s Deputy Chairman John A.M. Grant provide a telling insight into the likely future of the British luxury automaker under Ford Motor Co. ownership.

"I look at Honda as being much more like Jaguar than Ford is," Grant, himself a Ford veteran, says.

A few minutes earlier, he had commented: "We're not terribly interested in Mercedes and BMW, because we don't think either of those is very efficient."

Grant's remarks shed light on how Ford hopes to pilot its $2.6 billion acquisition past the shoals of a dangerous dilemma — how to modernize Jaguar without gutting its carefully-cultivated image of "craftsmanship."

If there is a star to steer by, Grant is saying, it is Japan and the entrepreneurial spirit to be found at Honda. Not Ford.

"We all recognize we have a great opportunity to make Jaguar the sort of company we all dream about," Grant says.

"It's got one language, one culture, all more or less in one area, and we have a limited product range and a limited number of alternatives to pursue. We should be able to use that lack of complexity to be able to come up with a very streamlined operation, which is much more like the Honda model than a Ford Motor Co. model.

"We're not trying to become a clone of Ford," he stresses. "We're trying to use our competitive advantage of small size to come up with a very efficient organization."

Can that really be accomplished under the weight of Ford's management overlay? Ford executives passionately believe so.

Bruce Blythe, Ford of Europe's corporate strategy vice president and the man who handed over £1.6 billion (then $2.6 billion) of his company's money to Jaguar's independent shareholders, suggests that the trick — no small one — is to completely remake the body without destroying the image.

"The concern is to maintain in the public mind what is true internally: that Jaguar is run as an

Toyota plans to appeal seat-belt verdict

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Toyota Motor Sales USA Inc. plans to appeal a $7.5 million jury award to a suburban Detroit couple who claim the seat belt in their 1986 4Runner was defective.

Last week a U.S. District Court jury awarded $6 million to the driver, Cliff Sadlier of West Bloomfield Township, and $1.5 million to his wife, Joanne, for "loss of companionship." She was not in the vehicle during the Feb. 9, 1988, accident.

Sadlier claimed that the belt malfunctioned, allowing his head to be thrown through the windshield and his body to hit the dashboard after his sport-utility struck a tree. He is paralyzed on his left side and spends 90 percent of his time in a wheelchair, his wife said.

Jeff Lyddan, senior counsel for Toyota, said Sadlier, 58, was not feeling well, drifted off the road and hit a tree two-feet in diameter at about 40 mph. Sadlier said he was going 27 mph.

Sadlier claimed there was slack in the shoulder belt that wasn't taken up by the retractor. He also said the manual lap-and-shoulder belt did not lock properly, Lyddan said.

But according to Lyddan, police officers at the site tested the belt and it worked.

"Our position is the belt performed as designed," Lyddan said. "It restrained him as much as possible."

Lyddan said Sadlier weighs at least 290 pounds.

AROUND THE WORLD

Korean 3rd quarter sales up

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — South Korean automakers reported their best quarter of the year in the three months ended Sept. 30. Sales in the Korean market rose 21 percent over the second quarter, and exports were up 43.5 percent.

The five vehicle makers — Hyundai Motor Co., Kia Motors Corp., Daewoo Motor Co. Ltd., Ssangyong Motor Co. and Asia Motor Co. Ltd. — said total sales for the period rose 26 percent from the previous quarter, to 352,921 units. Home market sales accounted for 262,426 units, and 90,495 were exported.

The quarter-to-quarter surge raised home-market sales for the first nine months of the year to 700,193 units, up a surprising 27.7 percent from the year-earlier period. That represents a record annual pace of 970,000 units in the face of widespread forecasts that the local market would be down for 1990.

But makers said they have begun to note a slight cooling off in the mid-sized and luxury segments. Faced with a scheduled increase in gasoline prices in January, buyers have started to steer away from such mid-sized models as the Hyundai Sonata and Daewoo Royale in favor of smaller cars.

Nine-month export sales were 13 percent below last year's despite the third-quarter surge. Analysts said the quarterly gain largely reflected strong shipments of the Hyundai Scoupe.

More than 34,000 units were exported in September, the first time this year they have topped 30,000. Two years ago, that was the monthly average.

The industry reported modest success in its efforts to diversify exports away from North America. Export volume to Eastern European and Southeast Asian countries, while still modest, has been rising steadily, the companies said.

Meanwhile, the government-funded Korea Institute of Economics and Technology reported it expects capacity to grow an average of 11.7 percent a year until 1995, to 2.18 million units.

After 1995, it said, growth likely will slow to 8.5 percent annually, reaching 3.2 million units by 2000.

When the all-new 100 luxury sedan debuts in Europe in December, the top model will use an all-new 2.8-liter V-6 that develops about 170 hp and will be priced around 55,000 marks. Eventually, the car will be offered with a range of four-, five- and six-cylinder engines.

Europe geared for Audi 100 debut

U.S. will see all-new replacement for old 5000 sedan next fall

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — Audi AG said it will introduce its all-new 100 luxury sedan — the next-generation 5000 model — in Europe next month and in the United States next fall. The car will debut in Britain next summer, the company said.

Although Audi has yet to disclose technical specifications or prices for the new car, it has released the first official photograph. The new 100 will be slightly narrower than its predecessor and will be offered with a range of four-, five- and six-cylinder engines, including an all-new V-6.

The new sedan, code-named C4, replaces the eight-year-old 100 that was badged 5000 in the United States until 1988.

In the late 1980s, the 5000 was the target of scores of complaints that it accelerated on its own, causing loss of control. But government reports in the United States, Japan and Canada concluded that driver error, not an engineering defect, was to blame.

With the crisis apparently passed, Audi of America has begun rebuilding its U.S. volume in 1990 after four consecutive years of decline. The new model next year is expected to give increased momentum to the recovery.

The official start of sales in Germany is pegged for the first week of December. According to sources, the range will begin with a 90-to-100-horsepower, four-cylinder model priced at about 35,000 marks (about $23,000) and will include a five-cylinder series of various displacements.

Initially, the top model will use the all-new 2.8-liter V-6 that develops about 170 hp. It will be priced around 55,000 marks ($36,400) in Germany.

The new V-6 will be outfitted at first with two valves per cylinder. A larger 3.0-liter version with four-valve technology and producing 220 to 250 hp is expected to be offered eventually. A 150-hp, 2.5-liter version will be added later.

As with the current model, the new 100 will be available with either front-wheel drive or, in the Quattro, all-wheel drive.

Additional versions based on the new 100 will debut in Europe in the fall of 1991, including replacements for the 200 luxury and Avant station wagon models. The Avant successor in its new configuration is expected to be more of a station wagon and shaped less like a large hatchback.

It is not clear whether Audi will continue to use the 200 badge on the replacement for the heavily equipped 200.

The new Audi is the fourth generation of the 100 top-line sedan, which dates back to 1968. The second model was introduced in 1976 and the current version followed in 1982. Introduction of the present 100 set a standard for aerodynamics in large sedans and established a design trend later followed by the Ford Taurus.

It boasted a drag co-efficient of 0.30, tops in the world among production cars at the time. Bigger tires and broader wheel housings have since caused the drag figure to rise to 0.32.

The C4 has an evolutionary, rather than revolutionary, shape, with a slightly slimmer body than the current model and a shorter rear overhang. The co-efficient of drag is understood to be a wind-cheating 0.29.

Length is about 189 inches (192.7 currently), but the wheelbase has been increased to about 110 inches, up from 105.6, affording more interior room.

The new model uses the grille from the Audi V8 flagship model, which is expected to continue in production until 1993 before being replaced with a new range-topper based on the C4.

Nissan reports gain in 1st half

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Nissan Motor Co. reported a 16.5 percent increase in unconsolidated net income to 46.8 billion yen ($339 million) for April to September, the first half of its fiscal year.

Operating income showed an increase of 11 percent to 72.8 billion yen ($528 million) and net sales were up 7 percent for the period to 2.05 trillion yen ($14.8 billion). Nissan attributed the upturn to strong domestic sales of new models.

Nissan raised its estimates for total domestic sales for the full fiscal year from 1.4 million to 1.45 million units. Despite an expected increase in sales, Executive Vice President Atsushi Muramatsu said conditions for the second half of the fiscal year are more severe. Muramatsu cited higher interest rates, lower stock exchange prices, the Persian Gulf crisis, a softer domestic market, and indications that a recession "may have already started in the United States" as factors that would eat away at profit during the second half. "We have to be prepared for a change for the worse," he said.

Muramatsu said revenue during the second half of the year should be "at least the same amount as the first half," but profit "would be at best the same as the first half." The forecast for the full year ending next March 31 calls for a 5.4 percent increase in net income to 90 billion yen ($652 million).

So far, there are no plans to change capital investment programs. Nissan has financed investment projects with 250 billion yen in excess cash, rather than going to the market to raise funds because of the higher interest rates.

Mitsubishi profit jumps in 1st half

TOKYO — Mitsubishi Motors Corp. said its net income for the six months ended Sept. 30, the first half of its fiscal year, rose 29.4 percent from a year earlier, to 12.06 billion yen ($93.5 million.)

The company said revenue rose 12.4 percent from a year earlier, to 1.06 trillion yen ($8.2 billion), aided by a 15.7 percent increase in small and medium passenger car sales and a 12.7 percent increase in mini-vehicle sales.

Mitsubishi said its Japanese sales rose to 360,199 units from 323,632 a year earlier, while exports slipped to 269,621 from 279,744.

TRUCKS

FROM PAGE 3

trucks can still turn in a 4.7 million year, compared to 4.8 million in 1989, according to auto sales analysts.

Big 3 market analysts feel that truck buyers aren't really gravitating toward cars, but rather are waiting out the current uncertainties in fuel prices and the economy.

That is particularly true of the big-van market.

Full-sized passenger vans, with sales of 3,580 units in October, were off 26.52 percent on a daily-selling-rate basis from October last year, according to an *Automotive News* analysis.

There were 27 selling days in October this year and 26 last year.

For 10 months, sales of 46,238 full-sized passenger vans were off 13.87 percent from last year.

Full-sized cargo vans, many of which are converted into passenger vans by RV companies, also are down.

They also have been hurt by dealers' reluctance to stock them due to high floorplanning costs.

Full-sized cargo vans accounted for 23,098 retail sales in October, off 16.18 percent on a daily-rate basis from October 1989.

For the first 10 months of 1990, sales of full-sized cargo vans totaled 292,254, off 14.40 percent.

Full-sized cargo vans accounted for 6.37 percent of industry light-truck sales in October, 6.61 percent in September and 6.65 percent in August, 1990. That was down from an 8.05 percent share for the first 10 months of calendar 1990 and a 9.23 percent share during the first 10 months of 1989.

Full-sized sport-utilities have trended down, with sales of 11,635 in October, off 36.34 percent from 17,608 a year ago on a daily-rate basis.

For 10 months of 1990, their 152,102 sales were off 18.16 percent from 185,863 last year.

Full-sized sport-utilities accounted for 3.23 percent of light-truck sales in October, 3.57 percent in September and 3.51 percent in August.

Those figures are down from a 3.85 percent share of the light-duty market during 10 months of 1990 and 4.56 percent in the comparable year-earlier period.

One dramatic change was the falloff in compact pickup truck sales.

October's 90,843 compact pickup sales were off 7.17 percent from 94,260 a year earlier on a daily selling rate basis.

Their 10-month sales of 952,573 were off 6.59 percent from the year earlier's 1,019,767 sales.

Their share of the light-duty market fell to 25.24 percent in October from 26.68 percent a year earlier.

The 10-month share was 24.12 percent this year, compared to 25.01 percent a year ago.

Industry analysts feel that compact pickups are down because they appeal to lower-income, entry-level buyers who are typically most affected by tighter credit restrictions other adverse economic factors.

Full-sized pickup sales were down only 6.10 percent for the 10-month period, and minivan sales were up 11.3 percent, with Chrysler's recent introduction of restyled compact vans and incentives on carryover models helping buoy that market.

SALES

FROM PAGE 3

United States. Japanese transplants sold 87,215 cars last month, up 41.70 percent, or 25,666 units over October 1989. "Import sales are weakening somewhat, but they're not all that bad," Webb said.

Ford Motor Co. and the European and Korean makers lost car market share for the month, while Chrysler Corp. and the Japanese held even compared to a year ago.

Webb said he expects the GM run to pick up speed. "It started with the Geo line in the beginning of the year," he said, "then continued with the (Pontiac) Sunbird in the compact market."

Webb expects GM to continue to pick up market share because of Saturn. "Saturn will take some sales from the Asian market — but not tremendously," he said. "The Ford Escort could also be hurt by Saturn." Through Oct. 31, Escort sales totaled 247,718; sales of the Geo line, both domestic and imported, totaled 242,411 cars.

Chrysler got improved performances from all car divisions in late October. Only Honda and Mitsubishi reported fewer sales of U.S.-built cars than last year.

Light-truck deliveries in October rose 1.89 percent over October 1989.

Combined car and truck sales for the month totaled 1,147,250, up 5.09 percent over a year ago.

The year-to-date figures aren't as rosy, with combined sales of imported and domestic cars and light trucks down 4.79 percent. Each of the Big 3 and the imports as a group trail last year's sales; all of the transplants are up.

Ford, GM and Chrysler held 71.9 percent of the U.S. vehicle market through the end of October, down two percentage points from last year. Those two percentage points went to the Asian makers.

General Motors is the only one of the Big 3 with a higher market share for the year; its combined car and truck share is 35.8 percent vs. 35.4 percent at this point last year.

DOMESTIC Market Shares

Subcompact	88,377	14.93
Compact	174,419	29.47
Intermediate	222,188	37.53
Standard	104,783	17.70
Specialty	2,177	0.37
TOTAL	591,944	100.00

Yugo raises price of GV Plus 8.8%

Yugo America Inc. still has the lowest sticker price in America, but Yugo last week hiked its price 8.8 percent to $4,825 for the basic Yugo GV Plus for 1991.

The company said dealer margin more than doubles to 16.1 percent, which Yugo calls "the highest percent margin in the small car market segment."

The 1991 price increase is softened by the addition of a rear-window wiper/washer as standard. It had been an option.

— Jim Henry

SATURN

FROM PAGE 1

munications.

Spokeswoman Jennifer Schettler said: "We're not going to talk about future products, and we're not going to talk about future capacity."

Special luxury versions of the twin-cam sedan (SL2) and 2+2 debut at the beginning of the 1992 model year. Those vehicles will have leather interiors, sportier exterior treatment (including new aluminum wheels and small rear spoiler) and standard anti-lock brakes. Saturn dealers were shown the vehicles at a meeting in Nashville, Tenn., during the first week of October.

Saturn plans to build about 7,800 of the luxury-sport sedans and about 10,000 of the comparable 2+2 in the 1992 model year.

Production of the single-cam sedan is slated to reach 78,000 in the 1992 model year, up from this year's target of 30,700. The build of the twin-cam sedan is targeted at just short of 70,000 in 1992, up from the 1991 target of about 37,000. The regular 2+2 is scheduled to climb to 69,000 units next year, up from the 1991 target of 31,600.

A convertible based on the current 2+2 is scheduled to debut midway in the 1992 model year, with pilot production due to begin next October and full production slated for January 1992. Production of just under 5,000 convertibles is planned during the 1992 model year.

Total production at the Saturn plant in Spring Hill, Tenn., is scheduled to reach 240,000 in the 1992 model year, up from the 99,000 targeted for this year.

Pilot production of two wagon models — one with the single-cam engine and the other an upscale version with the twin-cam engine — is slated to begin in June 1992. The wagons will debut as 1993 models, with regular production scheduled to begin in August 1992.

Dealers said they look forward to the introduction of the wagons because they will be GM's only small wagons by 1994.

"There is good demand from young families who want a wagon, but don't need one as big as the Caprice wagon," said a Saturn dealer who did not want to be identified.

Saturn's passenger-car line is slated to reach full maturity in the 1994 model year with the introduction of a pair of two-door hatchbacks based on the sedan design. Pilot production of the new two-door models is planned for June and July 1993, with regular production slated for August that year.

Saturn anticipates that the new two-doors will immediately contribute to the line, with first-year production of a single-cam version slated to be about 54,500 and a twin-cam version at nearly 30,000.

The 1994 model year also is scheduled to be big for Saturn in terms of content — and safety features. All Saturn vehicles, beginning in 1994, will have standard driver and passenger air bags and standard anti-lock brakes, according to Saturn and GM sources.

The production schedules also strongly suggest that 1994 will be the year that the sedan is reskinned for the first time. Sedan production in the 1994 model year is scheduled to fall to a three-model aggregate of about 137,000, down sharply from the 170,000 planned for the previous year.

The 2+2 is a likely candidate for reskinning in 1995, when a three-model total of 87,000 units are planned, down from nearly 100,000 on the 1994 schedule.

Total production at the Spring Hill plant is scheduled to reach 303,000 in the 1993 model year and 360,000 in 1994 through 1996. At that point, Saturn would be forced to expand capacity — by enlarging the plant or building a second facility if it wanted to increase output further or add models.

5-year plan may require plant add-on

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Saturn Corp. may have to expand its new $2-billion car plant in Spring Hill, Tenn., in as soon as two to three years to keep up with a five-year growth plan.

The huge factory would have to increase capacity by half over its current full-production rating to meet 1995 sales forecasts.

The factory was built to produce up to 240,000 cars a year. But by model-year 1995, Saturn anticipates producing up to 360,000 cars

Imports play incentive game

Toyota, Mazda, Mitsubishi pay rebates to buyers, dealers

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Three Japanese automakers have announced new or revised incentive programs.

Toyota Motor Sales U.S.A. Inc.'s new program, which expires Jan. 3, covers 1989, 1990 and 1991 models. It pays dealers $300 to $1,100 on Camry, $200 to $1,000 on Corolla, $600 to $1,200 on base two-wheel-drive and four-wheel-drive trucks and $200 to $800 on other trucks. The payments are based on performance against sales quotas.

Mitsubishi Motor Sales of America Inc. announced dealer rebates on 1990 and 1991 cars and trucks. The rebates vary by regions, and the program ends Dec. 31.

Dealer rebates, based on performance against quotas, range from $350 to $2,000 on 1990 and 1991 Galant, Eclipse and 2wd and 4wd pickups in the Western, Southwest and Southeast regions, and on 1990 and 1991 Galant, Eclipse and Montero in the Northeast and North Central regions.

The program also pays per-unit rebates to dealers of $1,500 on the 1990 Montero and $500 on the 1991 Montero in the Western, Southwest and Southeast regions and $1,000 on the 1990 Mirage and $500 on the 1991 Mirage in the Western region.

It pays per-unit rebates to dealers of $500 on 1990 and 1991 Mirages in the Southwest, Northeast, Southeast and North Central regions. The program also pays $500-per-unit rebates to dealers on 1990 and 1991 2wd and 4wd pickups in the Northeast and North Central regions.

Mazda Motor of America Inc. announced consumer incentives on 1990 cars. They are $750 on 323-SE and Protege SE and LX, $1,000 on MX-6 and $1,500 on 626.

Mazda has raised the per-unit rebate on 1990 trucks from $750 to $1,000 on 2wd unit and from $1,000 to $1,250 on the 4wd unit. It also is offering the SE5 or LE5 trim package at no charge. The MPV has discounts of $886 and $1,246 on option packages. The Mazda incentives expire Jan. 3.

Note: Some makers offer rebates to dealers on sales of 1988 and 1989 models. Most of those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

EXPAND

FROM PAGE 43

annually, according to a Saturn product plan developed in June.

Saturn originally was planned to have an annual capacity of 500,000 cars. But shortly after the project was announced, its size was halved. Saturn has maintained that its long-term plan is still to reach the 500,000-a-year figure.

"We bought a lot of land here," said spokeswoman Laurie Kay of the 2,400-acre site. "The possibility for expansion is always there."

Saturn will not release official production figures until later this month, by which time the plant is expected to reach a production level of 200 cars a day.

Normal full-capacity production of 20,000 a month will not occur until the beginning of its 1992 model run in the summer of 1991.

Saturn is scheduled to produce 303,000 cars during model-year 1993, increasing to 360,000 cars a year by model-year 1995.

Kay indicated that some additional capacity could be obtained "without a major brick and mortar expansion."

Saturn could produce some of the additional 120,000 cars with more workers or extensive overtime work.

Toyota Motor Manufacturing U.S.A. Inc. recently confirmed that its 200,000-unit-a-year car plant in Georgetown, Ky., would yield 240,000 cars annually by 1992 without a physical expansion.

A General Motors plant in Antwerp, Belgium, increased its capacity by nearly half over the past two years by enlarging its workforce and switching to a three-shift schedule. The plant now operates with 10-hour, four-day-a-week shifts that reduce down time.

Saturn management and the UAW are now considering a plan to institute a similar schedule at Saturn, but Kay said the idea is still under discussion.

The UAW has been hesitant to accept the concept at other GM plants.

Saturn is now adding 1,000 new associates to its current workforce of 3,300 for a second shift that will start next spring. But there are no plans for a third shift, Kay said.

Car stocks rise to 66 days, but trail '89 backlog

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The supply of new cars was higher on Nov. 1 than on Oct. 1, but it was in better shape than at the end of October last year when dealer showrooms and lots were loaded as sales slowed after late-summer clearance efforts.

Combined stocks of U.S.-built and imported cars totaled 1,933,837 units on Nov. 1, a 66-day supply, compared to a 58-day supply Oct. 1 and a 74-day supply last Nov. 1. The domestic automakers had a 66-day supply on hand; the importers, a 73-day supply.

The seven-year average of domestic and import new-car stocks on Nov. 1 is 61 days.

Aside from Toyota, every automaker that builds cars in the United States reported an increase in stocks. Toyota reported a 22-day supply of unsold cars built at its Georgetown, Ky., plant and a 35-day supply of imported cars, for a combined 29-day supply, the lowest among domestic makers.

Subaru reported the highest figures. Its Legacy model, built in Lafayette, Ind., had a 300-day supply, and Subaru's combined unsold stocks were 100 days on Nov. 1. Eagle dealers had a 458-day supply of Summits, but the cars were delivered to retailers late in the month.

General Motors had the highest inventory among Big 3, a 73-day supply, up from 58 days on Oct. 1. Ford Motor Co.'s stocks rose to 70 days from 57, and Chrysler Corp.'s edged up to 71 days from 69.

CURRY

FROM PAGE 1

was the same: no defect.

"I must tell you that it was personally disappointing," Curry said. "Because with all that smoke, there should have been some fire."

In an interview, Curry said that from now on, he will be highly skeptical of defect allegations or investigation petitions filed by the three organizations.

"I would be much less willing to give credence to allegations or petitions filed by the groups," he said. "You still have to look at them, but I am not going through another one of these. The American people don't deserve this."

When told of Curry's remarks, Clarence Ditlow, executive director of the Center for Auto Safety, said he's "happy they don't like us because they aren't doing their job." He accused NHTSA of "protecting the car companies from defects and not consumers."

Ditlow

Curry's comments will mark a widening rift between his agency and the most outspoken and most widely known safety advocates.

When Curry was appointed in March 1989, there was hope for a new harmony between government, industry and the consumer movement on auto safety issues. That would have been a marked contrast to the activist era under President Carter and the anti-regulatory policies of President Reagan.

Ditlow and Joan Claybrook, president of Public Citizen and an NHTSA administrator under Carter, were initially pleased with Curry's nomination. They guardedly praised him and his promises to improve automotive safety, unclog the backlog of defect investigations and issue long-overdue safety standards.

Consumer groups had a chilly relationship with Curry's predecessor, Diane Steed, a longtime public servant well-schooled in Washington bureaucracy. Steed's disdain for the advocates was well known, but she followed a Washington practice of not publicly criticizing followers of Ralph Nader.

But Curry, a former major general in the Army and a newcomer to Washington politics, was eager to listen. He invited the safety activists to NHTSA and "took them seriously" — despite the cynicism and warnings of many longtime NHTSA staff members.

The consumer groups were eager to have Curry embrace their agenda. They have pushed for a stricter side-impact standard on cars and for passenger-car roof-crush and side-impact standards on light-duty trucks.

And Curry has responded. He has proposed new rules for light trucks. And last month, he issued a new passenger-car side-impact standard after more than a decade of debate.

But he now says the advocates have had their day in court. "They were innocent until proven guilty.

"I believed them to be forthright until they proved themselves otherwise," Curry said.

Curry officially reopened the CJ case June 25. But informal probes began in January when new allegations and old documents the groups had obtained first surfaced.

After reviewing a stack of documents that measured 62 feet high, NHTSA concluded that "while the predicted rollover propensity of the CJ is slightly higher than the average for all utility vehicles, the CJ does not stand out from its peers to the extent that it warrants further investigation."

The agency also found no evidence that American Motors or Chrysler, which bought AMC in 1987, had lied to the federal government. Curry closed the case Oct. 11.

Ditlow said he now worries that NHTSA will ignore other sport-utility rollover allegations and investigations, like the pending probe of the Ford Bronco II.

Ben Kelley, president of the Institute for Injury Reduction and former director of public affairs for the Federal Highway Administration, called Curry's criticism of the groups and his latest comments "outrageous."

Kelley said Curry refused to recall the CJ because it would cost Chrysler too much. Kelley said Curry told him so over lunch July 20. Curry denied ever discussing cost with Kelley.

A rollover standard for cars and trucks and stepped-up recalls remain a major priority for the Center for Auto Safety and Public Citizen.

The Institute for Injury Reduction's agenda has included the CJ and retrofitting back seats of cars with shoulder belts.

Idle plants slash U.S. production

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Vehicle production in the United States continues to plunge as 15 Big 3 assembly plants remain idle for a second week. Three additional plants are partially idle.

Twelve of the plants are General Motors facilities, three are Ford Motor Co. points, and three are Chrysler Corp. plants.

U.S. automakers estimated last week's build at 109,687 units, down 22.39 percent from the prior week and 18.43 percent from the year-ago week.

Truckmakers scheduled 59,217 units last week, a decline of 28.30 percent from the previous week and 25.54 percent from 1989.

In October, 656,007 cars were produced, the lowest total for that month since 1970 when 390,016 were assembled. GM was shut down by a strike that year. October production rose 22.31 percent over the previous month, but fell 0.97 percent below the 1989 month.

Truck production in October was 367,484, the highest for that month since 1987 when 369,394 were produced. October truck output was 15.31 percent above the prior month and 16.46 percent above the year-ago month.

As previously reported, the following General Motors plants are scheduled to be idle this week: the Wilmington, Del.; Wentzville, Mo.; Kansas City, Kan.; Oklahoma City; Van Nuys, Calif.; and Willow Run, Mich., car facilities; and the Flint, Mich.; Fort Wayne, Ind.; Pontiac, Mich. (East); and Tarrytown, N.Y., truck plants. At the Detroit-Hamtramck, Mich., plant, the Allante line is scheduled to be idle, and so is the van line at Lordstown, Ohio.

Ford's Wayne, Mich., truck plant and Kentucky Truck in Louisville, Ky., are closed this week, as is the Lorain, Ohio, car line. Chrysler plants idled this week are Sterling Heights, Mich., and St. Louis No. 1 (car) and Warren, Mich., (truck).

Canada cars at 17-year high

Canadian auto producers assembled 114,730 units in October, the highest production for that month since 1973 when 131,193 units were built.

Truckmakers produced 77,317 units in October, the lowest for that month since 1987 when 71,080 units were built.

European import deals may fight new taxes

By Diana T. Kurylko
and Jim Henry
AUTOMOTIVE NEWS STAFF REPORTERS

Angry European import dealers are considering plans to form their own lobbying group to pressure Congress into repealing or modifying new taxes on luxury cars and gas-guzzling cars.

The increased tax load is "a devastating blow," said Ralph J. Gaden, chairman of the dealer council for Mercedes-Benz of North America Inc. and owner of Autohaus Inc. in Dallas. "Some dealers are going to go broke, and so are their salesmen and their mechanics."

As part of Congress' deficit-reduction package, lawmakers have slapped a 10 percent tariff on the price of a car over $30,000. In addition, penalties on cars that get less than 22.5 mpg have been doubled and now range from $1,000 to $7,700. They take affect Jan. 1.

Dealers who sell European cars will be hit the hardest.

"There are urgent discussions going on within the dealer groups and between the dealer groups," said Martin Bennett, chairman of the Jaguar National Dealer Council and owner of Thoroughbred Motorcars (Ferrari-Jaguar-Saab-Lotus) in Nashville, Tenn.

Bennett said chairmen of European import dealer groups have begun informal talks about forming a coalition that could be allied with a group like Auto Dealers and Drivers for Free Trade, a political action committee known as AutoPac.

"We've got to join something that has hitting power, that already knows its way around Congress and has the contacts," Bennett said.

Bennett said he would like to see European import dealers get together among themselves and form a unified lobby before January, then buttonhole legislators as soon

MR. GM

Stempel's hot for more market gains despite predicting tough times for '91

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

General Motors expects continued market share gains in 1991 despite consumer concerns over the Persian Gulf crisis, the economy and higher gasoline prices, Chairman Robert C. Stempel said.

In his first interview since he succeeded Roger B. Smith as chairman Aug. 1, Stempel predicted industry sales of only 14 million cars and trucks in 1991, a drop of 300,000 from his estimate for 1990.

Despite a host of potential problems, the auto industry has enough new products in 1991 to generate the kind of consumer interest that should prevent a big downturn, Stempel said.

GM is in a good position to deal with a downturn, partly because it has worked to manage its vehicle inventories, Stempel said.

"Inventory on cars is the lowest it's been since 1986, so we're in pretty good balance, production vs. sales," he said.

The automaker's market share, which has been rising slowly this year, should continue to go up, Stempel said.

Oil prices, which he said should remain in the mid-$30 per barrel range during most of 1991, will have a wide-ranging impact on the industry and GM regardless of how the crisis with Iraq is resolved, he said.

The effects will be felt "not only . . . in terms of our fuel efficiency, but the oil we use in manufacturing, the oil we use in the plastics and chemical side of our business," Stempel said.

GM has planned its future products with the assumption of even higher oil and gasoline prices, Stempel said although he declined to reveal the planners' assumptions.

"That's why you don't see a panic here as this gasoline price roars upward," he said. "If you'd like a small, fuel-efficient car, 'How many?' is my response. Not, 'Ooh! Give me a year to get there.' We've got 'em. We've got four-cylinder engines. You want fours? (We've got

"Saturn already has 29 patents approved — 29! Now you name one other automobile that's got half that many new patentable ideas," Stempel said.

Saturn plan: only 560 will be no-option $7,995 cars

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Saturn Corp. surprised dealers and customers with a low $7,995 sticker price for its base sedan, but the company expects to sell no more than 560 cars at that price in the 1991 model year.

Saturn plans to build 7,000 base SL sedans in the 1991 model year, and expects 4,690 (67 percent) of those units to be purchased with the $775 dealer-installed air conditioning system, according to an option forecast obtained by *Automotive News*. Another 1,750 SL units (25 percent) are expected to be built with factory-installed air, which also has a $775 sticker.

Saturn ads attract shoppers, Page 10

That leaves only 560 SL units that could sell for the $7,995 sticker price. And some of those are likely to be equipped with other options such as $170 cassette players.

Although the $7,995 base price

Honda 2-seater

Honda's new 656cc two-seat roadster, pictured here with a removable hard top, debuts in Japan this February. The mid-engined vehicle, which may be called the R-X, is based on Honda's Today minicar. It is not expected to be sold in the United States.

Co-op ads inspire anything but dealer cooperation

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

In a world filled with uncertainties, most car and truck dealers can count on at least three things: death, taxes and cooperative advertising.

Many Big 3 and import dealers find the three equally unpleasant.

In the last couple years, co-op advertising has become the most controversial area of automobile advertising for dealers.

Once a common ground where manufacturers and their dealers joined financial forces to fight the competition, co-op advertising, in some instances, has escalated into civil war.

While manufacturers contend they don't twist dealers' arms to keep them in ad associations, dealers disagree.

Dealers who want to quit the ad groups and stop paying the mandatory co-op fee assessed by the factory say they fear reprisal from the manufacturer in the form of warranty and/or dealership audits

Volvo digs into ad fiasco

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Volvo's "monster truck" ad scandal continued to erupt last week as AB Volvo Chairman Pehr Gyellenhammar ordered an investigation into what he called Volvo's "distasteful and unacceptable behavior."

Meanwhile, Volvo Cars of North America's longtime ad agency, Scali, McCabe, Sloves Inc., resigned the $40 million account.

In a statement from Sweden, Gyellenhammar called the doctored ads "an offense against our company and what we represent and an insult to all Volvo owners." He said Robert F. Dee, an outside member of the board of Volvo North America Corp., would head the investigation.

The Federal Trade Commission also has asked Volvo to substantiate all advertising claims made since Jan. 1, 1989, said Volvo Cars spokesman Robert C. Austin.

Volvo Cars was already conducting its own internal investigation, Austin said that was suspended last week, and all information was to be handed over to Dee.

Gyellenhammar called for the investigation "to clarify how this misconduct has come about and identify those responsible for it." He promised to "make an example" of those responsible.

The print and television ads showed a "monster truck" squashing a line of cars — except for a Volvo 240 wagon. Volvo killed the ads and apologized after the Texas attorney general revealed Volvo's car was specially reinforced and the other cars weakened.

Marvin Sloves, chairman of Scali, McCabe, Sloves, said the agency accepted "ultimate responsibility." But he said no one at the agency authorized the tampering or knew it had occurred.

Both Volvo and the ad agency had representatives on the scene when the ad was shot in Austin, Texas, last June, but not at every moment, Volvo spokesman Austin said.

Nevertheless, the agency was responsible because it hired New York-based Perretti Productions to film the ads, and the agency was responsible for everything that took place on the shooting, said William J. Hoover, Volvo senior vice president of marketing.

After 23 years of doing business together, Volvo was the agency's biggest and oldest account, representing about 15 percent of the agency's billings, Sloves said.

"They were great, rewarding years. We built the brand together. That's what's so devastating about this," he said.

Automotive News Staff Reporter Arlena Sawyers in Detroit contributed to this story.

How Volvo's bogus advertisements were discovered

By Jennifer Lawrence
CRAIN NEWS SERVICE

When Dan White went to the Texas Exposition & Heritage Center in Austin June 12, he hoped to pick up some Volvos for mechanical salvage.

Instead, he ended up blowing the whistle on one of the most respected companies around, one noted for its safe and reliable vehicles — Volvo.

It was just chance that White — car buff, auto mechanic, former welder, University of Texas graduate with a degree in government — started a conversation with a man who had a camera.

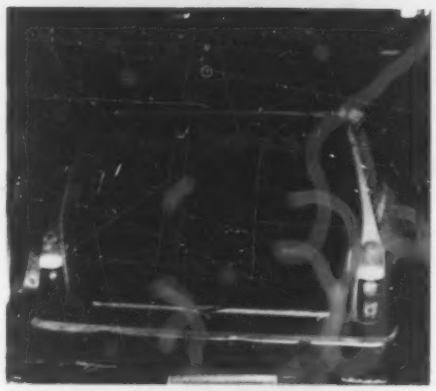
The man, Pat Horne, turned out to be the father of one of White's friends.

The retired Horne, visiting from California, wandered around the center with White for most of the morning.

They were on the south side of the arena when they heard what White called "the unmistakable noise of a saw cutting steel."

White and Horne walked over to the arena's west side where sparks were flying.

"A fellow in a welder's get-up was cutting



Steel reinforcment beams were placed inside a Volvo used in the "Monster Truck" commercial.

B-pillars (roof supports) on some cars with the saw," White recalled in an interview with *Advertising Age*, a sister publication to *Automotive News*. "We saw three cars being cut, and when we broke for lunch at noon, we saw that all the B-pillars on all the cars (competing against Volvo) had been cut."

Horne snapped some photographs of a Ford Maverick and brown Granada, pictures that would eventually be used as exhibits in the Texas attorney general's case against Volvo Cars of North America.

By now, White thought something phony was going on. Nevertheless, he had errands to run and left for most of the afternoon.

Meanwhile, Horne stayed and photographed all that he could.

While on his errands, White ran into an attorney friend at Big Steve's Gym. White told the lawyer what he thought was happening.

White asked the attorney whether he should alert the Federal Trade Commission, but the lawyer said to try the state attorney general's office instead because the FTC "wouldn't do anything."

When White returned to the center, he still wanted a crack at buying the Volvos, and he was ready to talk terms with Jesse Spindler of International Promotions.

Three used Volvo wagons were filmed. Early

EDS gambit paying off for GM

Troubles of 1984 buyout purged as revenue, profits surge

By Michelle Krebs
SPECIAL CORRESPONDENT

Everything that could go wrong did in the early days of General Motors' ownership of Electronic Data Systems Corp.

But on the sixth anniversary of the automaker's purchase of the Dallas-based computer services firm, both appear better off for the marriage.

The acquisition of EDS for $2.5 billion has turned out to be a financial prize.

EDS' revenues have grown from $786 million in 1984 to $5.5 billion in 1989, about $1 billion more than analysts had predicted five years ago. Profits increased from $71 million to $435 million.

While the GM business gave EDS an instant hike, EDS has boosted its non-GM business approximately 25 percent each year on a compounded basis during the past five years. EDS expects continued growth in the non-GM business, particularly in the areas of transportation and energy. EDS also expects significant growth overseas.

Nearly all the analysts who follow computer companies have placed GM Class E stock on their "buy" list. The stock pays dividends based on EDS' performance. The analysts point out that EDS is the largest company in the fast-growing business of taking over computer operations for other companies.

EDS wants GM to account for 50 percent of its business in 1990 and 33 percent by 1994. That compares with 55 percent in 1989 and 70 percent in 1985.

By some analysts' estimates, EDS has tripled in value since GM acquired it five years ago.

"Despite all the controversy, EDS has proved to be a financial success for GM," says Maryann Keller, analyst for the New York investment firm of Furman Selz Inc. "It's earnings are growing faster than those of GM, not because of more GM business, but in spite of less GM business. GM got a real prize and a fine company. It will continue to be a contributor to GM."

In addition to contributing to GM's bottom line, EDS has helped GM's internal operations. Because of EDS, GM has:

- Established a worldwide telecommunications network, creating the largest private digital network in the world. EDS implemented a plan that GM's data processing people developed. EDS consolidated GM's 106 independent networks and increased the capacity by 300 percent at a 20 percent cost reduction.
- Consolidated GM's major data processing centers from 35 to 21 worldwide. It also allowed the standardization of computer equipment and systems. By buying in larger volume, GM can purchase equipment at a lower cost.
- Increased substantially the capability of GM's health-care processing system. EDS processes approximately 200,000 health-care claims daily, compared with the 10,000 to 25,000 GM processed before EDS. GM estimates the new system has saved the company about $750 million since 1984.

Reitzle, Mayhew to head gala at World Congress

DETROIT — Wolfgang Reitzle, management board member of BMW AG and head of the Development Division, and Fred C. "Fritz" Mayhew, Ford Motor Co. chief design executive, North American Design, will address the Automotive News World Congress Tuesday Evening Gala Jan. 15.

The World Congress will run from Sunday, Jan. 13 through Wednesday morning, Jan. 16 at the Westin Hotel in Detroit. Attendees will hear from more than 30 leaders of the auto industry.

Tickets to the gala dinner are included with full registration for the World Congress or may be obtained separately.

After graduating from Munich Technical University, Reitzle joined BMW in January 1976 as a production specialist. He was named head of the methods testing department that April, and one

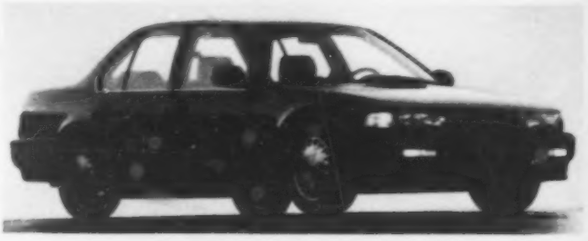
The Oct. 31 score:
Chrysler, 729,732; Honda, 729,366

The big guns:
Chrysler's Plymouth Acclaim, left, with 90,894 sales, or 12.5 percent of Chrysler's total

Honda's Accord, right, the country's No. 1 scorer with 346,953 sales, or 47.6 percent of Honda's total



Rental fleets bring Chrysler back to No. 3

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp.'s campaign to increase sales to rental-car companies may be paying off as the company battles to cling to its ranking as the No. 3 car seller in the United States.

At the end of October, Chrysler led American Honda Motor Co. Inc. by 366 units. The score was Chrysler, 729,732; Honda, 729,366.

Some sales figures for the first 10 days of November have not been reported, so a Nov. 10 comparison cannot be made.

At the end of August, just before rental-car companies replenish their fleets, American Honda held a 25,451-unit lead in car sales over Chrysler. By Oct. 31, when big fleet purchases generally end, Chrysler had regained third place in U.S. car sales by that slim margin of 366.

"We got competitive in the daily-rental first-cycle business," Chrysler Motors Chairman Bennett Bidwell told reporters in September. "So you'll see our car share go up a little bit in September, a little more in October and a little more still in November and December."

Honda is not a big player in the fleet market.

From July 1989 to August 1990, Chrysler acquired three rental-car companies: Dollar Rent A Car Systems Inc. in Los Angeles; Snappy Car Rental in Mayfield Heights, Ohio; and Thrifty Rent-A-Car System Inc. in Tulsa, Okla.

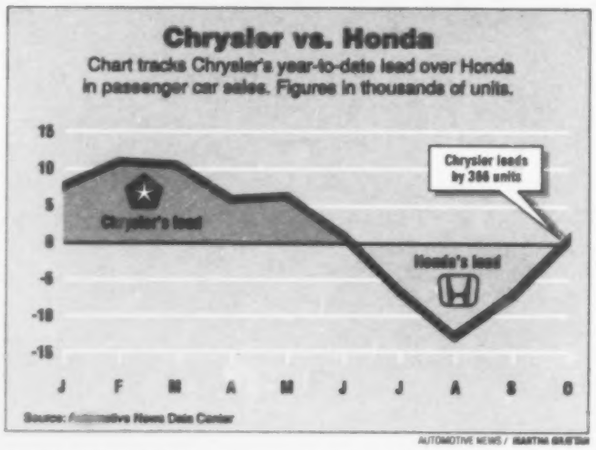
Chrysler signed a multi-year agreement this month with American International Rent-A-Car Corp. in Boston to increase the number of Chrysler cars that American International buys.

American International has 76,000 cars in its worldwide fleet, said spokeswoman Donna Walsh, but she did not know what percentage are Chrysler products.

Walsh acknowledged that an agreement had been signed with Chrysler, but she said the firm's president, Nicholas Yebba, was out of town and could not comment.

Chrysler spokesman Tom Jakobowski said the corporation did not want to comment on the deal.

A manager at an American International branch office said the agreement includes an increase in the purchase of Chrysler cars by the company in return for advertising money from Chrysler. She said the co-op program calls for Chrysler to pay American International about $200 for each car it purchases from Chrysler and, in return, American International will run a tagline in its ads that says it carries Chrysler products.



She said she currently has only General Motors and Ford Motor Co. cars in her fleet.

Jakobowski would not say what percentage of Chrysler's sales in September and October were to fleets, but he said fleet sales "were good."

Spokespersons from Dollar and Snappy did not return calls from *Automotive News*.

Meloyde Blancett-Scott, director of corporate communications for Thrifty, said Chrysler cars represented more than 75 percent of Thrifty's car purchases this fall, compared to less than 60 percent last fall. "Chrysler had a very competitive lease package" this cycle, Blancett-Scott said.

Chrysler and Honda have been in a sales battle all year. During the first 10 months of this year, each company won the monthly sales crown five times.

After Honda amassed a year-to-date lead of more than 25,000 cars at the end of August, Chrysler came back to outsell Honda by 11,207 cars in September and 14,610 cars last month.

For Nov. 1-10, Chrysler sold 18,873 domestic cars and 1,361 imports, and Honda sold 9,609 U.S.-built cars, but Honda declined to provide an import sales total for the period.

Chrysler's year-to-date sales include domestic and imported cars under Dodge, Plymouth, Chrysler and Eagle badges. American Honda's sales include U.S.-built Hondas, imported Hondas and imported Acuras.

October was the first month that Chrysler reported an increase over its year-ago figures.

Auto analyst Lee McMillan says the fleet market was helpful to Chrysler's surge the past two months. McMillan, with Marxman Management & Research in Northbrook, Ill., says Chrysler will continue to pour on the incentives to try to keep its No. 3 ranking.

"Chrysler is very aware of the psychological impact of headlines that would say 'Honda outsells Chrysler,' " McMillan said. "They're very aware what that would mean in regard to consumer perception.

"Chrysler doesn't want that; they don't need that."

If Time Warner sells it, Chrysler advertises in it

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Over the next few years, when you see a Chrysler vehicle prominently displayed in a movie, chances are it's not just show business.

Featuring Chrysler products in future Warner Bros. movies is one part of a carefully orchestrated multimedia, multimillion-dollar deal between Chrysler Corp. and Time Warner Inc. that will use all the media company's properties to market Chrysler products.

John B. Damoose, Chrysler vice president of marketing, announced the innovative marketing effort last week at Chrysler's corporate headquarters. He was joined by Michael Drexler, executive vice president of Bozell Inc., the advertising agency that handles Chrysler's corporate account, and Donald M. Elliman Jr., executive vice president of marketing and group publisher of Time Inc. Magazine Co.

The two-year agreement is to include all Time Warner media outlets including magazines, television programming, cable television, home video, films, books, direct mail and special events. It begins next February.

Damoose calls the strategy the "big bang theory."

"We're focusing on reaching the best prospects in key publications with greater impact and frequency," he said.

The program emphasizes magazines. It includes advertising in *Time*, *Life*, *Fortune*, *People*, *Money*, *Sports Illustrated* and *Entertainment Weekly*, which have a combined readership of 70 million adults.

All of those magazines will feature 11-page advertorial inserts.

The theme of the inserts will be "Rediscover America," marking the approaching 500th anniversary of the discovery of America. It also fits with Chrysler's ongoing appeal to patriotism. The inserts will focus on topics Chrysler believes Americans are concerned about.

Among the likely topics, said Damoose, are education, global competition and the environment. Each insert will include a ballot allowing readers to voice their opinions about the topics. Subscribers will receive personalized ballots. The results of each survey will appear in subsequent ad inserts.

Also, the program includes special issues of *Fortune*, *People* and *Life* in which Chrysler and its divisions will be the sole advertisers. The *Fortune* special issue is scheduled for May 1991, just in time for spring car advertising. It will focus on global competitiveness.

Damoose calls it the "big bang theory."

The *People* issue is slated for fall 1991, focusing on people who made contributions to this country. It will showcase the Dodge Viper sports car and Jeep ZJ sport-utility, both new models for 1992.

The *Life* issue, due in fall 1992, will highlight the contributions of explorers and humanitarians. Advertising would presumably push 1993 Chrysler models.

Chrysler will get 25 to 27 advertising pages in those issues.

Damoose refused to disclose the value of the agreement, but *Advertising Age*, a sister trade publication to *Automotive News*, estimates the media package to be worth $40 million to $50 million.

Damoose said the deal will not conflict with Chrysler's belt-tightening efforts. He said the carmaker will expanding its ad budget more than 10 percent next year, calling advertising a revenue enhancer.

The program will use Time Warner Direct Marketing for dealer programs.

It will also include advertising or promotion on Warner Bros. records, Time-Life books and videos and the Time Warner Cable Group.

Ford, GM rise in first 10 days

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

After strong sales in October, Chrysler Corp. began November with a thud.

Chrysler, down 9.1 percent, was the only domestic automaker to report a decline in car sales in early November. For the industry, car sales rose 7.6 percent over last year's depressed total.

Last year's total was the lowest 10-day period of 1989.

Truck sales were off 6.4 percent from last year. Chrysler's truck sales dipped 33 percent, and Nissan reported a 32.9 percent drop.

Combined sales of cars and trucks were 239,889, a 2.1 percent increase.

Every Chrysler truck division reported a heavy loss, and sales of Chrysler's Town & Country minivan, which is counted as a truck, were down 62.8 percent.

General Motors' car sales rose 10.1 percent. Cavalier was the star at Chevrolet with a 42.7 percent increase.

Ford Motor Co.'s car sales jumped 6.2 percent, truck sales were up 0.7 percent, and the car-truck total climbed 3.9 percent.

Among the transplants, Mazda reported the biggest increase. Deliveries of its new Navajo sport-utility pushed Mazda's overall sales up 111.5 percent.

Honda's sales rose 29.3 percent; Mitsubishi reported a 6.7 percent sales increase, and Toyota's sales rose 7.7 percent.

Nissan's car sales jumped 17.2 percent, trucks fell, resulted in an overall decline of 12.2 percent.

TRUCK INDUSTRY

Volvo GM rolls out new line of medium-duty trucks

By Joseph Bohn
TRUCK EDITOR

Volvo GM Heavy Truck Corp. will produce a new line of Volvo FE medium-duty trucks at its Orrville, Ohio, plant beginning Jan. 2.

The new vehicles, which replace the European-made Volvo FE6 and FE7 models, are aimed at the upper end of the market.

The new line consists of two Class 7 low-cabover models, the forward-entry FE42 truck and FE42T tractor.

Their gross vehicle weights range from 30,000 to 37,500 pounds. Gross combined weights for tractors range from 55,000 to 70,000 pounds.

Both truck and tractor models are available with either one-fourth- or 9/32-inch 110,000-pounds-per-square-inch frames similar to those of Class 8 WhiteGMC WG truck and tractor models.

The new FE series has a 59-inch front-axle setback and an 83-inch effective bumper to back of cab measurement.

The vehicles are geared to beverage, milk, oil, paper and refuse operations as well as overnight express delivery.

They are available with Caterpillar 3116 engines rated at 185 or 215 horsepower, or Volvo VE7 engines rated at 215 or 250 horsepower.

The engines can be matched with fully synchronized five-speed Spicer, six-speed Fuller or nine-speed Volvo transmissions or automatic Allison transmissions.

Volvo GM added 56,000 square feet to its 250,000-square-foot Orrville plant to handle assembly of the new series.

By switching to U.S. sourcing for its medium duty trucks, the company followed competitors like Freightliner Corp. and Ford Motor Co., which have found cost and supply advantages in producing their medium duties domestically.

With the production of the FE series, all Volvo GM vehicles marketed in North America will be produced in North America.

Added to the plant, which is on a 59-acre site, was a subassembly area for the two new engines available as options on the vehicles, an extension of the frame line, various warehouse and storage areas for 2,500 additional parts required to assemble the vehicles and 100 additional parking places for vehicles awaiting delivery.

New FE42T replaces European-made Volvo truck.

Swedish-built cab is trimmed at plant in Portsmouth, Va.

Plant Manager Phil Mayes said there are no plans to expand the plant's work force or its two-shift operation.

The Volvo FE features an American-made chassis and a Swedish-made premium cab. The cab interiors will be fitted and trimmed at a Volvo GM plant in Portsmouth, Va., and will be mounted on a WG chassis.

Volvo chose Orrville to assemble the new series because many of its parts are common to the Class 8 WhiteGMC WG that is assembled there, according to Thage Berggren, Volvo GM president and chief executive officer.

Orrville produces trucks on a U-shaped 1,000-foot-long assembly line that has 20 work stations.

To increase efficiency, major components, including frame rails, engines, transmissions, axles, wheels and cabs, are delivered and assembled parallel to the work station at which they are added to the truck.

Volvo GM has two other plants in Orrville, a cab assembly plant for WhiteGMC trucks and a metal stamping plant that produces parts for those cabs. It also assembles trucks in Dublin, Va., and Ogden, Utah.

TRUCK BRIEFS

Truck orders increase

NEW YORK — Net new Class 8 truck orders increased to 9,127 units in September from 8,901 a year earlier, reflecting a modest amount of prebuying to beat anticipated price hikes, according to Rothschild Inc., a financial investment firm.

Cancellation rates on orders increased to 16.5 percent in September from 14.0 percent a year earlier, reflecting manufacturers' efforts to screen out uncertain orders, Rothschild said.

The backlog of orders, totaling 32,564 units, was off 23.60 percent from a year ago, but up slightly from 31,808 in August 1990. Production rates in the industry have fallen below the retail sales levels, pushing order backlogs up.

Mitsubishi Fuso models

BRIDGEPORT, N.J. — Mitsubishi Fuso is offering new specialty versions of its FH100 and FM557 models, engineered by Fontaine Modification-Components Co. of Jeffersontown, Ky.

The FH100 is available as a cabover with dual-steering capability in a 17,196-pound gross vehicle weight. It is geared to refuse hauling and other applications that require a right-side driving position.

The FM557 is available as a Class 7, 132-inch wheelbase cabover, with 55,000-pound gross combined weight. The single-axle tractor is geared to city applications such as freight pickup and delivery and beverage and food delivery.

Mitsubishi is also making Associates Commercial Corp. of Irving, Texas, available as a wholesale and retail financing source to its dealers in addition to Mitsubishi Acceptance Corp. of Irvine, Calif.

Eaton distribution deal

KALAMAZOO, Mich. — Eaton Corp. reached agreement with Voith Turbo GmbH & Co. KG of Crailsheim, Germany, to become the exclusive distributor for Voith Retarders in North America.

The agreement allows Eaton to add another line to its drivetrain components products.

A retarder helps vehicle operators maintain and reduce speed without activating the foundation brakes.

Eaton is making the retarders available to original equipment manufacturers and end users of medium- and heavy-duty trucks in Canada, Mexico and the United States.

Rockwell retarder deal

TROY, Mich. — Rockwell International Corp.'s Automotive Operations struck a deal with Telma Retarder Inc., a subsidiary of Labinal Inc., Hayward, Calif., to market its brake retarders on Rockwell's premium single rear-drive axles.

The retarders are being made available on fire truck axles and will be expanded to school buses, recreational vehicles and other commercial specialty vehicles in the future.

They are available on Rockwell RS-series single-drive rear axles, with gross axle weight ratings of 13,000 to 30,000 pounds and a Telma Focal series electromagnetic retarder through virtually all North American fire truck OE manufacturers.

PACCAR Parts expands

BELLEVUE, Wash. — PACCAR Parts, a division of PACCAR Inc., has begun constructing its new Midwest distribution center in Rockford, Ill.

The new facility, when completed in the summer of 1991, will be one of seven PACCAR Parts locations in North America for its Kenworth and Peterbilt heavy-duty truck dealers.

It will consist of 225,000 square feet of distribution and operating space, plus an 8,000-square-foot office area, situated on a 24-acre site.

Makers debunk 'air-bag-servicing-isn't-safe' myth

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Automakers are making efforts to educate service personnel at dealerships and independent shops on the repair and installation of air bags.

Since Sept. 1, 1989, federal law mandates that all new cars sold in the United States have an automatic crash protection system as standard equipment. Some automakers install automatic safety belts to fulfill the requirement, while others use air bags — which are becoming the favorite of the buying public.

As an example of the rising installation rate, air bags are standard on all cars Chrysler Corp. makes in the United States, while Ford Motor Co. and General Motors each plan to install air bags in more than 1 million 1991 model cars. GM plans to have driver-side bags on all domestically-built cars by 1995, and Ford expects to install both driver- and passenger-side bags on all cars by the mid-1990s.

It is important that technicians and body-shop employees know how air bags work and what precautions to follow when repairing vehicles that are equipped with the system.

It also is important, according to the carmakers, to dispel the myth that air bags are hazardous to work on.

To this end, auto manufacturers have incorporated air bag training for dealership personnel into their new-model training sessions and have issued service manuals to owners and dealers and publications and bulletins aimed at independent shops and rescue professionals. The missives list the procedures to follow on vehicles equipped with air bags.

> "There is absolutely no danger to the technician servicing, replacing or diagnosing the bag. In fact, there is more danger being exposed to the gasoline in the car than to the air bag."
>
> **Brad Thatcher**
> C-P-C Group

The automakers and others involved with air bags are not overly concerned about hazards associated with the system.

"Once the public and the technicians get over that initial fear and get to understand how they (air bags) work, I don't think they will be as concerned as they are right now," said Andrew D. Brandt, advanced service project manager for large cars for the service engineering department of Ford Parts and Service Division.

"People have been concerned about gasoline in cars ever since the introduction of the internal combustion engine," Brandt said. "I can imagine, back in the 1890s, a lot of people were afraid of that too until they understood gasoline and got used to it."

Brandt said Ford first made driver-side air bags available on 5,000 Tempos to fleet buyers in 1985.

"Since then," Brandt said, "Ford has no reports of accidents or injuries in dealerships while replacing or servicing air bags."

Air bags, according to the carmakers, require some training, but no special tools to replace.

"Replacing an air bag essentially involves removing four bolts off the back of the steering wheel, removing the air bag module and installing a new one and attaching the bolts," Brandt said. "No special tools are needed to replace the bag, and a simple voltmeter can be used to test the system."

Components in the module are the wiring shield, igniter assembly, inflator, mounting plate, retainer ring, air bag assembly, module liner and trim cover assembly.

Ray Stone, manager of technical service liaison for Chrysler's Service and Parts Operation, said routine maintenance of air bags is "no problem whatsoever" for technicians.

"Air bags are not hazardous to technicians if they follow directions in the shop manual," Stone said.

According to Stone, a popular misconception involves the small amount of residue deposited on and around the air bag after deployment.

"This residue consists primarily of corn starch and is not toxic and not a cause for concern," Stone said. "Basically, the starch is used as a dry lubricant for the bag as it deploys. Education about the air bag will dispel this misconception."

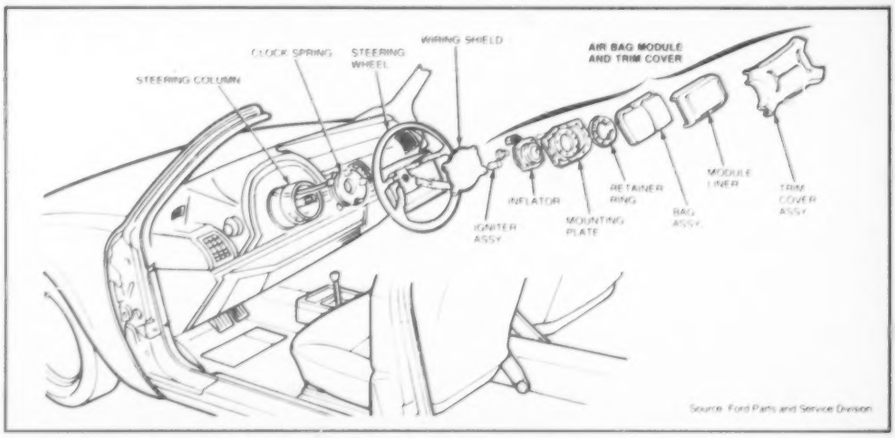
Because the residue also contains a small amount of sodium hydroxide dust, which is said to be a potential irritant to the skin, automakers advise technicians to wear protective gloves and safety glasses when working on deployed air bags.

In their shop manuals and instructions to technicians, the automakers advise that the cardinal rule before working on a car equipped with an air bag is to disable the electrical system which powers the bag. This involves disconnecting the negative battery cable, the fuse and/or the split connector at the base of the steering column.

Bill Blaylock, manager of technical training for Mercedes-Benz of North America Inc., said the automaker, which has been equipping cars with air bags since 1984, has incorporated bag training into its basic training for new technicians and advanced courses for experienced shop personnel.

"One of the features of the training program is a videotape that addresses some of the concerns originally associated with air bags."

see AIR BAGS, page 22



Drawing shows the components in the air-bag module used on Ford Motor Co. vehicles. The module, which is mounted in the center of the steering wheel, should be serviced as a complete assembly.

Shop volume moves up for 3rd straight month

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business recorded by new-car dealerships increased in September for the third consecutive month, according to the *Automotive News* Service Index.

Although September's shop volume was 2.1 percent ahead of the year-ago total, the increase was less than the 5.6 percent gain reported by dealers in August and the 9.3 percent advance in July.

Service and parts business for dealers in January to September 1990 was 6.8 percent above the similar period of 1989.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealerships.

September's leading indicator was total labor sales (customer-paid and warranty), which topped last year's volume by 4.7 percent. Close behind was gross profit on all labor, parts and accessories — the most important indicator from the dealers' viewpoint — which was up 4.5 percent.

Shop parts sales, used on both customer-paid and warranty jobs, were up 3.6 percent, while repair orders written and sales of all parts and accessories were down 8.3 percent and 0.6 percent.

Total labor sales led the year-to-date indicators with an increase of 8.1 percent, followed by shop parts sales, up 7.0 percent, and gross profit, up 6.0 percent. Sales of all parts and accessories registered an increase of 5.8 percent, while repair orders written dipped 0.7 percent.

SERVICE INDEX
102.1*

	Sept. '90 vs. Sept. '89	Jan. Sept. '90 vs. Jan. Sept. '89
Gross Profit on All Labor and P&A Sales	+ 4.5%	+ 6.0%
Repair Orders Written	– 8.3%	– 0.7%
Total Labor Sales (Customer & Warranty)	+ 4.7%	+ 8.1%
Shop Parts Sales (Customer & Warranty)	+ 3.6%	+ 7.0%
Sales of All P&A	– 0.6%	+ 5.8%

* Survey by Automotive News shows that dealers' service and parts business in September 1990 was 102.1 percent of business in September 1989. Service business in the first 9 months of 1990 was 106.8 percent of business in the corresponding period in 1989.

Ford Motor milestone

Ford Motor Co. reached a major milestone with the sale of its 10-millionth Extended Service Plan. Barbara McLoughlin of Columbus, Ohio, purchased the contract for a Ford Taurus from Ricart Ford in Columbus. The service plan was first offered by Ford and Lincoln-Mercury dealers in 1976. From left are Rhett Ricart of Ricart Ford; Barry Pate, extended service plan marketing manager for Ford Parts and Service Division; McLoughlin; and Fred Ricart of Ricart Ford.

Ford service plan aimed at big-rig owners

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

A massive effort to improve parts delivery and customer service for Ford heavy-truck operators has been announced by Ford Motor Co.'s Parts and Service Division.

"We have committed the full resources of our division to this effort," said David Cook, the division's heavy-truck operations manager. "We have taken 30 separate actions that have one goal in mind — to provide the type of parts and service support that today's heavy-truck operator expects and deserves."

Cook said the changes range from providing emergency help on the road and improving parts availability to increasing training for dealership technicians.

Ford is offering a new emergency road service, called Linehaul Club, to owners of Aeromax 120 and other over-the-road Ford heavy trucks. Fees for the road service have not been set.

The road service, which will begin in January, will help get the vehicle to a dealership for repair 24 hours a day, 365 days a year.

To get truckers back on the road quickly, the necessary parts for repairs must be available on short notice. To meet that requirement, Ford is shifting thousands of parts from the national depot in Livonia, Mich., to five regional parts depots.

"These depots," Cook said, "in Atlanta, New York, Dallas, San Francisco and Detroit, will each have approximately 15,000 heavy-truck parts that represent 98 percent of our present parts demand.

"We are testing a regional training program for dealer and fleet technicians. We are planning 12 regional training centers with eight full-time professional trainers," he said.

Ford Parts and Service Division is establishing a technical hotline for heavy-truck dealership technicians and is increasing its field force to improve service, Cook said.

INSIGHTS

NISSAN FIRST: Nissan Motor Manufacturing (UK) Ltd. will export its British-made Primera sedan and hatchback cars to Japan and Taiwan starting in 1991. It is the first time any Japanese auto company has shipped European products to either country. Nissan will produce about 100,000 cars at its Sunderland plant in northern England next year and plans to export up to 70 percent of the output to 20 continental European markets, as well as Japan and Taiwan. Around 10,000 will go to Japan and Taiwan. Each will get about 5,000.

BRAIN DRAIN: A crisis in American industry is imminent unless business and academicians reduce the fear of learning math and science-based disciplines among the nation's youth, Dr. Robert A. Frosch, vice president of General Motors research laboratories, told presidents of the nation's top technical universities. Speaking Nov. 8 before the Association of Independent Technological Universities in Irvine, Calif., Frosch said, "The United States awards the smallest proportion of science and engineering degrees of all industrialized nations. The National Science Foundation predicts a shortfall of 450,000 engineers and scientists by 2010. Clearly, we have a serious national problem." He called for "hands-on" programs to change the American youth attitude that science and engineering fields are either too mundane or too difficult to pursue. As an example, he cited a program at the GM research labs where engineers and scientists volunteer time with students from local schools in Warren, Mich. Students visit the GM facility and researchers speak to science classes at the school.

METHANOL MARCHES ON: GM is on schedule to deliver 2,200 methanol or flexible-fuel vehicles to California for testing. The first 200 vehicles are expected to be delivered in the latter part of 1991, and 2,000 more delivered in 1992. Is lubrication of methanol vehicles still considered an important issue? It is, according to Joe Colucci, head of the GM research labs fuels and lubricants department. He says, "When you cold-start these vehicles, it takes longer compared to gasoline vehicles. Considerable fuel can get into the crankcase. Methanol is not a good lubricant; it changes the lubricating properties of the oil and forms an emulsion that looks like mayonnaise." There is a major effort to develop lubricants to overcome the problem and provide good engine durability. The cold-starting situation is also being attacked.

TRACKING TRANSPLANTS: Nearly 90,000 people are employed by Japanese automotive-related manufacturing and assembly transplants in the United States, according to the latest study by the Office for the Study of Automotive Transportation, University of Michigan Transportation Research Institute in Ann Arbor, Mich. Included are approximately 47,000 employees in the part and component sector, 17,000 in the materials and capital tools sector and 26,000 in assembly facilities. The survey was conducted during the second quarter of 1990 and released Nov. 1. While the Japanese supplier transplants produce most types of components, the most commonly supplied are chassis electrical, steering and suspension, brakes, wheels and tires.

PERCENT OF JAPANESE TRANSPLANT PART AND COMPONENT ACTIVITY BY SYSTEM GROUP

Chassis Electrical	14.0
Brakes, Wheels, Tires	13.7
Steering, Suspension	12.7
Seats	10.6
Body Structures, Bumpers	9.6
Trim, Molding	9.6
Heating, Venting, Air Conditioning	6.6
Engine	6.1
Interior Panels, Liners, Mats	6.1
Engine Electrical	5.6
Transmission, Transaxle	5.5
Exhaust, Emissions	5.1
Hardware	4.0
Plastic Components	4.0
Ball Bearings	3.5
Filters, Cleaners	2.9
Fuel Delivery Systems	2.5
Other Components	15.1

ON TO PHASE II: Research on the expendable pattern casting process has moved to Phase II funding with about $600,000 from the Energy Department and $600,000 from 32 industry sponsors. Phase II research will involve the Southern Research Institute, University of Alabama — Tuscaloosa; University of Missouri — Rolla; and University of Wisconsin — Madison. Focus points will include literature evaluation revisions, review of defect analysis, determination of thermophysical properties, development of a fluid-flow and solidification model. Phase I findings are available from American Foundrymen's Society, Des Plaines, Ill., which contracted with the Energy Department for the work.

TIES THAT BIND: GM's Delco Electronics Corp., Kokomo, Ind., and Saab-Scania Combitech AB, Jonkoping, Sweden, have formed a joint development company, Mecel AB, for automotive electronics. Mecel, with about 40 employees, previously was a subsidiary of Combitech, which now has a 60 percent interest. For the Saab unit the deal means a potential for new customers inside GM. For GM, it brings a technical development source in Europe. The joint company results from a 50-50 cooperation agreement between GM and Saab, which created an independent car company, Saab Automobile AB. The agreement also provided for technical cooperation between Saab Automobile AB and GM's European technical development centers.

Auto trade deficit climbs 2.4%

WASHINGTON — The U.S automotive trade deficit increased slightly in July, putting an end to six straight months of decreases.

The latest trade statistics from the U.S. Commerce Department show that the trade deficit in automobiles and light trucks increased 2.4 percent compared with July 1989 levels. That followed a 1.1 percent dip in June.

The July automotive trade deficit was $3.46 billion, compared with a $3.38 billion deficit in July 1989. The total value of imports was $4 billion. Exports were valued at $540 million.

Despite the July increase, the U.S. automotive trade deficit has declined 7.6 percent over the previous year.

During that time, the value of car shipments from the United States to Japan rose 33.1 percent compared with year-ago levels. Japanese-made imports fell 6.9 percent. In the same period, Japanese automakers continued to increase production at their U.S. assembly plants.

The value of all new-vehicle imports for July was up 2.5 percent compared with year-ago levels. The value of Canadian imports increased 44.4 percent. Other countries registering increases in the value of shipments were: West Germany, 24.3 percent; Mexico, 34.3 percent; United Kingdom, 1.0 percent; France, 819.4 percent; and countries grouped as "others" by the Commerce Department, 119 percent.

The value of Japanese shipments fell 20.1 percent for the month. Other countries experiencing a decrease in the value of U.S.-bound shipments were South Korea, 26.3 percent; Sweden, 27.2 percent; Italy, 2.4 percent; Brazil, 46.8 percent. Yugoslavia exported no cars to the United States in July.

The overall gain in the value of exports was 3.7 percent in July.

Mexico's small-car prices soar

Addition of catalytic converters responsible for increases

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Mexican automakers have saddled some of their smallest cars with stiff price increases in a year that has seen the widespread addition of catalytic converters.

Yet, despite the price hikes, industry observers expect combined sales of 1991 models made in Mexico for sale in the home market to total 560,000 to 565,000 units, about 10 percent more than in the 1990 model year.

Bottom-of-the-line models from Chrysler, Nissan Mexicana, General Motors, Ford and Volkswagen have absorbed price increases ranging from 8.6 to 25 percent. On larger cars — Ford's Taurus and Chrysler's New Yorker, for example — increases have been held to 8 to 11 percent.

At Nissan Mexicana, the lowest-priced Tsuru 2 equipped with a catalyst costs 14.7 percent more than a comparable 1990 model, according to Seiroku Ochi, commercial director. The price of a Tsuru without a catalyst is 24.5 million pesos ($8,448), up 4.9 percent from last year. The base Tsuru, a popular small car that competes against Volkswagen's Beetle, will be the only 1991 car sold in Mexico without the device.

Among other small cars, the Chrysler Shadow increased 25 percent to 36.6 million pesos ($12,620). GM's Cavalier rose 13 percent, to 40.3 million pesos ($13,896), while the lowest-priced Ford, the Topaz, has gone up by a similar percentage, to 32.5 million pesos ($11,206). The VW Beetle, Mexico's lowest-priced car, increased 8.6 percent.

The law that has put catalysts into widespread use this year does not mandate the devices on all cars as long as an automaker's entire fleet meets a corporate emissions average set by the government.

Nissan Mexicana has said that 25 percent of all the 1991-model-year vehicles it sells in Mexico will not have a catalytic converter. The company also builds the Hikari coupe, a station wagon and Ichivan and pickup trucks in Mexico.

This year, with the lifting of rules banning imports, Nissan Mexicana has added the 300ZX and the Maxima to its line, both equipped with 3.0-liter engines.

"For the moment many Mexicans feel that Nissan is an entry-car manufacturer only. That's not quite true. These (imported) cars will surely improve our image in the Mexican market," Ochi said.

He said Nissan plans to import 3,000 to 5,000 300ZX and Maxima vehicles this model year and import the Pathfinder in the second half of next year.

The non-turbo 300ZX, which will compete with the twin-turbo GM Corvette, will cost about 150 million pesos ($51,700) against the Corvette's 200 million peso ($68,965) price tag, Ochi said. The Maxima will be priced at about 100 million pesos ($34,482).

Nissan expects to sell about 116,000 vehicles in Mexico in the 1991 model year.

Import sales dip 10%; transplants play bigger role

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Japanese, European and Korean nameplates all had fewer sales of imported cars in October than they did in the year-ago period.

The imports ran counter to the trend of the total U.S. car market, which was up 6.6 percent for the month. In some instances, namely with the Japanese, import declines reflected increased reliance on U.S.-built cars.

Total imported sales fell 10.3 percent for the month. European makes were off 7.3 percent. The Japanese fell 9.1 percent, and Korean cars were down 25.2 percent.

Of the 39 divisions selling imported cars, only 10 sold more last month than they did during October 1989. They are Acura, Alfa Romeo, Chevrolet/Geo, Honda, Isuzu, Lexus, Mercedes-Benz, Mercury, Mitsubishi and Pontiac.

Bright spots for the Europeans included the Mercedes 190 series, BMW 7 series, Jaguar XJS, Saab 9000 series and Porsche 944S and 911 Carerra 2.

Of the 13 Asian nameplates, four increased import sales: Acura, Isuzu, Lexus and Mitsubishi.

Acura's gains were attributable to the Integra, which sold 7,448 cars, up 40.7 percent from last October. The Legend, which is being replaced this month, faltered.

Isuzu was up 79.5 percent thanks to its new Impulse and Stylus. But the company had little presence in the passenger car market last year and now has two entries. They sold a combined 1,048 units in October.

Lexus continues its strong success. Last month Lexus sold 5,530 cars, up 61.9 percent from last October, when the franchise was just getting off the ground. Infiniti, with 934 sales of its new G20, had its best month ever as it wound up its first full year of sales. It sold 2,750 units in October.

Mitsubishi gained 1.4 percent on its imported models and 2.1 percent for its domestically built products. Sales of the Mirage and Precis were up, and 197 buyers got their hands on the new 3000GT.

Bright spots in the rest of the pack include a near doubling of imported Civic sales for Honda. And although Honda sold 3,812 fewer imported Accords than during the previous October, it sold 7,304 more Ohio-built ones.

Hyundai sold 1,719 of its new Scoupe models. Excel and Sonata were both down more than 40 percent.

Toyota's import sales declined 19.4 percent in October. But the company serves as one of the best examples of the effect domestic production can have on overall sales performance.

Sales of U.S.- and Canadian-built Camrys and Corollas were up 79.7 percent for the month. And total sales of import and domestic Toyotas increased 11.8 percent.

Sterling taps Range Rover ad agency

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Sterling Motor Cars has hired Grace & Rothschild as its advertising agency. The agency also represents Range Rover of North America Inc.

Both U.S. importers are subsidiaries of the Rover Group in Britain, but Rover maintains separate sales and marketing operations for each, at home and abroad.

Spokesmen for both Range Rover and Sterling denied the persistent rumor that Rover Group is considering merging the two U.S. companies, and they denied that having the same ad agency makes a possible merger any more likely.

"There is no change in the way Sterling Motor Cars and Range Rover do business just because we have the same ad agency," said William E. Baker, Range Rover's vice president of corporate communications.

Roy Grace, chairman of Grace & Rothschild, said his firm's success in establishing the Range Rover marque helped win the Sterling account.

Meanwhile, Sterling officials concede that Sterling's image is weak. The company has poor name recognition, and there is confusion over its connection with Honda Motor Co. Ltd.

The Sterling car was conceived through the a joint effort between Rover and Honda. It is a twin of the original Acura Legend and is powered by a Honda 2.7-liter V-6.

Grace & Rothschild is Sterling's fourth agency in three years. The previous one was New York-based AC&R/DHB & Bess Advertising Inc. Sterling began searching for a new agency last summer.

Megadealer Norman Braman owned 51 percent of the Miami-based Sterling import operation when it was formed in 1987. Rover, which owned 49 percent, bought Braman's share in May 1988. It changed the name to Sterling Motor Cars in April 1989, replacing Austin Rover Cars of North America.

Range Rover, based in Lanham, Md., outsells Sterling with its sport-utility, which starts at $42,400. Prices for Sterling's three models begin at $26,500.

Through October of this year, Sterling sales were 3,443, down 31.9 percent from the same period last year. Range Rover sales were 3,669, down 4.8 percent.

TRACKING THE OPERATIONS OF DEALER AD ASSOCIATIONS

Manufacturer	Number of dealer advertising associations	Percent of dealer body enrolled in dealer ad associations	Range of per-vehicle contributions by dealers	Use of factory ad agency required to receive factory funds?	How program works
BUICK	145	100	1 percent to 2 percent of invoice	No	Buick pays one-third of the media costs of an approved ad while the dealer group pays for two-thirds. Factory support rises to 50 percent when dealer group runs factory produced ads for special promotions.
CADILLAC	64	90	1 percent of invoice up to $300	No	Cadillac pays an average one-third of media costs. Actual factory support is up to Cadillac zone manager.
CHEVROLET	150	100	1 percent of invoice up to $300	No	Dealers collect their own funds and spend the money on media in their markets. Division runs factory produced regional ads separately from dealer association ads.
CHRYSLER-PLYMOUTH	59	99.3	Majority of dealers contribute between 0.5-1 percent of vehicle base invoice price plus up to $100	Yes	Chrysler-Plymouth contributes 10-35 percent of media costs for dealer association ads; dealers contribute two-thirds. The factory may raise support to up to 50 percent for special promotions.
DODGE	56	97.2	Majority of dealers contribute between 0.5-1 percent of vehicle base invoice price plus up to $100	Yes	Dodge contributes 10-35 percent of media costs for dealer association ads; dealers contribute two-thirds. The factory may raise support to up to 50 percent for special promotions.
FORD DIVISION	63	99	$50-$150	No	Ford distributes its market support money among its districts. The districts divide the money among the advertising groups. To receive 100 percent of market support funds, a Ford Dealer Advertising Fund group must spend 80 percent of what it collects on 6 media expenditures. The groups may use the remaining 20 percent on incentives and administrative costs.
HONDA	Acura - 30 Honda - 63	Acura - 65 Honda - 58	Acura- $150-$300 Honda - $50-$200	Acura - No Honda - No	Dealers who want to organize a group tell the importer how much they want to collect and American Honda puts it on the invoice. Honda dealers receive factory support for special programs.
JEEP-EAGLE	30	99.8	1 percent of base invoice plus $50	Yes	Jeep-Eagle pays 40 percent of dealer association media costs. For some special promotions, Jeep-Eagle will pick up the cost of producing the ad.
LINCOLN-MERCURY	29	100	$75-$290	Yes	Marketing funds are determined by the spending of individual associations. Dealers earn a share of the pot based on their spending and requests from the district ad manager and/or the association. For special promotions, L-M may shift factory ad funds to dealer ad associations.
MERCEDES-BENZ	254	98	$100-$300	Yes	Mercedes-Benz contributes $100-$300 per car in a dealer matching program. Matching funds pay for dealer association media costs; dealers can take up to 10 percent of dealer/factory money to fund non-advertising programs.
OLDSMOBILE	156	100	1-2 percent of invoice	No	Oldsmobile allocates its regional ad money among its 4 regional managers who work with dealer groups to coordinate association and regional ads which complement one another. To obtain money from Oldsmobile, association ads must receive legal clearance.
PONTIAC	160-180	95	1 percent of invoice ($40 million-$60 million)	No	Pontiac pays for $1 of dealer ad association media costs out of every $2 the dealer group spends in media.
TOYOTA	23	99	$185-$300	No	Dealers under Toyota Motors' distributor system receive variable contribution rates from the factory ranging from 10-50 percent. Toyota national sales events require dealers to use factory ads.
VOLKSWAGEN	75	92-95	$150-$400	Yes	VW dealers decide if they want a dealer association and how much they want to contribute to the fund. VW contributes 50 percent of media costs.
VOLVO	187 single point co-op dealers;[1] 37 major market groups	98	$100-$200	Yes/No[2]	For every $100 dealers contribute, Volvo matches it, plus $17.65 (to cover agency fees) for a total of $117.65. Major market dealers must use national agency to receive funds from factory; single point co-op dealers do not.

[1] Single point co-op dealers are dealers in an area where there is no organized Volvo dealer advertising group.
[2] Major market dealers must use national agency to receive support funds from factory; single point co-op dealers do not.

FROM PAGE 1

and withholding popular products.

A Midwestern Ford dealer, who approached a factory representative about getting out of his ad association and taking his ad dollars with him, was told he would have to resign his franchise if he did so. He said he paid almost $100,000 in ad association fees in 1989.

"A lot of dealers are to the point of 'what's the use?' " said the dealer, who did not want to be identified. "I think it's a joke."

Dealers in Ohio were so enraged when Chevrolet and GMC Truck Division started assessing mandatory ad fees two years ago, the Ohio Automobile Dealers Association filed a lawsuit alleging that the two General Motors divisions violated the Ohio Motor Vehicle Franchise Law by requiring dealers to join an ad group.

The lawsuit was certified as a class action on behalf of all Ohio Chevrolet and GMC Truck dealers and is pending in federal court.

Johnny Beck, owner of Johnny Beck's Jeep-Eagle in Ocean Springs, Miss., and chairman of the New Orleans zone Jeep-Eagle Council, is single-handedly challenging Chrysler Corp. In a letter to council members, Beck said: "Mandatory assessments are in violation of state motor vehicle regulations as well as state law."

He vows to get out of the association, paving the way for fellow dealers to do likewise.

At least two manufacturers have abandoned co-op advertising. They are Nissan Motor Corp. in U.S.A., once plagued with inconsistent dealer association advertising, and Suzuki of America Automotive Corp., which grew tired of fighting with its dealers. BMW of North America Inc. disbanded its ad associations and reduced the per-car regional advertising fee paid by dealers.

A high-stakes game

Because manufacturers are reluctant to disclose how much they and their dealers contribute, it is difficult to determine exactly how much is spent on co-op ads.

But the stakes are high and the dollar amounts are staggering. In 1989, dealers spent $3.8 billion on local advertising, a 6 percent decline from 1988, according to the National Automobile Dealers Association. New-car dealerships shelled out an average of $154,000 on local association and independent dealer advertising in 1989. As recently as 1980, dealers spent an average of $42,800 for local ads.

But that total does not include any of the factory co-op money, and it also excludes the major portion of the dealer money spent on co-op ads.

NADA, which gleans ad spending data from dealer financial statements, said the figures do not include most dealer ad association contributions. Most ad association fees are included in the vehicle invoice, and about 75 percent of the dealers calculate the expenditure as a cost of doing business, rather than as advertising.

Manufacturers, faced with increased competition, loss of market share and soaring media costs, say co-op advertising has become a very important slice of the automobile marketing pie. They believe it allows dealer groups to advertise in mediums most individual dealers cannot afford and with a more unified voice.

They see it as a way of increasing their share of voice. Share of voice refers to a company's ad expenditures in relation to all advertisers in its category.

To create a bigger pool of funds and to make sure everyone who benefits from the advertising helps foot the bill, many manufacturers, including GM and Chrysler Corp. made co-op ad fees mandatory.

Mandatory ad fees are assessments added to the invoice of each non-fleet, non-employee vehicle to pay for local advertising. The assessment is usually 1 percent of invoice plus $50 to $100, but it can run as high as 3 percent.

Dealers who are required to pay mandatory ad fees are not required to join an ad association. Fees collected from non-members are used by the manufacturer to pay for regional marketing in the non-members' regions.

GM went to mandatory fees two years ago when it found that its dealers' participation in ad associations was much lower than that of Ford Motor Co. and Chrysler, which had close to 100 percent participation. Chevrolet and GMC Truck instituted the program in the fall of 1988, followed by Oldsmobile and Cadillac a year later. Pontiac and Buick began the program this fall.

Many dealers, especially those in small towns and rural areas, are vehemently opposed to the program. They resent being told how to spend their ad dollars, and they argue that co-op advertising is effective in metropolitan areas, where most large dealerships are located. The small dealers say they receive few, if any, benefits.

"Personally, I don't see any benefit (in dealer co-op ad associations)," said James K. Lust, a Chevrolet-Buick-Oldsmobile dealer in Aberdeen, S.D. He is also NADA's GM industry relations chairman.

Many of the manufacturers, such as Chevrolet, return a portion of the collected fees, usually about 25 percent, to the dealer associations for local advertising.

But NADA President Ray Green said the greatest problem with mandatory advertising associations is that not enough of the money is returned to local markets.

"Dealers don't like it because they know its not working for them," said Green. "It upsets them, and I don't blame them. Major markets represent the majority of sales, but they don't represent the majority of dealers."

Saturn is different

The exception to GM's co-op advertising rule is its new Saturn Corp. Saturn dealers are not members of traditional co-op groups.

Instead, Saturn has established a regional marketing council that consists of one dealer representative from each of its six regions, and representatives from Saturn marketing and Hal Riney & Partners of San Francisco, Saturn's advertising agency.

Unlike other GM franchisees, which are assessed 1 percent of invoice to pay for regional and local dealer association advertising, Saturn dealers pay a flat rate of $150 per vehicle into the regional marketing program. Saturn pays for the creation of ads; the dealer contributions pay media costs.

The councils meet quarterly to determine how the money will be spent. The regional dealer representatives meet with dealers in their areas before attending the council session.

Russ Hand, a dealer in Marina Del Rey, Calif., represents Saturn's Western region, which includes California, Oregon, Washington, Idaho, Nevada and Arizona.

He said the program will allow the purchase of spot television and other media regionally, which is less expensive than buying it city

by city.

Last August, Pontiac and Buick began assessing dealer ad fees. Buick is spending $20 million in factory support funds, and Pontiac is spending $20 million to $30 million in the 1990 calender year, factory sources said. Oldsmobile is funneling about $25 million into co-op advertising, according to an industry source.

Last July, Ford Division, in its quest to catch Chevrolet in car sales, pumped an additional $11 million into its dealer advertising associations fund. Lincoln-Mercury dealer groups received an additional $6 million.

Dealers step up efforts

Some dealer groups, either on their own or because of what some members perceive as pressure from their factories, have stepped up their efforts as well.

For example, last July, when the Cincinnati-area Dodge dealer group voted to double its ad fees, several members were angry and charged that the decision was made by the factory and pushed onto dealers. Starting in January 1991, dealers will pay 1 percent of invoice plus $100, up from the current 0.5 percent plus $50.

On the other hand, in September 1989, Ford Division began allowing its dealers to collect local advertising funds by putting a 1 percent charge on the invoice price of new cars and trucks. Ford dealer groups may choose between paying a per-vehicle amount or 1 percent.

One Ford dealer group taking advantage of the program is the Greater Michigan Ford Dealer Advertising Fund group. In September, it voted to assess its members 1.5 percent of invoice of each vehicle which is to be no less than $150 and no more than $250. The group, which currently pays a flat rate of $120 per vehicle, has not determined when the measure will go into effect.

Craig Weidner, owner of Weidner Motor Sales in Cadillac, Mich., and president of the 118-member association, said the group raised its fees to meet higher media costs and to remain competitive.

"We can react more quickly to the market and be on (television) with an urgent message," he said.

While unique advertising is the main thrust of many dealer ad associations, the manufacturers often want dealers to help them develop a clear, consistent message.

Some makers, including L-M, Mercedes-Benz and Chrysler's divisions, require dealer groups to use factory-appointed advertising agencies if they want to receive co-op payments.

Extra lures

To encourage associations to use more manufacturer-supplied ads and/or programs that tie in to national programs, several manufacturers increase co-op spending or offer special incentives.

While Toyota ad groups are not required to use factory-produced advertising, those that used ads promoting the "Toyota Shopping Time" national campaign at the end of the 1990 model year were given more money from the factory than groups that did not.

Dealer groups that do not have to use factory-appointed agencies to receive the matching funds still must submit the ads to their own legal counsel or to the manufacturer's legal department to make sure the ads are legally accurate.

Some dealers are unhappy with the finished product.

"Dealer's want to kick, bite and scratch in the ads, but they come out somewhat sterile," said a Michigan Ford dealer.

Daniel Burns, NADA industry relations representative for Oldsmobile and owner of Dan Burns Oldsmobile in Delray Beach, Fla., said that after GM's legal department finishes with an ad, it is as exciting as "kissing your sister."

Realizing that co-op advertising is a sensitive area, manufacturers say they try to be flexible.

Volvo Cars of North America, which made $16 million available to assist dealers with local and regional ad programs in 1990, prefers that its dealers use factory ads, but will on occasion accept dealer-developed ads, said Peter Smith, dealer advertising manager.

Mercedes-Benz of North America Inc. dealers who do not like the ads offered by the manufacturer may work with Mercedes to develop ads that satisfy both parties. Mercedes is assisting its dealers with $13 million in 1990.

Buick has added a twist to its program. Like the programs at other GM divisions, 25 percent of the fees collected are returned to dealers for individual advertising. As an incentive, Buick dealers whose monthly advertising expenditures exceed the amount returned are eligible to receive an additional 25 percent of that amount.

Eagle support declines

Jeep-Eagle, in an effort to help ease the transition from American Motors to Chrysler, paid 60 percent of the dealer advertising groups' media costs in 1988 and 1989. In 1990, the factory support dropped to 40 percent. Dealer reaction ranged from anger to acceptance.

The Greater Detroit Jeep-Eagle Dealers Association, in response to the decline, increased its ad fees from 1 percent of invoice to 1.25 percent plus $50 as of Oct. 1.

Joe Ricci, chairman of the Detroit Jeep-Eagle group, said it increased its fees because advertising is crucial to Eagle, which has yet to find its niche in the market.

"Anytime you take a cut on an unknown nameplate such as Eagle, it affects your sales," said Ricci, who owns two Jeep-Eagle stores in metropolitan Detroit.

"If you want to sell a product, you keep the name of the product out there. When we don't advertise, we see a drop in business. But there's only so much the company can do based on budget."

Suzuki, Nissan bail out

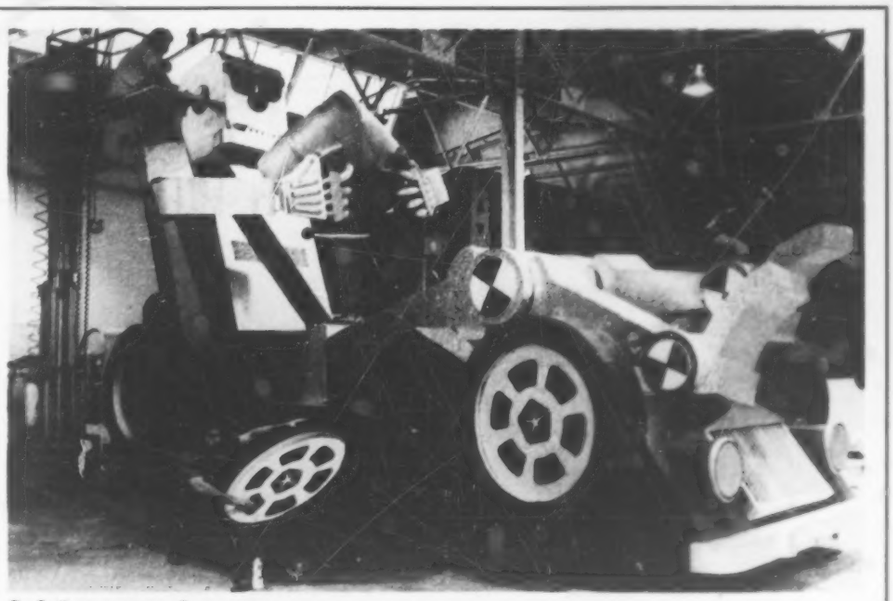
A few import firms have given up on dealer ad associations — at least for now.

Last April, Suzuki stopped assessing its dealers ad association fees and made association participation voluntary. Thomas Meyers, Suzuki national advertising and public relations manager, said the firm did so because most of its ad associations lacked full cooperation and support of dealers.

Of Suzuki's 290 dealers, 40 remain in ad associations, he said.

Nissan disbanded its dealer ad associations and dropped its assessment about two years ago in the "interest of creating a more unified image and to get more bang for our dollar," said John Rinek, Nissan national advertising communication manager. "We had areas where the advertising was good; some areas were not as strong. The image was not consistent."

The associations were replaced by five regional advertising offices that are funded solely by Nissan.



Safety on parade

Workers put the finishing touches on the world's largest air bag featured in the Chrysler Corp. entry for the Michigan Thanksgiving Day Parade in Detroit. Two vacuum cleaners will inflate within seven seconds, a tad slower than the "half a blink of an eye" it takes to inflate a real air bag.

Lutz finds silver lining for trucks

Shorter product cycles will help meet federal rules, he says

By Joseph Bohn
TRUCK EDITOR

Shorter product life cycles may be the key to meeting future federal standards for light trucks, according to Robert A. Lutz, president of Chrysler Motors.

At the annual SAE Truck & Bus Meeting, Lutz said light-truck engineers will face two distinct challenges in the next decade: shorter product life cycles and new regulatory standards. But one could provide the solution to the other.

Lutz

"Shorter product life cycles will enable you to meet the regulatory burden more easily," Lutz said. "If you're changing your trucks more frequently, it'll be that much easier to keep up with whatever new changes come down the pike on safety, fuel economy and emissions."

Lutz said both the customer and competition will force future trucks to follow the passenger-car trend of shorter life cycles.

"It used to be you could get away with changing a truck in this country every 10 or 15 years," Lutz said.

Some models, like the Jeep Grand Wagoneer, have gone more than 20 years without a major change.

The new Ford Econoline and Club Wagon, which are being restyled for 1992, have not had a major change since they were introduced as 1975½ models.

Similarly, the Chevrolet Blazer/GMC Jimmy, also being restyled in 1992, have not had a major change since 1969, a Chevrolet spokeswoman said.

"But that's all changing today," Lutz said. "Part of the reason is the growth of the so-called 'crossover' market — all those baby boomers out there driving minivans, sport-utilities and personal-use pickups."

He said that while those people are beginning to drive trucks, they expect the car-like attributes of regular design freshenings and continual technological updates.

Increased competition will also demand more frequent truck updates.

"The Japanese have taken life cycles for small pickups and other trucks down to five years," Lutz said, "which is almost as low as on cars."

He called that a "moving target we all need to shoot at."

Lutz noted continuing rumors of Japanese companies getting into the full-sized truck market: "In this new era of transplants here in America, I'd say anything is possible."

To meet the new competitive challenges, engineers must become more focused in their education, he said.

"This country already has enough MBAs and lawyers," he said. "What America needs to compete in the world is more people who know how to create and build things."

Lutz said he and Francois Castaing, Chrysler vice president of vehicle engineering, are on a "crusade" to encourage Chrysler engineers who are thinking of pursuing advanced degrees to get a master's or a doctor's degree in a technical field instead of business administration.

Wash. lemon law survives Ford's appeal

By Helen Kahn
SENIOR CORRESPONDENT

Washington state's highest court has unanimously upheld the constitutionality of its lemon law.

Ford Motor Co. challenged the law, claiming it violated the equal protection and due process provisions of the state and U.S. constitutions.

The case involved a court-ordered buyback of a 1985 Ford Thunderbird, purchased by Gary Barrett, with allegedly defective steering.

Ford acknowledged that the defect constituted a serious safety defect but appealed, saying the repurchase requirement was unconstitutional.

While the case was under appeal, Ford was assessed attorney fees and continuing damages of $25 a day beyond a 40-day grace period because it refused to provide free use of a loaner.

An almost identical case is awaiting decision in Florida, where Mercedes-Benz of North America Inc. has challenged the constitutionality of that state's lemon law. The same provisions that have now survived Washington's courts exist in the model lemon law being proposed by the National Conference of State Legislatures.

In its appeal, Ford claimed the law was unfair since the consumer could appeal "without risk."

The court upheld the lemon law's classification of consumers and manufacturers as "rational and justified."

The lemon law itself justified the distinction by noting manufacturers are better able to improve quality and provide service and are more knowledgeable of their legal rights. Consumers, meanwhile, are at risk of injury and must bear the hardship of defective cars.

In short, says the court, "Equal protection does not require that legislative efforts be perfect."

Finally, the court says the restrictions on Ford's right to appeal did not abridge due process, which does not in any case guarantee the right of appeal.

A Ford spokeswoman said the company was disappointed by the decision. She said it was too early to say if Ford would appeal.

Chrysler hikes rebates; Jaguar offers 'owner loyalty' lure

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. last week announced new and enhanced consumer rebates on trucks, effective through Dec. 16, and Jaguar Cars Inc. offered a $5,000 "owner loyalty" incentive on the purchase of all 1990 and most 1991 models.

Rebates of $1,000 now apply to all 1989 and 1990 Chrysler, Plymouth and Dodge minivans, including short-wheelbase models, which were not covered previously. The payback on long-wheelbase minivans formerly was $500.

A $700 rebate is now in effect on 1991 Jeep Cherokee, Laredo, Limited and Briarwood models, and a $500 rebate is in effect on 1991 Cherokee base and Sport models. Also, the rebate has been increased from $300 to $700 on the 1991 Comanche, except the two-wheel-drive short-bed model, which has been boosted from $300 to $500.

The rebate also has been increased from $300 to $700 on the 1991 Dodge Dakota pickup, except the S model, which has been hiked from $300 to $500.

Instead of the rebates, buyers may choose financing of 7.9 percent for 48 months or 10.9 percent for 60 months.

Jaguar is mailing certificates to the original owners of 1988 Jaguar sedans, offering $5,000 toward the purchase from dealer inventory of any leftover 1990 model or any 1991 model except the XJ6.

Deliveries must be made between Nov. 15 and Dec. 31.

Staff Reporter Jim Henry contributed to this report.

Jaguar's Vanden Plas sedan: Owners of 1988 Jaguar sedans can get a $5,000 incentive on 1990 or 1991 models except XJ6.

Suzuki (1991)		
Swift	$500-1,000, based on number sold	12/3
Sidekick	$500-1,000, based on number sold	12/3
Toyota (1989-91)		
Corolla, Camry	$200-1,100 quota	1/3
Trucks	$200-1,200 quota	1/3
Volkswagen (1990)		
Golf	$500	12/31
Fox	$500	None
Corrado	$1,500	None

Note: Some makers offer rebates to dealers on sales of 1988 and 1989 models. Most of those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

KOHRS

FROM PAGE 2

using lighter materials to reduce weight and multi-valve engines to cut fuel consumption.

He will have to get his ideas through his boss, Alex Trotman, executive vice president of North American Automotive Operations, and Ford's corporate product planning committee, which includes Trotman, Ford Chairman Harold "Red" Poling, Ford President Philip Benton and the chief of the Automotive Group, Allan Gilmour.

After joining Ford in February 1962, Kohrs spent 15 years in truck engineering, where he worked on winners such as the early Bronco and F-series models. He switched to the car side in the late 1970s, when Ford was, by Kohrs' admission, building "stodgy, boxy" cars.

As executive director of mid-sized programs and, later, of luxury and mid-sized car platforms, he worked on the aerodynamic 1983 Thunderbird/Cougar, the 1984 Mark VII, and the early development stages of the new 1986 Taurus/Sable.

During development of the Taurus/Sable, Kohrs says, "The thing that had the biggest impact on me was: What do the customers really want, and are you brave enough to get out ahead of ... present competition?"

Kohrs has been asking himself the same question these days as both import and domestic competitors have followed Ford into aerodynamic styling.

"I think the aero look has run its course in being different," he says. "When consumers look at our cars they are tending to look alike. They all have smooth lines, they all have rising belts, they all have high decks."

"I think the next wave is how to change the architecture of that car. One way is to move the cab forward, wheels at the corners, which some of the European cars have already done. You've got to really squint to see that that car is really different from the rest of the pack. I think that's the way we will go."

Downsizing and weight

Even as Ford is asking its designers to make its cars look different from competitors', the government is asking manufacturers to add safety equipment, such as airbags and door reinforcements, while increasing fuel economy.

Kohrs says Ford will approach the problem in two ways. One is to maintain the size of the interior passenger space while reducing the exterior — in other words, downsizing current products.

"That's probably the more risky approach because you have to break new ground on style, break new ground on sizing; what is a Taurus today may be a smaller Taurus tomorrow," says Kohrs, who added that being the first manufacturer to downsize is risky.

The second way will be to use lighter materials, such as plastic and aluminum, to reduce weight. Engineering sources say Ford is already planning to use aluminum heads and blocks in the engines for its 1994 Continental and 1993 Mark VIII. A plastic hood is also scheduled to appear on the 1994 Continental. Kohrs says these lighter materials will be more expensive but more efficient.

> To emphasize the importance of weight in meeting fuel economy standards, Kohrs says Ford engineers have been given a one-ounce coin carrying the inscription: "Every ounce counts."

"We'll probably end up doing a little of both" downsizing and increasing the use of lighter materials, Kohrs says.

To emphasize the importance of weight in meeting fuel economy standards, Kohrs says Ford engineers have been given a one-ounce coin carrying the inscription: "Every ounce counts."

Alternative fuels

Kohrs is also looking carefully at developing flexible-fuel vehicles, which can run on both gasoline and on alternative fuels such as methanol.

Ford is proceeding with developing an electric car, while competitor General Motors has tentatively planned to produce its electric Impact car. Kohrs calls the Impact a good blend of a highly stylish vehicle with a specific purpose, but said it has had no bearing on when or if Ford will bring an electric vehicle to market.

Ford has exposed its electrically powered Aerostar experimental van to the public.

He says GM has "gotten a lot of good publicity (with Impact), but they are no farther ahead than we are" in developing an electric vehicle.

"We are quite a ways away" from announcing the production of an electric vehicle, Kohrs says.

Reducing cycle times

Kohrs is also looking for ways for Ford to reduce its cycle time on cars, which has been running from six years on the 1989 Thunderbird to 10 years on the 1990 Lincoln Town Car, while the Japanese have all-new products every three to four years. He says Ford is trying to shorten every segment of the product development process.

"The Japanese started earlier and are masters in understanding process, as opposed to just looking for the results," he says. "And American industry in general has been results-oriented as opposed to looking at the process that you do the job."

"I don't think there is any magic in what the Japanese are doing — we just have to do it equally as well."

Kohrs says he believes Ford and other manufacturers around the world will make moderate styling changes two to four years after introducing a car. But major platform changes will be done only every six to 10 years, depending on the segment.

In the past, Ford has said that its large sedans (such as the Town Car and Grand Marquis) don't need freshening as frequently as the style-sensitive cars like Thunderbird and Cougar. Kohrs adds that less technically complex cars are easier to develop in 36 months than more technically complex cars. He mentioned that the Lexus LS400 took six to eight years to develop, while the new Escort took about four years.

Product in the Poling era

Kohrs disputes reports that the product-oriented days that characterized the reign of former Chairman Donald Petersen, an engineer, are history under Poling, who has a finance background.

"They are two different types of personalities, but I don't think the end result will be much different," says Kohrs, who worked with Petersen at truck operations.

"Don Petersen was very much a product man, but very much of a businessman as well," Kohrs says. "His real interest lay in style and function, and therefore he became far more involved in the engineering side. Red Poling is the epitome of a tremendously good businessman, and I think he would acknowledge that he is not the person who can go over to the design center or the engine design lab and direct what you should be doing."

"In a way, as an engineer that has a lot of positive to it. Because what I get from Red is ... you set the strategy you want, you let me buy into that strategy, and you deliver it."

EXPORTS

FROM PAGE 2

bile Division of Peugeot S.A.

Indeed, many analysts expect exchange rates to have an important effect on the 1990 earnings of the Big Three German exporters, Daimler-Benz AG, Volkswagen AG and BMW AG.

"If this sort of rate prevails next year I don't think they would make a profit in the U.S.," said Peter DuPont, auto analyst at Phillips & Drew in London.

"This is the most difficult problem they face right now."

Still, if the squeeze on major European exporters like Mercedes-Benz, BMW and Volvo is severe, no one really expects a withdrawal by companies with such big stakes in the American market.

"They are just going to have to bite the bullet," said DuPont. "The volume is so significant for them that they can't pull out."

Rather, it is the small specialty makers, like Bitter, and bigger companies looking for a U.S. beachhead, that have generally had to put aside their American hopes.

"I think a Bitter should be sold in the U.S. for about $65,000; at the moment, we would have to price it at $72,000" because of the dollar's tumble, Bitter said.

Indeed, he said, the Type 3 was slated to sell in the mid-$30,000 range when the Isuzu deal was set in 1987.

Bitter, who works out of a small workshop near Dusseldorf, is proceeding with scaled-back plans to produce about 500 Type 3s a year at a site he has not yet picked. He hopes to begin production next September, but is not sure if any of his cars will find their way to the United States.

"The dollar is so low at the moment that under the circumstances of our smaller quantities, maybe we don't need America. It is quite difficult for European cars in the U.S.," he said.

Other companies, big and small, have shelved plans to export to the U.S. market because of the enormous dollar barrier.

AB Volvo's Dutch affiliate, Volvo BV, three years ago called off plans to export its 480 sport hatchback to the United States because of exchange rates — even though the car was conceived for the U.S. market. Company officials say they won't consider reviving the project unless the dollar hits a sustained level of 2.00 against the mark.

Five years ago, the Spanish carmaker Seat S.A. said it expected to be in the U.S. market "by 1989." One year later — despite the readymade U.S. distribution network it enjoys through its parent, Volkswagen — Chairman Juan Antonio Diaz Alvarez said Seat won't even begin to consider U.S. sales for at least three years.

Currency rates have been a major factor in several other broken import dreams. Lincoln-Mercury's Merkur upscale franchise from Ford of Germany withdrew last year and GM's German unit, Adam Opel AG, has tabled its U.S. import plans indefinitely.

Exchange rates also helped spell doom last year for the Maserati-built Chrysler TC luxury convertible — yet another project conceived in the mid-1980s.

Italy's Bertone decided against replacing its X 1/9 two-seater, largely because it couldn't build a car to compete in the X 1/9's affordable roadster niche in the United States. That left Bertone's U.S. network without a product. Similarly, France's MVS last year put aside plans to sell the Venturi roadster in the United States.

Group Lotus, now owned by General Motors, had hoped to reenter the affordable roadster segment that its Elan occupied in the 1960s. But currency rates mean that the new Elan, due in the U.S. this winter, will probably have a price-tag approaching $40,000.

Britain's TVR sold roadsters in the United States until about 1984, and largely made its reputation in America in the 1950s. But though the company showed two new models at the recent Birmingham Show — the 3.9-liter, V-8-powered Griffith two-seat convertible and the Speed Eight 2+2 convertible — there are no plans to return. Company officials cite the bleak currency situation.

Similarly, the Peugeot-powered, Ford Barchetta-like Max roadster by the Dutch firm Max Motors, which is now in pre-series production, is no longer planned for U.S. distribution.

"At this moment it would be difficult to sell in the states unless we manufactured it there," said Eric Spronk, the car's designer and company founder.

Despite the tough selling conditions and pressure on margins, however, Helmer said Peugeot plans to introduce its 605 sedan in the United States in the foreseeable future and that stablemate Automobiles Citroen will launch its XM there — although on a small scale.

Car output trails 1989 by 10.4%

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

Twenty U.S. car and truck assembly plants were completely or partially idle last week, and Big 3 output fell 5.23 percent from the prior week. Fifteen of those plants will resume operations today.

Scheduled output of 99,446 cars last week dropped 9.10 percent below the prior week and 25.72 percent below the year-ago week.

Year-to-date, 5,557,992 cars have been produced, 10.44 percent behind 1989 at this point.

Truckmakers scheduled 57,459 units last week, an increase of 2.31 percent from the prior week but 24.92 below the same week last year.

So far this year, 3,517,814 trucks have been assembled, 4.99 percent below last year.

General Motors has extended downtime at its Fairfax, Kan., Grand Prix facility and the Van Nuys, Calif., Camaro-Firebird assembly plant for two additional weeks. The plants are scheduled to resume output Dec. 3.

The company's Allante line at the Detroit-Hamtramck facility will be idle this week for inventory adjustment.

Also reporting downtime this week are GM's Wentzville, Mo., car plant and the Lordstown, Ohio, van plant. Both are closed for inventory adjustment.

The Lake Orion, Mich., plant closed Wednesday, and Buick City in Flint, Mich., closed Thursday for inventory adjustment. They are to resume today.

All Chrysler Corp. and Ford Motor Co. U.S. assembly plants will operate this week.

Ford scheduled Saturday overtime last week at its Louisville, Ky., truck plant.

In observance of Thanksgiving, all U.S. plants will be closed Thursday and Friday.

Cars, trucks dip in Canada

Canadian automakers scheduled 22,330 units last week, 7.68 percent below the prior week's build and 5.30 percent below the year-ago week.

Year-to-date, 963,061 cars have been assembled, 8.01 percent above production at this point in 1989.

Truckmakers assembled 14,303 units last week, 7.37 percent below the previous week and 26.60 percent below the year-ago week.

GI exodus rocks dealers

Some say sales off 40% because of Iraq crisis

By Jim Henry and Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTERS

Besides keeping Iraqi dictator Saddam Hussein out of Saudi Arabia, Operation Desert Shield is keeping U.S. troops and their families out of U.S. car showrooms.

The absence of hundreds of thousands U.S. troops is hurting dealers from coast to coast — dramatically in cities that have a heavy economic dependence on the military. Dealers near bases reported sales are down as much as 40 percent, and in some cases they are canceling orders, cutting inventory and laying people off.

In addition to the full-time forces overseas, more than 600 reserve units have also been called up for active duty since Iraq's invasion of Kuwait Aug. 2. They come from nearly every one of the 50 states and Puerto Rico.

There are already more than 200,000 U.S. troops in the Persian Gulf area, with another 150,000 reinforcements in the pipeline.

The Japanese-American car

U.S. design centers, American engineers make Japan poised for even greater sales

First of two parts

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Nissan's Gerald Hirshberg in California: "What was it about the Gobi that made people in America smile? You really have to be here to feel it."

First came the Japanese imports. Then came the transplant car factories. Now come the technical centers.

The Big 3 are under siege once again.

And consistent with their long-term view, the Japanese automakers may not see the full results until the next century.

All seven Japanese carmakers with American factories are operating U.S. companies that will vastly improve their ability to design and engineer vehicles for American consumers. And most of these technical centers are undergoing aggressive expansion:

- At least $270 million is being sunk into new U.S. research and design facilities — some of them in the Big 3's home turf in Michigan.
- More than 2,400 designers and engineers will be on the American staffs of the Japanese automakers by the end of 1992.

The numbers are still modest by Detroit standards. Chrysler Corp., for instance, will consolidate several thousand engineers, designers and research and development personnel at its new Auburn Hill Tech Center by 1992.

But Japan's new U.S. technical networks make one thing clear: To pay for their investments in new staffs, new studios and testing operations, the Japanese automakers expect to sell hundreds of thousands or millions of additional vehicles in North America during the 1990s and beyond.

Some of America's hottest vehicles are Japanese imports born in U.S. design studios, including:

- Nissan's 240SX, Maxima and Pathfinder
- Toyota's Celica, Previa minivan and, from a Japanese designer on sabbatical, the Lexus LS400
- Mazda's Miata and MPV minivan

But the full integration of design, engineering and manufacturing in America is more difficult. Because most of the transplant factories here are already straining to fill demand for basic products, the launch of new vehicles by self-sufficient U.S. subsidiaries remains years away for many.

One exception is Honda's Accord station wagon, which will

New side-impact rule: few 1991 cars comply

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Although automakers have only a few days left until the Nov. 30 deadline for filing petitions to challenge the new federal side-impact standard, the government said the dockets are empty.

There were no petitions last week and few apparent compliance concerns, despite an *Automotive News* survey of 36 automakers and car importers that shows the makers of fewer than 6 percent of the cars sold in the United States this year feel confident that their cars meet the side-impact standard announced by the National Highway Traffic Safety Administration Oct. 24.

In October, Barry Felrice, NHTSA associate administrator for rulemaking, said that one-third of the car models now sold in the United States meet the tough new standard that is effective in 1994 for 10 percent of the cars sold and will be phased in entirely for 1997.

Early this month, Felrice declined to provide a list of the models that he believes meet the new standard.

In addition, a symposium paper on effective highway accident countermeasures, presented last June by Ralph Hitchcock, director of NHTSA's office of crashworthiness research, claimed that 12 percent of 1988 models achieved side-impact performance levels better than those in the new standard.

But an *Automotive News* survey found carmakers and importers willing to claim outright that only a few models — accounting for only 2 percent of 1990 calendar-year sales — would pass the standard today. The manufacturers and importers reported that a few others — totaling another 3.5 percent of this year's car sales — are close to compliance.

Seventy percent of the carmakers surveyed said they had not yet tested their vehicles using the

Solar cars woo the day

By Brian Woodward
SPECIAL CORRESPONDENT

SYDNEY, Australia — The results of the 1990 World Solar Challenge, which ended near Adelaide in South Australia last week, showed that the inventive talents of universities are more than a match for such corporate giants as Honda Motor Co. and Nissan Motor Co., whose Hoxan Corp. engineering unit claims to be the world's largest manufacturer of solar cells.

Of the first 15 cars across the finish line, nine represented universities. The winning car, the Spirit of Biel from Switzerland's Bienne School of Engineering, covered the 1,900-mile course at an average speed of just under 40.7 mph, despite rain and cloudy days for most of the race.

Honda's entry, Dream, finished second with an average speed of 33.6 mph, while the University of Michigan's Sunrunner came in third, with an average speed of 32.1 mph.

The Hoxan entry finished fourth, with an average speed of 32.3 mph.

In the three years running up to the next Solar Challenge, corporations and colleges alike will be analyzing the race results and trying to improve their cars' performance. Each of the solar cars in this year's race gathered and converted between 1,000 and 1,500 watts of electrical energy from the sun when racing was ideal, although cell technologies varied widely.

The convincing victory by the little known Swiss team will draw particular attention, race observers agree. The 385-pound car generated 1,300 watts of power from laser-grooved solar cells developed at the University of New South Wales, Australia.

The car's wide victory margin — its average speed was 7.1 mph faster than the Honda entry and 8.4 mph faster than Michigan's — in unfavorable weather underscores the efficiency of grooved-cell technology, experts here say.

West Germany's Telefunken AG, which supplied Biel's cells, is one of two licensees for the new technology; the other is British Petroleum PLC. The Telefunken cells were laboratory constructed pre-production prototypes costing about 400,000 Australian dollars (about $307,000).

In contrast, the gallenium arsenide cells that powered the 1987 winner, General Motors' SunRaycer, reportedly cost $1.15 million to build, or about three times as much for a similar level of efficiency in converting sunlight into electricity.

SunRaycer finished with an average speed of 41.6 mph, nearly 1 mph faster than this year's victor, although sunlight conditions in the 1987 race were superior.

Production versions of the Telefunken and BP laser grooved cells will be considerably cheaper than the hand-made cells used on the Biel race car. BP has said production of the laser grooved "green" cells should commence at a new factory in Spain by the end of 1991.

One closely watched entry managed a sixth-place finish this year. It was a car fielded by the small Australian Energy Research Laboratory. The company specializes in developing and manufacturing low cost computers that manage the conversion of solar power input to electric power output.

Eight of the first 10 cars to cross the finish line used AERL's Power Maximizer unit.

Despite the lavish expenditure of scientific talent and money on races like the Solar Challenge, experts agree the future of the solar-powered car is bleak. With cell efficiency already close to the maximum theoretical limit, there is no foreseeable way that a solar powered car will be able to compete on cost or performance grounds with a fuel burning car.

The future of battery electric cars is much more promising. According to experts here, the possibility of using solar technology to recharge batteries while cars are parked in the sun is an especially exciting avenue of research.

As the cost of cells fall and the environmental cost of generating electricity with fossil fuels increases, solar recharging becomes a strong reality.

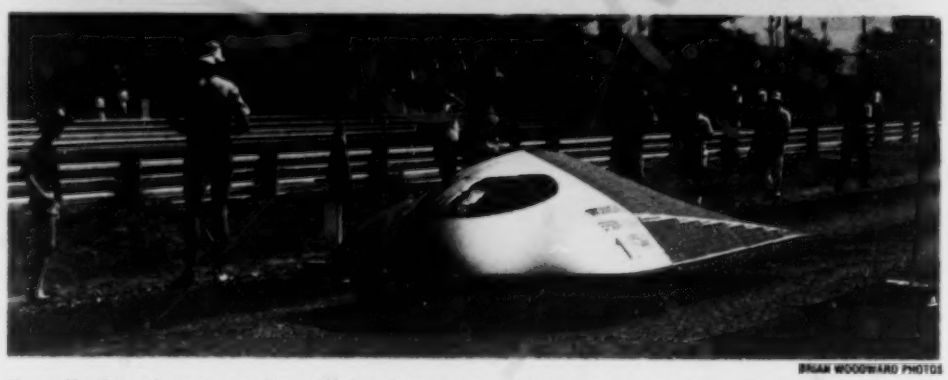
The major problem confronting researchers is that batteries are either heavy and inefficient or environmentally disastrous.

One major development talked about here comes from a joint venture between Isuzu Motors Ltd. and Fuji Electrochemical Co. The capacitor battery developed by the two is so far superior to conventional lead/acid batteries that it promises to revolutionize storage technology, many say.

The new unit holds 30 to 50 times more charge than a conventional lead/acid battery and can produce 20 times the output.

In tests, the prototype capacitor battery took just 30 seconds to recharge, an important consideration for vehicle applications.

Experts say that race enthusiasm aside, solar cars are unlikely to fill roads in Australia, or anywhere.



BRIAN WOODWARD PHOTOS

Young Honda engineers were pleased that their car, Dream, finished second, at an average speed of 33.6 mph.

GM forms minority dealer unit

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

General Motors has formed a department to develop additional minority dealers, and help existing ones be more profitable.

"Minority dealers have the same problems as any other dealer," said Joseph J. Vasquez, who was appointed general director of minority dealer development.

"It is a very competitive market, grosses are flat and the industry is losing volume," he said.

Vasquez, 63, said his goal is to get existing minority dealers disciplined, motivated and doing what is necessary to become profitable.

Vasquez

That means training about products, customer follow-up and getting them "to make 15 cold calls a day to find five prospects and sell two vehicles."

He said the company also needs to find more minority candidates qualified to fill dealership points, conceding GM's record has been spotty.

"What I would like to achieve before I walk away is to put a process in place that would insure a normal appointment process for minorities as there is for majority individuals," he said.

Vasquez lauded GM's Dealer Development Academy — started in 1972 to train minority candidates to operate retail stores — saying it has graduated some of the most financially successful GM dealers.

Financing minority dealers has never posed a problem. "In the early days it was finding candidates. Then the problem was finding points for them to acquire and matching the individual to the store," he said. "Now the problem is the depressed industry."

GM has 192 minority dealers, about 2 percent of the total GM dealer population. That is down slightly from 202 dealers last year and the company's all-time high of 208 minority dealers. The automaker defines minority dealers as blacks, hispanics, Asians and American indians.

Vasquez declined to pinpoint company minority dealership objectives.

"In some urban areas there are no dealerships at all," said Vasquez. "I'm from Boston and it has not had a GM dealer in the city for a number of years of any color or ethnic background."

Vasquez has supervised GM minority dealer activities for six years. The new department will coordinate with GM vehicle divisions the selection and training of minority candidates, as well as their placement in favorable business locations.

VW approves minivan venture in Europe with Ford

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — A tentative agreement between Ford Motor Co. and Volkswagen AG to jointly produce up to 200,000 minivans a year in Europe after 1994 has been approved by VW directors.

The companies, which have been studying the venture for two years, signed a tentative non-binding agreement last year to proceed with the project. The approval by VW, disclosed without elaboration by Chairman Carl Hahn, puts pressure on Ford directors to either approve the project or pass on it.

The next meeting of the Ford board is Dec. 13, spokesman Bert Serre said. He would not comment on whether the minivan project is on the agenda.

The so-called VX62 project is expected to be based on VW Passat mechanicals with completely separate exterior designs. The joint venture would turn out about 200,000 units annually, beginning in 1993 or 1994, with each company to market half the production.

VW released no other details of the project and said a production site has not been chosen, but a location in Portugal is possible.

Antonio Ernesto Neto da Silva, Portugal's secretary of state for foreign trade, said recently that he expects the two carmakers to produce there. The Setubal industrial area near Lisbon is considered the most likely location, but Ford and VW are known to have investigated sites in Spain also.

Many analysts regard the minivan market as Europe's most important growth segment.

In its latest European light-truck forecast, the research group DRI Europe Ltd. projects sales of 80,000 multipurpose vehicles in 1990, up from 68,765 in 1989. Sales of 300,000 are expected by 1995.

With several new small vans expected to be introduced by about mid-decade, DRI analysts say that the market could double again by 1998, to 600,000 units, and could rise to about 750,000 by the end of the century.

Correction

On the Letters page in the Nov. 12 issue, Alexander R. Kovnat was incorrectly identified as a Porsche-Audi dealer. On the same page, the identification of John T. Morzenti was incomplete. He is a Porsche-Audi dealer in Conshohocken, Pa.

No longer niche products, van conversions have accounted for close to 200,000 sales annually the past few years.

All Dressed Up and Nowhere to Roll

Gearing up for a rocky '91 market, van makers and converters combat cautious dealer floorplans

By: Joseph Bohn

Van converters have been struggling through a difficult period, created partly by retail dealer cautiousness in ordering and stocking conversion units.

But van manufacturers, taking heed of the conversion industry's difficulties, have been looking at ways to help.

As a result, there may be some new — and possibly more potent — programs to help buoy the market in December, when the current round of retail and wholesale incentives end.

Some of General Motors' top converters said they met with GM officials and suggested various ways that the company might help them.

It is uncertain if — or in what way — GM will respond. But its Chevrolet division expressed its strong support for the industry and the importance of converters' economic viability.

Jim Green, Chevrolet assistant RV sales manager, says, "We are committed to the upfitters. We, Chevrolet, will do anything within our power to help them get a good solid footing for the spring market."

Overall, GM has had a greater stake in the conversion market than Ford Motor Co., which has funneled more of its full-sized cargo vans into other commercial markets.

The E-150 cargo van, Ford's most popular conversion model, accounted for only about 22 percent of Econoline production last year.

By contrast, Chevrolet and GMC full-sized van conversion sales accounted for almost an entire van plant's production.

For GM, the slack from such sales cannot easily be taken up by regular passenger vans, because of the strong market that converters have created.

Van conversions are no longer niche products. They have become a full-fledged part of the motor vehicle business, accounting for close to 200,000 sales annually the past few years.

Still, for the average Chevrolet, Ford or Dodge dealer, van conversions are the most expensive vehicles on their lots — the equivalent of luxury cars to floorplans.

Given the uncertain economic environment, dealers have become leery about floorplanning conversions, which they view as a secondary profit source.

To some degree, dealers are more cautious in ordering conversions than the retail strength of the market would seem to dictate.

GMC Truck Division, for example, pointed out that its retail sales of van conversions increased 14 percent in October over last year, an increase far exceeding the rate at which dealers replenished their stocks.

Given such continuing demand, sooner or later dealers will be forced to start restocking what they have sold.

Meanwhile, van conversion sales for the 1990 model year turned out to be pretty much as had been predicted last year at this time.

Industry officials originally forecast a 10 percent sales downturn in the 1990 model year. The final tally shows sales were off 11.81 percent from 1989.

The industry retailed 183,000 van conversions in the 1990 model year, compared to 207,500 in 1989.

Chevrolet retailed 89,000 1990-model conversions, compared to 96,000 in 1989, according to Green.

Actually, Chevrolet sold the same number of full-sized G-vans — 63,000 — in both 1989 and 1990, but its Astro conversions fell from 33,000 in 1989 to 26,000 in 1990.

The decline was due partly to cannibalization by the Lumina APV minivan, but also in large part to the production setup at GM's Lordstown, Ohio, plant, where the compact vans are built.

Lordstown builds a critical mix of passenger and cargo vans. When sales of passenger-model Astros and Safaris slowed and officials trimmed production, the output of commercial Astro/Safari chassis also was trimmed.

GM officials believe that additional cargo versions of Astro would have been sold, particularly in the RV market, if overall production at the plant had been higher.

Astro is being energized this year by powertrain improvements and by increased RV availability of extended-length models. Chevrolet wound up with 48.63 percent of the van conversion market in the 1990 model year, according to an *Automotive News* analysis based on manufacturers' reported sales. That was up from 46.27 percent in 1989.

Ford's share of the van conversion market dropped to 21.31 percent in 1990 from 26.27 percent a year earlier.

Ford retailed 39,000 van conversions, including 38,000 Econolines and 1,000 Aerostars, compared to 54,000 in 1989, according to Jerome Mittman, Ford Division RV sales manager.

Mittman says the fall-off in Ford's conversion sales last year was due mainly to not signing new accounts to its pool system.

Ford currently has 60 authorized converters, compared to 160 for Chevrolet, 75 for Dodge and 40 for GMC Truck.

Mittman says the company didn't sign new accounts because it was in process of implementing a new program for its pool system. That involves closer scrutiny and evaluation of converters' product quality and other operational criteria.

Ford is now signing new companies, and also

has been increasingly directing more of its conversion chassis through its pool system.

"We've been seeing our share of the business picking up in recent months," Mittman says.

Currently, about 60 to 70 percent of Ford's conversion chassis go through its pool. That is expected to increase to 80 to 90 percent by next year and 90 to 100 percent by 1993.

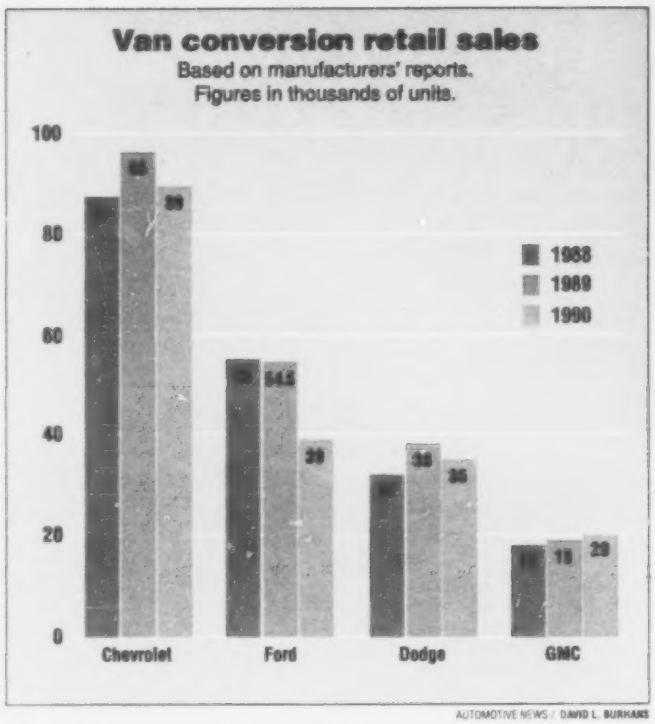
Aerostar conversion sales fell off sharply in 1990. At present, there are very few converters doing anything with the Aerostar. Only one of its top 10 converters handled more than 100 Aerostars last year.

Ford has talked to a number of conversion accounts, and plans to keep Aerostar available with the RV prep package for the 1992 model year. Company officials hope to make it more attractive for converters to work on through product and package changes.

For example, upfitters have commonly complained that it is hard to do a good conversion on an Aerostar and price it competitively with the factory passenger wagon.

Mittman confirmed that the company is re-evaluating the price position of the two models. It is looking at a potentially wider price spread between the RV prep van and Aerostar wagon.

Nothing will be decided until spring. And it will depend on capacity. If Ford has the capacity to produce more Aerostar vans, it will be more amenable to repositioning the RV chassis. But if the retail market for Aerostar wagons rebounds strongly, and the company is running near capacity, it likely will not make the move.



Aerostar, as part of its 1992 changes to meet new federal motor vehicle safety standards, also is getting some interior design alterations that will make it more attractive to converters. The floor-mounted transmission-shift lever will be relocated to the steering column, for example.

Ford also is considering releasing some additional options on RV vans that converters have been asking for — options it currently offers only on the wagons.

Dodge Division, after expanding its pool system to 75 converters, held fairly steady in conversion sales in 1990. It sold 35,000 van conversions, down slightly from 38,000 the year earlier.

Its overall share of the conversion market increased to 19.13 percent from 18.31 percent the previous year.

Dodge officials say they are comfortable with their current number of converters, and are only replacing firms that drop out of their pools.

Dodge has been evaluating and promoting the quality of its converters, much like its competitors. The company used an independent survey company, Original Research Customer Management Services Inc. of Chicago, to evaluate the work of 27 of its converters.

The survey company contacted 1,000 owners of 1989 model Dodge van conversions done by the 27 firms in Dodge's pool, querying them about the quality of workmanship and other impressions about the vehicle and work done on it.

In general, the conversion features, quality of workmanship and quality of conversion components rated very well. The owner retention for Dodge and most conversions also was very high.

But where customers said they would not buy another van conversion, they also said they would not buy another Dodge.

The survey showed the close link between Dodge as a manufacturer and the conversion community, and underscores the importance of having satisfied van conversion buyers.

All converters received results of the survey, which allowed them to compare their own ratings with average converter ratings.

Some converters, who scored above average, plan to use the survey results as marketing tools to dealers.

GMC's conversion sales were the only ones to show an overall increase in 1990. GMC sold 20,000 conversion vans, including 12,400 full-sized G vans and 7,600 compact Safari conversions, in the 1990 model year, up from 19,000 the previous year.

GMC's market share was 10.93 percent in 1990, down slightly from a 9.16 share in 1989.

GMC Truck has been doing more to help its converters, such as providing them exposure in a data book which goes out to its dealers, says Keith Ball, GMC special vehicle sales manager.

GMC, like other manufacturers, considers the current market downturn to be only temporary and is looking for an upturn by spring.

Meanwhile, it has been helping converters through special programs similar to those at Chevrolet. □

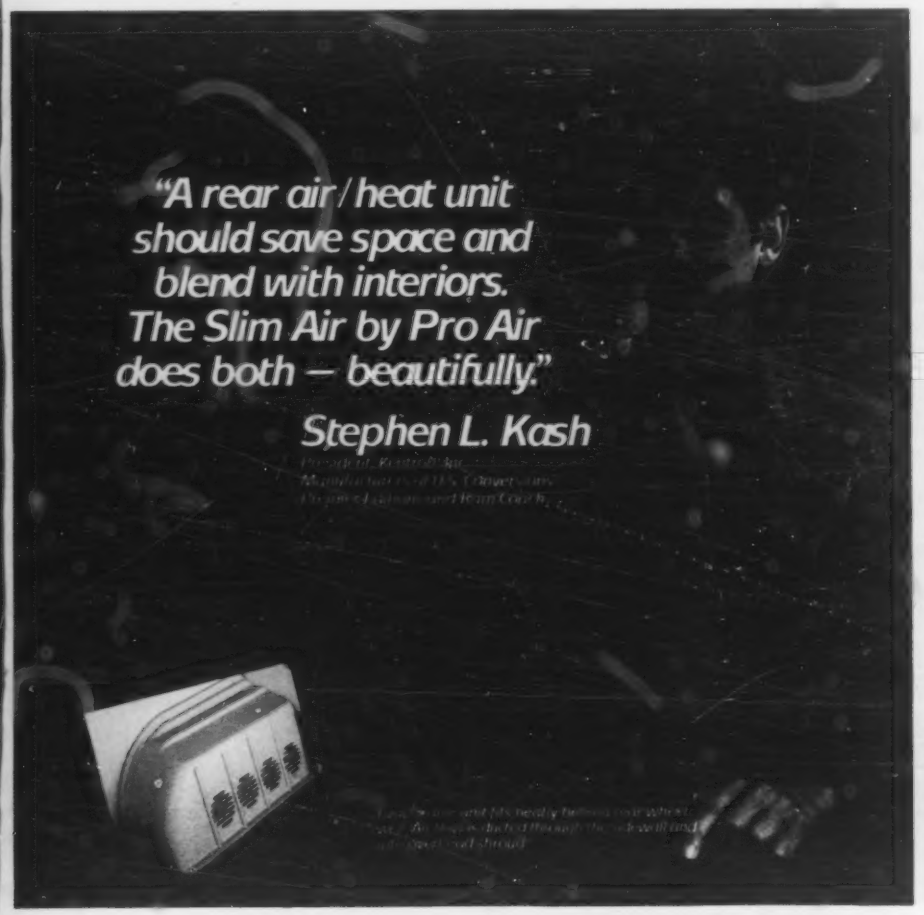
"To some degree, dealers are more cautious in ordering conversions than the retail strength of the market would seem to dictate."



"A rear air/heat unit should save space and blend with interiors. The Slim Air by Pro Air does both – beautifully."
Stephen L. Kash

Today's major van converters are sold on Slim Air.

They're sold because Slim Air looks good with its sleek, compact styling, sure-fire performance, and low warranty claims.

Professionally engineered and designed, Slim Air is attracting major converters for its space-saving benefits: greater headroom, floor storage space and rear vision. They also enjoy the freedom from condensation problems Slim Air provides. Not to mention the one-year limited warranty and nationwide service Slim Air owners can count on.

Today's big converters are sold on Slim Air's fast, easy installation. And on the choice of cooling only or heating/cooling units in silver or tan, plus styles to fit standard and sport roofs for all GM, Ford and Dodge vans.

Today's major van converters are sold on Slim Air - because Slim Air's helping them sell. To learn more, write or call. Soon.

Canada's Oct. car sales off 12%; trucks drop 20%

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Total vehicle sales in Canada declined in October for the third month in a row. Cars dropped 12.64 percent, and trucks slipped 20.25 percent below October 1989 totals.

Sales of cars built in Canada and the United States, which are counted as domestic sales, were off 17.68 percent.

Imported car sales were down 269 units, or 1.08 percent below last year. Seven manufacturers increased import sales, including: General Motors, Volkswagen, Suzuki, BMW, Mercedes-Benz, Ford and Subaru.

For 10 months, total car sales in Canada were 12.64 percent below last year.

General Motors and Toyota were the only manufacturers to record increases in combined imported and North American car sales. Canadians bought 283 Lexus units, which are sold through Toyota dealers, helping Toyota inch above last year's total.

GM's total car sales in October increased 1.07 percent. Michael Erdman, vice president of marketing for GM of Canada, said GM was happy with its performance, "especially when we consider the softened state of the Canadian economy."

On the light-truck side, each of the Big 3 reported a loss: GM fell 16.95 percent; Ford Motor Co. was off 25.84 percent; and Chrysler Corp. dropped 29.03 percent. Imported trucks slipped 4.25 percent below the same month last year.

For 10 months, North American trucks were down 12.20 percent, and imported brands were up 4.38 percent.

Total vehicle sales through October were down 15.11 percent, or 18,500 units, below the 1989 total.

2 Olds programs aim at buyer satisfaction

LANSING, Mich. — Oldsmobile has introduced two customer satisfaction programs.

The first is a nationwide toll-free hotline called the Oldsmobile Customer Assistance Network. It began last January as a pilot project in Pittsburgh and has spread to 18 zones nationally.

After exhausting their options with dealers, Oldsmobile owners can dial (800) 442-OLDS and receive assistance from a staff of 60 customer service representatives. Another toll-free number, (800) 242-OLDS, handles product information inquires.

Buyers of 1991 Oldsmobiles are automatically included in the Oldsmobile Edge program, which allows customers to return their cars within 30 days/1,500 miles for credit toward a new Oldsmobile.

California and styling: Be there or be square

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

In September, the king of luxury carmakers broke down and joined a commoners' club.

Mercedes-Benz AG sent designer Gerhard Steinle to California to open an American styling studio in Irvine. His mission: to find inspiration in the crowded streets of Southern California and translate it into design ideas for future Mercedes-Benz models.

"Mercedes is and always will be a German car," Steinle cautions. "But we must stay in touch with the market around us."

Not to be left behind, Germany's Volkswagen AG will open a studio in Simi Valley, Calif., this month, for largely the same reasons.

Such design centers are nothing new. Since Toyota Motor Co.'s Calty Design Research Inc. set up shop near the beach back in 1973, importers from Volvo to Mazda to Subaru have gotten into the act.

Detroit acknowledges California, too. Ford has an exclusive contract with a private studio there, and Chrysler and GM operate design centers.

As global competition heats up, those centers will play an increasingly vital role. In addition to generating vehicle concepts with an American flavor, the studios serve as monitoring posts, keeping overseas manufacturers up to date on consumer trends and changing tastes on issues from windshield slope to seat fabrics.

Gerhard Steinle: California helps Mercedes stay in touch.

"You can see any car in the world on the streets here," explains Dave Hackett, studio director at Toyota's Calty facility. "That kind of environment is great for a designer." Toyota is spending $17 million to triple the size of the operation and expand its design staff from about 45 to 65.

The urgency for U.S.-influenced design may be greater for the Japanese: the United States is their largest export market. Honda Motor Co. Ltd. sells two cars in the United States for each one sold in Japan.

More than that, the Japanese are now attempting to develop integrated U.S. subsidiaries capable of designing, engineering and producing cars and trucks in America for America. Most of the West Coast salons are still too young for any of their concepts to be in production at the Japanese transplants. But plans call for greater U.S. design influence:

- Honda of America Manufacturing Inc. will soon launch an Accord station wagon that was designed as a joint U.S.-Japanese endeavor.
- Nissan Motor Co.'s next-generation Pathfinder sport-utility — a concept originally drafted at Nissan Design International in San Diego — will probably be built at Nissan's Smyrna, Tenn., plant in the mid-1990s.
- Nissan Design International also participated in the design of a new Stanza replacement that Smyrna will produce in late 1992.
- And Subaru-Isuzu Automotive Inc. in Lafayette, Ind., will eventually add a new Subaru car to its production mix that might be based on a design from Subaru Design Center in Garden Grove, Calif. That four-year-old studio has submitted at least 15 concepts to headquarters in Japan for the project, all of which have been rejected, according to studio head Yuji Uemura.

So far, Japan's U.S. production — largely focused on basic, high-volume products — and its California showmanship are years apart. The concept labs focus on products that are three to five years ahead of the market. Few transplant factories even have capacity to build for new products.

Meanwhile, studio heads in California claim the mixture of laid-back West Coast culture and youthful energy is a flourishing creative environment for designers.

Calty will add a color lab to concentrate on trends in color. A fabric research office at Mazda Reseach and Development of North America Inc. in Irvine, Calif., bears almost no trace of belonging to the automotive industry. Nissan's design unit once adjourned for the afternoon so that its design staff could go see the movie "Batman," believing it to be rich in new trends.

Not everyone is convinced that California is the best place to experience America. James Womack, research director of the International Motor Vehicle Program at the Massachusetts Institute of Technology, calls the California salons "trendy" and says the West Coast is not typical of the country.

"If Honda really wants to seize the heartland, they'll take their designers out of California and put them in Ohio, which is a lot closer to real America," Womack says.

Such a move isn't likely. Studio heads also point out that young automotive designers seem to like living on the West Coast. "To attract young designers, we must be here," Mercedes' Steinle says. "The California lifestyle is very attractive."

R&D

FROM PAGE 1

begin production in the next few weeks in Marysville, Ohio, and which was largely engineered and designed by Honda Motor Co.'s U.S. employees. Though based on the Japanese-designed Accord sedan, the new wagon uses U.S.-designed machinery, U.S.-designed and -engineered body parts and a host of U.S.-engineered components.

Slowly but surely, the Japanese are getting closer to integrating design, engineering and manufacturing in America.

Gobi shelved

Consider the Nissan Gobi, the concept vehicle that crossed a sophisticated pickup with something off the streets of Roger Rabbit's 'Toon Town.

The cheerful little Gobi was the brainchild of Nissan Motor Co.'s San Diego creative team, Nissan Design International. It stole the North American International Auto Show in Detroit last January when it was unveiled.

Nissan officials said the U.S. manufacturing company would build the low-volume vehicle. Its U.S. engineers were already looking into if, when and how. To all appearances, it was a U.S. project using U.S. technical resources to produce a U.S.-designed and -engineered vehicle under a Japanese nameplate.

But by summer, the whole idea had been canned — deemed financially unfeasible.

The Gobi probably would have required Nissan to build a second U.S. assembly plant and strained U.S. engineering resources. Chassis assembly would have consumed capacity at Nissan's plant in Smyrna, Tenn., which is currently juggling a new Sentra, a pickup, and plans for a second sedan and, possibly, the Pathfinder.

The Gobi now sits in an r&d center in Japan. Although it won't be built, Japanese designers are curiously scrutinizing it to learn how their California colleagues tapped the American fancy.

"It's a difficult thing to explain to them," says Gerald Hirshberg, Nissan Design International executive vice president. "What was it about the Gobi that made people in America smile? You really have to be here to feel it."

Apparently, plenty of importers agree with Hirshberg.

Toyota Motor Co. is spending $44 million to expand its Calty Design Research Inc. in Newport Beach, Calif., adding another 20 design engineers.

Isuzu Motors Ltd. occupies a new studio in Cerritos, Calif. Fuji Heavy Industries Ltd. maintains a design center in Garden Grove, Calif., to produce concepts for its Subaru vehicles. Even Mercedes-Benz AG, the king of the European imports, opened shop in September in Irvine, Calif., to send designs back to Germany.

Volvo AB of Sweden operates a California studio in Camarillo, and Volkswagen AG opened one this month in Simi Valley.

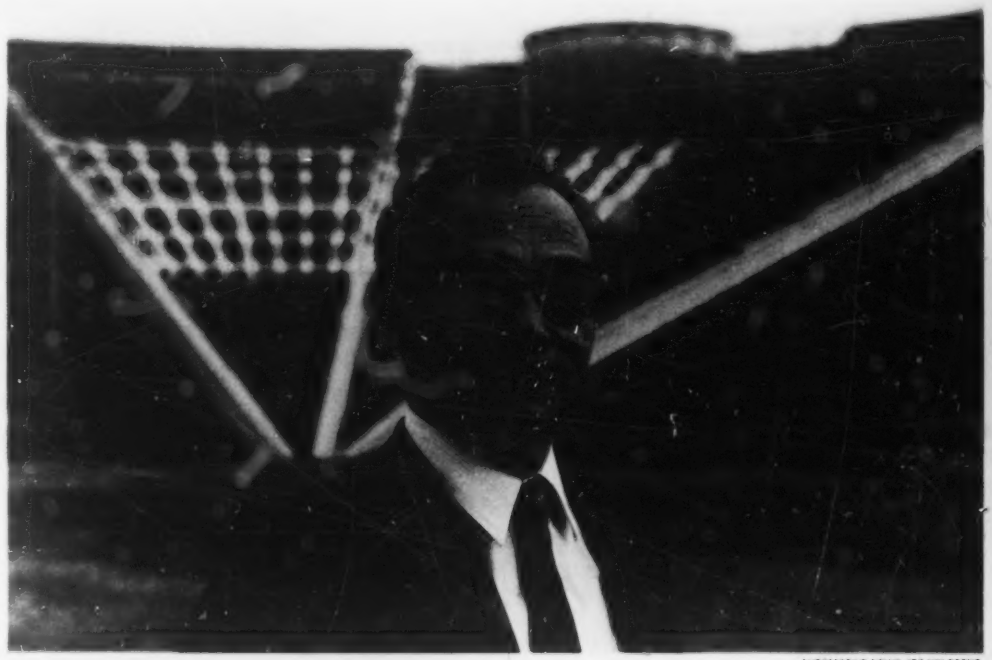
Nissan's Hirshberg, a former rising star in design at General Motors, came to Nissan and to California 11 years ago to find new, creative opportunities. His story is not unusual among the studios up and down the coast.

"It's a wonderful feeling to design a car the way you think it should look, and to have the company take the drawing and build it like you said," Hirshberg explains. "If they wiggle our surface more than three millimeters, I get letters of apology from Japan."

Adds Dave Hackett, a former Ford Motor Co. designer who is now studio director at Toyota's Calty: "In Detroit, you're too close to some vice president's office. It's too easy for the business guys to drop around to see what you're doing. After a while, you know what they think, so you sort of censor yourself."

Ties that bind

Japan's burgeoning U.S. technical centers are proving adept at translating drawings from Japan into machinery and components that meet U.S. specifications.



AUTOMOTIVE NEWS JOE WILSSENS

Takeshi Tanuma, CEO of Nissan Research and Development, at his rising new facility in Michigan: "We need good engineers . . . and 80 percent of all U.S. automotive engineers live in this area."

But marshalling cohesive U.S. car-producing machines could be a slow process. So far, the path from the California studios to the transplant factories still winds its way through the Japanese tech centers.

Nissan Design International's 240SX design, for example, went to Japan for production, while Nissan's Smyrna plant concentrates on producing the Japanese-spawned Sentra.

"It will take at least a decade to bring these operations up to speed," says James Womack, research director for the International Motor Vehicle Program at the Massachusetts Institute of Technology.

"It will take young people who can learn the company's way of doing things from the ground up," Womack said. "And it will take a lot of domestic suppliers who will have to learn new methods of operating. I predict we will only begin to see the real results of these moves in the next century."

Yet the moves continue. Nissan has nearly completed a $50-million r&d center in Farmington Hills, Mich., in the heart of Big 3 country, where it will employ a technical staff of almost 500. A second Nissan office in Ann Arbor, Mich., now conducts engine and powertrain research, an indication of the carmaker's plans to open a U.S. engine plant.

Little by little, Nissan's U.S. operation is gaining experience in vehicle development.

The two-door Sentra that went into production this fall was largely U.S.-engineered from Japanese clay models. A new Stanza slated for model-year 1992 production in Smyrna will have considerably more U.S. involvement.

More expansion

At the same time, Toyota Motor Co. is midway through a technical expansion across the United States that will boost product and component-engineering personnel from 190 now to about 600 in four years.

Toyota just kicked off a $45 million expansion of its Toyota Technical Center in Ann Arbor, Mich. That project follows last year's opening of a Southfield, Mich., center to handle design engineering on body panels and trim.

Toyota also announced this year that it would develop a 12,000-acre vehicle proving ground in Arizona — one of the country's largest.

Honda Motor Co. Ltd. has committed at least $27 million to expanding Honda Research and De-

see R&D, page 43

R&D

FROM PAGE 42

velopment North America in Marysville, Ohio. The project — referred to as the "first phase" — will nearly double the Ohio staff to 300 in the early 1990s. The closely tied Honda Engineering North America in Marysville will be expanded from about 180 technicians to about 300, with more r&d expansions likely to follow.

Expansion of the two Honda engineering subsidiaries will boost its total U.S. r&d staffing over the next two or three years from the current 300 to more than 600.

Isuzu, which owns 49 percent of the Subaru-Isuzu Automotive Inc. transplant in Lafayette, Ind., broke ground in Novi, Mich., this summer on a new branch of its California r&d office, where it eventually plans to employ 150 in component engineering, engine testing and technical support.

Mitsubishi Motors Corp. and Mazda Motor Corp. each maintain two technical offices in Michigan.

Takeshi Tanuma, president of Nissan's r&d operation in Michigan, is bullish on growing technical roots in America.

"We need good engineers in America in order to produce American cars, and 80 percent of all U.S. automotive engineers live in this area," he says.

"Most U.S. suppliers have operations here. How can we establish relationships with these people if we live in Tokyo? How can you imagine the American customer's way of living if you live in Tokyo, in a Japanese house, and drive on Japanese highways?"

Grand strategies

Why bother recreating expensive design and development centers here when existing Japanese organizations already claim nearly 28 percent of the U.S. car market?

An obvious reason is Japan's desire to keep up with an evolving American customer. Subtle market shifts — like the demand for curvier, more "European" styling — keep importers hopping. By establishing North American facilities to watch for such shifts and to speed up product alterations and factory tooling, the Japanese feel they will respond faster to consumer trends.

Self-sufficiency spells competitive advantage. The Big 3 are already working to reduce the time to bring new concepts to market. GM wants to cut its lead time from an average 48 months to 24 months. Honda shaved several months of development time off its current Accord model by calling on r&d and engineering staffs at the Marysville Accord plant.

Another reason is the complex world of U.S.-Japanese trade politics. Congress and U.S. trade officials continue to pressure Japanese automakers to use more American-made components. As the transplants commit themselves to purchasing greater volumes of U.S. parts, they are virtually bound by logistics to open technical centers to make it possible.

In addition, the expense of the technical centers and staff counts as domestic content. Higher domestic content opens import-export doors and can be of advantage in calculating corporate average fuel economy.

All of the centers are taking on a growing list of duties: qualifying suppliers, helping suppliers develop new components, and testing the final products. Travel time is reduced for U.S.-based manufacturing engineers and suppliers, and the level of U.S. componentry in the cars is slowly increasing.

Almost All-American

Honda's upcoming Accord station wagon offer a glimpse into what the expanded North American operations can do. Although based on the Japanese-developed Accord sedan, the new wagon is the closest that any of the transplants has come to creating an American car from design through manufacture.

In December, Honda's Marysville Accord plant will launch the wagon, based on prototypes that were built by Honda Engineering in Marysville. Honda will use machinery and dies that were built on-site. It will rely on specifications from Honda r&d in Marysville, and incorporate designs produced both in Japan and in its studios in Torrance, Calif.

Some of the machinery was developed in Japan. From the front seat forward, the car is largely the work of Honda of Japan. But the rest — including hundreds of unique components developed and supplied by North American firms — is decidedly Honda of America.

The door handles for the new product show why expanded U.S. support is necessary. In Japan, Honda knows little about tooling for handles, which are outsourced. To create handles for the wagon, American engineers had to develop the tooling from scratch, working in the Marysville facility with the prototype.

"We had to be here to do that," says John Adams, a Honda engineering vice president who came to Honda from a computer automation company in Columbus, Ohio. "If we're going to develop one section of our company in North America, we believe it's necessary to develop totally. For our manufacturing to continue to develop and be successful here, you need engineering and r&d support."

The lingering gap

Honda's decision to build the wagon prototype in-house rather than though a U.S. prototype shop, as the Big 3 commonly do, illustrates lingering differences between the transplants and the Big 3.

Initially, Honda officials were concerned that security might be breached by involving an outside shop in the Detroit area. Further, no one outside Honda appeared to understand the company's meticulous method of producing vehicles on short schedules. Honda officials demand to be firmly in command of the project's cost and quality decisions — a posture that Adams and other Honda executives refer to as "the Honda way."

"We have no timetable for when we will be self-sufficient, but we are moving toward that goal," Adams says. "It's not a skills issue, it's capacity. We're working on a manpower problem. We're trying to find people who are willing to come learn the Honda way."

For now, the greatest benefit of the expanding American r&d and design operations may be simple convenience. Considerable development work still takes place in Japan, requiring suppliers and U.S. staffs to shuttle back and forth for prototyping, meetings and production runs.

Suppliers for Nissan's two-door Sentra project still had to take numerous trips to Japan for prototyping, even though the model was largely engineered in Tennessee. Work on Nissan's next U.S. car in 1992 will mean numerous trips only as far as the Detroit suburbs.

Where Japanese automakers have research & design facilities

IMPORT R&D DESIGN CENTERS

Company	Year opened	Current employees	Senior official	Principal function/Major models
Honda R&D North America Inc.				
Torrance, Calif.	1975	125	Kumitaka Sakai, president	Design and develop autos, motorcycles and power equipment

Lexington, Ky.	1989	6	NA	Technical support for Toyota plant

Three European car manufacturers also have design centers in the United States. They are: Mercedes-Benz Advanced Design of North America Inc. of Irvine, Calif., established 1990, 4 employees, Gerhardt Steinle, president; Volkswagen of America Inc. Design Center of Simi Valley, Calif., established 1990, 10 employees, Michael Tozer, director; and Volvo Monitoring and Concept Center of Camarillo, Calif., established 1986, 10 employees, Sylvia Vogel, general manager.

AUTOMOTIVE NEWS / DAVID L. BURNHAM

OBITUARIES

Charles J. Scanlon

ESSEX, Conn. — Charles J. Scanlon, 75, a retired vice president of General Motors, died Nov. 15. He retired in 1980 as GM vice president and coordinator of pension fund investments. He was a director of General Motors Acceptance Corp. and Motors Insurance Corp. and was president of the Federal Reserve Bank of Chicago before joining GM.

Ernest H. Bellard Jr.

PONTE VEDRA BEACH, Fla. — Ernest H. Bellard Jr., who retired in 1982 as manager of Oldsmobile's Jacksonville, Fla., zone, died Nov. 1. He was 68. He was with Oldsmobile 34 years and served in the Oklahoma City; Atlanta; Buffalo, N.Y.; Detroit; New York and Washington zones before being named to the Jacksonville post in 1965.

SPEAKERS

FROM PAGE 3

signer for Isuzu Technical Center of America.

Taylor started his automotive career in 1981 at a design consulting firm that worked for Suzuki Motor Corp. in the United States.

In 1984, he moved to West Germany, where he designed cars for Opel. In 1987, he joined the Isuzu Technical Center.

The other five Monday afternoon speakers are:

- **Clarence Ditlow,** executive director of the Center for Auto Safety since 1976.

Ditlow, a chemical engineer and attorney, directs the consumer group, whose purpose is to improve automobile safety, repair services and highways. He has played a role in initiating recalls, including one for 1.5 million Ford Pintos for exploding gas tanks. He led consumer efforts to get lemon laws passed in 47 states.

He testifies frequently before congressional committees and federal agencies on auto safety, warranties, air pollution, gasoline prices, energy conservation, patents and inventions.

He directed the Public Interest Research Group from 1971 to 1975.

- **Lester P. Lamm,** president of the Highway Users Federation for Safety and Mobility.

Lamm had a 31-year career with the Federal Highway Administration and its forerunner, the U.S. Bureau of Public Roads. He became the Federal Highway Administration's executive director in 1973. In 1982, President Reagan appointed Lamm deputy administrator of that organization.

Lamm was elected the fourth president of the Highway Users Federation in 1986. He also serves as president of the Intelligent Vehicle-Highway Society of America, which was formed earlier this year to support "smart" technology for roads and vehicles into the 21st century.

- **Toyoji "Tom" Yashiki,** executive vice president of Honda of America Manufacturing Inc. and director of Honda Motor Co. Ltd.

Yashiki joined Honda Motor Co. in Japan in 1964. He managed the Sayama plant from 1980 to 1981 and the Wako plant from 1981 to 1983.

He came to Honda of America Manufacturing in 1984 as a member of the Anna, Ohio, engine plant project team and was named plant manager in 1985.

- **Susan M. Cischke,** executive engineer, Proving Ground Operations, Chrysler Corp.

Cischke joined Chrysler in 1976 as a management trainee. From 1978 to 1986, she was a design/development engineer. She became supervisor of instrumentation and interior lighting in 1985 and was named manager of sensors, actuators and ignition systems in 1987. A year later, she was appointed chief engineer of vehicle environmental systems, and in 1989 she was named to her present position.

Cischke is responsible for the testing, evaluating and development of all prototype and production vehicles at Chrysler's proving grounds in Chelsea, Mich., and Arizona and at selected field sites.

- **Professor Garel Rhys,** head of the Economics Section, Cardiff Business School, University of Wales.

Rhys' interest in the auto industry started while he was preparing a thesis on the "Economics of the British Commercial Vehicle Industry," in the early 1960s.

In addition to his post at the university, Rhys is a fellow of the Institute of Transport Administration and the Institute of the Motor Industry, of which he is also a vice president. In addition to lecturing and writing on the automotive industry, he has done radio and television broadcasts on the economics of the industry.

For further World Congress information, write Wendy Barhydt, World Congress, UMTRI/OSAT, 2901 Baxter Road, Ann Arbor, Mich. 48108-2150, or telephone her at 313-936-1049.

1991 WORLD CONGRESS SPEAKERS

SUNDAY, JAN. 13
EVENING

Robert Lutz, president, Chrysler Motors

Joseph T. Gorman, chairman, president and CEO, TRW Inc.

MONDAY, JAN. 14
MORNING

Hans-Jorg Hungerland, board of management, Volkswagen

William Rosenberg, assistant administrator, EPA

David J. Herman, president and CEO, Saab Automobile AB

John Rock, general manager, GMC Truck Division

MONDAY AFTERNOON

E.F. "Fritz" Kern, senior vice president and general manager, American Isuzu Motors Inc.; **Richard T. McKinnon,** vice president of manufacturing, Subaru-Isuzu Automotive Inc.; **Charles Taylor,** assistant chief designer, Isuzu Technical Center of America

Clarence Ditlow, executive director, Center for Auto Safety

Lester P. Lamm, president, Highway Users Federation for Safety and Mobility

Toyoji "Tom" Yashiki, executive vice president, Honda of America Manufacturing Inc. and director of Honda Motor Co. Ltd.

Susan M. Cischke, executive engineer, Proving Ground Operations, Chrysler Corp.

Professor Garel Rhys, head of Economics Section, Cardiff Business School, University of Wales

MONDAY EVENING

Clark Vitulli, senior vice president and general manager, Mazda Motor of America Inc.

William Hoglund, executive vice president, Automotive Components Group and Power Products and Defense Operations Group, General Motors

TUESDAY, JAN. 15
MORNING

Ernest Lofton, vice president, UAW

Donald Runkle, vice president, advanced engineering staff, General Motors

TUESDAY AFTERNOON

Karl-Heinz Faber, senior vice president of product compliance, service and parts, Mercedes-Benz of North America Inc.

Shirley Young, vice president of consumer market development, General Motors

Walter Huizenga, president, American International Automobile Dealers Association

C. Raymond Rogers, principal, Kepner-Tregoe Inc.

Graham Morris, president, Sterling Motor Cars

Guy Briggs, vice president of manufacturing, Saturn Corp. **Mike Bonnett,** president, UAW Local 1853 at Saturn Corp.

TUESDAY EVENING GALA

Wolfgang Reitzle, management board member, head of Development Division, BMW AG

Fred C. "Fritz" Mayhew, chief design executive, North American Design, Ford Motor Co.

WEDNESDAY, Jan. 16
MORNING

M.A. "Raz" Razaq, regional director, Eastern Europe and export markets, General Motors

Mario Maioli, vice president, style coordination, Fiat Auto S.p.A.

Lee Miskowski, vice president and general manager, Ford Parts and Service Division, Ford Motor Co.

J.C. "Jim" Perkins, general manager, Chevrolet

sales totalled 1,965 in October, compared to 1,360 in September. Although sales are still below the 3,000 per month projected when the car was introduced in March, Hungerland said the guaranteed money-back program helped introduce the Passat to American consumers.

Under Young and Hungerland, VW will open a design center in Los Angeles next month, its first in the United States, so that it can design its cars more to the likes of U.S. consumers.

"In America, design is probably the most appealing" attribute when purchasing a car, Hungerland said, followed by price/value and brand name.

VW has committed $40 million on a new headquarters in Auburn Hills, Mich., which it will occupy next year.

Hungerland and Young had the unpleasant task of reducing the company's work force in the United States to streamline the business. At least 1,000 jobs were cut during their tenure.

"We are meeting the needs of the American consumer and most importantly, we are satisfying the dealers," Hungerland said.

Hungerland, 49, will be responsible for VW and Audi sales worldwide in his new position on the newly created Board of Management in Wolfsburg, Germany.

Other major divisions of the board will be research and development, production, purchasing and finance. The board's function is to focus on future strategy.

SATURN

FROM PAGE 1

Would-be buyers swarmed over the car when it went on the block, and the SL1 brought $1,000 over sticker price, despite its odometer reading of 1,489 miles.

The SL1 was bought for $10,400 by Mark Kuehn, one of the principals of Kuehn Motor Inc. of Rochester, Minn., said auction general manager Joe Greco.

Kuehn Motor operates used-car lots in Rochester, Owatonna, Austin and Spring Valley as well as Kuehn Leasing Co., said Charles E. Kuehn Jr., Mark Kuehn's brother.

"We're anxious to get it in and display it. Then we'll lease it," Charles Kuehn said.

Enlisted in October to help fight Saturn's war against Japanese import cars, the SL1 was among the first cars shipped to the front lines from the plant in Spring Hill, Tenn.

The gray sedan, which has a brief but interesting history, was one of the first Saturns sold in Florida, and probably was the first Saturn in Connecticut and the first Saturn in Minnesota.

The original owner, a friend of Chevrolet dealer John Barberino, bought the car about three weeks ago from Saturn of North Broward in Light House Point, Fla.

Barberino said he enlisted his friend because he doubted that a Saturn dealer would sell a car to a Chevrolet dealer.

The car was driven to Granby, Conn., where Barberino used the Saturn as a traffic booster at his dealership, Stephen Chevrolet.

"We advertised the car in the paper, saying we were not an authorized Saturn dealer, but we wanted to be," Barberino said. "We did it for promotional purposes — there are no Saturn dealers open in Connecticut."

The Saturn drew significant interest at the dealership, but Barberino said he doesn't think he sold any Chevrolets because of it.

"People were interested in the Saturn," he said.

After the promotion ended, Barberino said he had the Saturn trucked to the auction in Orlando, where he estimated 250 potential buyers huddled around the car.

The SL1 carried a base price of $8,595, and its only option was a $760 package that included power windows and door locks — total manufacturer's suggested retail price was $9,355.

"We left the window sticker on it at the auction, so everybody knew what the sticker price was," said Barberino, who also owns a Subaru dealership in Torrington, Conn., and a Chevrolet-Buick store in Winstead, Conn.

Charles Kuehn said he wasn't shocked to pay $1,000 over sticker to acquire the Saturn, adding that he'll probably take a $1,000 write-off for advertising.

Barberino, whose brother is megadealer Stephen J. Barberino Sr., said he still wants to be a Saturn dealer. But Barberino said he was told by Saturn that franchises only will be awarded in metropolitan areas, and Granby is in northern Connecticut, between Hartford, Conn., and Springfield, Mass.

Holiday cuts car output to 77,420

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

With a short work week due to the Thanksgiving holiday, last week's scheduled auto output fell 25.82 percent from the prior week's build.

Carmakers scheduled production of 77,420 units during the three-day week; 101,631 were assembled during the previous five-day work week.

Year-to-date 5,637,597 cars have been produced, 10.29 percent behind 1989 at this point.

Truckmakers scheduled 48,267 units last week, down 19.47 percent from the prior week and down 7.09 percent from the year-ago week.

So far this year, 3,568,734 trucks have been assembled, 4.93 percent below last year at this time.

General Motors' Fairfax, Kan., Grand Prix facility and Van Nuys, Calif., Camaro-Firebird assembly plant remain idle for inventory adjustment until Dec. 3.

GM's Allante line at the Detroit-Hamtramck facility resumes output today after one week of inventory adjustment.

Downtime at GM's Wentzville, Mo., car plant and Lordstown, Ohio, van plant has been extended another week. Both plants are scheduled to resume output Dec. 3. They have been down since Nov. 5.

Ford Motor Co. will idle six car assembly plants this week due to a lack of dealer orders. The plants are: Norfolk, Va.; Twin Cities, Minn.; Edison, N.J.; Dearborn, Mich.; Wayne, Mich.; and Lorain, Ohio.

The truck line at Lorain also will be down.

Chrysler Corp. will idle the Toledo, Ohio, plant this week to adjust inventory of Jeep models.

Canadian cars up 7% for week

Canadian automakers scheduled 24,121 units last week, 7.86 percent above the prior week and 19.30 percent above the year-ago week.

Truckmakers assembled 14,091 units last week, 12.95 percent below the previous week and 27.13 percent below the year-ago week.

Chrysler closed its Brampton, Ontario, plant and its Pillette Road facility in Windsor, Ontario, last week for inventory adjustment. The plants will resume operations Dec. 3.

The company's Bramalea, Ontario, plant closed Nov. 12 for inventory adjustment and is scheduled to resume output today.

Saturn delays openings, may compensate dealers for lack of cars

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

A panel of Saturn Corp.'s dealers and company executives will meet Wednesday to consider compensating dealers for a severe shortage of cars.

General Motors' new car company also is delaying the opening of some dealerships because quality problems have slowed production. The company is insisting that the cars meet rigid quality standards.

Some existing dealers have received just a few cars.

"We're concerned about dealer profitability," said Donald Hudler, Saturn vice president of sales, service and marketing. "But I have to point out that dealers are concerned about our profitability as well."

Hudler acknowledged that the Saturn "franchise operations team" will discuss some form of compensation to dealers for the short supply of cars since Saturns went on sale at 29 dealerships on Oct. 25. Saturn now has 53 open dealerships.

Saturn would not disclose how many cars have been shipped. *Automotive News* estimates about 8,000 cars have been built since production began July 31, but not all of them have necessarily been shipped. None of the sporty SC coupes have been shipped for sale. The company says the coupe isn't ready.

Possible compensation is among a "number of things" to be discussed to help Saturn dealers in the early going, Hudler said.

The franchise operations team is a panel of six dealers and six Saturn executives, said Saturn spokesman Mark Tanner. "It's a decision-making and recommending organization," he said. "They get into the nitty-gritty of the dealer business."

Greg Sutliff, owner of Saturn of Harrisburg in Pennsylvania and a member of the franchise operations team, suggested that some compensation might be fair since dealers have made their commitment even

Europeans eye big month as buyers race luxury tax

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — European importers expect a boost in luxury car sales during the next four weeks from buyers racing to beat a Jan. 1 luxury tax on cars priced above $30,000.

But a December rush could eat into sales in the first quarter of 1991.

After Jan. 1, a 10 percent tax will be assessed on the amount by which the transaction price exceeds $30,000. Overnight, a $42,400 Audi 200 Quattro will cost $43,640, and an $80,600 Porsche 911 Carrera 6 convertible will jump to $85,660.

Some companies, including Porsche Cars North America and Jaguar Cars Inc., are promoting beat-the-tax sales in national ads.

Rolls-Royce Motor Cars Inc. sent letters to all its owners, noting that the new tax and a Jan. 1 doubling of gas-guzzler penalties could hike the price of a Rolls-Royce more than $30,000.

But German heavyweights Mercedes-Benz of North America Inc. and BMW of North America Inc. are leaving the year-end promotions to dealers.

Peter G. Terian, co-owner of Rallye Motors Inc. in Roslyn, N.Y., said he wishes those importers would promote the change.

"The tax is a fact of life, and I don't want anybody coming to me afterwards to say, 'Gee, I wish I'd known about it,' " said Terian, who has BMW, Mercedes-Benz, Rolls-Royce and Lexus franchises. He is advertising the new tax in radio and newspaper ads and sending more than 10,000 letters to customers and prospects.

He said he ordered about one-third more Mercedes cars than usual, plus "several" Rolls-Royces which, with retail prices beginning at $145,800, represent a big investment.

"If we called the shots right, we'll be in good shape. If we didn't,

Chrysler dumping 10-day reports

Bidwell: Sales tallies are misleading, take too much staff time

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. last Friday announced that it is breaking with a long-standing industry tradition, and will refuse to report 10-day sales after Jan. 1.

Instead, Chrysler will report monthly sales on the third working day following the end of each month.

Currently, all manufacturers that build vehicles in the United States report sales of U.S.-built models every 10 days.

Imported vehicles sold in the United States are not included in the 10-day count but are tallied monthly.

Chrysler views the 10-day report as a relic of the 1940s War Control Board. Chrysler says it no longer serves a purpose and consumes too much staff time.

The company has hinted for some months that it was considering closing the 10-day reporting pipeline.

"It is silly. It is misleading. It is misreported. It is not understood," Bennett Bidwell, Chrysler Motors chairman, said of the 10-day sales reporting practice last week. "What do you learn on a 10-day basis, which has typically a six or seven-day sales cycle in a 10-day period?

"It is an unproductive and we waste too much time at it," Bidwell said. "We are forever being criticized by the press and everybody else for not taking the long view. How can you take the long view when you start out with a 10-day mentality?"

Bidwell said he has written to General Motors Chairman Robert Stempel and Ford Motor Co. Chairman Harold Poling, apprising them of Chrysler's decision and "welcoming them to consider similar action if they saw fit."

A Ford spokesman said the company was not considering discontinuing 10-day sales reporting.

A GM spokesman said the company currently is "reviewing its sales reporting procedures but no decision has been made concerning any changes in the format."

A GM source said it is doubtful the company will end the 10-day reporting practice. The source said the company considers it likely that the automotive press and analysts would obtain and publish 10-day sales numbers even if they were not officially disclosed.

The industry as a whole began reporting retail sales every 10 days in 1955.

In January 1979, with sales at an all-time low and inventories at an all-time high, the faltering American Motors became the first of the major domestic producers to refuse to issue 10-day sales reports. Chrysler acquired AMC in August 1987.

In its announcement expected today, Chrysler will maintain that monthly reports better serve the industry because the 10-day sales estimates that statisticians use for import companies reduce the accuracy and value of the 10-day information.

In addition, Chrysler expects to reduce by two-thirds the workload of its sales-reporting staff as part of its ongoing $2.5 billion cost-cutting program.

Nissan revamps field setup to concentrate on dealers

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Saying that it has quit chasing Honda and Toyota, Nissan Motor Corp. in U.S.A. will reorganize its entire sales and service operation to focus more closely on its 1,100 Nissan dealers.

The effort will begin in the three-state Dallas region in January and expand nationally within about two years. It is aimed at building Nissan's image by improving the way it takes care of customers.

Instead of each dealer working with three or more regional staff members, Nissan will assign one field staffer to handle the sales, parts and service needs of about 10 dealers. Over time, employment in the field organization will likely increase and headquarters jobs will decline.

The new program marks the rejection of a volume-oriented strategy that was destined to cripple the company in the long run, according

Detroit, L.A. reach for glitz and iron to win annual duel

AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The 1991 New Year promises to open with a slugfest between the Detroit and Los Angeles auto shows.

Some thought the Detroit show stumbled when it pushed its opening day back to the second week of January this year, allowing its west coast counterpart to be the first show of the year. The two shows were held the same week in 1989 and 1990.

But this year, Detroit plans to deliver a one-two punch: the debut of at least 34 production and concept vehicles, and a Robin Leach-hosted television show that will be syndicated to 200 television stations around the country.

The Los Angeles show will debut about half as many vehicles and, for the second year in a row, create a local television show.

"The more publicity we can get, the more likely manufacturers will debut their production and concept cars in Detroit," said Gordon Stewart, a Detroit area Chevrolet dealer and co-chairman of the 1991 North American International Auto Show in Detroit. The show is sponsored by the Detroit Automobile Dealers Association.

Still, Los Angeles is the car-buying capital of the country, said Joseph Molina, a spokesman for the Los Angeles show. "The Los An-

Big 3 pare production again

GM leads as fourth quarter cuts total 409,000 units

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Increasing tensions in the Middle East and a resulting sag in buyer confidence are being blamed for sharply slashed fourth quarter production schedules at the Big 3.

The cutbacks are likely to hurt earnings. Auto analyst Jean Claude Gruet of UBS Securities said the impact of these cutbacks on earnings will be powerful. "There's real trouble in autoland."

Last Thursday, General Motors Chairman Robert C. Stempel announced GM's cuts in a speech in Fort Wayne, Ind. "Beyond an earlier 181,000 unit reduction, we are now planning to reduce our North American production schedules for the fourth quarter of 1990 by 111,000 units," Stempel said.

Last Friday, sources at Ford Motor Co. and Chrysler Corp. also confirmed significant fourth quarter production adjustments. Ford chopped its original forecast by 99,000. And Chrysler trimmed its forecast by 18,000 vehicles.

"Many people have been taking a wait and see attitude toward major purchase decisions," said Stempel. "For the auto industry this has translated into weaker automotive demand that has meant temporary plant shutdowns and layoffs."

In the December issue of *Playboy* magazine, Chrysler Corp. Chairman Lee Iacocca described what the Middle East crisis has done to the car business. "The industry is on its ass, really down," Iacocca said. "Nobody's buying anything and people are worried about their jobs. I'm seeing all kinds of layoffs. Let's hope this doesn't last more than a year."

But auto analyst David Healy with Barclays de Zoete Wedd Research said the cuts were "below the levels of retail sales."

"The vehicles will be coming out of dealer inventory in the fourth quarter," he said. "The second round of cuts were not expected. Sales have been firm. So they don't reflect lower dealer orders. But perhaps the financial types in Detroit might actually be more worried about the effect of the Middle East than the people buying cars."

UPDATED FOURTH QUARTER NORTH AMERICAN PRODUCTION FORECAST

	Updated Nov. 30, 1990	As of Nov. 1, 1990	Change
GM*	1,071,000	1,182,000	–111,000
Ford	767,000	866,000	– 99,000
Chrysler	396,000	414,000	– 18,000
Total Big 3	**2,234,000**	**2,462,000**	**–228,000**

*Includes NUMMI production

A Ford source last Friday said 10 plants would be down the first week in December "to keep buildable dealer orders in line with production."

"Our new forecast is a reconciliation with some unscheduled downtime in November and an expectation of downtime in December," said Ford spokesman Joel Pitkoff.

Stempel expressed confidence in the long-term outlook for GM, but said current market forces and an objective to achieve more level production in 1991 have caused the corporation to further reduce its fourth quarter North American vehicle production.

"The major reduction in our fourth quarter North American vehicle production in 1990 will promote avoidance of inventory overhang and achievement of more level and cost-effective production in 1990," said Stempel. "GM expects its overall fourth quarter financial results to decline significantly relative to our recently released third quarter results."

GM had originally planned to build 1,363,000 vehicles in North America in the fourth quarter. But with a 181,000 cutback in late October and the 111,000 unit reduction last Thursday, a total of 292,000 vehicles have been pared from the original projection.

In early October, some analysts predicted that GM's aggressive schedule would result in production cuts to balance inventory.

Captive finance firms reap gains as some banks drop auto loans

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Easy money is drying up in the Northeast and some other regions as some banks withdraw from making auto loans.

But the Big 3 captive finance companies are picking up the slack. And the percentage of customers financing cars through Ford shows it. In the third quarter, Ford Motor Credit Co. financed 33 percent of all new vehicles sold by Ford Motor Co. dealers in the United States, up from 30 percent for the third quarter in 1989.

Among the banks that left the auto-loan market recently are New York-based Citicorp and Marine Midland Automotive Financial Corp.; Bank of New England, based in Boston; and California's Security Pacific Corp., according to a spokesman from the Consumer Bankers Association.

"There is no widespread credit crunch," says Randy Kniebes, vice president of marketing for Ford Motor Credit.

"But in selected areas of the country, particularly the Northeast and some areas of the Southwest, some banks have pulled out," he said.

In these markets, marginal customers are being squeezed hardest.

Robert Brest, owner of Bob Brest Buick Inc. in Lynn, Mass., says if it weren't for General Motors Acceptance Corp., his sales would drop by half. "Banks are tough," asserts Brest. "They don't want to be in the credit business."

Bankers are reluctant to finance more than the dealer invoice price of cars, whereas two years ago they would finance 10 to 15 percent above invoice, Brest said.

In addition, customers with marginal credit or who owe more on their current vehicles than they are worth are having trouble financing vehicles. Brest says GMAC is trying to negotiate any way possible to put people into cars.

Brest says he sold or leased 150 vehicles in November, with 74 percent financed through GMAC and the rest by local banks.

The percentage of vehicles financed through GMAC is about 25 percent higher than for November 1989. The regional credit crunch shows up in his overall turndown rate for loans: roughly 35 percent, compared with only 15 percent in 1988.

On the other hand, Midwest dealers are awash in credit. Banks in the heartland are competing aggressively with captive finance companies.

"There is no scarcity of credit here," says Ray Green, who owns dealerships in Danville, Springfield, and Jacksonville, Ill.

Green, who is president of the National Automobile Dealers Association, contends the dealers' problem is not a credit squeeze, but lack of showroom traffic.

As president of NADA, he talks to dealers regularly. He says some have complained of

see CREDIT, page 41

Correction

An item in last week's Briefly column on Chrysler Credit Corp.'s offer to postpone December payments for qualified customers reported the company charges a 10 percent fee for that service. The fee is actually 1 percent.

World Congress Monday lineup features execs

Hungerland

Rosenberg

Rock

DETROIT — Hans-Jorg Hungerland, member of Volkswagen AG's Board of Management; William Rosenberg, EPA assistant administrator for air and radiation; and John Rock, general manager of GMC Truck Division, will address the Automotive News World Congress Monday morning Jan. 14.

David J. Herman, president and chief executive officer of Saab Automobile AB, also will speak Monday. He was profiled previously.

The World Congress will run from Sunday, Jan. 13 through Wednesday morning, Jan. 16 at the Westin Hotel in Detroit. Attendees will hear from more than 30 auto industry experts.

Hungerland began his VW career in 1958. He was a management trainee at VW AG and then was assigned to Volkswagen of America Inc., where he worked with service and systems departments.

In 1970, he returned to West Germany as department manager of service planning and systems in VW's Central Service Division. In 1977, he was promoted to manager of the service organization.

He returned to the United States in 1980 as general manager of VWoA's Corporate Service Division, and in 1983 he became director of export sales. He was appointed VWoA president and chief

Toyota plans second Camry plant

New Kentucky factory will boost capacity to 440,000 cars

By Jack Keebler and Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTERS

GEORGETOWN, Ky. — Toyota Motor Corp. surprised some industry observers and disappointed others last week when it announced plans to build a second U.S. plant devoted solely to Camry production.

Toyota will spend $800 million to add a second plant adjacent to its already expanding $1.1-billion car and engine production center in Georgetown, Ky.

The company confirmed months ago that it needed and wanted additional North American plant capacity, revealing that straining factory output in both the United States and Japan is crimping its U.S. sales potential.

> "I have never considered building any vehicles other than the Camry sedan and wagon at Georgetown."
>
> **Kaneyoshi Kusunoki**
> Toyota Motor Manufacturing

Industry speculation pictured Toyota making a daring plunge into full-size pickups or six-passenger family sedans with its proposed new factory. No Japanese automaker has attempted to enter either market.

Toyota officials strongly denied that they considered building anything other than the Camry at Georgetown.

"There is no such plan at this moment," said Kaneyoshi Kusunoki, chairman of the board for Toyota Motor Manufacturing USA Inc., through an interpreter. "I have never considered building any vehicles other than the Camry sedan and wagon at Georgetown."

But Alex M. Warren, senior vice-president of Toyota Motor Manufacturing, said the Camry-only

Subaru to slash jobs, consolidate offices

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Subaru of America Inc. has begun a top-to-bottom overhaul of its operations by planning to cut as much as 10 percent of its work force, by consolidating some regional operations and by negotiating to buy an independent distributor.

The moves are the first significant changes at Subaru since it became a wholly owned subsidiary of Fuji Heavy Industries Inc. three months ago. Subaru had been a publicly-traded, independent importer and distributor before Fuji bought the 50.7 percent of Subaru that it didn't already own.

Tokyo-based Fuji is the maker of Subaru cars, which have been losing popularity in the United States since 1986. Through October, 1990 sales were off 22.74 percent from 1989.

The company has begun telling some employees they will lose their jobs Dec. 28. Spokesman Richard Marshall said no precise figures are available, but Subaru estimates it will discharge no more than 10 percent of its 1,080 employees. The exact number will depend on such things as how many employees are willing to relocate or change jobs. Some positions that are presently unfilled will be eliminated.

Subaru also is reducing its national sales regions from six to five and is relocating some of its regional headquarters offices.

Chris Wackman, vice president of marketing, said Subaru may eliminate some management and regional headquarters staff, but there will be no reduction in the field sales force.

Subaru will close its Southeast regional office in West Palm Beach, Fla., and its Atlantic regional office in Savage, Md. Those offices will be combined into a new regional office that will be be established in the Atlanta area by next May. The company has a parts distribution center near Atlanta.

Subaru also will close its Southwest regional office in San Antonio and will move those operations to a new regional headquarters in Denver. Subaru has a "satellite" sales office in Denver and a parts distribution center in Aurora, Colo. The Southwest region was the only one with the regional office in one city and a satellite office in another. The Denver office will become the regional headquarters.

Meanwhile, Subaru is negotiating to buy Penn Jersey Subaru, the independent distributor for Pennsylvania, southern New Jersey and Delaware.

At one time, Subaru had 13 independent U.S. regional distributors. It has bought all except Penn Jersey Subaru; Subaru of New England in Norwood, Mass.; and Subaru Distributor Corp. in Orangeburg, N.Y. Buying Penn Jersey would make Subaru of America the exclusive distributor in 41 states. Company officials have said they are interested in buying all the independent distributors.

Forget the economy: Sales hit by earthquake prophesy

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

Add earthquakes to the list of reasons why car and truck sales are slow in some parts of the country.

An informal survey of dealers in Missouri, Arkansas and Tennessee shows that a much-publicized prediction that an earthquake could hit the Mississippi Valley region today has had some effect on new-car sales.

"I've never seen anything like this. I've had a lot of customers tell me that they're not going to buy a car until after the earthquake, until after Dec. 3," said Glenn Dodd, dealer principal at Glenn Dodd Honda-Isuzu in Memphis, Tenn.

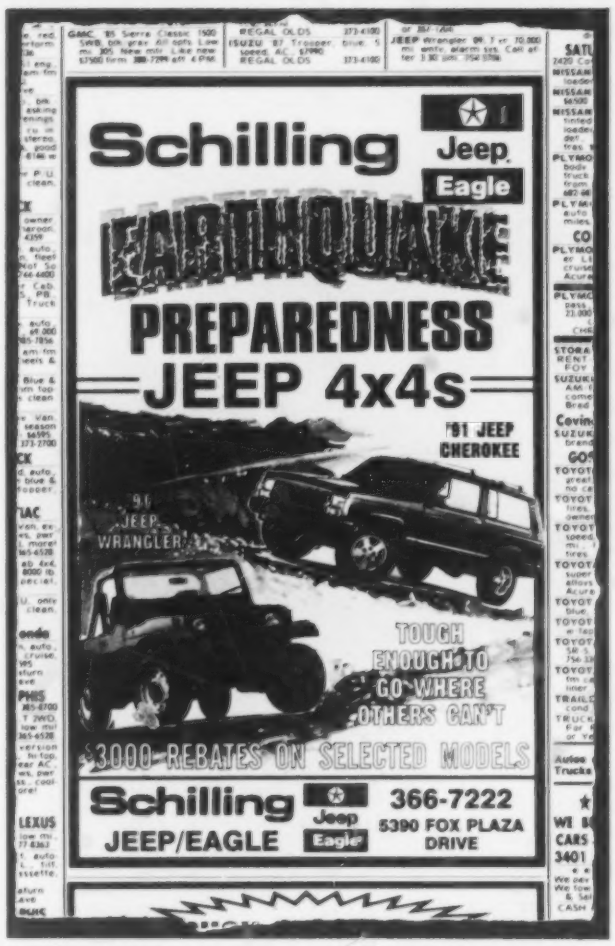
The stir began when New Mexico climatologist Iben Browning said last summer there was a 50-50 chance that the geographic fault, which runs through the area, would cause an earthquake today.

The fissure, known as the New Madrid fault, runs 120 miles from southern Illinois to northeast Arkansas. Seismologists agree that it has the potential to deliver a jolt measuring 7.0 on the Richter scale, about the same as the earthquake that struck San Francisco in October 1989. A quake of that magnitude could cause widespread heavy damage.

But scientists have derided the prediction that it is more likely to hit today than any other time in the next 1,000 years. Nonetheless, a number of Mississippi Valley communities have been shaken.

Like Dodd, other dealers in the area say customers have told them they are staying out of the market until after the marked date. To turn that tide, at least one dealer is using the situation as a promotion.

Schilling Jeep-Eagle in Memphis is advertising Jeeps as "Earthquake Preparedness" vehicles. Randy Mathis, Schilling general sales manager, said the dealership has done some preparation of its own by instructing employees on building safety and outlining evacuation routes. Other dealers say they've taken similar action.



One Memphis dealer has used the earthquake prediction as a promotion — but also has instructed employees on safety and evacuation routes.

Isuzu dealer Dodd said he sold a Rodeo sport-utility to a buyer who "wanted a four-wheel-drive vehicle in case he needs to get out over the rubble." That sale was made without any kind of earthquake promotion.

Other dealerships have responded by giving salespersons the day off if they request it, storing flashlights and water, ignoring the issue altogether or buying earthquake insurance.

Universal Underwriters Insurance Co., one of the nation's largest auto dealer insurers, has seen a fivefold increase in certain areas.

The company has written $100 million worth of earthquake coverage for dealers along the fault since August, according to Dwight Groves, Universal's vice president of underwriting.

In the firm's Memphis office, underwriting manager Bill Sharp reported that because the coverage is relatively inexpensive, many dealers have figured they're better safe than sorry. On average, premiums are less than $1,000 a year.

Summit improves prospects for Mexico free-trade pact

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

The prospects for increased auto trade between Mexico and the United States appeared brighter last week following two days of meetings in Mexico between President George Bush and Mexican President Carlos Salinas de Gortari.

The two leaders vowed commitment for a free-trade agreement by 1992.

Although no specifics have been proposed, a U.S.-Mexican accord would likely be similar to the one reached between Canada and the United States in 1988. That pact allows manufacturers from either country to invest and operate freely across borders without paying local tariffs. A precursor to that deal governed automotive trade between the United States and its northern neighbor for 25 years.

Mexican exports increase, Page 26

At the heart of the Mexican issue is U.S. labor's fear that manufacturers will export jobs and capital to take advantage of lower Mexican wages.

Mexican labor rates are often as low as $1 an hour, compared with U.S. auto-industry rates of $13 to $18 an hour.

"If this country's economic development strategy is going to be based on growth through low wages, then free trade with Mexico makes sense," said Steve Beckman, international economist with the UAW in Washington.

"But that's not the way to go about improving our standard of living or fostering economic growth," said Beckman. "At the same time, tying Mexico's economic destiny to that strategy simply assures that standards of living there will remain low."

At the heart of the issue is U.S. labor's fear that manufacturers will export jobs and capital to take advantage of lower Mexican wages.

Beckman said the UAW will urge Congress to resist a Mexican free-trade agreement.

He estimated that U.S. automakers already employ 75,000 Mexicans along the border in "macquiladora" factories. "Those are jobs that would have been filled in the United States," he claimed.

A macquiladora permits U.S. companies to import subcomponents or raw materials into Mexico, to process or assemble them, and to re-export the final product to the United States without paying import duties.

Macquiladora labor rates are usually $1 an hour or less.

Chrysler Corp. spokesman John Guiniven said Chrysler's production in Mexico creates U.S. jobs, rather than eliminating them, since its Mexican-assembled cars contain U.S.-made engines and components.

Guiniven said Chrysler generally supports a free-trade arrangement, but emphasized that it has to be in American manufacturers' best interests.

Guiniven and other observers are concerned that a free-trade pact will allow Mexico to become a bustling export platform into a U.S. car market that has more than enough capacity already.

A number of automakers are already positioning to export more Mexican-made cars into the United States.

Ford's plant in Hermosillo, which opened in 1986, enables the automaker to import about 150,000 Escorts and Mercury Tracers annually to dealers in the United States.

Nissan Motor Co. Ltd. and Volkswagen AG are investing heavily to expand their Mexican auto production. VW has designated Mexico as its North American production center, and Nissan is currently building an "export assembly plant" that is expected to send more than 60,000 cars annually to the United States by mid-decade.

Such increases align with projections from the Mexican government that automobile exports to the United States will increase from more than 200,000 a year currently to about 500,000 a year by 1995.

Until this year, vehicle trade has been one way. But Mexico now allows the import of U.S.-built vehicles.

Honda Motor Co. currently builds motorcycles and service parts for U.S.-marketed cars in Mexico. But Honda officials maintain that the company has no plans to build cars there.

Even without a free-trade pact, Mexico's automotive shipments to the United States are growing.

Last year, Mexico exported some $4.3 billion in automotive goods to the United States, up from $2.38 billion four years earlier.

Mexican parts production now accounts for a 13-percent share of the U.S. automotive sales market, up from 11 percent in 1985.

Just between friends

Iacocca blasts, then buoys Greenwald

By Edward Lapham
MANAGING EDITOR

Iacocca: Loyalty first

Greenwald: Still a friend

Chrysler Corp. Chairman Lee Iacocca and Gerald Greenwald, former Chrysler vice chairman and heir apparent to Iacocca, are still friends.

This despite Iacocca's pronouncements that Greenwald was disloyal for leaving the automaker last June to join the efforts to purchase United Airlines.

In an interview in the December issue of *Playboy* magazine, Iacocca said he faults Greenwald for leaving the company last June. "He grew up with me. He'd been in the business for 32 years, the same two companies as me — Ford and Chrysler," Iacocca said in the interview. "Isn't there anything sacred anymore? Isn't there loyalty to anything?"

At a reception at the National Press Club in Washington last Tuesday, Iacocca told an *Automotive News* reporter that he and Greenwald are still friends. "I had dinner with Gerry last night; we're good friends," Iacocca said. "No problem. That's what I told him."

Greenwald could not be reached for comment.

Greenwald joined Chrysler in 1979 as controller following 22 years with Ford Motor Co. He was named vice chairman in 1981. In 1988, Greenwald joined Iacocca in a two-member office of the chairman, clearly becoming the heir apparent.

Iacocca spent much of the *Playboy* interview defending his comments about Japan. "These guys are aggressive. When you sting them commercially, they fight back. It's a war. If we get too thin-skinned about it, then this country's got a problem. I'm a red-blooded American. I fight back."

Automotive News Staff Reporter Diana Kurylko in Washington contributed to this report.

Mid-Nov. sales rise 14.6%

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Sales of domestic cars and trucks were surprisingly strong in mid-November, increasing 14.6 percent in a jump that analysts attributed to strong fleet sales and generous incentives.

Sales of the Big 3's North American-built vehicles and those from Asian transplants totaled 283,529 for the period. Cars sales rose 17.6 percent over last year to 174,670, and truck sales were up 10.1 percent to 108,859.

David Healy, auto industry analyst for Barclays de Zoete Wedd in New York, said the increase was "sort of puzzling" in light of recession fears, the threat of war in the Middle East and higher gas prices.

"Maybe the consumer is not as spooked as he's supposed to be," Healy said.

Chrysler Corp.'s car sales climbed 10.8 percent and its truck sales were flat, leaving it with an overall 5.4 percent gain and 45,227 sales for the period.

Ford Motor Co. and General Motors both had double-digit increases in car and truck sales. Ford's overall volume was up 15.4 percent to 85,372; GM climbed 14.5 percent to 121,718.

Ronald A. Glantz, auto industry analyst for Dean Witter Securities in San Francisco, said a boost in fleet sales helped the numbers.

"Sales do not spurt up when layoffs are increasing, your neighbor has had a 'For Sale' sign on his lawn for six months, and war is about to break out in the Middle East. It had to have been something fluky," Glantz said.

Sales of domestic Hondas were up 5.2 percent to 11,267.

Nissan's sales climbed 3.0 percent. Sentra sales, which is new for 1991, were up up 45.9 percent to 3,399, but small trucks were down 18.6 percent to 2,709. Toyota's sales rose 53.4 percent to 9,025.

The big gains by Toyota and Nissan in sales of U.S.-built cars are tempered by the fact that their sales of imported cars are down for the year. For 10 months, Nissan's import sales (excluding Infiniti) were down 20.8 percent from 1989, and Toyota's import sales (excluding Lexus) were down 19.7 percent. The transplant makers do not report import sales on a 10-day basis.

Auto execs shun outspoken Calvet

Seeking influence, new group softens anti-Japan attitude

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — European auto executives frustrated with the blocking tactics of Peugeot SA Chairman Jacques Calvet will form a new lobby group without him.

Calvet has been outspoken in his demands to severely limit Japanese presence in Europe for a decade after 1992, when free trade generally begins in Europe. The other executives support a shorter transition period and fear they are losing influence at the European Commission because of Calvet's obstinance.

Calvet had [illegible]eatedly used his veto at the 12-[illegible]ember Committee of European Community Automobile Makers to block policy statements. The other 11 chief executives of European automakers quit the group last week.

The executives feared that the committee's strength as a lobbying group had been undermined by its inability to offer a united front on such issues as Japanese imports and emissions regulations.

Calvet: staunch protectionist

Von Kuenheim: new lobby leader

Calvet, the staunchest protectionist voice in the European auto industry, had frequently used the group's rule requiring unanimous support on policy positions. He seemed to have support from other European makers when, at the Paris auto show, he chastised Britain for encouraging Japanese plants and called for a derade of strict limits on Japanese nameplates. But although Renault SA and Fiat SpA for a time opposed a milder European Commission position, the top executives of other automakers evidently were not convinced.

In recent weeks, they had tried to adopt a qualified 80-percent majority rule. When that failed, they quit the group. An industry source said that the executives had long been working on changing its lobbying structure in Brussels, headquarters of the European Commission. "The industry wants to speak with one voice," he said — although without Calvet, they won't have one.

The new group is expected to come under the auspices of another Brussels auto industry trade association, the CLCA. The CLCA has taken a low key approach concentrating on technical matters of the auto industry and auto trade.

BMW AG Chairman Eberhard von Kuenheim has been charged with forming the new organization, which would include Ford of Europe and General Motors Europe, which had been excluded from the Committee of European Community Automobile Makers.

Peugeot SA also has been invited to join the new group. A Peugeot spokesman said Calvet will not comment on developments.

The new group is understood to support a plan by the European Commission that would establish a five-year transition period for Japanese imports. Calvet had called for a 10-year limit on the Japanese starting in 1993 that would freeze current Japanese market share, would maintain existing tight restrictions on Japanese cars in France, Italy, Spain, Britain and Portugal, and would strictly limit transplant production in Europe.

Mexican exports rise 15.5% in 1st 9 months

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Mexico's five automakers increased exports by 15.5 percent during the first nine months of the year.

Shipments totalled 187,026, compared with 161,950 from January through September 1989, according to the Mexican Automotive Industry Association.

Volkswagen more than doubled its exports.

Increased shipments of Ford's new Mexican-built Escort and Tracers pushed its nine-month export totals up 33.6 percent.

Despite an 11 percent decline in shipments, Chrysler remained Mexico's leading exporter through the first nine months. The company exported 53,845 vehicles, compared with 60,474 in the same period last year. Chrysler's totals included 27,766 two-door LeBaron coupes and 17,724 D-150 pickups.

Ford exported 23,454 Escorts and 29,412 Tracers.

Most of VW's 32,282 exports were Golfs and Jettas for the U.S. market.

A total of 31,529 GM cars left Mexico, all of them Buick Centuries.

Following the trend of recent years, most Mexican shipments continued to head for the United States. Of the 194,631 vehicles exported by the industry in all of last year, 83.7 percent went to the United States.

Chrysler shipped 67,840 vehicles from Mexico in 1989, 61,701 of them to the United States and 5,919 to Canada.

All but 84 of General Motors exports were U.S. bound, while all of Ford's and most of Volkswagen's exports were. Nissan sent most of its Mexican-built exports to the Caribbean and to South and Central America.

MEXICAN EXPORTS

Maker	Jan-Sept 1990	Jan-Sept 1989	Total 1989
Chrysler ..	53,845	60,474	67,840
Ford	52,866	39,580	39,580
VW	32,282	15,851	21,702
GM	31,529	27,766	40,376
Nissan	16,504	18,279	25,133
**Total	187,026	161,950	194,631**

LEGAL BRIEFS

Single sale isn't racketeering

A U.S. district judge has dismissed a racketeering suit against a Pennsylvania truck dealer who was accused of making false statements about the condition of a tractor-trailer.

U.S. District Judge Lowell A. Reed Jr. said Donald Raymond's suit against Borken Truckarama tried to transform a single event into a series of acts allegedly forming a pattern of racketeering.

In March 1989, Raymond discussed buying a four-year-old International Eagle tractor-trailer with a Truckarama spokesman, who allegedly misrepresented the make, model and condition of the vehicle. Raymond made a $2,210 downpayment and entered into a three-year lease with First National Capital Inc.

In his suit, Raymond asserted that numerous mechanical problems made the truck undriveable. He said the truck's odometer had been rolled back and the truck was not a 1985 model but a modified 13-year-old one.

He also claimed his mailed monthly lease payments established mail fraud. In throwing out the mail fraud charge, Judge Reed noted that while Raymond alleged the so-called scheme was suggested or required by the dealer to induce him to buy the truck-trailer, the fact is the "mailings came after the alleged fraudulent transaction occurred and in no way concealed the alleged scheme."

The judge said the happenings cited were all part of a single event, the sale of one truck. He also found a lack of continuity in the conduct. "Taking into consideration the time of delivery and subsequent repairs made to the truck, the entire 'scheme' could not have taken more than several months in 1989," he said.

— Helen Kahn

Attorneys get pay in odometer case

Missouri's federal district court, which late last year settled all class actions involving rolled-back odometers against Chrysler Corp. for $17.8 million, has started writing $3.1 million in checks to 16 law firms involved in the case.

Last April, the court fixed the attorney fees at 17.5 percent of the settlement. It urged the firms to work out the amounts to reflect the relative contribution of the different attorneys.

In 1987 it was disclosed that odometers had been disconnected on 43,000 cars used by Chrysler executives in quality testing programs and later sold as new.

INAUGURAL EVENT
Industry Trade Days PREVIEW

Your exclusive preview of the auto industry's leading exhibition
January 10 & 11
1991
Cobo Center,
Detroit, MI USA

A TWO DAY, PRE-SHOW OPPORTUNITY TO SEE THE LARGEST ONE-ROOM AUTO SHOW IN THE WORLD

For the first time ever in North America, suppliers to the worldwide automotive industry will be given the chance to preview more than 700 of the international automotive industry's newest products and concept vehicles of the future — — for two days before the general public is admitted. Here's a unique opportunity to entertain your key customers and prospects, host a reception or conduct a meeting around one of the world's most influential auto shows. You won't find a better setting in which to talk about your business. For more information or to obtain your credentials today, call Julie at:

Phone: (313) 643-0250
Fax: (313) 643-8788

THE NORTH AMERICAN INTERNATIONAL AUTO SHOW IN DETROIT

Preview Hours:
Thursday, January 10 - Noon to 11:00 pm
Friday, January 11 - 9:00 am to 2:00 pm

Detroit Auto Dealers Association, 1800 W. Big Beaver, Troy, MI 48084

AUTOMOTIVE MINI-VAN BUYERS:

NEW "INTERLOCKING" FLOOR LINER. INCREASES THE VERSATILITY OF THE "MINI-VAN"

DESIGNER LINER. MADE IN AMERICA.

Designer Liner™ is a hi-tech, tough, polyethylene floor liner, designed to provide the protection for the expensive carpeted areas of today's Mini-Vans. This custom fitted, rugged, light weight floor liner converts the modern Mini-Van from a stylish "People Carrier" to a rugged "Cargo Carrier". The 4 light-weight sections with their patented "Interlock" system install without tools. All four or any combination of sections may be used to fit your needs. Custom fits Chrysler, Dodge, Plymouth, Ford, Chevrolet and GMC Mini Vans.

★ VERSATILITY ★ FLEXIBILITY ★ DURABILITY ★

For more information and a product brochure, call Don Patterson (609) 499-3232, FAX (609) 499-3233.

Note: Some makers offer rebates to buyers of 1988 and 1989 models. Those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

Chrysler adds '91 minivan rebate; GM extends payouts

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. is offering buyer rebates for the first time on its redesigned 1991 minivans, and all General Motors car divisions have revised or extended their incentives. In most cases, expiration dates have been extended to Jan. 7 from Dec. 12.

In letters mailed to owners of its 1984-89 minivans, Chrysler is offering a $500 discount on a 1991 model through Dec. 31.

The direct-mail rebate program comes on the heels of Chrysler's decision early in November to offer customers cash paybacks of $1,000 on all 1989 and 1990 Chrysler, Plymouth and Dodge minivans.

The minivans became Chrysler's most popular and profitable vehicles in the late 1980s even though no rebates were offered by the manufacturer.

With sales softening late last year, Chrysler resorted to rebates on minivans for the first time. The six-week payout began Dec. , 1989.

Chrysler also is continuing consumer rebates ranging from $400 to $2,500 on 1989-91 cars and trucks through Dec. 16, and dealer paybacks ranging from $250 to $1,000, based on quota, through the end of the year.

Buyer rebates on some Chevrolet and Geo models have been reduced. Paybacks on 1990-91 Geo Metros have been cut from $500 to $300; 1990 Prizm incentives fall from $1,250 to $1,000; and 1991 Prizm paybacks dip from $800 to $500.

Camaro incentives for 1990 models drop from $1,000 to $750, and rebates for 1990 Astro minivans have been reduced from $600 to $500.

Cadillac cut the customer incentive on 1990 DeVille/Fleetwood, Seville, Eldorado and Brougham from $1,500 to $1,200, while maintaining the $1,500 payback on 1991 Broughams.

Oldsmobile is continuing its program of consumer rebates on all 1990-91 models except the 1991 Custom Cruiser, 98 and Bravada. The rebates, which include a reduction from $1,500 to $1,000 on the 1991 Toronado except in the Eastern region, continue to range from $500 to $2,500.

All Chevrolet, Cadillac and Oldsmobile rebates expire Jan. 7. The former expiration date for all GM payments was Dec. 12.

Pontiac revised incentive amounts and extended the expiration date on some models.

The current rebates, which range from $500 to $1,000, will expire Dec. 12 for 1990-91 LeMans, Sunbird, 6000 and Trans Sport and 1990 Firebird.

Pontiac has revised the rebate amounts and extended the program through Jan. 7 on the following cars: 1990 Bonneville ($1,000, up from $500), 1991 Bonneville ($750, up from $500); and 1990 Grand Prix ($1,250, up from $750). The $750 rebate for 1990-91 Grand Am is unchanged. The 1991 Firebird rebate also expires Jan. 7. The Firebird payment remains at $500, except in California where it has been raised to $1,000.

Buick has extended the current rebates, ranging from $250 to $3,000, through Dec. 31 on its 1990 models and through Jan. 7 on its 1991 models.

The revised GM rebate programs continue to carry the low-interest finance rates offered in the previous programs.

NISSAN

FROM PAGE 1

to Robert J. Thomas, Nissan Division general manager.

Nissan Division still hopes to sell 700,000 vehicles annually in the United States by 1993. But it expects sales in the 1992 model year to be no higher than the 650,000 it recorded in the 1989 model year.

As it awaits such volume-building products as the 1993 Stanza and a 1993 Nissan-Ford minivan, it will get its organization in order.

Meanwhile, Toyota Motor Sales U.S.A., Inc. expects to reach 1.5 million sales a year by the middle of the decade. If it maintains its current growth rate, American Honda Motor Co. Inc. won't be very far behind.

"Frankly, we have been chasing Honda and Toyota in recent years," says Thomas. And the company could continue to push cars out the door with incentives and do "every schlock thing in the world to maintain volume," he says.

But it won't. "We can't spend money to buy customers; we have to spend money to earn them," Thomas says.

In the Dallas program, a smaller group of regional and district officers will make decisions formerly made by staff members in Nissan's 11 regional headquarters. Also, fewer decisions will have to be cleared by national headquarters.

A district operations manager — the person in charge of the sales, parts and service needs of a group of 10 dealers — will have access to all the resources of the region to do whatever he and a dealer decide needs to be done to improve the retail operation. The dealer operations manager could approve the use of a Nissan-subsidized loaner car, for example. Currently, loaners are available only in special cases.

Eventually, the program also will give dealers more say in the model types, options and colors of cars they get from the factory. Dealers also will be given more authority in handling warranty claims. They might decide, for example, that Nissan should cover a repair on a vehicle whose warranty has just expired. Such decisions currently are left to the region.

Ray Brandt, owner of Ray Brandt Nissan in New Orleans, says he likes the idea of a dealer operations manager: "Most problems in today's market need immediate attention. Now we'll have a hands-on quarterback on our team who's calling his own plays."

The Resource Allocation Project, as it is formally called, is the brainchild of Nissan President Thomas Mignanelli and Thomas.

Thomas says Mignanelli has been wrestling with how to decentralize Nissan's operations since joining the company from Ford Motor Co. more than three years ago. The Boston Consulting Group, which Nissan had been working with on another project, helped.

The new program follows a dramatic overhaul of Nissan's product lineup in recent years. But sales of Nissan-badged products were down 10.4 percent through October, and market share slipped from 4.6 percent to 4.3 percent.

While its cars have been redesigned, Nissan's corporate structure has been a stodgy reminder of the past, according to Evan Wride, Nissan director of information services and national team chairman for the project.

Wride says the death of the dinosaurs holds a lesson for Nissan and all businesses. "If you don't change, you die," he says. The internal brochure describing the Dallas project is informally called the "dinosaur brochure."

According to Bill Bivens, national merchandising manager and chairman of the regional team, the move is the next logical step following the creation in January of Nissan North America Inc., an umbrella company overseeing Nissan's entire U.S. operations, and the appointment of Mignanelli as president in June.

"Nissan (in Japan) decided a few years back that local entities needed control over their own destinies," says Bivens. "The first step was giving more independence to operations in each country. Now, we're applying the same philosophy here regarding our regions."

Nissan has told most of the dealers in the Dallas region about the pilot program, and many of them were consulted about it.

The Dallas region covers Texas, Oklahoma and Louisiana.

Bivens and Wride join three other high-level employees who will head five oversight teams based in Nissan's Carson, Calif., headquarters. The other units are marketing, communications and planning.

Those five report to the implementation team that is made up of four vice presidents, including Infiniti Division General Manager Bill Bruce, who chairs the team. The new Nissan program will resemble Infiniti's organization, so Infiniti will not be directly affected by the change.

The other vice-presidents are Nissan Division's Thomas; Jerry Butts, general manager of parts and service; and Shelee Serdaba, who is in charge of finance and information systems.

More important, from Nissan's perspective, are changes outside the home office.

The Dallas region will have 10 district operations managers for its 90 dealers. The ratio of dealers to district operations managers will vary from market to market.

> "Nissan (in Japan) decided a few years back that local entities needed control over their own destinies. The first step was giving more independence to operations in each country. Now, we're applying the same philosophy here regarding our regions."

How Honda and Toyota organize staff in field

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

Nissan Division Vice President and General Manager Robert Thomas says Nissan wants to stop chasing Honda and Toyota. Apparently it wants to stop operating like them, too.

The program that Nissan is launching in January moves power to the regions and gives dealers more direct contact with decision-makers in the field.

With it, Nissan will abandon a structure similar to those used by the top two Japanese sales organizations.

Honda has 10 auto sales and service zones nationally. Each zone is headed by a zone manager and an assistant. They report to either the Eastern or Western region. The regions report to American Honda Motor Co. headquarters in Torrance, Calif.

Zone service managers report directly to Torrance headquarters, while the zone parts managers go through the general manager at the region.

District managers in sales, service and parts report to the zone managers.

At Toyota, each of nine regions has a general manager who is the direct link with headquarters. The general manager oversees field operations managers, who hear directly from district managers.

District managers handle sales. Parts and service are handled separately. District parts managers and district service managers report to regional parts and service managers, who then report to an assistant general manager at the regional office.

At both Honda and Toyota, the number of people at almost every level varies depending on how big the market is and what kind of sales it generates.

As many as three field representatives — for sales, parts and service — could be calling on any dealer at any one time.

In the new Nissan scenario, each dealer deals with a single person for sales, parts and service. The aim is to cut steps out of the reporting process and get decisions made faster.

SATURN

FROM PAGE 1

if Saturn hasn't provided many cars.

"If one does what he's supposed to do and the other doesn't, there's an inequity," Sutliff said. "It seems fair that the person who has met his part of the bargain gets some consideration, particularly when he has a genuine loss."

The production setbacks led Saturn to delay the opening of Sutliff's store from Feb. 21 to April 4, even though construction will be completed this week. Sutliff, who owns a Chevrolet dealership across the street, said he will use the Saturn facility to sell Chevrolets, used cars or used trucks.

"It's a prime location in which we have a financial interest," he said. "Saturn has no wish to see us with a facility that we can't use."

If they had it to do over again, Sutliff said he thinks all existing Saturn dealers probably would wait to open. But he said they are happy to benefit from the intense early publicity Saturn has received.

Asked whether he thought there was enough product to justify being open, Sutliff said: "In retrospect, perhaps not. But this is a mammoth undertaking — a lot of things have to happen to make it hum. Two or three years from now, you'll forget this didn't come out right on point."

Al Serra, owner of Saturn North in Clarkston, Mich., said that just the fact that Saturn is thinking about helping its dealers makes him happy.

"In all fairness, I expected that production might be slow at first, and I had to be prepared to take on some extra burden," Serra said. "I didn't think it would be quite this severe."

Serra said his dealership had only six cars to sell in the first 30 days it was open; it sold four and kept two for display.

The dealership is taking orders, he said, but "four cars in 30 days is kind of tough to take."

Compensating Saturn dealers would be appropriate, Serra said, because, "Not only do they not have any product, they don't have any income base."

He said he has to continue paying his salespeople and a service technician even though no income is coming in. The dealership has sold 12 used cars and will run a promotion to help generate service business.

"It's just one drop in an empty bucket. But it's a beginning," Serra said.

Not one SC coupe has been shipped to dealers for sale, Hudler said. Although every dealer should have a coupe for display, the cars cannot be sold because Saturn has retained title.

Hudler said the coupe just isn't ready for the market.

"The SC started life out about a year behind (the sedan), and we've pulled it from a year behind to now just 60 days," Hudler said. "We should be shipping coupes before the year is out."

Saturn has no target date for coupe shipments.

"Not having a date has enabled us to focus on quality," Hudler said.

Production of sedans and coupes has been slowed by continued problems with door seals and excessive vibration of engine mounts in cars with automatic transmissions, Hudler said.

"It's not a problem with automatic transmissions, it's a phenomenon with cars with automatic transmissions," Hudler said. "It (the vibration) is still better than Honda, but we're not happy with it."

Shortages of parts also have caused delays because Saturn is holding suppliers strictly to specifications, he said.

"It's no one thing (causing the production delays) — we're just being tough on ourselves," he said. "You only get one chance to establish your image. The dealers are with us on that."

Saturn of Toledo (Ohio) has received just six cars since it opened Nov. 15, and three of those were sold before the opening, said owner Frank Kistler Jr.

He declined to comment on whether that was enough product to justify being open.

"I think it's a sore issue," he said. "Obviously, compensation would help."

Meanwhile, Saturn of Toledo continues to take orders.

"We've . . . sold five. We've taken 16 to 17 orders," Kistler said.

"We do have a lot of traffic. Our only limitation is availability. There is only one car in the showroom, and we have two outside that we've sold but haven't delivered."

He said the owners of those vehicles agreed to let the dealership keep them for display until a new batch of reinforcements arrives.

10 plants halt output; 8 are Ford

By Karen Dedkowski
AUTOMOTIVE NEWS STATISTICIAN

Big 3 manufacturers will idle 10 plants and 23,150 workers this week as they continue to contend with slow sales.

The 10 plants consist of eight Ford Motor Co. facilities, one General Motors point and one Chrysler Corp. location.

U.S. carmakers scheduled 108,977 units last week, 41.71 percent above the prior three-day week but 15.79 percent below the year-ago week.

So far this year, 5,746,056 cars have been built in the United States, 10.39 percent below 1989.

Targeted truck output of 67,394 last week rose 36.49 percent above the previous holiday week but fell 20.12 percent below the year-ago week.

GM will idle its Arlington, Texas, assembly plant this week for inventory adjustment.

The company's Lansing A & B lines were down last week to adjust inventories and are expected to resume output today.

Output at GM's Wentzville, Mo., car plant and the Lordstown, Ohio, van plant is scheduled to resume today.

Ford extended downtime this week at its Norfolk, Va.; St. Paul, Minn.; Edison, N.J.; Dearborn, Mich.; and Wayne, Mich., assembly plants.

Additional closings scheduled at Ford this week are the Michigan truck facility in Wayne, Mich.; the Kentucky truck facility in Louisville; and the St. Louis truck plant.

The company's Lorain, Ohio, car and truck plants last week cut operations to one shift for four weeks.

All Ford plants will resume normal operations Dec. 10 with the exception of the Lorain plants, which are scheduled to resume two-shift work Jan. 2.

Chrysler will idle the St. Louis car facility this week to adjust inventory.

Car production rises in Canada

Canadian automakers scheduled 27,801 units last week, 7.11 percent above the prior week's build and 15.02 percent above the year-ago week.

Truckmakers assembled 13,506 units last week, 6.51 percent below the previous week and 29.32 percent below last year.

General Motors has scheduled downtime at its Ontario car facilities. The Oshawa No. 1 plant will close for two weeks starting Dec. 10. Oshawa No. 2 will be idle the week of Dec. 17.

Chrysler may shape brands by making Eagle its import franchise

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. by the 1995 model year may sell all but a handful of the Japanese vehicles it imports from Mitsubishi Motors Corp. through its Eagle franchise.

Currently, Chrysler-Plymouth, Dodge and Jeep-Eagle dealers sell cars built in Japan by Chrysler's partner, Mitsubishi Motors Corp.

Jeep keeps ZJ, loses minivan, Page 53

But as Chrysler seeks stronger brand identity for its three dealer networks, the company is considering turning Eagle into its import franchise, according to those familiar with the discussions.

If adopted, the creation of Eagle as an import franchise would culminate several years of bickering over product allocation among Chrysler's three franchises. The bickering began when Chrysler created Jeep-Eagle following its acquisition of American Motors in 1987.

The move would be similar to General Motors move of selling Japanese imports and the Prizm, built in a joint venture with Toyota in Fremont, Calif., through the Geo sub-franchise at Chevrolet dealers. GM created Geo in 1988 after trying to sell imports as Chevrolets.

Preliminary discussions call for Eagle to sell a range of Mitsubishi-built products, including a minivan code-named CL in the 1994 model year and a stretched version of the van, code-named CLX, in the 1995

Smaller engines loom large in Ford's plans for the '90s

V-8s on diet, V-6s for power

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. will tackle the energy conscious 1990s by replacing its current powerplants with lower displacement engines and converting some of its rear-wheel-drive models to front-wheel drive.

Ford's Engine Division cycle plan, approved on Aug. 15 and obtained by *Automotive News*, shows that Ford will try to balance energy conservation with consumer demand for more power and speed for the rest of the decade.

Ford spokesman David Caplan said the company does not comment on future product plans. He added that there are constant changes to product cycle plans and changes have been made to the cycle plan since Aug. 15. He declined to elaborate on what changes have been made since that time.

A high-level Ford source confirmed the company has held numerous meetings to discuss potential product cycle changes that might be required to accommodate new government emissions and fuel economy regulations.

Ford currently plans to offer a Yamaha-designed, 3.0-liter, V-6, 30-valve, Super High Output engine for its 1997 Thunderbird. Presumably, the engine will replace the 3.8-liter supercharged V-6, which won't be produced after the 1996 model year. Thunderbird, which has always been rwd, will become a fwd car in the 1997 model year.

Ford will offer consumers the choice between a 3.0-liter V-6 and its tried and true push-rod 5.0-liter V-8 in the next generation Mustang, code-named SN95, in the 1994 model year. The present Mustang offers the choice between a 2.3-liter I-4 and the 5.0-liter V-8.

Ford switches to dealer rebates

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Acknowledging that consumer incentives no longer move a stubburn sales market, Ford Motor Co. will launch a major dealer incentive program across nearly all of its car and truck lines.

The program runs from Dec. 12 to Feb. 28 and does away with all consumer rebates except for customer cash on the company's four least expensive vehicles and 1991 Mercury Grand Marquis.

Importers tweak incentives, Page 56

Ford and Lincoln-Mercury dealers do not have to contribute financially to the incentive program nor order a certain number of cars to receive the rebates, which range up to $700 on Ford and $750 on Mercury models.

The move is a major marketing shift for Ford, which has been entrenched in the customer cash rebate and cut-rate financing game with the rest of the domestic auto industry since 1985.

Two other car divisions have tried to get off of the customer rebate merry-go-round in the past. Oldsmobile announced in November 1989 that it would only offer dealer rebates on its cars but then backed down on that strategy when sales worsened. Volkswagen United States announced in the fall of 1989 that it would lower prices and offer no consumer rebates, although it has dealer incentives. Sales rose.

General Motors offers consumer incentives but very few dealer incentives, while Chrysler offers both.

Chrysler balks at recalling balky automatic transaxle

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp.'s "Ultradrive" four-speed automatic transaxle snafu has come back to haunt the company, as one special interest group called for a 500,000-unit recall last week.

Chrysler denied the extent of the problem, but an *Automotive News* survey of service managers at major Chrysler Corp. dealerships and fleet managers from major fleet customers showed that hundreds of thousands of vehicles with the Ultradrive transaxle, code-named A604, could be affected.

Chrysler installed the A604 in a total of more than one million units in the 1989 and 1990 model years.

A variety of difficulties, rang-

John Rutkowski, left, and Dan Turk of Saturn of Schaumburg, in Schaumburg, Ill., are selling used cars until more Saturns arrive.

Saturn postpones call on dealer aid

Dealers to secure more cars before cash could arrive

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Saturn Corp. is expected to decide this week whether it will make financial amends with its first dealers for a shortage of cars caused by production glitches.

Real relief — more cars — apparently will arrive before any monetary aid.

Saturn officials and dealers who visited the plant in Spring Hill, Tenn., last week were confident that most of the early production problems were history.

Saturn's "franchise operations team" — a committee of six dealers and six company officials — held its regular monthly meeting last Wednesday, Dec. 5 to discuss a variety of plans to help dealers who have had to keep paying bills for more than a month even though they were given few cars to sell.

In some cases, dealers were given only six Saturns in the first 30 days they were open.

Compensation ideas reportedly under consideration included:

- Monthly payments to each open dealer to help cover overhead costs.
- Delay or temporary elimination of payments dealers make to the manufacturer for cooperative advertising and other expenses.
- Payment of $1,000 per car per month based on the dealership's planning potential.
- Saturn's temporary payment of dealers' monthly mortgage expenses.

Saturn dealers said the committee made no official decision or recommendation and that the matter now was in Saturn's hands.

"It's still being discussed and considered (by Saturn)," said John B.T. Campbell III, owner of Saturn of Santa Ana, Calif., and a member of the franchise operations team. "They (Saturn officials) are going to run it up and down their flagpole now."

Guy D. Briggs, Saturn's manufacturing vice president, blamed delays on late changes in the new car's design and fit problems with its plastic doors. Briggs said plant workers are stopping the line to make adjustments, rather than allowing the cars to pass.

"What's coming out at the end is correct," Briggs stated. "We can't say whether we're 60 days behind schedule or 90 days behind schedule. We'd like to be making more cars, but I'm pleased."

The company had earlier forecast producing as many as 16,000 vehicles by the end of December. It confirmed last week that only 2,162 cars had been produced through the end of November.

Dealers who attended the Wednesday meeting said the stepped-up production, combined with stoppages to assure quality, yields 97 cars per day at the plant.

"My guess is that if they can get these cars shipped out on a daily basis, that it (problems dealers are having) will go away," said John Zimbrick, owner of Saturn of Madison, Wis., and a member of the franchise operations team.

In addition to boosting production, Saturn also has delayed the next wave of dealership openings from February to April, to bolster supplies at open dealerships.

Zimbrick's was one of the locations that was delayed.

"I was supposed to open in February; now it's April 15. But I changed architects and got delayed anyway, so this is beneficial for both of us not to rush things," he said.

Automotive News Staff Reporter Lindsay Chappell contributed to this report.

Makers gun diesels as sales climb

By Joseph Bohn
TRUCK EDITOR

Light-duty diesel-engine trucks are churning up a lot of sales and increasing competition among domestic manufacturers.

Chrysler Corp. is negotiating a multi-year contract with Cummins Engine Co. of Columbus, Ind., to ensure long-term supply of its 5.9-liter turbodiesel, said Troy Simonson, Chrysler truck product planning manager.

The engine now accounts for half of all Dodge full-sized pickup truck sales. Dodge sold 30,000 turbodiesel pickups in the 1990 model year and projects 44,000 sales in 1991.

In January, the 5.9 liter will be intercooled to meet the new emissions standards and become available with a four-speed automatic overdrive transmission.

The new automatic will boost the trucks' current top speed of 80 mph and improve their fuel economy and performance.

Next fall, Chrysler will expand availability of the 5.9 liter to its extended-cab full-sized pickups, including the D- and W-250 and 350 series. It is now available only in conventional cab models.

Last month, Chrysler also increased the gross combined weight rating of its five-speed manual-transmission-equipped Cummins pickups with the 4.10 axle ratio by 1,000 pounds to 17,000 pounds and upped their tow rating to 11,900 pounds.

Ford sold 90,400 7.3-liter diesel-equipped trucks in the 1990 model year, according to Woody Haines, Ford Truck Operations spokesman.

The diesel continues to account for about 12 percent of its combined F-series and Econoline sales.

Ford has no plans to use Cummins' engine for its light trucks.

Bob Hommel, manager of powertrain programs engineering for Ford Truck Operations, called Navistar "one of our best suppliers" and praised the quality levels of the 7.3-liter engine it supplies Ford as "outstanding."

Still, the 7.3 liter won't be updated in January for the new emissions standards. Instead, Ford will use a provision of the EPA's emissions regulation, which allows companies to draw on "banked credits" for exceeding previous standards to meet the new ones.

The Navistar engine won't be certified to the new standard until January 1992, Hommel said.

Ford and Navistar also plan to bank diesel emission credits during 1992 and 1993 and to use them to meet tougher 1994 standards, Hommel said.

He felt the current 7.3 liter could have met the 1991 standards — but not with the kind of margin Ford officials wanted.

The company also wanted to tie certification to some horsepower and performance improvements it was making in the engine for 1992.

Ford, unlike GM, will continue to offer its 7.3 liter only in models with over 8,500 pounds gvw.

Hommel said whenever fuel costs jump "we wish we had (the diesel) in lighter-duty models," but he doesn't think the sales potential justifies it yet.

GM takes a contrary view and will sell diesels in all weight classes this fall in an all-out marketing drive. GM will introduce improved 6.5- liter turbo and non-turbocharged versions of its current 6.2-liter diesel, according to Ralph Treadway, director of light-duty vehicles for the Truck & Bus Group's Engineering Operations.

The diesels will be offered in under- and over-8,500 pound gvw pickups, vans and sport-utilities.

Chevrolet sales figures were unavailable, but GMC Truck sold 8,223 light-truck diesels in the 1990 model year. Its 1991 sales are up over a year ago, according to Spokeswoman Tracy Williams.

GM modified its 6.2 liter engine at the onset of the 1991 model year to meet the new standard, according to Steve Gaut, a spokesman for GM Engine Division.

Nov. brings no surge in luxury sales

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Luxury car makers are expecting a year-end increase in sales because of a Jan. 1 tax, but November yielded mixed results.

Dealers and importers said business picked up at month's end, and they expect a December rush as the deadline nears and more buyers become aware of the new tax.

BMW and Mercedes-Benz had healthy increases, even though overall car sales in the United States dropped 1.54 percent. Dealers said the luxury tax helped bring some undecided buyers off the fence.

But Jaguar Cars Inc. and Porsche Cars North America Inc. both saw a decline of about 20 percent in November sales.

Ironically, the two companies called attention to the tax in their national advertising, while BMW of North America Inc. and Mercedes-Benz of North America Inc. left beat-the-tax advertising up to their dealers.

"To me, the tax is a negative thing and I don't like advertising negatives," said John Jaffe, co-owner of BMW of Fairfax (Va.).

Nevertheless, Jaffe said he's running a print ad that says, "$00,000 Luxury Tax," reminding people that the days of zero luxury tax are running out.

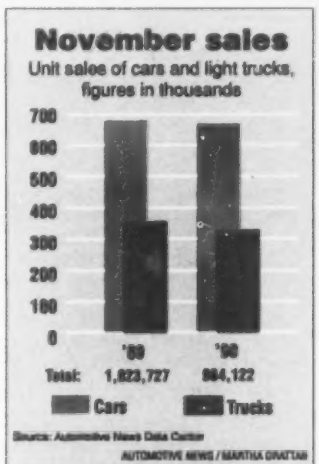
BMW sold 5,370 cars for the month, 5.5 percent above November 1989. For the BMW 7 series — whose 735i will absorb a $2,090 price hike once the government tacks on a 10 percent tax on the amount over $30,000 — sales rose 18.1 percent to 1,153 units. For the year to date, BMW's sales were down 6.0 percent to 56,784.

The luxury tax probably helped close some of those November sales, but dealers reported that BMW through Nov. 30 also had a dealer "support program" worth up to $5,000 per car on leftover 1990 7-series models.

Mercedes-Benz saw November sales rise 6.3 percent to 6,634.

Compared with the year-ago month, sales of the SL coupe/roadster more than doubled to 881, but the SL is a new model that could be expected to outsell one that was being discontinued. Also, a Mercedes spokesman said many of the SLs sold in November had been ordered far in advance and could not have been influenced by the luxury tax, which was passed in late October.

Sales of the Cadillac Allante fell 61 percent in November to 97 units. At $55,250, it is one of the few domestic models substantially over $30,000.



Deliveries drop

Combined sales of new cars and trucks totaled 984,122 units in November, a 3.87 percent dip from last November. **Story on Page 54.**

Ford seeks 1% price rollback from suppliers

By Al Fleming
INDUSTRY EDITOR

Ford Motor Co. is asking suppliers for a 1 percent price reduction starting Jan. 1 on components, material, machinery and equipment.

One reason is market incentives, which now cost an average $1,400 on each car sold, according to Clinton D. Lauer, vice president of purchasing and supply.

At a supplier conference in Dearborn, Mich., last week, Lauer said Ford's "variable marketing incentives" add up to 11 percent of company revenues compared to 6 percent at the start of the decade.

"Some U.S. suppliers don't seem as concerned about their cost base as I think they should be," Lauer said. "I'd suggest that they benchmark their productivity and cost against world-class competitors to see where they really stand."

Vendors said they would be less chagrined by Ford's action if the automaker passed along the supplier price reduction to consumers in the form of retail price cuts, which might boost vehicle sales.

Meanwhile, Ford has commissioned an independent research firm to conduct an in-depth survey of 1,200 to 1,500 of its suppliers to determine their feelings about dealing with Ford. Ford expects to see the results early in 1991.

Correction

A table in the Nov. 5 issue listing Canadian model year production by province contained incorrect totals for Ontario and Quebec car output. The correct totals are: Ontario, 870,752, and Quebec, 135,404.

Japanese, Big 3 will compete next for design talent

Second of two parts

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Al Palma, 26, went to work last year for Toyota Motor Co. as a vehicle designer.

A recent graduate of the Art Center College of Design in Pasadena, Calif., Palma mulled over the career question that more and more young automotive professionals will face in coming decades: whether to go to work for a Big 3 American automaker in Detroit, or whether to work for the Japanese.

"I talked to General Motors," says Palma who ended up doing a four-month GM internship before going to Toyota's California vehicle design studio. "I didn't think about whether I would end up with a domestic company or a Japanese company. To me it was all design."

Half of the graduates of the nation's two leading automotive design schools — the Art Center and the Center for Creative Studies in Detroit — now opt for jobs with the Japanese, according to program directors at the schools. A decade ago, the Big 3 had their pick of design and engineering graduates across the country.

> "I didn't think whether I would end up with a domestic company or a Japanese company. To me it was all design."
> **Al Palma**
> Toyota vehicle designer

Not only are the Japanese battering away at the Big 3's market positions — now, faced with the construction of large new Japanese technical centers in Michigan, Ohio and California, the Big 3 have to compete for the engineers, designers and computer science technicians who represent their future.

In the short run, the big American companies continue to attract and keep their share of good engineers and designers from the top

Vitulli and Runkle slated to address World Congress

DETROIT — Clark J. Vitulli, senior vice president and chief operating officer of Mazda Motor of America Inc., and Donald L. Runkle, General Motors vice president, advanced engineering staff, will address next month's Automotive News World Congress.

Vitulli

Runkle

The 15th Automotive News World Congress, staged in conjunction with the North American International Auto Show, will be held Sunday, Jan. 13 through Wednesday morning, Jan. 16 at the Westin Hotel in Detroit. Attendees will hear from more than 30 leaders of the auto industry.

Vitulli will join William Hoglund, GM executive vice president, Automotive Components Group and Power Products and Defense Operations Group, in speaking Monday evening, Jan. 14. Runkle will join Ernest Lofton, UAW vice president, in addressing the Tuesday morning session. Hoglund and Lofton have been profiled previously.

Prior to joining Mazda, Vitulli spent 21 years at Chrysler Corp. He joined Chrysler in 1969 as a district sales manager. After holding several zone and regional management positions, he was appointed general marketing manager of Chrysler Division in 1987, a position he held until leaving for Mazda in November 1989.

At Mazda, Vitulli is responsible for overseeing sales, service, parts, logistics, public relations, information systems, human resources, product planning and marketing.

Runkle has been vice president of GM's advanced engineering staff since June 1988. He is responsible for advanced product engineering, advanced manufacturing engineering and artificial intelligence.

Runkle joined GM in 1968 as an analytical engineer at Chevrolet. While with Chevrolet, he was director of passenger car planning

The Range Rover: it's a car, it's a truck, and it's a multi-purpose vehicle according to various government agencies' definitions of four-door sport-utilities.

Range Rover identity crisis may end in luxury tax loophole

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Range Rover of North America Inc. is hoping there's a loophole in the new luxury tax big enough to drive one of its sport-utilities through.

The company might avoid the new tax if the Internal Revenue Service classifies the Range Rover as a truck. Ironically, the company lobbied successfully two years ago to have four-door sport-utilities classified as passenger cars by the Treasury Department so it could escape a 25 percent tariff on imported trucks.

After Dec. 31, the government is imposing a 10 percent tax on the amount of a car transaction that exceeds $30,000. The luxury tax would add about $1,300 to the price of a Range Rover, which lists for $42,975.

Range Rover spokesman William E. Baker said the company assumes it will be included in the new tax. "But we just don't know."

That's because the Internal Revenue Service hasn't yet defined what is a car and what is a truck for the purpose of applying the luxury tax.

Also, the gross vehicle weight of the Range Rover almost exactly coincides with a 6,000-pound cutoff on trucks that could determine whether it is taxable.

According to a preliminary notice from the IRS, the new luxury tax applies to trucks and vans — but only if they have a "maximum loaded weight of 6,000 pounds or less." The maximum loaded weight, or gvw, is the weight of the vehicle plus passengers and a maximum cargo load.

Range Rover's gross vehicle weight is 5,997 pounds. If the IRS decides that a Range Rover is a truck, the company could fatten the vehicle by three pounds and avoid the tax.

On the other hand, it appears certain that the Range Rover will be taxed if it is classified as a passenger car. The IRS said the tax applies to passenger vehicles having an "unloaded weight of 6,000 pounds or less." The Range Rover's unloaded weight, or curb weight, is 4,401 pounds. Curb weight is the weight of the vehicle with a full tank of gas and other required fluids but no passengers or cargo.

In early 1989, the U.S. Customs Service threatened to reclassify some multipurpose vehicles, including Range Rover, as imported trucks subject to a 25 percent duty. At that time, Range Rover insisted its sport-utility was primarily designed to carry passengers, so it shouldn't be classified as a truck.

The Treasury Department ruled that four-door sport-utilities, such as Range Rover, would be classified as passenger cars, while two-doors would be subject to the 25 percent tariff.

Other government definitions aren't much help in predicting how the IRS will define the Range Rover.

The EPA defines the Range Rover as a light truck for the purpose of determining Range Rover's corporate average fuel economy.

And the Department of Transportation defines the Range Rover as a multi-purpose vehicle in determining that Range Rover is not obliged to meet passenger-car safety requirements.

Edward Madden, an IRS attorney working on the tax regulations, said it is possible for different federal agencies to define the same vehicle in different ways for different purposes.

He said last week the IRS was trying to finish the rules for filing and collecting the new luxury tax before Jan. 1. Further details will probably be published after Jan. 1, he said.

Worldly Land Rover hits hot sales roll

By Richard Feast
SPECIAL CORRESPONDENT

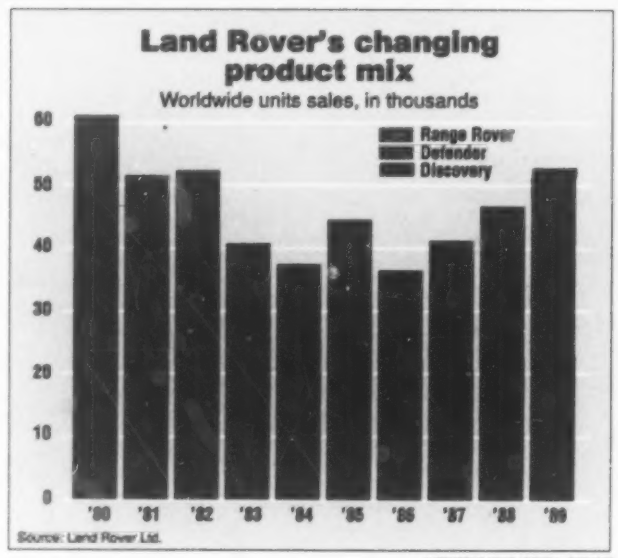
SOLIHULL, England — It's easy to overlook Land Rover Ltd. on the world automotive stage, especially in North America, where the company sells only a small slice of its annual production.

But Land Rover, a subsidiary of British Aerospace PLC's Rover Group unit, is on a roll that many of the world's bigger companies might envy.

The company will sell 68,000 of its rugged four-wheel-drive vehicles this year, up a stunning 30 percent over 1989 and a company record. Three out of every four produced will be exported to buyers willing to wait months for delivery.

And while Land Rover's volume has remained relatively flat over the past decade, its mix of sales has moved steadily upscale, from basic military versions of the Defender (formerly the Land Rover) to the high-margin, semi-luxurious Range Rover.

How far? In 1980, 85 percent of the company's sales were from the utilitarian Defender; last year, that figure had fallen to 44 percent.



AUTOMOTIVE NEWS / DAVID L. BURHANS

Christopher J.S. Woodwark, Land Rover's commercial director and a member of the Rover Group board, spells out the company's aim: "To be the world's best four-by-four by far."

Despite such claims, Woodwark rejects some analysts' criticisms that the company is so sure of its products that it does not pay any attention to the competition. "We're in no way

Car, truck sales off 3.87% in Nov.

Incentives buoy U.S-built cars; GM, Japanese makers fare best

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Plummeting sales in the final 10 days wiped out earlier gains and left November vehicle sales below the sluggish year-ago month, although one category — U.S.-built cars — did eke out a slight gain with the help of incentives.

Truck and imported car sales faltered and combined sales of cars and trucks totaled 984,122 units in November, a 3.87 percent drop from November 1989. Last year's figures were down 11.84 percent from 1988.

In addition to higher gasoline prices and fear of war breaking out in the Middle East, automotive forecaster Susan Jacobs cites other economic news which may be undermining sales.

"Real estate markets are eroding substantially," said Jacobs, president of Jacobs Automotive in Little Falls, N.J. A former forecaster for General Motors and BMW of North America Inc., she believes the economic uncertainty will also "make the luxury car market less recession proof" than usual.

Automakers delivered 660,986 cars in November, down 1.54 percent from the year-ago month. Sales of U.S.-built cars were up 2.01 percent as every domestic carmaker except Ford Motor Co. and Chrysler Corp. reported increases.

Ford's luxury Lincoln nameplate, which has been reporting sales increases for most of the year, sold 1,161 fewer cars last month. Sales of the Lincoln Mark VII were down 46.50 percent.

Imported car sales fell 9.88 percent. Truck sales of 323,136 were off 9.06 percent.

General Motors and Japanese carmakers fared the best last month.

GM sold 218,519 cars in November, 1,172 more units than last year, and its car market share rose to 33 percent from 32.4 percent. GM's Saturn Corp. sold 641 cars. Sales of the redesigned Buick Regal were up 107.57 percent to 8,444 units.

The Japanese, led by American Honda Motor Co. Inc. and Toyota Motor Sales U.S.A. Inc., saw their market share rise nine-tenths of a percentage point to 30.3 percent for the month.

American Honda, including its Acura division, sold 76,036 cars in November, trailing Ford and Chevrolet which sold 89,582 and 85,136 cars respectively.

The last 10 days of the month were especially bleak for U.S. carmakers. Only Honda and Mazda reported sales increases the final 10 days as total car sales of 152,332 fell 15.31 percent from the comparable period a year ago.

Year-to-date, combined car and truck sales total 12,918,198, down 4.64 percent from last year.

GM, Ford and Chrysler are trailing last year's figures; all of the transplant automakers are up in sales.

GM, Honda and Toyota are up in market share for the year, while Ford, Chrysler and Nissan are down.

With sales of 1,275,129, Chevrolet was the best selling car nameplate through the end of November, leading Ford by 39,061 units.

Ford led Chevrolet by 232,574 units in combined car and truck sales. Through Nov. 30, Ford had sold 2,716,133 vehicles.

Olds starts shipping new station wagons

The new Oldsmobile Custom Cruiser Wagon should be arriving in dealer showrooms now after company officials gave the go-ahead for shipments last week.

The 18-foot-long wagon had been held up because of "minor quality glitches" and temporary plant shutdowns.

Officials allowed the wagons to be shipped after they were convinced that quality problems were corrected, a spokeswoman said.

However, officials did not release the Cutlass Supreme Convertible as expected.

ULTRADRIVE

FROM PAGE 1

ing from complete failure to minor electronics problems, have continued to plague the transaxle — although the rate of failure reported by the service and fleet managers steadily have declined during the past two years.

Warranty costs already have hit $250 million, according to sources close to the problem. Additional costs resulting from lost business and customer dissatisfaction are likely.

Last week, Clarence Ditlow, executive director of the Center for Auto Safety, asked Chrysler Chairman Lee Iacocca to recall 500,000 cars and minivans equipped with the A604 transaxle.

"Ultradrive's dismal showing in its first two years on the road earns it the dubious distinction of the world's most defective transmission," wrote Ditlow in a letter to Iacocca.

Chrysler said Ditlow's statements regarding the quality, reliability and safety of the Ultradrive transaxle are "grossly exaggerated" and "totally irresponsible."

But service managers at top-selling Chrysler and Dodge stores and fleet managers for corporations polled by *Automotive News* have estimated very early failure rates as high as 25 percent.

"Most of our problems were a hard fail (100 percent failure)," said a technician who works on the vehicle fleet for a major corporation. "And originally, Chrysler was holding us up on the repair costs. To me, it seemed that of the first batch of these transmissions, most of them had some kind of problem."

A service manager at a Florida dealership put the range of Ultradrive repair costs between $300 for "swapping an electronic module" to $1,000 for "an eight-hour overhaul."

Chrysler has refused to reveal the actual number of failures where transmissions were repaired but not replaced, but admits to replacing transaxles in 19,000 vehicles.

The affected vehicles are those that paired the company's V-6 engines with the four-speed automatic transaxles. These include the Plymouth Grand Voyager, Dodge Grand Caravan, Plymouth Voyager LE, Dodge Caravan LE, Chrysler New Yorker and Dodge Dynasty.

Although Chrysler's Plymouth Acclaim and Dodge Spirit also feature the Ultradrive, they received later upgraded versions of the transaxle — which are said to be less trouble-prone.

"The news is not that we've had trouble with this transmission," said Tony Cervone, a Chrysler spokesman. "It's that Clarence Ditlow says we're having problems. We've owned up to the problems on that transmission. I mean this thing has been under a microscope."

The real rub seems to be in determining the magnitude of the problem. Chris Theodore, executive engineer for powertrain engineering, said last week that Chrysler had completely replaced 19,000 of the roughly one million transmissions installed as of September this year. And, according to Theodore, the replacement rate was roughly 3.8 percent in 1989 models and 0.8 percent in 1990 models.

Chrysler insists it's already in the process of smoothing the ruffled feathers of inconvenienced Ultradrive customers with free repairs — a $100 deductible has been unofficially waived — and loaner vehicles. And that seems to be born out by conversations with service people.

"No, they're not giving customers a hard time about repairs," said a service manager from a Maryland dealership. "We're giving them loaner cars and taking care of them. All the guy had to do was squawk a bit."

Chrysler's Theodore said after February, the transmissions came with a modified "dual-vented seal ring." And that fix was largely responsible for the sharp fall-off in problems. Earlier transmissions could be made reliable with a "kit" of parts that included a front-pump seal, a new reaction shaft and "miscellaneous" seals.

GM group executive to retire Jan. 1

DETROIT — W. Blair Thompson, vice president and group executive in charge of General Motors' Automotive Components Group, is retiring Jan. 1, GM Chairman Robert C. Stempel announced.

Thompson, 62, guided the far-flung components group through a major reorganization and helped individual divisions focus their efforts, Stempel said.

Thompson, who was named to head the former Mechanical Components Group in 1984 and then the newly created Automotive Components Group in 1987, will not be replaced. His operations will report directly to GM Executive Vice President William E. Hoglund, GM said.

Loyale (1991)	$300-1,050	1/3
Note: Some makers offer rebates to buyers of 1988 and 1989 models. Those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.		

Importers tweak rebates

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Two auto importers announced new or adjusted incentive programs last week.

American Suzuki Motor Corp.'s dealer program pays cashbacks ranging from $400 to $1,500, depending on model, on 1990-91 Swift and Sidekick models. The program gives the dealer the option of keeping the cash or passing it along to the customer.

The per-unit payments, which expire Feb. 4, are: 1990 Swift GT, $700; Swift GA/GL three- and four-door models with manual transmission, GLX five door, and GA/GL/GS with automatic transmission, $400; 1991 Swift GT, $500; Swift GA/GS three- and four-door models (all transmissions), $400; 1990 Sidekick JS/JX/JLX soft top, $1,000; and 1991 Sidekick JS/JL/JX two-door, $500.

Dealer incentives for vehicles produced at Suzuki's Canadian Automotive Manufacturing Inc. plant are: 1990 Sidekick JX/JLX soft top, $1,000; Sidekick JX hardtop, $1,500; and 1991 Sidekick JS/JL/JX soft top, $500.

Hyundai Motor of America's incentive program on 1990 and 1991 cars was adjusted to include higher payments on some models. The program, which ends Jan. 3, offers payments ranging from $500 to $2,000. The 1990 Excel L carries a rebate of $1,000; the GL/GS/GLS, $1,500; 1991 L model, $500; and GL/GS/GLS, $750.

Also, all 1990 Sonata models offer $2,000 rebates and all 1991 models carry $1,500 payments. The rebate on all 1991 Scoupes is $500.

INCENTIVE WATCH
DEALER INCENTIVES

Note: Some makers offer rebates to dealers on sales of 1988 and 1989 models. Most of those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.		

EUROPEANS

FROM PAGE 4

and industry executives agree that increased parts purchases in the United States is a far more likely proposition. Despite the importance of the U.S. market to their financial health, most European producers spend only a pittance there on components.

Despite selling nearly a third of its passenger-car output on the U.S. market, for example, the United States last year accounted for only about 1 percent of Volvo's total automotive-parts purchases — 137 million kronor (about $24 million). In contrast, the company spent a third of its 14 billion kronor (about $2.5 billion) parts budget in Germany and 8 percent in Japan.

Currently, less than 2 percent of Saab Automobile's component purchases are in dollars, compared with 46 percent in Swedish kronor and 33 percent in marks. But a new contract with U.S. seat supplier Lear Seating will raise that level to 11 percent within about two years, Saab says. Other deals under study could bring the dollar sourcing to 17 percent in the same time frame.

Porsche's Bohn, who also hinted recently that the company is eyeing U.S. assembly, also wants to buy more components in dollars.

But, "I don't think the world is ready for a Porsche from anywhere else but Germany," said Brian Bowler, president of Porsche Cars North America. "However, we would very much like to bring in more dollar content."

Bowler added that U.S. models might conceivably be fitted with add-on components, such as electronics, once shipped from Germany. But he said the trade-off for such "Americanization" would be added inventory costs.

A Mercedes-Benz spokesman said the automaker also is considering spending more on U.S.-made parts. Local assembly of the some 75,000 cars the company sells in the United States each year remains a "long-view" study, he said.

Mercedes-Benz purchased 11 percent of its components outside Germany in 1989, up from less than 9 percent in 1985, the company says. Still, U.S. purchases, not including the company's Freightliner subsidiary, have risen to only 215 million marks (about $144 million) last year from 110 million marks (about $74 million at today's exchange rates) in 1982.

Car inventory rises in Nov. to 76-day supply

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The number of unsold new cars continued to mount in November, even as production was being cut back.

Most automakers also had suffered inventory increases in October. There were 2,005,207 unsold domestic and imported cars on Dec. 1, a 76-day supply, up sharply from a 66-day supply on Nov. 1.

The seven-year average of domestic and import stocks on Dec. 1 is 65 days.

Only three manufacturers that build in the United States were able to reduce their stockpiles — Honda, Mazda and Subaru.

The Big 3 and transplant carmakers had a 77-day supply of unsold cars on hand on Dec. 1, compared with a 66-day supply on Nov. 1.

Among the Big 3 carmakers, only Ford Motor Co.'s Lincoln nameplate and the Cadillac division of General Motors were able to reduce their inventories in November.

The Ford Probe, with a 208-day supply, had the largest stockpile among U.S.-built cars.

Inventories rose for all the Big 3 automakers. Mitsubishi Motor Sales of America Inc. had the highest days supply, rising from 85 at the end of October to 112 days. Subaru reported a 99-day supply.

Import inventories remained stable in November, with a combined 74-day supply on Dec. 1.

REBATES

FROM PAGE 1

general manager, and Ross Roberts, Lincoln-Mercury general manager, said the new dealer incentive program puts the marketing of cars and trucks back into the hands of Ford and Lincoln-Mercury dealers.

"Business has been tough . . . incentives have turned buying a car and truck into a fire sale event and we simply don't see any results from doing rebates," said Wagner, who added that Ford wants to make dealer incentives a permanent marketing change.

"The dealers have complained

Wagner

Roberts

that we have taken their marketing ability away from them," Wagner said.

Ford Division car sales are down 12.55 percent for the first 11 months of 1990. For the same period, Mercury sales are off 18.62 percent and Lincoln sales have increased 13.69 percent.

Ford and L-M dealers have urged the company to give them responsibility for marketing rebates. After positive results from test market programs using dealer-only incentives this summer and fall, Ford decided to make the shift.

However, the new program is not expected to reduce Ford's overall incentive costs, which have been running at about a $4 billion annual rate this year and cutting heavily into corporate profits.

Roberts said incentives will be "at the same level of expenditure" as before the program began.

"The Ford Motor Co. has wasted a whole lot of money on customer cash and we feel that that money could be better utilized going back into advertising and marketing programs that are much more effective," said Roberts.

Ford and Lincoln-Mercury also plan to make major changes to their advertising by eliminating the "fire sale" advertising of rebates and low financing in national spots. Instead more product specific ads and brand oriented ads will be used.

"There are so many of us screaming rebate (in automotive advertising) that the image isn't where it should be," said Roberts.

Ford and L-M's national advertising will promote product and image while dealer association advertising will promote national and dealer option packages.

Option packages and rebates will not be mentioned in national advertising, according to Ford officials. Mercury dealers will advertise double bonus discount option packages on Topaz, Cougar and Sable.

Each dealer advertising group will design its own marketing promotion around the new dealer incentive program. Additional advertising funds will be given to those dealer associations but the dealers will determine how the money will be spent.

The rebate program has sliding values based on volume. Most Ford dealers can earn up to $700 for each 1991 car and truck unit, while select small dealers receive a $545 per unit payment with no volume requirement.

For Mercury cars, most dealers can earn up to $750 per unit on 1991 Topaz, Sable and Cougar. Select small L-M dealers receive $545 per unit payment with no volume requirement.

There are no dealer rebates on 1991 Lincoln cars, except for owners of 1985-87 Cadillacs who want to trade in their $4,000 Cadillac owner retention certificate on a Lincoln.

Dealers can give the rebate amount to the customer or keep some of it for himself. Dealers will get 75 percent of their anticipated rebate money in three installments, on Dec. 25, Jan. 25 and Feb. 25.

In most of the country, the dealer incentive program does not cover Ford Escort, Festiva, Mercury Tracer and Ford Ranger models, which will have customer cash. Ford Motor Co. feels that buyers of those four vehicles are more income sensitive and need a customer rebate for a downpayment.

Sales person incentives — such as "spin and win" games — will be used occasionally as they are needed, according to Ford.

On eligible 1990 models, Ford Division and L-M will continue cash payments until Dec. 31, but will reduce dealer cash rebates on most 1990 models after Jan. 1, 1991.

Dealers selling to residents of California, Oregon, Washington, Alaska, Hawaii and select counties in Idaho can use only dealer cash.

Miscellaneous includes estimates for Mack, Volvo-White, Kenworth, Peterbilt, Freightliner, Mercedes-Benz.

Trucks off; cars down 18% in Nov.

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. auto production in November was 443,122 units, 32.45 percent below October and 18.04 below November 1989. This is the lowest figure for November since 1981 when 418,948 units were assembled.

Truckmakers built 264,146 units, 28.12 percent below the prior month and 18.82 percent below the year-ago. It was the lowest November production for trucks since 1986.

Last week, U.S. automakers estimated production was 119,136 units, 9.08 percent above the prior week and 8.09 percent below the same week a year ago.

Year-to-date, 5,865,431 cars have been assembled, 10.38 percent below the year-ago pace.

U.S. truckmaker's estimated output last week was 63,743 units, 5.59 percent below the prior week and 30.0 percent below the same week in 1989.

Year-to-date, 3,701,099 trucks have been assembled, 5.81 percent below the prior year.

General Motors scheduled 10 plants to be down this week: truck plants in Baltimore; Flint, Mich. (No. 1 and 2); Ft. Wayne, Ind.; Pontiac, Mich. (East); and Tarrytown, N.Y., and car plants in Bowling Green, Ky.; Oklahoma City; Wilmington, Del.; and Arlington, Texas. Eight of the assembly plants will remain idle until Jan. 2.

Ford's Chicago car assembly was forced to shut down last week due to a shortage of materials caused by a strike at the Assembly Plant Material Services, Inc., warehouse, a wholly owned subsidiary of Ford that supplies bumpers, panels and other components.

Chrysler plans to idle the Toledo, Ohio, Jeep facility today in order to adjust inventory levels. Production is expected to resume the week of Dec. 17.

Car build up in Canada

Canadian auto production in November was 109,039 units, 5.0 percent below the prior month and 2.93 percent above the year-ago month. It was the best November since 1984.

Truckmakers assembled 72,200 units in November, 6.62 percent below the prior month and 9.08 below November 1989.

Last week, 26,962 cars were scheduled, 1.07 percent below the prior week and 8.97 below the year-ago week.

Estimated truck production last week was 14,134, 8.07 above the prior week and 31.42 below the year-ago week.

HOSTILE?

Chrysler board digs in as raider gets 9% stake

Corporate raider and billionaire financier Kirk Kerkorian has sent shivers throughout Chrysler Corp. by acquiring more than 9 percent of Chrysler's outstanding common stock.

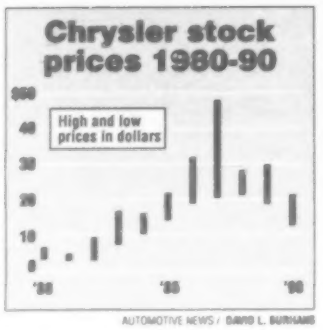
Trading was halted for half an hour Friday on the New York Stock Exchange after Chrysler notified the exchange of Kerkorian's stock purchases and the Chrysler board's response of strengthening Chrysler's "poison pill" defense against an unwanted raider.

When trading in Chrysler stock was halted, it was selling for $11.875 a share, down 37½ cents from Thursday's close. The stock hit $48 a share in 1987.

This story was reported by Automotive News *Staff Reporters Joseph Bohn, Kristine Stiven Breese, Phil Frame, Jim Henry, Kathy Jackson, Arlena Sawyers and Charles M. Thomas, who wrote it.*

In an emergency telephone board meeting Friday, the Chrysler board voted to begin an anti-takeover defense if Kerkorian purchases more than 10 percent of Chrysler's stock.

Until Friday, Chrysler defenses would have kicked in when an unwelcome suitor acquired 20 percent. The "poison pill" defense would dilute the unwelcome investor's holdings.



AUTOMOTIVE NEWS / DAVID L. BURNHAM

Chrysler officials don't know what Kerkorian has in mind, said Steve Harris, Chrysler's director of public relations. In the past, Kerkorian has tried to acquire airlines and movie companies.

Harris said Kerkorian met with Chrysler Chairman Lee Iacocca and Vice Chairman Steve Miller on Dec. 7. Kerkorian told them he supported management and was a passive investor. But when they asked him to sign a "standstill"

Ford of Europe falters, clouds parent's future

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

BRENTWOOD, England — What's wrong at Ford of Europe? Long noted for aggressive marketing, zippy products and one of the most cost-efficient manufacturing bases in the world, the carmaker — Europe's fourth-biggest — is stumbling badly these days.

Sales are down across the board, while the sales mix has skewed toward the low-margin end. Profit is expected to be off 50 percent this year. Market share is down in Britain, Ford's "home" market, where it has long enjoyed the kind of dominance that Fiat might post in Italy. And its first major product launch in several years was greeted with a collective raspberry by the automotive press.

Perhaps worst of all, Jaguar Ltd., which Ford acquired last January for $2.5 billion, has thus far proven to be about as digestible as a fishbone.

"This is going to be a disappointing year for Ford of Europe for a variety of reasons," Chairman L. Lindsey Halstead, with perhaps unintended understatement, conceded in a recent interview.

To be sure, Ford's setbacks come against the backdrop of rapidly contracting car sales in Europe. Sales are expected to be off 3 to 4 percent this year, a seemingly modest decline that is slanted by continuing strong sales in Germany and by solid first-half sales. The

Show stopper

Dodge Neon is one of three concept vehicles Chrysler Motors will unveil at the Detroit auto show. Virtually every part on the vehicle consists of, or can be recycled into, reusable components. Story on Page 3.

Toyota is poised for its second million-unit year

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — When Toyota Motor Sales U.S.A. Inc. sells its millionth vehicle of 1990 around Christmastime, it will rank ahead of any other foreign brand.

But the No. 1 Japanese automaker will be only two-thirds of the way toward its 1995 goal of 1.5 million.

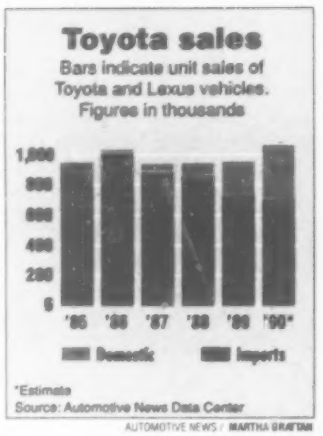
Toyota tells 10-day import sales, Page 4

This will be Toyota's second million-vehicle year in the United States. When it reached that total in 1986, the market was a record 16.0 million cars and light trucks, two million more than this year.

This year, U.S.-produced Toyotas make up one-third of the company's total sales.

Through last Monday, Toyota had sold 985,474 Lexus and Toyota vehicles, including 325,200 Corollas and Camrys built in North America. In 1986, when the company sold 1,025,345 units, just 7,281 were made in North America.

"Our next goal is to sell 1.5 million vehicles and to build half of them here," said George Borst, Toyota vice president for marketing and product planning. The company recently announced plans to build a second Camry plant in Georgetown, Ky.



AUTOMOTIVE NEWS / MARTHA BRAYTAN

Toyota Motor Sales held 7.5 percent of the U.S. car and truck market through November, compared to 6.4 percent in 1986.

Through November, Toyota Motor Sales was in fifth place in U.S. car sales and was fourth in combined car and truck sales. Through November, Chrysler Corp. had sold 1,575,606 cars and trucks in the United States.

GM picks up cellular phone market call with dealer plan

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

General Motors is piecing together a national cellular telephone program that will make it easy for its dealers to snatch $260 profit per unit away from the aftermarket.

By the end of the 1991 model year, GM plans to have agreements with cellular network providers across the country so that all of its vehicle dealers can offer customers telephones and instant access to service, said Mike Williams, manager of audio systems marketing for Delco Electronics Corp.

The program has been tested in Philadelphia and Indianapolis since November, and more than 60 percent of the GM dealers within the cellular service regions for the two areas signed up, Williams said. He would not disclose the actual number of dealers participating.

In the Indianapolis area, dealers were told they would pull a 30 percent profit on the option's $700 price, which includes the phone and installation, said John Guion, sales manager at Bob Meyers Buick in Anderson, Ind.

Guion said the customer is automatically signed up for GTE Mobilnet cellular service. The buyer can keep the service for 30 days and opt for another carrier, or buy a one-year contract with GTE for a lower rate, he added.

In this program, dealers do not get a sales commission from the service provider, as aftermarket installers often do so they can lower the price of the phone, Guion said. He said he has not sold any phones in the two weeks he's participated in the program.

"We think we're extremely competitive and that this program is going to be extremely attractive to the GM dealer body," Williams said. "Our initial experience tells us we're on the right path."

Delco will make an announcement in January that Atlanta, Detroit, Minneapolis and San Diego

With VW link, the door to U.S. opens for Skoda

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — The long-time ambition of Skoda, the Czechoslovakian carmaker, to someday dent the U.S. market took a giant step forward last week when it agreed to become an operating unit of Germany's Volkswagen Group.

VW, which bested France's Renault S.A. in a months-long competition for Skoda's hand, said in Prague that it will retain the Skoda nameplate in Western countries and pursue new export markets "outside Europe."

Although Skoda is barred from the U.S. and Canadian markets by environmental and safety standards, it sells about a quarter of its output of just under 200,000 cars a year in Western Europe.

Skodas were sold in the United States from 1957 to 1962, but the numbers were not impressive. About 3,000 were sold during that period. The Skoda factory was not involved; the cars were imported and distributed by independent operators.

Skoda's long-standing ambition, even under the country's previous Communist government, has been to find a Western partner that would provide it with a clean-burning engine for its cars and an American sales network.

Volkswagen officials said in Prague that the company will develop new Skoda models and eventually install a VW engine in the Skoda Favorit. The German carmaker also plans to upgrade Skoda's Mlada Boleslava plant and add capacity to boost Skoda's export potential.

Meanwhile, Skoda said it will move forward with its own plans to introduce its Favorit subcompact in Canada, which is viewed as a test market for the United States. By the time Skoda might be ready to tackle the U.S. market — in about three years — it presumably would do so with VW powertrains, technical assistance and possibly distribution.

Skoda has long been present in Canada, but has yet to offer the two-year-old Favorit there. About 50 Canadian dealers, including some five exclusives, were selling the old rear-engine Skoda model when Canada adopted U.S. emissions standards in the mid-1980s, shutting out further imports.

Some 30 Skoda franchise-holders remain in Canada offering parts and service.

Skoda officials said the new subcompact could be offered there as early as next summer. Seven Favorits already have undergone certification testing in Canada, and five have passed, Skoda said. It expects the remaining two to be certified this month.

Following certification, Skoda will decide in the first quarter of 1991 whether to introduce the car. Skocar, Skoda's Canadian distribution arm, estimates a first-year sales potential of 1,000 to 2,000 units, while Motokov, the Czechoslovakian government agency that handles Skoda's exports, believes sales could eventually reach 5,000 annually.

Under terms of the agreement signed with the Prague government, Volkswagen will buy 25 to 30 percent of Skoda and will increase its holding to 70 percent by 1995.

Four-door Viper? What a concept

Wearing Chrysler 300 badge, production may hinge on reaction

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp.'s three 1991 concept vehicles being unveiled in January will include a Viper-based four-door sedan that could become an image vehicle for the Chrysler brand.

Reviving the Chrysler 300 nameplate, the 8-liter V-10 powered sedan will be shown on the auto show circuit in 1991 and, if successful, could become a limited production vehicle.

Thomas Gale, Chrysler vice president of product design, said the "blood and thunder" rear-wheel-drive car is built on a 126-inch wheelbase and carries a four-speed automatic transmission.

In assigning development of the sedan, Chrysler Motors President Robert Lutz mandated that the car have future production possibilities. The Dodge Viper concept vehicle received such enthusiastic press reaction on the 1989 auto show circuit that Chrysler added it to its production lineup.

Chrysler will unveil the sedan and two other concept cars at the North American International Auto Show in Detroit. The other vehicles include the Dodge Neon subcompact, which is powered by a new two-stroke Chrysler engine, and the Jeep Wagoneer 2000, a multi-purpose concept vehicle that could preview the next-generation Grand Wagoneer.

- **Chrysler 300:** The vehicle uses a security and starting system similar to that of a fighter jet. To start the vehicle, the driver inserts an identification card into a slot in the center console and that opens a door to the ignition button. Pushing the switch starts the car.
- **Dodge Neon:** At the other end of the vehicle spectrum is the Dodge Neon, which was designed as a "people's car," Gale said.

The Neon concept car addresses a host of environmental issues. Nearly every component consists of, or can be recycled into, reusable components, Chrysler said. The exterior is made of sheet metal but was designed to reduce scrappage.

Interior panels are coded to identify the type of plastic used.

The most significant aspect is the use of a new two-stroke engine developed by Chrysler that produces over 100 horsepower from a 1.1-liter engine.

- **Jeep Wagoneer 2000:** A V-8-powered, all-wheel-drive, aerodynamically styled multi-purpose vehicle.

The vehicle has an entertainment center that includes a television, video cassette recorder and compact disc player.

The V-10 powered, Viper-based 300 concept car has rear-hinged back doors like the 1961 to 1969 Lincoln Continental.

AUTOMOTIVE NEWS JOE WILKENS

Despite today's competitive, legislative and environmental challenges, Chrysler Motors Chairman Bennett Bidwell says he would still work in the auto industry if he had to choose a career again.

BIDWELL BOWS OUT

Chrysler exec leaves legacy as booster, harsh critic of U.S. auto industry

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors Chairman Bennett Bidwell has been a wry, sardonic and caustic commentator on the automotive business for 37 years.

He has been alternately the domestic auto industry's most severe critic and its staunchest defender. He has lambasted the press as "congenital sickos" while developing a strong rapport with reporters. He has been labeled a "Japan basher" by raising the specter of a Japanese-dominated America whose citizens stood idly by as their nation lapsed into mediocrity.

He has written some of the industry's most provocative and oft-quoted speeches, and Bidwell is legendary for his ability to seize the moment with a quip.

In short, Ben Bidwell has not been a faceless auto executive during his tenure in the Motor City.

As he retires at year-end from a business he would still enter today, Bidwell said he has no plans to write a book. But he does see the domestic auto industry on the verge of some fundamental changes.

Bidwell, who railed against Detroit's insularity when he ended a 27-year career at Ford Motor Co. to become president of Hertz Corp. in 1981, said he leaves the domestic auto industry as one of its "most ardent defenders."

And he said one of the domestic industry's biggest gambles — General Motors' launch of Saturn Corp. — is becoming a symbol of America's quest for economic and industrial rebirth.

"I thought Saturn was an act of folly," Bidwell said. "I'm not so sure now — even whether they make money or don't make money. What has become more important is what Saturn stands for. The view that there is a chance here for America to prove itself."

Asked to assess GM and Ford,

see BIDWELL, page 16

The changes of 24 years show in Ford company photo of Bidwell taken in 1966 when he was national parts and service marketing manager.

Ford sales are hot, Honda's are not in early December

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Suffering a sales drop in both its Civic and Accord domestic models, American Honda Motor Co. Inc. was the only U.S. carmaker to report a decline in new-car deliveries in the first 10 days of December.

A total of 220,040 cars and trucks were sold in the early December period, up 22.1 percent from a dismal 10-day period in 1989. Each had eight selling days.

If December sales follow last year's pattern, about 13,910,828 vehicles will be sold in the United States this year, a 4.39 percent decline from the 14,549,958 cars and trucks sold last year, based *Automotive News* Data Center figures.

For December's first 10 days, 136,072 new cars were sold, up 27.4 percent over 1989; truck sales climbed 14.3 percent to 83,968.

Last year's comparable period was weak. Tom Webb, chief economist for the National Automobile Dealers Association, warns that the upbeat early December period may be a fluke.

"True demand, absent the artificial prop of fleet deals, remains weak," Webb says. He says he expects a modest rebound within six months.

Honda's sales dipped 31.6 percent for the period; its report includes only U.S.-built cars.

Spokesman Mike Spencer blames the weak sales on a November dealer promotion for Civics. Dealers were promised additional incentive money for selling a set number of Civics before Nov. 30. "That probably stole some sales from early December," he says.

Ohio-produced Civic sales were down by 1,215 units; Accord sales were down 552 units.

Ford Motor Co. led the Big 3 in increases. Ford's car sales were up 30.8 percent and its truck sales soared 32.6 percent for a combined sales hike of 31.7 percent. Every car in its Ford division reported higher sales except the Probe, which dropped 49.04 percent.

Led by the Pontiac division with a 45.7 percent increase, GM got higher sales from every division. GM's car sales rose 28.5 percent; truck sales were up 11.6 percent.

Chrysler Corp. continued to see weakening performance from its important truck lines. Truck sales were down 13.2 percent. Chrysler's car sales rose 25.4 percent, and it reported an overall increase of 4.7 percent for early December.

10-day sales bandwagon picks up Toyota's imports

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Toyota Motor Sales U.S.A. Inc. has broken pattern and has become the first Japanese automaker to report import sales on a 10-day, rather than monthly, basis.

Typically, importers only release 10-day sales of vehicles that are made in the United States. The Big 3 have reported total sales, including imports.

That practice raised the ire of Chrysler Corp. and was one of the reasons Chrysler announced that it would release sales reports only on a monthly basis, beginning Jan. 1.

General Motors and Ford Motor Co. officials last week said they would continue to release 10-day figures and encouraged Japanese makers to do the same.

On Dec. 13, Robert McCurry, executive vice president for Toyota, said his company was ready to step up to the challenge.

"In this increasingly global industry, it makes sense for automakers to adopt key local practices wherever they do business," McCurry said. "For that reason, Toyota has decided to report all sales, locally produced and imported, on a 10-day basis."

American Honda Motor Co. says it will decide whether to release import sales in about two weeks.

But Nissan North America Inc. says it applauds Chrysler Corp. for ending 10-day sales reports. Although Nissan plans to continue to release sales of its vehicles made in the United States on a 10-day basis, company spokesman Don Spetner believes Nissan should cease reporting even sales of its U.S.-built vehicles.

"The transplant sales are not indicative of anything," he said. Nissan only produces Sentras and light trucks in the United States.

"It's not Nissan overall," Spetner said. "When you see Nissan up 48 percent or whatever, it's not indicative of anything."

Chrysler spokesman Tom Jakobowski said Chrysler has no plans to release 10-day sales now that Toyota has joined the bandwagon. He said the primary reason Chrysler decided to end 10-day reports is the time factor.

Study links race, car price

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Blacks and women pay more for a new car after negotiating with dealers, according to an American Bar Foundation study of Chicago-area new-car dealerships.

Test results showed that dealership salespersons quote final offers to black men and women that are two to three times the markup quoted to white males, according to Ian Ayres, who conducted the study.

Ayres, assistant professor at Northwestern University School of Law and research fellow at the American Bar Foundation, said the results "suggest" that blacks and women are considered "suckers" by car sales personnel.

"Although blacks and women as groups are poorer than white males, the dealers may be making inferences about differences in their knowledge about the car market and their willingness to bargain," said Ayres in an article prepared for the February issue of the *Harvard Law Review*.

The test studied car selling tactics. Testers acting as buyers displayed middle-class characteristics and were trained to negotiate for the best final offer.

According to Ayres, testers got the worst deals from salespersons of their own race and gender.

Allan Wilbur, National Automobile Dealers Association executive director for public affairs, had not seen the actual study.

"I think we need to know more about the study — and it's just one study in one area," Wilbur said.

"If there is any practice going on like this, clearly it would be indefensible, but to tar the whole industry at this point in time is premature."

Testers made more than 500 trips to Chicago-area dealers. In the test, final offers by dealership sales personnel averaged $362 above dealer cost for a white male, $504 for a white female, $783 for a black male, and $1,237 for a black female.

Crown Victoria unveiled

Ford Division took the wraps off its 1992 Crown Victoria last week. Ford will officially introduce the car at the North American International Auto Show next month in Detroit. The new Crown Victoria is slightly longer and taller than its boxy predecessor and is powered by Ford's new 4.6-liter, modular V-8 engine. Ford hopes to position the new full-sized model as a step up from its popular Taurus. The car goes on sale March 21.

Honda expects 80 percent conquests for new wagon

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

MARYSVILLE, Ohio — American Honda Motor Co. expects 80 percent of the buyers of its new Accord wagon to be conquests — owners of vehicles other than an Accord. The wagons are being shipped to dealers this week.

The 1991 wagon, introduced to the press here last week, is part of a long-term expansion of U.S. output of the nation's best-selling car.

The company will export about 10,000 of the U.S.-made wagons next year — 5,000 of them to European dealers. It will be the first export to Europe from a Japanese assembly plant in the United States.

The wagon also is the first Japanese car body to be chiefly designed and engineered as well as manufactured in the United States. Honda officials expect the car to garner U.S. sales of 30,000 to 35,000 units in its first year.

Thomas Elliott, executive vice president of the carmaker's U.S. sales arm, American Honda Motor Co. Inc., predicted that 80 percent of the wagon's sales will come from individuals who own a vehicle other than an Accord.

The wagons come with a manual transmission and are equipped with a 2.2-liter, 16-valve engine, with 125 horsepower on the LX and 140 on the EX.

Export plans call for dealer bodies in Germany and the United Kingdom to receive about 2,000 wagons each in 1991. Another 1,000 will be divided among dealers in France, Belgium, Holland and Switzerland.

Honda also plans to increase exports of its Ohio-made Accord coupe, sedan and Civic from about 18,000 this year to 30,000 next year. The Ohio cars are exported to Japan, Taiwan, Korea and Israel.

The increased exports will place additional strain on the company's flat-out production schedule at its Ohio factories. The Marysville plant is already operating on overtime to meet projected 1990 U.S. Accord sales of 410,000 to 420,000 units. Elliott expects Accord sales of between 420,000 and 430,000 in the United States next year "even though there will be somewhat of a downward trend in the industry, especially in the first quarter."

In light of the 40,000 to 45,000 new wagon sales next year in the United States and Europe, the projection indicates that Honda foresees a drop in Accord sedan and coupe sales from this year.

About 100,000 Accords have been imported from Japan this year, and that number will be reduced in 1991, Elliott said.

A company source said Honda also will build Accords at its East Liberty, Ohio, factory starting in 1992, when it is scheduled to produce 150,000 Civics annually.

ACCORD VS. TAURUS WAGON

	Accord LX	Taurus GL
Length	186 in.	191.9 in.
Width	67.9	70.8
Wheelbase	107.1	106.0
Max. passenger capacity	5	8
Base engine	4-cyl.	6-cyl.
Base horsepower	125	140
Base sticker price with automatic transmission	$18,050	$14,784

Two versions of the Accord wagon are offered: LX, with a base price of $17,300, and EX, $19,050.

Sales slump vexes two transplants

Diamond-Star, Flat Rock await new products; others at full tilt

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NORMAL, Ill. — A tough sporty car market is hampering two Japanese transplant factories when some of their peers are working overtime.

The slump has knocked Diamond-Star Motors Corp. off of its growth schedule.

The 2-year-old plant is operating at 70 percent of capacity instead of the 100-percent level it expected by now, according to Lino J. Piedra, chairman of the 50-50 joint venture between Chrysler Corp. and Mitsubishi Motors Corp.

Through the first week of December, Diamond-Star produced 144,447 cars in calendar year 1990, or about 95,500 fewer than its full 240,000 units of annual capacity.

"We would have liked to be at 100 percent by now, but because of the market, we are at 70 percent," Piedra said."

Most of the production at the Normal, Ill., factory is devoted to the two-door Mitsubishi Eclipse/Plymouth Laser/Eagle Talon models. Piedra said that while the vehicles are performing well in their class, sales in the entire sporty car segment are decreasing.

He predicted the segment will continue to decline next year.

At Mazda Motor Manufacturing (USA) Corp. in Flat Rock, Mich., production is down by nearly 24,000 units so far this calendar year because of diminished sales of the Mazda MX-6 and Ford Probe.

Flat Rock's production of more than 40,000 four-door Mazda 626 units this calendar year prevented an even deeper cut in total factory output. It has been operating at about 75 percent of capacity.

Probe sales through Nov. 30 totaled 99,755, a decline of more than 26,000 units from the same 11-month period last year. MX-6 sales were just under 27,000 for the period, a decline of about 10,000 units. The next generations of the Probe, MX-6 and 626 will debut in the 1992 model year.

By contrast, Nissan Motor Manufacturing Corp. U.S.A. in Smyrna, Tenn., is currently working "full overtime" to produce Sentras and pickup trucks, according to Jerry Benefield, president and chief executive officer. The plant will work two Saturdays this month and has been operating an additional hour per shift for the past month, Benefield said.

The plant built 11,950 cars in November, an increase of 2,596 over November 1989. Truck production so far this calendar year is running almost 17,000 units ahead of the same period last year.

Both shifts at the Toyota Motor Manufacturing U.S.A. Inc. Camry plant in Georgetown, Ky., have been working an additional 30 minutes to an hour of overtime daily most of this year. At New United Motor Manufacturing Inc., a joint venture between Toyota and General Motors in Fremont, Calif., each shift is working an extra half hour daily and some Saturdays.

Honda of America Manufacturing Inc. has operated several Saturday shifts over the past three months in Marysville, Ohio. The company also traditionally works many Saturday shifts through April of each year.

Subaru—Isuzu Automotive Inc., in Lafayette, Ind., is also working Saturdays.

Piedra said that an agreement announced in October between Chrysler and Mitsubishi to develop a third vehicle at Diamond-Star would bring the joint venture up to 100 percent of capacity.

During the next two to three years, Diamond-Star will add a new hatchback to its mix, as well as replace its current two-door and four-door models. It launched the four-door Mitsubishi Mirage/Eagle Summit in July.

The plant is building about 2,500 Mirage/Summit models a month. That level will remain the same through most of 1991.

"With three platforms, we think the chances of running at 100 percent are much greater," Piedra said. "By having that range of models, we are maximizing the probability of fully loading the plant in any climate. When you're primarily targeted to one segment, you're more at the mercy of the market."

Piedra said Diamond-Star will add workers when the third platform is added. The plant now employs 2,900, a number he said was adequate for full capacity, but not enough to launch a third vehicle.

U.S. TRANSPLANT PRODUCTION
Includes cars built for Big 3 partners

Detroit show adds 2 days for suppliers

DETROIT — The North American Auto Show, one of the largest single-room car and light truck displays in the world, has added its first industry trade days.

The program will give automotive suppliers a chance to make major announcements or introduce new products.

Trade days at the Cobo conference and exhibition center on are Jan. 10, from noon to 11 p.m. and Jan. 11, 9 a.m to 2 p.m. The show, sponsored by the Detroit Auto Dealers Association, is open to the public Jan. 12-20.

The industry trade days program will also provide a pre-show opportunity for suppliers to see the auto show when it isn't full of consumers. Attendance at the 1990 show was 658,372.

Although new to the Detroit show, industry preview days are a common practice at some European auto shows.

Tickets for the industry preview sessions can be purchased for $30 at the door or in advance by contacting Julie Hunyadi at the Detroit Auto Dealers Association at (313) 643-0250.

SERVICE MANAGEMENT

AUTOMOTIVE NEWS JOE WILSSENS

Counterfeit parts confiscated

Hal Helterhoff, left, special agent in charge of FBI operations in Michigan, and William E. Hoglund, General Motors executive vice president, examine some of the $50 million worth of counterfeit auto parts and accessories confiscated as the result of 40 raids of manufacturing plants in 15 states. Stored in an idled GM plant, the parts, considered inferior in quality to genuine parts and a safety risk, will be destroyed to assure they won't get into the marketplace. Security from Ford Motor Co., Chrysler Corp. and GM worked closely with the FBI and U.S. Attorney's office in the undercover operation, code-named Operation Partsman.

Oct. index tops Sept. rise

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

The growth of new-car dealers' service and parts business in October topped the increase achieved in September by 7.7 percentage points, according to the *Automotive News* Service Index.

October's service and parts business amounted to 109.8 percent of the volume recorded in the year-ago month. The September increase in business over the same month of 1989 was 2.1 percent.

October marked the fourth consecutive month to show an increase over the year-earlier service-parts volume, and was the biggest recorded gain since February when shop business topped the year-ago volume by 13.6 percentage points.

October also marked the first month since July that all five indicators in the Service Index were increases.

October's leading indicator was total labor sales (customer-paid and warranty), which showed an increase of 13.0 percent over the year-ago volume, followed by shop parts sales (both customer-paid and warranty), up 11.8 percent.

Figures used in the Service Index are compiled from reports on shop business from a cross-section of the nation's new-car dealerships.

SERVICE INDEX
109.8*

	Oct. '90 vs. Oct. '89	Jan.-Oct. '90 vs. Jan.-Oct. '89
Gross Profit on All Labor and P&A Sales	+ 10.1%	+ 6.5%
Repair Orders Written	+ 4.8%	– 0.1%
Total Labor Sales (Customer & Warranty)	+ 13.0%	+ 8.6%
Shop Parts Sales (Customer & Warranty)	+ 11.8%	+ 7.6%
Sales of All P&A	+ 6.1%	+ 5.8%

* Survey by Automotive News shows that dealers' service and parts business in October 1990 was 109.8 percent of business in October 1989. Service business in the first 10 months of 1990 was 107.1 percent of business in the corresponding period in 1989.

Makers touch up warranties

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

New-vehicle warranty coverage for the 1991 model year is essentially the same as last year, although 16 makers made minor changes.

Cadillac, Ford Motor Co. and Saab Cars USA Inc. have notable enhancements of deductibles.

Cadillac warranties no longer require deductibles for repairs after the one-year/12,000-mile coverage expires. All other GM divisions will continue to charge owners a $100 deductible after the one-year/12,000-mile coverage expires.

Ford Motor announced reductions or eliminations in repair deductibles per visit for its 1991 models, but shortened its powertrain warranty from six years/60,000 miles to four/50,000.

The company reduced the deductible on all 1991 Ford and Mercury cars and light trucks from $100 to $50. Owners pay the fee after the basic one-year/12,000-mile warranty expires.

And to match Cadillac, all 1991 Lincoln Town Cars, Continentals and Mark VIIs carry an expanded bumper-to-bumper, basic warranty of four years/50,000 miles with no deductible.

The elimination of deductibles by Cadillac and Lincoln brings those makers in line with other luxury car producers that have not charged warranty fees for years.

The Big 3 are the only companies, with the exception of Saab and Yugo of America Inc., still charging warranty deductibles.

- Saab more than doubled its new-car warranty to six years/80,000 miles for its 1991 9000 and 900. The new warranty includes bumper-to-bumper coverage for three years/40,000 miles, and major-systems coverage for the duration of the six-year/80,000-mile warranty. Certain engine, transmission, steering, air conditioning and electronic components are subject to a $150 deductible under the major-system coverage provisions.
- Yugo charges owners a $25-per-visit deductible. The basic warranty coverage includes all scheduled maintenance.
- Saturn Corp. is offering an Owner's Protection Package that includes a no deductible, bumper-to-bumper, three-year/36,000-mile basic warranty and 24-hour roadside assistance.
- Chrysler Corp. has increased the powertrain coverage on its captive imports from three years/50,000 miles to five/60,000.

Several importers also announced added warranty protection for 1991 models.

- American Isuzu Motors Inc.'s basic and air conditioning coverage remain at 36 months, but mileage has been extended from 36,000 to 50,000 miles.
- Mitsubishi Motor Sales of America Inc. raised powertrain coverage for its 1991 models, except for Precis, from three years/50,000 miles to five years/60,000 miles. Its basic warranty coverage continues at three years/36,000 miles.
- Nissan Motor Corp. upped powertrain protection from three years/36,000 miles to five years/60,000 miles.
- Subaru of America Inc. increased powertrain coverage from three years/36,000 miles to five years/unlimited mileage. Subaru also changed rust coverage from six years/60,000 miles to five years/unlimited mileage.
- American Suzuki Motor Corp. increased its basic warranty coverage and powertrain coverage from two years/24,000 miles to three years/36,000 miles.

Boosting rust protection were:

- Hyundai Motor America from three years/unlimited mileage to five years/100,000 miles.
- Audi of America Inc. from six years/unlimited mileage to 10 years/unlimited mileage.
- Jaguar Cars Inc. from six years/60,000 miles to six years/unlimited mileage.

Other changes included:

- Range Rover of North America changed its basic coverage from three years/36,000 miles to three years/42,000 miles.
- Volvo North America Corp. increased basic coverage from one year/unlimited mileage to three years/50,000 miles. Volvo also changed powertrain coverage from three years/unlimited mileage to three years/50,000 miles.
- BMW of North America Inc. boosted its basic and powertrain coverage from three years/36,000 miles to four years/50,000 miles.

SERVICE BRIEFS

ABS training available

McHENRY, Ill. — An aftermarket training program on anti-lock brake systems is being offered by Raybestos/Brake Parts Inc.

Bob Kaulig, marketing vice president for Raybestos, said a four-part series explains the basis of ABS and teaches the technician, step-by-step, how to repair and diagnose Bosch, Teves and Kelsey-Hayes systems.

Raybestos also offers a three-hour class to give technicians hands-on experience with anti-lock brake systems.

SPX signs with Opel

MUSKEGON, Mich. — SPX Corp. has signed an agreement with Adam Opel AG of Russelsheim, Germany, that makes SPX the administrator of the Opel Dealer Equipment Program under the Euroline name.

SPX will sell approved service equipment to Opel dealers in Europe, including east Germany.

Parts association moves

BETHESDA, Md. — The Automotive Parts and Accessories Association has moved its international office from Lanham, Md., to Bethesda. The new address is 4600 East-West Highway, Bethesda, Md. 20814. The group's new phone number is (301) 654-6664.

The move improves access to government, according to Lawrence C. Hecker, senior vice president of finance and administration.

Canadian sales dip in Nov.

Canadian total vehicle sales declined in November for the fourth month in a row. Total car and truck sales were 21.39 percent below Novevmber 1989, pulling the year-to-date decline to 7.0 percent.

Car sales fell 17.45 percent below November 1989, and truck sales were off 28.88 percent.

Each of the Big 3 reported steep drops in sales of North American-built cars and trucks. They blamed a weak economy, rising unemployment, higher fuel prices, and the prospect for a new tax.

Vehicle prices should drop an average 3.5 percent after Jan. 1, when a new goods and services tax is expected to take effect.

LEGAL BRIEFS

Alabama judge reprimands GM

Court upholds jury award, says maker put profits before lives

By Helen Kahn
SENIOR CORRESPONDENT

Saying that General Motors put profits before lives, an Alabama Circuit Court judge has denied GM's moves to overturn a $15 million jury award against the automaker.

The judge also warned that unless GM changes its conduct, other injuries and deaths may occur.

At issue is a "programmable read-only memory" chip (PROM) that allegedly caused a three-day-old 1988 Chevrolet Silverado 2500 to stall unexpectedly in a busy intersection. On Aug. 12, 1987, the vehicle was hit by a Mack logging truck, killing a 7-year-old boy and injuring his grandfather, the driver of the vehicle.

The boy's mother, Helen Lewis Johnston, and the grandfather, S. Ford Lewis, claimed the truck stalled unexpectedly because of the computer chip, which had been the subject of several dealer service bulletins.

GM said the chip had been improved for the 1988 model year. It also said the former problems concerned driveability, not stalling.

In his ruling, Alabama Circuit Judge Claud D. Neilson noted that GM knew of problems with the computer chip before marketing the vehicles. GM then "covered up" the hazards by issuing a "silent recall" — telling dealers to install a new PROM if the customer complained, the judge wrote.

"Simply put, General Motors made a business judgment to risk damage to property and persons from the defect in the vehicle rather than to expend the substantial sum necessary to recall and replace the defective PROMs," he wrote.

"This is not a case where death occurred as a result of mere inadvertence nor even where wanton conduct occurred on a single occasion. Here General Motors placed hundreds of thousands of its customers' lives at risk in order to save money and increase its profits.

> "Simply put, General Motors made a business judgment to risk damage to property and persons from the defect in the vehicle rather than to expend the substantial sum necessary to recall and replace the defective PROMs."
>
> **Judge Claud D. Neilson**

In this court's opinion, its wrongdoing was both intentional and totally intolerable."

The court noted that GM sold about 600,000 of the vehicles and that replacement PROMS cost about $70 per vehicle. As a result, GM saved about $42 million by not having a recall or notifying owners.

So even after paying the verdict, said the court, GM "will still save approximately $27 million by not recalling this defective PROM."

GM had moved for a new trial on several grounds: It questioned the jury selection; it said the evidence was insufficient for a jury; it cited what it called the improper conduct of plaintiffs' attorney Jere Beasley, who during the trial broke the fan shroud that GM says was part of the evidence; and it said the Alabama Wrongful Death Statute, under which the $15 million was awarded, is unconstitutional.

Neilson denied each motion. Noting that " 'defective' means unreasonably dangerous," he added that there is "little doubt that a new vehicle with less than 300 miles that stalls in the middle of a busy intersection does not meet the reasonable expectations of an ordinary consumer." He added that similar vehicles with the same engine and computer system had similar problems and that mechanics and GM's corporate office "would recommend replacing the PROM whenever a stall in this type of vehicle occurred."

GM has until mid-January to decide whether it will appeal to Alabama's Supreme Court.

Wife, not makers, cause of sudden acceleration

A New Jersey jury has cleared Volkswagen of America Inc. and Audi AG of blame in the crash of a 1985 Audi 5000S station wagon.

Anthony Verna sued both companies and his wife, Sueanne Verna, who was driving the wagon. The car struck Anthony Verna and pushed him through a restaurant window. He sued his wife so he could get restitution for his medical bills.

The jury found that Sueanne Verna's negligence caused the accident and awarded $150,000 to the husband.

During the trial, William Rosenbluth, plaintiff's expert, said there was a manufacturing defect because the gas pedal and brake pedal were too close together. As a result, Sueanne Verna was confused and pressed the accelerator instead of the brake.

Audi testified that the car was manufactured under a rigid quality control program. Dennis Guenther, Audi's accident reconstruction expert, said the narrowing of the gap between pedals could have been caused by the crash itself.

An Audi engineer, Herbert Weinert, agreed. To refute Rosenbluth's contention that the narrower gap between pedals caused driver confusion, Audi called John Tomerlin, qualified by the Bergen county court as an expert in unintended acceleration, who said there was no correlation between the size of the gap and driver error.

PERSONNEL

AWDA — Robert H. Raff, president of Parts Warehouse Inc. in Little Rock, Ark., has been named chairman of the Automotive Warehouse Distributors Association.

Other officers are **Arthur E. Lottes III,** president of A.E. Lottes Co. in St. Louis, and **Timothy A. Lee,** president of Certified Automotive Warehouse Inc. in Chicago, vice chairmen; and **Beryle M. Blanchard** of Motor Supply Warehouse Co. in Belle Plaine, Iowa, secretary.

Martin Fromm, president emeritus of the association, has been named AWDA's "Automotive Man of the Year" for 1990. The association recognized him as "the man who pioneered the growth of automotive warehouse distribution." Fromm has been a leader in the association since 1946 and currently is vice chairman of the board of trustees of the AWDA University Foundation.

C&C COMPETITION — Doug Fehan has been promoted from group manager to vice president of C&C Competition, a unit of C&C Inc. in Brighton, Mich.

CHEVROLET — J.C. Perkins, general manager of Chevrolet, has been named chairman of the special gift campaign for the Boys and Girls Clubs of Southeastern Michigan.

The campaign calls on corporate leaders to solicit their peers, employees, companies and foundations on behalf of the clubs. This year's goal is $400,000. Last year's campaign raised $323,000.

CINCINNATI MILACRON — Harold J. Faig has been appointed vice president of injection molding machinery. He was vice president of the Plastics Machinery Division.

GM OF CANADA — William E. Tate has been appointed vice president and general director of personnel for General Motors of Canada Ltd. in Oshawa, Ontario. He succeeds **Frederick R. Curd Jr.** who, in November, was named group director of personnel for GM's Buick-Oldsmobile-Cadillac Group.

Before moving to Canada, Tate was director of industrial relations for the Chevrolet-Pontiac-Canada Group.

GM — ENGINE DIVISION — Maryellen Smith has been appointed controller for the 3300/3800 product team. She replaces **Bud Murphy,** who has retired.

Smith was with Oldsmobile as a car-line planner on the large and luxury product team.

MERCEDES-BENZ — Five managers have been appointed in the new Western business region of Mercedes-Benz of North America Inc. The region comprises California, Oregon, Washington, Nevada, Alaska and Hawaii.

Mark Derengowski is regional sales manager. He was business management manager in San Francisco.

Robert Deck is regional parts and service manager. He has been with the company since 1973.

Raymond McCoy is marketing manager. He was Houston zone manager.

Karl Goertzen is manager of the vehicle preparation centers in Carson and South San Francisco, Calif. **Carl Partyka** continues as manager of the vehicle preparation center in Carson, reporting to Goertzen. Goertzen was manager of the South San Francisco center.

ZAPIECKI & PARTNERS — Anthony Thiros has been named a senior account executive, responsible for automotive aftermarket accounts for the Toledo, Ohio, advertising and public relations agency. He was advertising and merchandising manager for Champion Spark Plug Co.

ZEON CHEMICALS — Rob Dalton has been appointed vice president and general manager of global marketing. He was product manager of polyether elastomers.

Everett Scheer Jr. has been named vice president of sales. He was director of marketing and specialty elastomers.

Marie Berner has been appointed manager of logistics. Berner was manager of domestic and international customer service and logistics.

The company produces specialty synthetic rubber used in automotive hoses, belts, gaskets and adhesives.

Ford revamps rebate program

Cash goes directly to dealers on most 1990-91 cars, trucks

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. has switched from consumer cash payments to direct rebates to dealers on most of its 1990 and 1991 cars and trucks.

The program, which runs through Feb. 28, does away with all consumer rebates except for customer cash paybacks ranging from $500 to $2,000 on 1990 and 1991 Ford Festiva and Ranger; 1991 Ford Escort, Mercury Tracer and Grand Marquis; and 1990 Lincoln models.

Under the new rebate program for Ford Division dealers, sales of all 1991 Probe, Mustang, Tempo, Taurus, Thunderbird, Bronco, Econoline Van (except E30 RV cutaway, E33 RV stripped chassis and Econoline with conversion package), Club Wagon, Aerostar and F-series pickup models pay the dealer nothing for the first two units, $100 each for the third and fourth, $200 for the fifth and sixth, $400 for the seventh through ninth and $700 for the 10th unit and above.

Ford extended through Dec. 31 the existing dealer rebate program on 1990 models and selected 1991 vehicles; the program was to end Dec. 12. Dealerships will continue to be paid a flat per-unit incentive on each eligible model.

Rebates on 1990 models are $1,000 on Mustang, Probe (except GT), Tempo and Crown Victoria; $1,300 on Taurus; $1,500 on Probe GT; $1,400 on Thunderbird; $3,000 on Taurus SHO; $1,100 on F-series pickups; $1,300 on Econoline, Club Wagon and Aerostar; and $2,000 on Bronco. Dealer payments on 1991 models are $1,000 on Taurus SHO and Crown Victoria.

Effective Jan. 1 through Feb. 28, dealer rebates will be reduced $200 on the 1990 Mustang, Probe (except GT), Tempo, Taurus, Thunderbird, Econoline, Club Wagon, Aerostar and F-series pickup trucks.

Consumer rebates on 1991 models are $500 on Escort and Festiva and $1,000 on Ranger pickups. Payments on 1990 models are $700 on Festiva and $1,500 on Ranger.

In lieu of rebates, dealers may offer consumers finance rates of 7.9 percent on contracts up to 48 months.

Because a one-time cash payment of $750 was made to dealers for all 1990 Escorts in inventory as of Dec. 12, the company said those vehicles will be excluded from all future incentives.

Lincoln-Mercury Division's dealer rebate program for 1991 Topaz, Sable and Cougar models also is based on the number sold. Dealers will receive $100 per eligible unit for the fourth sale, $230 for the fifth and sixth, $500 for the seventh through ninth and $750 for the 10th and above.

L-M's program covering 1990 models also has been extended through Dec. 31. Rebates to dealers are $1,000 on Topaz, $1,300 on Sable, $1,400 on Cougar and $1,500 on Grand Marquis. For Jan. 1 to Feb. 28, the rebates will be reduced $200 on all models except Grand Marquis.

L-M extended the dealer and consumer cash payments on all 1990 Lincoln models. The dealer per-unit cash rebate for the Town Car, Continental and Mark VII has been increased to $2,000 from $1,500, while consumers will continue to receive a $1,500 rebate under programs that run through Jan. 31.

Until Dec. 31, L-M will honor the $4,000 rebate certificates that Cadillac sent to owners of 1985-87 Cadillacs. The certificates can be used on purchases of 1990 and 1991 Lincolns, and they are in lieu of other Lincoln rebates.

Customer rebates on 1991 Tracer and Grand Marquis models are $500 and $1,000 until Feb. 28. A finance rate of 7.9 percent on loans up to 48 months is an alternative.

CONGRESS

FROM PAGE 3

with the North American International Auto Show, will be held Sunday, Jan. 13, through Wednesday morning, Jan. 16, at the Westin Hotel in Detroit.

Attendees will hear from more than 30 leaders of the automotive industry.

Razaq joined General Motors in 1967 and progressed through sales management positions in Germany, Greece and Saudi Arabia.

In 1980, he moved to GM Espana as director of sales and marketing, and in 1984 moved to Germany.

He remained there until 1987, when he was appointed chairman and managing director of General Motors Egypt in Cairo. He was named to his current job last June.

Maioli has been in the design field throughout his business career and has held such titles as architect, product engineer and automotive designer.

In 1977, Maioli joined the Fiat style coordination team that designed the Lancia and Autobianchi marques. Maioli's team received car of the year awards in 1979 for the Lancia Delta and in 1983 for the Fiat Uno.

In 1986, the team won an architects' award for the design of the Y-10 Tipo.

Miskowski joined Ford in 1975 as a financial analyst trainee at Lincoln-Mercury Division.

He held several positions with Lincoln-Mercury's finance and marketing staffs and with Ford Parts and Service before he was appointed vice president of the parts organization for Ford of Europe in 1977.

In 1980, he was named executive director of marketing for the Car and Truck Group. Three years later, Miskowski was appointed development manager for Ford's Parts and Service Division.

Miskowski became the division's general sales and marketing manager in 1988 and was appointed general manager in 1989.

Perkins joined Chevrolet in 1960, working in sales and marketing at Chevrolet zone and central offices.

He served as a zone manager and regional manager at Chevrolet and, in 1977, was appointed director of marketing policy and dealer relations for GM.

He returned to Chevrolet in 1979 as manager of the Atlantic Coast region and was appointed truck sales manager in 1980 and assistant general sales manager for field operations in 1981.

Perkins moved to Buick as general sales manager in 1982. In 1984, he joined Toyota Motor Sales U.S.A. Inc., and in 1989 he returned to Chevrolet in his current position.

Digital phones eliminate static

Present-day cellular car phones are analog — transmitting conversations with continuous electrical signals that differ in wave length and amplitude.

With digital phones, the electrical signal is broken into segments, or bits, and converted to computer code before transmission. On the receiving end, the noncontinuous digital signal is decoded so the caller's voice can be heard. It's the same principle for compact disc technology.

Digital phones would eliminate static because the signal is reproduced in the receiver exactly as sent by the transmitter. That's why CDs offer clearer sound than records or tapes.

Because digital signals can be compressed, the technology also can be used to vastly increase the capacity of cellular phone switching stations — eliminating accessibility problems. That's why CDs are smaller than records.

And, because digital switching is more precise, digital phones also eliminate signal losses that sometimes occur when a car moves from one cell to another.

— Phil Frame

PHONE

FROM PAGE 1

will be the next four cities to get the program, according to GM Vice Chairman Robert Schultz.

Initially, GM dealers will sell base-level or deluxe-version Delco-brand phones made by Motorola Inc.

Hughes Network Systems Inc., a unit of Hughes Aircraft Co., will supply the next two generations of phones. Hughes Aircraft and Delco Electronics are owned by GM Hughes Electronics Corp., which is a subsidiary of General Motors.

Hughes also is piecing together the nationwide network of cellular service providers that will cooperate in the GM program. In this regard, GM trails Big 3 rivals Ford and Chrysler.

Ford, which recently reintroduced the cellular phone option on Lincoln Town Car, Continental and Mark VII, already has agreements nationwide with service providers, said Donald Russell, audio systems and communications business planning manager for Ford Electronics Division. Ford dropped a cellular phone option in 1984 on the Lincoln Mark IV because so few areas had service coverage.

Chrysler also has nationwide agreements with cellular service providers so it can sell the Visor-phone, which it introduced at the 1990 North American International Auto Show in Detroit.

GM currently offers cellular phones as factory options with only two cars: Oldsmobile Trofeo and Cadillac Allante. The Trofeo is the only GM car to be wired on the assembly line for a cellular phone.

The new Delco-Hughes program will give all GM dealers the opportunity to get into the cellular phone business with a minimum of headaches, Williams said.

Delco will provide training on selling and installing phones, and on signing customers for cellular service, Williams said.

This should be additional business for most GM dealers because of the roughly 1.5 million cellular phones sold each year, only about 2 percent are sold by new-car dealers, said Pradeep Kaul, executive vice president of Hughes Network Systems.

"I think cellular phone sales should (evolve) the same way as the AM-FM radio," Kaul said. "We think eventually people will come to accept that a phone is just a part of the car — the cellular link will be the umbilical cord for the automobile."

While GM is jumping into the nationwide phone business later than its two cross-town rivals, it is banking on the technical expertise of Hughes to establish a beachhead in the next generation of phones using digital communications.

Before digital phones can be used, cellular switching stations need to be converted with digital equipment. That change has been anticipated and will begin later this year in New York, Chicago and Los Angeles, but it will take several years before all of the country is converted, Kaul said.

Hughes plans to introduce its second-generation phone, a hybrid that can be used on digital or analog circuits, later in 1991. Neither Kaul nor Williams would say when a third-generation, all-digital phone would be available.

28 plants close early for holidays

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Christmas vacation begins one week early for 28 Big 3 assembly plants. General Motors closes 13 car and seven truck facilities today; Ford closes five truck plants and one car-truck facility; and Chrysler closes two truck plants.

All the closings are the result of slow sales.

Estimated U.S. auto production last week was 128,766. It was 11.47 percent over the prior week and 9.58 percent below the year-ago week.

Last week, U.S. truckmakers' estimated output was 62,490, down 7.01 percent from the prior week and down 24.19 percent from the same week in 1989.

The 13 GM car assembly plants scheduled to shut down today are:

Flint, Mich.; Lansing, Mich. (B); Lansing, Mich. (Reatta Craft Centre); Linden, N.J.; Wentzville, Mo.; Wilmington, Del.; Arlington, Texas; Bowling Green, Ky.; Doraville, Ga.; Kansas City, Kansas; Lakewood, Ga.; Oklahoma City; and Van Nuys, Calif.

GM's truck plants affected are: Tarrytown, N.Y.; Baltimore; Detroit; Fort Wayne, Ind; Moraine, Ohio; Pontiac, Mich. (East); and Shreveport, La.

Ford is scheduled to idle the following truck plants: Edison, N.J.; Wayne, Mich.; Norfolk, Va.; St. Louis; and St. Paul, Minn.

In addition, both the car and truck lines at the Kansas City, Mo., facility are scheduled to be down.

Ford reduced both the car and truck lines at the Lorain, Ohio, facility to a single shift.

Ford's Chicago assembly plant is scheduled to resume production today. It was down two weeks because of a supplier strike.

Chrysler's Sterling Heights, Mich., and Warren, Mich., truck facilities are scheduled to be down this week.

Canada cars take a tumble

With Ford Motor Co.'s Tempo and Topaz lines down, Canadian auto production was estimated at 16,753 units last week, 37.15 percent below the prior week and 35.92 percent below the same week in 1989.

Truckmakers estimated last week's output at 18,908 units, 38.33 percent above the previous week.

The return to production of Ford light trucks and the Dodge Ram Van and Ram Wagon accounted for the increase.

65th year—$65.00 per year, $2.00 per copy

Mazda bets the farm on expansion with low-profit cars

After years of being Japan's tag-along, bring-up-the-rear carmaker to big shot rivals Toyota, Nissan and Honda, No. 4 Mazda Motor Corp. is making what some consider to be a risky break for the big time.

Analysts say the company, which has embarked on an ambitious new-model program, may be tilting its product mix too much toward the low end to generate the profits needed to pay for its expansion.

Long known for a limited product line centered on the popular but aging 323/Protege-series subcompact, Mazda in the past two years has rolled out a stunning array of new vehicles that seem little mindful of the company's traditional place in the order of things.

The new lineup, which includes the smash-hit MX-5 Miata; the MPV recreational vehicle/minivan; and the micro-mini Carol and Scrum, 600-cc vehicles based on Suzuki mechanicals, has been backed by an upgrade of the mainstay 323, giving it more power and more plush.

Then, too, there are the all-new Navajo sport-utility built by equity partner Ford Motor Co., which owns 24.5 percent of Mazda, and the equally new, rotary-powered Cosmo, a luxury sports car confined so far to the Japanese market.

And in the wings for 1991-92, officials say without tipping their hands, are four to six more products — including a probable U.S.-bound premium car to compete in the Lexus/Infiniti segment.

To provide the new product range, Mazda is building a high-tech plant near Hiroshima that will be capable of turning out nine different models simultaneously. The facility, with a planned capacity of 160,000 cars a year, is scheduled to open early in 1992. The compa[illegible] also is overhauling its main, 30-year-o[illegible]lant in Hiroshima.

And with the goal of increasing its home market share to 10 percent from 7.8 percent currently — a move that would pressure Honda for the No. 3 spot — Mazda is setting up two new sales networks, or channels, in Japan. In addition, it is known to be considering a separate distribution network for

Maserati unveils mid-engined Chubasco

Maserati S.p.A. unveiled the Chubasco, its first mid-engined model since the Bora and Merak in the late 1970s, at the company's annual meeting in Modena on Dec. 14. The car, styled by Marcello Gandini and built in only four months, is powered by a twin-turbo, 3.2-liter V-8 turning out 430 horsepower at 6,500 rpm. Analysts speculate the car was trotted out in hopes that it would generate enough demand to force Fiat Group, which owns 49 percent of Maserati, to lift its ban against Maserati producing mid-engined models.

GM components group slashes ads, quarterly spending

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

The nine divisions of General Motors' Automotive Components Group were ordered to cancel or postpone all advertising, promotion, training and other expenses in 1991's first quarter and make sharp cuts in other discretionary costs.

GM Executive Vice President William Hoglund, who is in charge of the $30-billion-a-year components group, has ordered the divisions to:

- Eliminate all "consumer influence" expenses, including planned promotional activities and advertising.
- Reduce expenses for participation in the annual SAE International Conference & Exposition in Detroit Feb. 25 to March 1. The SAE show has been group's biggest showcase for the world's other automakers and suppliers, with whom the group derives about 15 percent of its revenue.
- Eliminate overtime except when needed to meet production schedules.
- Travel only when a letter, fax or phone call won't do, and eliminate off-site meetings.
- Postpone or eliminate employee training programs.

William Hoglund says the earnings forecast for Automotive Components Group is unacceptable.

All other expenses also must be reviewed, and any spending that cannot be eliminated should be postponed at least until April, according to a memo to the division general managers by John P. Vacketta, the group director of finance.

GM's marketing divisions have given no evidence that they are contemplating similar cuts.

The memo was the result of a Nov. 26 conference call during which Hoglund told Vacketta that the group's earnings forecast was unacceptable. Vacketta took the call from Hoglund because

Oldsmobile: Hot cars are new stars

Former Pontiac chief adds dash of 'excitement' to goose sales

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

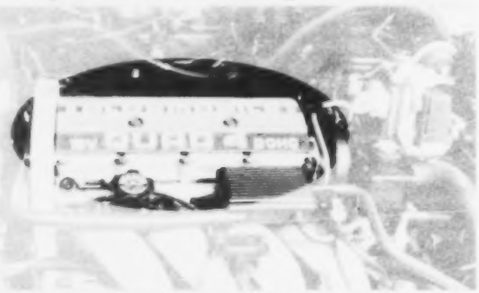
PHOENIX — Oldsmobile General Manager J. Michael Losh is ready to take what he learned about the marketing value of performance cars when he was Pontiac general manager and use it to sell Oldsmobiles.

Oldsmobile, which has suffered in sales as its image has grown increasingly nebulous, is preparing to emphasize powerful engines — something the division was noted for in the 1960s and early 1970s.

"We know that one of the foundations you build on is powertrain performance," said Michael A. Grimaldi, Oldsmobile's general marketing manager. "But these cars will not be like those of the 1960s. Their execution will be understated and upscale like a Lexus or an Infiniti."

In the spring, Oldsmobile will build 200 Cutlass Calais Quad 442 coupes with a 190-horsepower version of the Quad 4 — the most powerful version of that multivalve engine — and market them as just one of several performance models to come that will add sparkle to the division's image.

Base price on the hot 1991 Calais model will be $14,500 without air conditioning and $15,200 with air conditioning.



For performance emphasis, Oldsmobile name adorns Quad 4 cam cover.

"We're not out to replace Pontiac," said Oldsmobile spokesman Gus Buenz. "But 'responsive' is one of the Oldsmobile traits. So when better powertrains are available, we'll have them. As far as discussing those future vehicles, we'd really be getting into 1992 product plans, which we won't do."

One analyst says the direction makes sense.

"Given General Motors' original market image assignments, this doesn't make sense," says Jesse Snyder, director of product analysis for AutoPacific Group Inc. of Santa Ana, Calif. "But in light of where Olds is headed now it does make sense."

Snyder said that following the reorganization of the GM divisions in 1984, additional image fine-tuning was done in the fall of 1986. That fine-tuning had Buick abandon its attack on the "Euro-road" cars and return to its more conservative, traditional position relative to the other divisions. The direction for Oldsmobile that came out of the North American marketing strategy was to become the more "expressive" of the two premium-car divisions.

The result has been a painfully slow progression toward greater expressiveness. Divisional sales

Ford plans 6.5 percent hike in car, truck output by '99

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. expects its car and truck production for the North American market to increase 6.5 percent from 1991 to 1999, growing from 4.6 million units in 1991 to 4.9 million in the 1999 model year.

Ford projects car and truck output for North America will decline from 1991 to 1992. It will rise the next three years, top the 1991 total in 1996 and continue to increase through the end of the century, according to a Ford Engine Division product plan approved Aug. 15 and obtained by *Automotive News*.

The product plan is based on plant model years, which typically run from July to July. The plan includes all car and truck production designated for the U.S. and Canadian markets and for export. Cars made in other countries and sold in the United States and Canada are included.

Ford will not comment on future product plants. Ford spokesman

Pill could poison stockholders

Chrysler Corp.'s "poison pill" defense against investor Kirk Kerkorian could be a bitter pill to swallow for shareholders as well as any hostile investor.

The poison pill would go into effect if any investor accumulates 10 percent of its stock and Chrysler's board of directors perceives that investor to have hostile intentions — that is, if the investor isn't supported by management and the board.

The Chrysler board lowered the trigger from 20 percent to 10 percent on Dec. 14. The plan would allow existing shareholders, other than the hostile investor, to buy Chrysler stock at half price.

The intent is to reduce the hostile investor's share. But at least four shareholders' lawsuits have been filed against Chrysler since Chrysler's board strengthened its poison pill defense.

Auto analyst Maryann Keller of Furman Selz Inc. believes Chrysler might find it difficult to set this takeover defense in motion.

"If a hostile investor owning 10 percent of a company makes a tender offer to shareholders of $18 a share when the current value of a share was $14, and if Chrysler activated this poison pill defense, it might have a tough time because some people would want to sell to make a profit," she said.

Steve Harris, director of public relations for Chrysler, says this poison pill procedure has been upheld by courts in Delaware, where Chrysler is incorporated.

"The poison pill is aimed at encouraging an individual to go directly to the board of directors to let them know what their intentions might be," Harris said.

— Liz Pinto

Kirk Kerkorian might not be the only one hurt by a poison pill.

Chrysler customers calm

Car trade-ins count; not stock trader

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Potential car buyers are showing no concern about who is in the driver seat at Chrysler Corp., dealers report.

But dealers are worried about sales if the stock buying by financier Kirk Kerkorian should turn hostile.

"People will be concerned if an actual takeover of Chrysler does start," says Mike Shepard, owner of Santa Ana Chrysler-Plymouth in California. "And if consumers are uncertain, their strategy is not to do anything. And in this case, the strategy will be to not buy Chrysler products.

"If he (Kerkorian) takes over on the basis that the parts are worth more than the whole, which is probably true, and if he started immediately dismantling the company, selling off Jeep and the financial operations, it could have a significant impact on me as a dealer."

Dealers say that although Kerkorian's recent purchases of 9.8 percent of Chrysler's stock may be big news to the business and automotive sectors, the normal buyer isn't flustered.

"The average person isn't in tune to Wall Street," says Bill Devreline, general manager of Precision Chrysler-Plymouth-Dodge in Winter Haven, Fla. "They're more interested in car warranties and how much they'll get on a trade-in than on what goes on internally at a car company."

Edwin Zumwalt, a partner of Zumwalt-Magrini Chrysler-Plymouth in Santa Rosa, Calif., says he doesn't believe consumers "care one way or the other if (Lee) Iacocca or Kerkorian owns the company."

Some dealers are sitting back and watching the show.

"It's something I have no control over, so I'm not concerned," says Herb Yardley, owner of Massey-Yardley Chrysler-Plymouth in Plantation, Fla.

Larry Roesch, owner of Elmhurst Chrysler-Plymouth in Illinois is holding off judgment until a definite outcome becomes clear.

"If anyone wants to buy the company and run it profitably, I won't worry — it would be a good deal for dealers and customers," Roesch says.

But based on what they know today, dealers generally view Kerkorian as just a shrewd investor, not a hostile raider out to pillage Chrysler.

"Chrysler has been underestimated in the marketplace and in the stock market for a long time," says Dick Huvaere, owner of Dick Huvaere Richmond Chrysler-Plymouth-Dodge in Richmond, Mich. "I think Kerkorian has made an investment to take advantage of the situation when everyone else wakes up."

But some dealers, although saying they are not worried, believe there is a buyer for Chrysler lurking in the background and feel Kerkorian will make a killing when the buyout finally comes.

Allen Cubbage, owner of Allen Cubbage Chrysler-Plymouth-Dodge in Stanley, Va., says: "I think he already has a deal to sell the stock because he knows who the buyer of Chrysler will be. I think he knows that after the first quarter next year the automobile industry is going to come out of doom and gloom and it will be a win for him."

Says Devreline: "I think it's inevitable Chrysler will have a partner sometime, somewhere, with somebody. It takes lots of money to run a company these days, and individual companies can't do it on their own."

Environmental groups to seek boost in CAFE

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Sixteen environmental groups last week vowed to renew efforts to raise federal fuel economy standards.

The groups vowed to make energy conservation and fuel economy their primary lobbying focus in the next session of Congress, which begins in January.

They urged the Bush administration to push for a higher corporate average fuel economy standard in the new national energy policy that is scheduled to be announced in January. They also declared support for CAFE bills likely to be introduced next month in Congress.

Hours after the environmentalists' press conference, Transportation Secretary Samuel K. Skinner announced that the National Academy of Sciences will study the extent to which fuel economy can be improved "while still meeting environmental and safety needs." The first phase of the study will be completed by June 30.

Michael McCloskey, chairman of the Sierra Club, called for a CAFE of 45 mpg by 2000. The current standard is 27.5 mpg for cars and 20.2 mpg for light trucks.

Sen. Tim Wirth, D-Colo., an avid environmentalist whose Jeep is fueled with compressed natural gas, said Sen. Richard Bryan will reintroduce the CAFE bill that was defeated last fall.

Bryan, a Nevada Democrat, wants CAFE standards to increase 20 percent by 1995 and another 20 percent by 2001.

McCloskey accused the Bush administration of joining the auto industry to defeat what he called Bryan's "moderate legislation to increase auto fuel efficiency."

"It seems the whole process has been designed to ensure safe profit margins for Exxon and General Motors, not a safe energy future for the American people," McCloskey said.

Skinner's study will estimate practical increases in fuel economy during the next decade and assess technologies automakers can use.

Skinner said the study will consider the new mandates imposed by the Clean Air Act, which affects cars beginning with the 1994 model year.

Jerry R. Curry, administrator of the National Highway Traffic Safety Administration, said the study also will examine safety implications, such as whether further downsizing would increase automotive fatalities.

Separately, Public Citizen, a Ralph Nader organization, wrote President Bush on behalf of 100 national and community-based citizen groups. Public Citizen did not directly advocate a higher CAFE but called for a general improvement in energy efficiency, covering automobiles as well as appliances, electric motors and other energy users.

2 more importers tell 10-day sales

By Anne E. Wright and William R. Diem
AUTOMOTIVE NEWS STAFF

Volkswagen of America Inc. and Subaru of America Inc. have joined Toyota Motor Sales U.S.A. Inc. in releasing 10-day sales reports of imported cars, but the benefits of more accurate industry figures will be fleeting if Chrysler Corp. holds to its decision to withdraw from reporting all 10-day sales figures beginning in January.

VWoA reported selling 280 Audis, 1,128 VW cars and 37 VW trucks during the first 10 days of December. Subaru reported selling 1,225 cars.

Earlier, Toyota and the Big 3 reported their imported and domestic sales for Dec. 1-10, and *Automotive News* has estimated sales of other importers. All told, 90 percent of U.S. sales were reported on a 10-day basis.

10-day import sales, Page 6

But December's first 10-day sales period may be the most thoroughly analyzed one for quite a while. The Christmas holidays delay reporting on Dec. 11-20 sales until Jan. 3, and they are made moot a day later by year-end sales reports. And Chrysler threatens to stop reporting its 12.2 percent share of the U.S. market next month.

Chrysler's Nov. 30 attack on 10-day reporting apparently prompted the importers.

Outgoing Chrysler Motors Chairman Bennett Bidwell said the 10-day reports give the public an unfair view because they ignore the effect of imports on a company's sales record.

"The 10-day report is a sensitive economic indicator," said analyst David Healy of Barclays de Zoete Wedd, after Chrysler's announcement. "But I think Chrysler has a legitimate gripe."

On Dec. 13, Toyota released its import figures without fanfare. Last week, when *Automotive News* asked, VWoA and Subaru released theirs.

Nissan and Honda, the No. 2 and No. 3 Japanese importers, have so far refused to share 10-day figures. Like most importers, they do announce sales monthly.

'Clean' gas no cure-all

Pollution team studies alternate fuels next

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Reformulated gasoline may not be the answer to meeting the strict pollution requirements of the new Clean Air Act.

So say the preliminary results of an auto-oil study of the potentially cleaner gasolines.

The $16 million project will continue for another three years at an additional cost of $25 million. In the next phase, the Big 3 and 14 oil companies will also look at alternative fuels — ethanol, methanol and compressed natural gas.

The industries studied the effects of 29 reformulated fuel variations on 53 cars and light trucks.

The results, though promising, are inconsistent, said Joseph Colucci, head of GM's fuels and lubricants department. He noted that "we never said" reformulated fuels were going to be a cure-all.

The study's most promising results came from adding oxygenates

About 400 firms pitched their wares and services to delegates at the NADA convention last February. So far, 412 exhibitors have signed up for the 1991 gathering in Atlanta.

Early registrations for NADA convention down 20% from '89

By Charles Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Pre-registration for February's National Automobile Dealers Association 74th Annual Convention & Exposition at the Georgia World Congress Center in Atlanta is off 20 percent from this point last year.

NADA officials say this is the first time since 1982 that the convention has been held in Atlanta. They say the location and the slowdown in the economy could be reasons why pre-registration is slow.

Registrants include dealers, managers, spouses and people from related industries.

But because the convention is on the East Coast, there could be a larger than usual number of walk-ins, according to an NADA spokesman who asked not to be named.

After years of growth, the trade show at the convention also may have reached the saturation point.

So far, 412 exhibitors have signed up to display their wares and services, and NADA has sold more than 200,000 square feet of space. Although the space is a few thousand feet shy of the association's expectations, the number of exhibitors is up from 1990's 400.

In past years, NADA has sold out its exhibition space, creating a waiting list of exhibitors.

"That's not as significant as it might have been. This is only the second year that we've sold more than 200,000 square feet of space," the spokesman said. "We are pleased with what we are doing. It's still a big show. Maybe 220,000 square feet of space is the saturation point."

Some firms that purchased huge amounts of space in past years have gone out of business, and others have decided not to rent space this year because of economic conditions.

Most notable of the missing are some large extended service contract companies that have folded or are in liquidation. Some van converters folded in the past year, too.

There was also a consolidation in the computer industry in 1990. Those kinds of companies buy big blocks of space, and it is hard to find exhibitors to replace them.

Two car importers, Volkswagen of America and Toyota Motor Sales U.S.A. Inc., also decided not to rent space, though they will sponsor parties and events for dealers at the convention.

"This is not unusual," the spokesman said. "We plan for the car companies, and sometimes they are in and sometimes they aren't, depending on what they have to show dealers."

Still, there will be more companies displaying products at the convention than last year.

More than 80 percent of the dealers attending the exhibition either plan to buy products or do purchase them at the trade show, according to NADA surveys.

Chrysler, feds lock horns over car siezed in drug raid

By Colleen McDonald
SPECIAL CORRESPONDENT

DETROIT — Chrysler Corp. and the federal government, which both measure their annual budgets in billions of dollars, are locked in a court battle over $11,994.98.

Chrysler Credit Corp., which rejected the Department of Justice's proposal to return to the company a 1989 Eagle Premier that had been seized in a 1989 drug arrest, filed suit against the government in U.S. District Court in Detroit.

Chrysler seeks reimbursement for what it says is the actual cost of the car — $18,994.98, plus interest.

The controversy revolves around the Premier bought by Pam Butler of Detroit, who financed it through Chrysler Credit. She had possession of the car for about a week.

Last May, the Department of Justice informed Chrysler Credit that the Drug Enforcement Administration would return the car after Chrysler Credit paid $500 in storage fees. Chrysler Credit rejected the offer, saying it wanted the agency to pay it $18,994.98.

A strange twist occurred on Oct. 26 when the U.S. Marshall's office in Detroit sold the car through Midwest Autopart Auction for about $7,000. That money was given to Chrysler.

Now, Chrysler Credit wants the remainder of the actual cost of the car. "Chrysler Credit is seeking recovery of the money lost because of the principle of keeping an item that didn't belong to them, and the storage charges that were wrongly charged to us," said Michael Shields, Chrysler Credit's attorney.

Assistant U.S. Attorney David J. Portelli was unavailable for comment.

MERCEDES: *Sales chief calls U.S. luxury cars primary victims of Japanese entries*

By Peter Brown
EDITOR

DETROIT — Japanese luxury cars have succeeded — but not at the expense of Mercedes-Benz of North America Inc., says Mercedes' new sales chief.

In fact, says Michael J. Jackson, the former Maryland Mercedes dealer who became senior vice president for marketing and sales at Mercedes' North American marketing unit in July, Lexus and Infiniti cars are closer to American luxury cars than to German.

But Jackson acknowledged that long life cycles — such as the 11-year cycle for the current Mercedes S class, which will be replaced next year — "are unacceptable today." He reiterated Mercedes-Benz AG's plan to introduce a new car every year.

As competition intensifies in the 1990s, Mercedes will offer more products and shorter product cycles. Kenneth Moriarty, Mercedes' manager for marketing planning, said cycles would be cut to six to eight years.

But Jackson said those expanded product offerings still won't return Mercedes to the sales level of 1986, when a booming market, a strong dollar and the impending U.S. tax reform pushed Mercedes' U.S. sales to 99,314.

"We are not looking to return to sales levels of the mid-'80s," he said.

World Congress speakers have variety of experience

Some of the top automotive executives from around the world will address the Tuesday afternoon session of next month's Automotive News World Congress.

Tuesday afternoon speakers are:

- Karl-Heinz Faber, who is senior vice president of product compliance, service and parts at Mercedes-Benz of North America Inc.
- Shirley Young, who is vice president of General Motors' consumer market development.
- Walter Huizenga, president of the American International Automobile Dealers Association.
- C. Raymond Rogers, principal of Kepner-Tregoe Inc.

Faber

Young

Huizenga

Rogers

- Graham Morris, Sterling Motor Cars president.
- Guy Briggs, Saturn Corp. vice president of manufacturing.
- Michael Bennett, president of UAW Local 1853 at Saturn Corp.

The 15th Automotive News World Congress, staged in conjunction with the North American International Auto Show, will be held Sunday, Jan. 13, through Wednesday morning, Jan. 16, at the Westin Hotel in Detroit.

Attendees will hear from more than 30 leaders of the automotive industry.

Faber joined Mercedes-Benz of North America's parent company, Daimler-Benz of Stuttgart, Germany, in 1956 as an export service engineer.

Auto dealers join furs, gems, yachts in fighting luxury tax

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The creation of a multi-industry coalition to fight the federal luxury tax has displaced efforts by European import car dealers to form their own lobbying group.

European dealers had been trying to fight the issue with the support of Auto Dealers and Drivers for Free Trade, a political action committee known as AutoPac.

But now, auto dealer and manufacturer groups have joined forces with the fur, yacht and jewelry industries in the hope of overturning the levy when Congress begins work on a 1991 tax bill.

"We need to be united," said J. Robert Ladd, a Lebanon, Pa., Jaguar dealer who represented the Jaguar National Dealer Council at an organizational meeting.

One dealer said about 80 participants met in Washington Dec. 14. They have been asked to contribute to the lobbying effort, which has a proposed $500,000 budget. Another meeting is slated for Jan. 15.

Auto representatives include the American International Automobile Dealers Association, the National Automobile Dealers Association, the Big 3, the American International Automobile Manufacturers Association and AutoPac.

European imports will bear the brunt of the 10 percent tax that will be applied to the amount of the purchase price over $30,000. The tax, which takes effect Jan. 1, also affects jewelry and furs costing more than $5,000 and yachts above $100,000.

The group will try to dispel the notion that high-priced cars are a luxury, and it plans a study to confirm what dealers suspect: Expensive cars aren't purchased by just the well-to-do, said Robert M. McElwaine, a consultant hired by Mercedes-Benz dealers to organize the group.

"Airline pilots, engineers and technically minded people put themselves in hock to buy these cars," said McElwaine, a former president of AIADA. "It isn't just rich people."

Lobbying will be coordinated by a Washington law firm, Patton, Boggs and Blow, which AIADA used in 1989 to fight a 25-percent import tax on sport-utilities.

Firm commitments haven't been made by all European makers, but McElwaine said the support of Mercedes, BMW, Jaguar, Porsche and Ferrari appears enthusiastic.

Jaguar dealer Ladd said last week that Jaguar dealers and Jaguar Cars Inc. "were in philosophical agreement" with the coalition, but neither the company nor the council had formally signed on.

Some dealers have questioned the decision to join forces with other industries. They have argued that items like furs and jewelry are clearly more of a luxury than an expensive automobile.

"I don't think a senator is going to be sympathetic to fur coats," said Roy W. Sommerhalter Sr., owner of Park Avenue BMW in Maywood, N.J. "He might be sympathetic to safety and to thousands of mechanics being unemployed."

But John Jaffe, owner of BMW of Fairfax (Va.) and chairman of BMW's National Dealer Council, favors banding together. "There's safety in numbers," he said.

The auto industry's position on the issue isn't uniform. During budget negotiations, the Europeans had proposed lowering the threshold to $20,000 or $25,000. They argued that a lower per-unit tax covering a broader segment would raise the same amount of money.

McElwaine and Lori Gribbin, AIADA vice president for government relations, say they'd oppose any efforts to lower the threshold.

"That would be harmful to a large percentage of our membership," said Gribbin, whose organization has many dealers who sell Japanese makes.

Automotive News Staff Reporter Jim Henry in New York contributed to this report.

Automotive News compiles 10-day sales for imports

With this table for the Dec. 1-10 period, *Automotive News* begins regular coverage of imported-vehicle sales on a 10-day basis.

Actual retail sales are reported for each 10-day period by General Motors, Chrysler Corp., Ford Motor Co., Toyota Motor Sales U.S.A. Inc., Subaru of America Inc. and Volkswagen of America Inc. Sales for the remaining imports are estimated by *Automotive News* based on calculation and sources.

For the convenience of readers, our sales report for imported cars and light trucks will clearly differentiate sales reported by automakers and *Automotive News* estimates.

Nissan had anticipated sales of about 700 Passats a month, but said actual demand was averaging fewer than 100 a month. The mid-sized, front-wheel-drive Passat has become the third best-selling car in Germany since its launch in 1988.

Nissan cans plan to build VW's Passat in Japan

By Maryann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Nissan Motor Co. said it dropped plans to produce the Volkswagen Passat in Japan because sales were much lower than expected.

Nissan, which had anticipated sales of about 700 Passats a month, said actual demand was averaging fewer than 100 a month. But Nissan said that it would continue to import units to meet that demand.

Launched in 1988, the mid-sized, front-wheel-drive Passat has become the third best-selling car in Germany. It comes in sedan and station wagon versions.

A market survey indicated the demand in the Japanese market for an import model the size of the Passat was much lower than expected, according to a Nissan spokesman. There are no plans at this time to replace the Passat with another model.

The decision to cancel production has led to speculation that Volkswagen will now concentrate on its relationship with Toyota Motor Corp. at the expense of Nissan.

Volkswagen and Toyota have a joint venture production agreement in Europe.

Nissan said, though, that the move will not affect its relationship with Volkswagen and that the two companies will continue to cooperate.

Import scam stings buyers for $4 million

THE ASSOCIATED PRESS

SEATTLE — Three people have been arrested in Switzerland in a scheme that federal authorities say persuaded some 20 people to hand over $4 million in down payments for expensive European cars most never received.

Individuals matching the description of Alejandro Ortiz, Felicita Morales Ortiz and Carlos Ortiz were arrested in the Lugano region on charges of conspiracy, wire fraud and money laundering, said U.S. Attorney Mike McKay.

It is believed Alejandro and Felicita Ortiz are married and Carlos Ortiz is their son, the U.S. attorney said in a statement.

The Ortizes falsely claimed to have close contacts at Mercedes-Benz and Ferrari factories in Germany and Italy that helped them get cars at discounted prices, said McKay, citing a complaint filed in U.S. District Court in Tacoma.

A few of the cars were delivered, but the Ortizes had no connections to European auto factories, McKay said. Investigation revealed the cars had been purchased from lots in Beverly Hills, Calif., at full price, and then sold for a reduced price to create an illusion of factory contacts.

About 20 customers from the Seattle-Tacoma area contributed $4 million for the purchase of 14 Ferrari and 70 Mercedes-Benz automobiles. Area dealers price a Ferrari at $190,000 with a delivery time of up to six years. Top-of-the-line Mercedes, such as the Mercedes SL, sell for about $90,000 and may take two years to deliver.

The Ortizes were tracked through Spain, France, Brazil and Argentina before they were arrested in Switzerland. Extradition proceedings have begun.

Alejandro Ortiz also was charged with fraud for persuading an unidentified individual to provide $1 million, allegedly for the purchase of Daimler-Benz AG stock.

Federal charges and arrest warrants previously were filed in Reno, Nev., charging the Ortizes with defrauding an unidentified Reno businessman of $12 million, McKay said. Details on that case were not immediately available.

Mack sees more red ink in 3rd quarter

ALLENTOWN, Pa. — Mack Trucks Inc. lost $46.8 million on sales of $358.8 million in its third fiscal quarter ended Sept. 30, according to documents that Renault Vehicules Industriels filed with the Securities and Exchange Commission.

During the period, Mack was faced with an industry-wide recession and uncertainty about the $407 million takeover by RVI that was concluded Oct. 5.

Because Mack is now a subsidiary of RVI and not a public company, it did not release an earnings statement and had no comment. The company was required to provide the information to the Securities and Exchange Commission because its stock was still traded publicly during the quarter.

Mack's third-quarter loss was about half as severe as its loss in the year-earlier quarter. In the third quarter of 1989, the company lost a record $87.5 million on sales of $367 million.

Mack lost $144 million during the first nine months of 1990, compared to a loss of $105.9 million during the same period of 1989.

Sales in the first nine months dropped to $1.2 billion, compared to $1.4 billion a year earlier.

AROUND THE WORLD

European sales continue to fall despite surge in Germany

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — European new-car sales fell for the fourth consecutive month in November despite a 27 percent surge in the strong German market.

Registrations in 17 Western European countries totaled 995,400 in November, down 1.9 percent from the year-ago month, according to industry estimates compiled by *Automotive News*.

For 11 months, sales were 12,478,700, off 1.1 percent.

Despite the dip, European new-car sales should still top 13 million for 1990, making it the second best year ever. Sales last year reached a record 13.4 million.

Germany's Volkswagen Group will finish as Europe's sales leader for the sixth consecutive year. Volkswagen — which includes the VW, Audi and Seat brands — captured 15.3 percent of the entire European market through November. Italy's Fiat S.p.A., including the Fiat, Alfa Romeo and Lancia brands, was next, at 14.1 percent.

Germany, buoyed by continuing strong demand from the former East Germany, has been the locomotive for all of Europe for most of this year. In November, German registrations accounted for 27 percent of all European new-car sales, according to estimates. During the same month in 1989, West Germany accounted for 21 percent.

For 11 months, German sales were 8.8 percent above last year, at 2.85 million cars. That pace points to a record of well over 3 million for the year. The current record is 2.91 million in 1987.

"It will remain the strongest market probably through most if not all of the '91 calendar year," said General Motors Europe President Robert Eaton, who cited the effect of used-car demand from the former East Germany on German new-car sales.

Sales in each of the four other major markets declined in November. The United Kingdom fell 18 percent, to 117,500 units; France slipped 8 percent, to 193,500; Italy was off 2 percent; to 168,700; and Spain tumbled 23 percent, to 68,200.

Sanjay Dabysing, who follows the industry for DRI Europe in London, said he was surprised by the sharp downturn in France, but he said the big drops in Britain and Spain were consistent with deteriorating economic conditions in the two countries.

DRI forecast last fall that British and Spanish sales would stabilize next year after declining well over 10 percent in 1990. But that outlook is being reassessed.

"My feeling now is that those markets will be down 3 to 4 percent next year," said Dabysing.

The Japanese share of the Western European market was 11.7 percent for the year through November, up from 11 percent in 1989. Japanese sales totaled 1,455,200 cars through November, a 5 percent increase over 1989.

In Germany, the Japanese market share receded in November after topping 18 percent in July, August and September. In November, the Japanese held 13.8 percent of the German market, although the 11-month penetration of 15.7 percent surpassed Japan's 14.8 percent for the same period last year.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	11 Months 1990	Pct. change vs. 1989

Car sales zoom in Korea

SEOUL, South Korea — Passenger car sales, defying all predictions of a downturn, continued at a record pace in November, according to the Korean Automobile Manufacturers Association.

The industry group said 139,000 units were sold in November, up 34 percent from the 103,440 units delivered in October. It estimated November's local sales at 94,000 units, up 39 percent from the 67,796 units sold in October, while exports were put at 45,000 units, the strongest monthly performance this year.

Through Nov. 30, sales totaled about 1,158,500 units, an industry record, the groupsaid.

Analysts said the sales surge was being fueled by incentives and January hike in the new-car tax.

Battle heats up in Korea's hot-selling van market

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — Three years after the government stripped it of its legal monopoly over van production, Kia Motors Corp. is locked in a bruising struggle with Hyundai Motor Co. to maintain control of Korea's fastest-growing auto segment.

Kia, Korea's second biggest carmaker and an affiliate of Ford Motor Co. and Mazda Motor Corp., launched the van segment in 1983 after a government industrial-rationalization program barred it from car production.

Between 1983 and last year, the segment exploded 270 percent, from 19,000 units to nearly 70,000. Van sales are expected to surge another 22 percent this year, to about 85,000 units.

Since 1987, however, Kia has been forced to share the segment's runaway growth with archrival Hyundai, Korea's biggest vehicle maker. From an effective share of 100 percent, Kia has watched its penetration fall to a still commanding 60 percent after Hyundai was given official clearance to enter the segment that year.

Daewoo Motor, 50-percent owned by General Motors, has sold a barely measurable 1,000 Vanette vans since 1988 and is expected to drop out next year.

Entering the segment with the Grace, a product based on the Mitsubishi L300, Hyundai grabbed a stunning 27 percent share of the market its first year out. It has not slacked off since, racking up a 31 percent share in 1988 on sales of 18,500 units and a 43 percent share last year on sales of 30,000 units.

This year, Kia managed to reverse the tide by offering a front-end facelift for its van, the Mazda-based Besta, and two new models. One new variant, the EGI, offers a 2.0-liter multi-port fuel-injected-gasoline engine in place of the standard 2.2-liter diesel. The other is a 4×4 edition that Hyundai has yet to reply to.

> "The major reason for Kia's small recovery this year is its expansion of capacity."
>
> **Chang Choong-Lynn**
> Daewoo Economic Research Institute

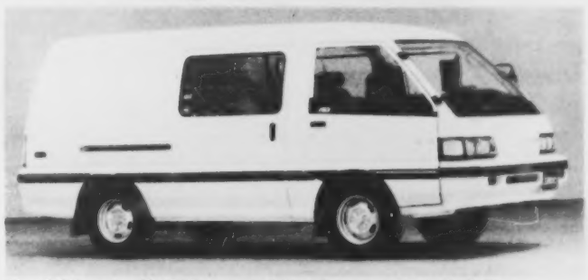
Classified as buses in South Korea, both company's vehicles are comparable to minivans in the United States.

Kia, betting heavily on the segment, has upped van capacity at its main Sohari plant, to 110,000 units a year from 65,000.

As a result, analysts expect Hyundai's share for the year to be off a couple of points from 1989.

"The major reason for Kia's small recovery this year is its expansion of capacity," says Chang Choong-Lynn, who follows the industry for the Daewoo Economic Research Institute. "Greater economies of scale have cut production costs and given them savings to plough back into sales promotion."

Despite obvious styling differences, the Kia and Hyundai vehicles are as alike as peas in a pod. Priced from 7.8 million to 10.4 million won (about $10,900 to $14,550) depending on the seating, interior trim level and other options, the Besta offers a 2.2-liter diesel and the Grace a 2.5-liter diesel as standard. Each offers only a four-speed manual transmission.



Hyundai Grace grabbed 27 percent of Korea's van market in its first year.

New front-end design for Besta has helped Kia recoup some sales.

Both are of comparable outer and interior dimensions. But while shoppers give high marks to Hyundai for the Grace's styling, the Besta enjoys a slight marketing edge because of Kia's reputation for the quality of its diesel engines.

Waiting in the wings are new models that promise to shake up the segment once again. Daewoo Shipbuilding, a counterpart to Daewoo Motor, and Asia Motor Co., a Kia affiliate, are both working to bring new, smaller vans to market sometime in 1991. Each would seat six and be powered by 800-cc engines.

"Van sales, especially for nine-seaters, could be hurt by these new models," Chang warns. "They'll sell for about half the price of regular-size vans."

Meanwhile, Kia reportedly is interested in cloning Mazda's highly successful MPV for both the domestic and export markets. It is not clear whether Mazda is interested in licensing the MPV.

BRIEFS

Daihatsu, Piaggio link for truck production

TOKYO — Daihatsu Motor Co. said it agreed to set up a joint venture with Italy's Piaggio S.p.A. to produce light trucks and vans at a new plant in Pisa, Italy.

Daihatsu will hold a 49-percent stake in the venture and Piaggio 51 percent, a company official said.

The new plant, to cost about $59 million, will have a planned capacity of about 35,000 trucks and vans a year and should come on stream by the end of 1992, the official said. He said the vehicles would be marketed in Italy and other European nations under both the Daihatsu and Piaggio brands.

— The Associated Press

Ford taps Cosworth for Scorpio engines

LONDON — Ford of Europe said it had contracted with Cosworth Engineering Ltd. to supply about 5,000 four-cam, 24-valve V-6 engines a year for the Scorpio.

Ford said it would use the Cosworth engine, which develops 195 horsepower, on the Scorpio range until its own all-new series of V-6s goes into production in the mid-1990s.

Cosworth said distributorless ignition and advanced fuel injection enables the engine to exceed California emission standards.

Cosworth also is working on a house-designed 16-valve cylinder head for Ford's 125 hp 4-cylinder engine. These compact engines will be designed for front wheel drive models, including CDW27, the Sierra replacement.

Import sales rise for 4 Japanese and 4 European makes

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Eight import makes — four Japanese and four European — sold more imported cars in the United States last month than in November 1989. Sales of captive imports by Mercury (Tracer-Capri) and Pontiac (LeMans) also were up.

European brands Saab, BMW, Alfa Romeo and Mercedes-Benz topped last year's totals. Among the Japanese, Honda, Lexus, Isuzu and Suzuki also sold more imported cars than in 1989.

Import sales in November declined 9.88 percent from the year-ago period, from 200,304 to 180,509. That compares with a 1.54 percent drop for domestic and import car sales combined.

For the first 11 months of this year, import sales were off 11.57 percent from the corresponding 1989 period.

Alfa Romeo's totals were helped by the all-new 164 sedan. Through Nov. 30, Alfa sold 1,338 of them, including 175 in November.

BMW is down about 6 percent for the year, but in November almost every model was up. The company's sales rose 5.53 percent. Five Mercedes-Benz models showed sales increases, leading that make to a 6.30 percent gain. The German heavyweights may have been helped by buyers trying to beat a new tax on cars priced above $30,000, which takes effect Jan. 1.

Naturally aspirated versions of Saab's 900 and 9000 series were up, while the turbo versions of each lagged behind.

Honda sold more imported cars than anyone else last month. In November, Honda sold 27,324 imported Civics, Accords and Preludes, a gain of 28.46 percent over last year. In addition, Honda sold 40,405 U.S.-built Civics and Accords.

The new Stylus gave Isuzu a boost, and the Impulse is now outselling last year's I-Mark. Isuzu's car sales totaled 805 in November, up 54.21 percent over last year.

Sales of the Lexus LS400 and ES250 were up sharply. The LS400 was up 45.47 percent, and the ES250 rose 77.69 percent. Infiniti reached 20,000 sales for the year after selling 2,778 cars last month.

Suzuki's only car, the Swift, gained 8.56 percent in November and gave the company 6,246 sales for the year.

Production problems and delivery lags have plagued a number of imports.

Acura introduced its new Legend sedan in November, but according to a few dealers around the country, the cars did not arrive until December and supply is not keeping up with demand. The hot NSX is still in short supply. Acura sold 296 NSX models last month.

Production snags in Germany have kept BMW from getting its new 850i coupes to dealers. Through November, the company had sold only five.

Transmission glitches and inadequate production capacity has hurt Mitsubishi and its new 3000GT sports car. The VR-4 model, which Mitsubishi is pushing as an image leader, has been especially hard to come by.

Dodge, which is emphasizing the entry-level version of the Stealth, has sold about 60 percent more of the sports cars since their introduction than Mitsubishi, which makes them for Dodge. Last month, Mitsubishi sold 648 3000GTs; Dodge sold 1,182 Stealths.

The New Yorker Salon, Jeeps and other vehicles are on display at the Jeddah Motor Show in Saudi Arabia.

Chrysler rejoins Saudi vehicle show

JEDDAH, Saudi Arabia — Chrysler Corp. has launched a Jeep foray into the Middle East at the Jeddah Motor Show following a 25-year absence. The Jeep Cherokee and Wrangler are featured on the United Arab Motors' Chrysler stand at the new Jeddah International Exhibition Centre.

Cappy

The Jeeps are expected to be top contenders with four-wheel-drive enthusiasts in Saudi Arabia and the Middle East, said Joseph E. Cappy, Chrysler vice president of international operations.

"Chrysler is making a major commitment to the Middle East, which we believe is a very important market," Cappy said.

Other Chrysler models on display at the Jeddah Show are the Chrysler Imperial, New Yorker Salon and Acclaim, as well as the Dodge Dynasty and Spirit.

GM, Ford tap fleets for mid-range sales

By Joseph Bohn
TRUCK EDITOR

General Motors and Ford Motor Co. are still finding opportunities in the otherwise soft medium-duty market, with sales to fleets and state and local governments.

Ford picked up a 500-unit order for F-700 one-way rental units from Penske Corp. that should help bolster sales over the next few months, according to Terry Huber, manager of Ford Heavy Truck Field Operations.

GMC Truck Division has been cashing in on smaller fleets. It has enough orders to keep its Janesville, Wis., plant on its current 600-truck-a-week schedule until the first week of March, according to Ray Rota, GMC Truck general sales manager.

GMC Truck also handles medium-duty truck marketing for Chevrolet.

Officials are, in fact, evaluating whether to add overtime or increase the line rate during March and April, Rota said.

Caterpillar's 3116 diesel engines now account for close to 60 percent of GM's medium-duty conventional truck sales, its gas engines for the remaining 40 percent.

"That's good and healthy. Economically speaking, you can still make a strong case for the need for a gas engine," Rota said.

Automatic transmissions also account for about 26 percent of GM's medium-duty conventional truck sales.

Rota said the influx of inexperienced drivers, including women, favors automatic transmissions.

Ford has been busily cranking up volume of its low-cab-forward medium-duty Cargos since phasing them out of production in Brazil and into its Kentucky truck plant in October.

Huber expects production of Cargos to hit 17-a-day by April, following the addition of the CF 7000, more wheelbase choices and other product changes at the Louisville plant. Ford is now producing eight Cargos a day.

Huber sees Ford producing about 4,000 Cargos on an annualized basis until the overall medium-duty market strengthens.

He sees the whole low-cab-forward segment expanding, particularly after the Northeastern U.S. economy bounces back.

Low cab forwards have been popular for city delivery in crowded urban centers like New York, where maneuverability is at a premium.

Long-term, Ford will offer Cummins engines in its medium-duty models, including Cargo, as part of minority purchase in Cummins Engine Co. earlier this year.

But the Ford-built diesel currently used in Cargo will likely be around until 1994, when emissions standards tighten further.

Huber said: "We feel we have one of the most competitive mid-range diesel engines going. If you look at the numbers of trucks built with our diesel, it has been a big success."

Chevrolet and GMC use Isuzu-built trucks to compete in the low-cab-foward segment. Chevrolet sells Isuzu models under the Tiltmaster name, and GMC uses the Forward name. The Chevrolet/GMC W-4 model is Isuzu's NPR. The Chevrolet/GMC W-5 is Isuzu's NRR. Their W-6 is Isuzu's FSR and their W-7, Isuzu's FTR or FVR, depending on gross vehicle weight.

According to company records, Chevrolet and GMC retailed 3,689 medium-duty imports for 11 months of this year and 3,882 through Dec. 13.

That will give them about 4,000 for calendar 1990, about equal to the level Ford expects to operate at next year.

Navistar International Corp. needs to shore up its strength in this segment. Its Nissan-built low-cab-forward sales totaled less than 300 units in the first 11 months of this year. They had hit 749 in 1988, but dropped to 317 in 1989, according to the Motor Vehicle Manufacturers Association.

Navistar has been promising its dealers new models with European-sourced cabs, but hasn't said when they would get them.

Navistar's design for new ideas

Navistar International Corp.'s "idea truck" includes concepts such as a fully air-suspended composite cab, an electrical system with an "intelligent" instrument panel and solid-state switching and an ergonomically designed driver environment.

TRUCK BRIEFS

Heavy-truck vendors face tough future

NEW YORK — Medium- and heavy-truck sales will grow solidly over the next five years, but falling profit margins, global competition and government regulation will hurt vendors, according to a Frost & Sullivan study.

"The U.S. Market for Heavy-Duty Vehicles and Associated OEM Components" forecasts a 20 percent growth in sales of Class 6, 7 and 8 trucks, buses and trailers from $16.1 billion in 1989 to $19.4 billion in 1995.

Unit sales are expected to rise from 484,000 to 516,000 by 1995. The vendor-supplied component market is expected to increase from $9.1 billion to $10.7 billion.

But the study sees massive "prebuying" by fleets in 1993 to avoid costlier and cleaner 1994 models.

It sees regulations for anti-lock brakes and more high-tech engine controls by the mid 1990s, driving up prices and undercutting makers' profits.

California truck woes

WEST SACRAMENTO, Calif. — Some 130 California motor carriers failed during the first nine months of 1990, compared to 117 firms in the same period last year, according to Tizana Mohorovic, associate manager of business statistics at Dunn & Bradstreet in New York.

The failure rate is the highest since 1986, according to Thomas C. Schumacher, executive vice president of the California Trucking Association. He blames it on the California Public Utilities Commission's price regulations, which hinder trucking firms' operating flexibility.

Schumacher called for deregulation of prices; for more effective environmental, safety and fuel-efficiency laws; and for removal of the arbitrary 10 percent cap on carriers' fuel-cost surcharges.

Freightliner's engines

PORTLAND, Ore. — Electronic engines will be standard in Freightliner's entire Class 8 product line, beginning in 1991.

Detroit Diesel Series 60 11.1-liter engines equipped with DDEC will be standard in Freightliner's FLA cab-over-engine models and FLD 120 long conventionals.

Caterpillar 3176 10.3-liter engines with integral electronic controls will be standard in Freightliner's medium-length FLD 112 and FLC 112 conventionals. Mechanical engines will continue to be available.

Freightliner will continue to offer a broad spectrum of engine options, including other Detroit Diesel, Caterpillar and several Cummins engines.

Freightliner included a road speed governor in its Vigil 3 family of electronic monitoring systems. The option is available on all Freightliner models equipped with Cummins L10 and N14 nonelectronic engines.

Vigil 3 also includes an engine trouble warning and shutdown system and other features, designed to help fleets cut costs.

Truck Equipment parley

LIVONIA, Mich. — Chevrolet, Ford Motor Co., Chrysler Corp. and Toyota Motor Sales U.S.A. Inc. are sponsoring activities at the National Truck Equipment Association's annual convention in San Diego, Feb. 6-9.

Each of the companies supplies chassis to the industry and also supported the association's 1990 convention.

Chrysler pays $500 on '91 minivans

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. is offering cash rebates to buyers of its 1991 minivans and has raised the cash paybacks on all 1991 Jeep Cherokees. Chrysler also extended customer cash incentives through Jan. 9 on 1989-91 cars and trucks.

Chrysler's extension of consumer rebates runs counter to Ford Motor Co.'s new program that switched from consumer cash payments to direct rebates to dealers on most 1990-91 cars and trucks.

The Ford program began Dec. 12 and runs through Feb. 28. General Motors recently extended its consumer cash rebate program through Jan. 7.

For openers, Chrysler is offering a $500 cash incentive to buyers of 1991 Dodge Caravan, Plymouth Voyager and Chrysler Town & Country minivans delivered through Jan. 31. The new allowance can be coupled with $500 cash certificates from the company's recent direct-mail program to owners of its 1984-89 minivans. That offer applies to replacement vehicles delivered or ordered before Jan 1.

From Feb. 1 through March 31, customers will have the choice of a minivan with a free $500 air bag, or the $500 rebate on a minivan without the air bag.

Chrysler also said it will introduce Feb. 1 a Security Package on minivans with 3.3-liter engines. The package includes driver-side air bag and anti-lock brake system for a net price of $499. Chrysler said the full price of the package is $1,299.

Chrysler also is enhancing its Family Value discount package for entry-level minivan buyers. That package with air conditioner, rear defroster, dual horns, deluxe insulation, light package and power liftgate release had been discounted $300 for a net price of $1,102. The discount has been increased to $857, reducing the net to $545, or essentially providing air conditioning free.

The automaker also increased to $1,000 the consumer incentive on 1991 Jeep Cherokees. They previously carried cash rebates of $500 or $700, depending on the model.

Incentives ranging from $300 to $3,000 or alternative financing starting at 7.9 percent on all other vehicles in the program are unchanged.

The program also includes $1,000 rebates on 1989 and 1990 minivans.

CONGRESS

GM ad cuts may spread

By Raymond Serafin
CRAIN NEWS SERVICE

The suspension of first-quarter advertising by General Motors' Automotive Components Group could portend cuts in spending for GM's car and truck divisions.

The components group's nine divisions combined spend only an estimated $15 million on advertising annually, almost all in trade publications.

Ad agencies that handle GM's vehicle divisions, which spent the lion's share of the company's $1.4 billion ad budget this year, haven't yet been given 1991 budgets.

Some GM agency executives had been told earlier that 1991 ad cuts could total as much as $200 million. But there has been discussion more recently that GM will budget only for the first quarter instead of for the entire year because of economic and military uncertainty.

"We're still waiting to hear," said Richard O'Connor, chairman and chief executive officer of Lintas:Campbell-Ewald in Warren, Mich., the agency for Chevrolet.

So far, agencies are making whatever buys are authorized by GM, and the company's past policy has been to honor existing contracts even if budgets are cut.

"Nobody is looking forward to the first quarter," said one agency executive, who asked not to be identified.

MAZDA

FROM PAGE 1

any luxury car it introduces in the United States.

But expansion and new products cost money. For the current fiscal year, Mazda has budgeted 120 billion yen (about $923 million) for capital investment, up sharply from 66.5 billion yen (about $510 million) the year before. Next year, the company says, it plans to invest another 120 billion yen, "at the very least."

To avoid the debt markets and to pay for the expansion through cash flow — a stated corporate goal — Mazda Executive Vice President Yoshihiro Wada told securities analysts in New York recently that the company knows it will have to begin generating pretax income of "at least" 100 billion yen (about $769 million) a year.

"This is an ambitious objective," Wada said. "But it is attainable."

How ambitious? Mazda earned a record 77 billion yen in 1985, a high-water mark it has not approached since.

But profit is on the upswing. In the 1990 fiscal year ended last March 30, the company posted pretax earnings of 48.1 billion yen ($305 million at the prevailing exchange rate), up 15.5 percent from the previous year, on sales of 2 trillion yen (about $12.9 billion).

For the first six months of its current fiscal year, ended Sept. 30, pretax income rose 6.7 percent, to 23.8 billion yen ($172 million) on sales of 1.1 trillion yen ($8 billion).

To be sure, Mazda's new-product offensive has netted excellent results in both the home and U.S. markets, at least in volume terms. After posting a 20 percent rise in car and light-truck sales at home last year, to 484,000 units, the company's volume through the first 11 months was up another 12 percent, to 541,000.

In the U.S. market, Mazda's car-truck sales climbed 4 percent in the first 11 months of 1990, at a time when overall car-truck demand declined 4.6 percent. Mazda expects to reach a U.S. total of 380,000 units in 1990, and is aiming for 500,000 a year in the United States by mid-decade.

But it is a basic axiom of the car business that big cars yield higher profits than minis, or small cars, analysts point out. And by skewing its sales mix toward low-end cars just when it needs cash flow, they contend, Mazda is skating on dangerously thin ice.

"The sales look good, but there's no profit," said an analyst who asked to remain unidentified. "Specifically, their (earnings gain) for the first half is not what it could have been if the company was succeeding more with larger cars."

Koji Endo, who follows the industry for Nomura Securities in Tokyo, said his concern is that Mazda's profit margin is so thin that "it could easily be wiped out by a sharp change in the exchange rate."

Indeed, despite higher sales for the six months ended Sept. 30, Mazda's indicated profit margin slipped during the period from an already thin 2 percent for all of fiscal 1990 to 1 percent.

Steve Usher, automotive analyst with Kleinwort Benson International in Tokyo, believes Mazda is betting the farm on its new strategy.

"Essentially, the company has decided, 'We go for it. If we lose, we lose big. But we lose unless we make it,' " he said.

Usher predicts that Mazda will stay the course, continuing full speed ahead on a course to carve out a role for itself as a producer of distinctive "niche" cars. Following the worldwide popularity of the Miata, for example, Mazda moved swiftly to bring the MPV, Navajo and Carol to market.

Wada says the new-product parade will be continuous from now on.

"An aggressive product strategy, supported by global research and development, will allow us to introduce new, distinctive models — one year after another — in the years to come," he told the New York analysts.

To handle its growing lineup of products, Mazda has developed what amounts to a niche marketing network in Japan. In 1989, Mazda set up two new channels, making a total of five channels in its domestic sales network.

Meanwhile, Mazda will not yet say whether it plans to set up a separate U.S. channel for a new luxury car, which is widely expected to debut this spring. Although trailing Honda, Toyota and Nissan, such a move would be a needed followup to the success Mazda has enjoyed in niche marketing its smaller models.

As always, though, there is the matter of money.

By James R. Crate in Detroit and Mary Ann Maskery in Tokyo.

U.S. output down 11% for year

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Car and truck production by U.S. manufacturers for the 1990 calendar year is estimated at 9,881,971, down 11.17 percent from the 1989 total and the lowest since 1983 when 9,512,751 vehicles were produced.

Car production slipped 11.01 percent from 1989 to an estimated 6,078,326, the lowest since 1982. Estimated truck output fell 11.44 percent to 3,803,645, the lowest since 1986.

Last week, U.S. automakers scheduled 90,735 units, 27.86 below the prior week and 31.29 percent below the year-ago week.

U.S. truckmakers' scheduled build was 36,961 last week, 40.50 percent below the prior week and 53.80 percent below the same week a year ago.

General Motors has extended the holiday vacation for 11 plants that now are scheduled to be idle the weeks of Jan. 2 and Jan. 7. Truck plants are Detroit; Flint, Mich.; Fort Wayne, Ind.; Pontiac, Mich. (East); and Tarrytown, N.Y. Car plants are Van Nuys, Calif.; Oklahoma City; Kansas City, Kan.; Linden, N.J.; Lansing, Mich. (B); and the Lansing, Mich., Reatta Craft Centre.

At the Detroit-Hamtramck, Mich., plant, all lines except Allante are scheduled to be idle the weeks of Jan. 2 and Jan. 7, and the van line at Lordstown, Ohio, also will be down those weeks. The Wilmington, Del., plant will be idle the week of Jan. 2, and the Wentzville, Mo., will be idle the weeks of Jan 7. and Jan. 14.

GM's Janesville, Wis., Chevrolet Cavalier line was scheduled to build out last week. The plant will now make only trucks.

Chrysler's Toledo, Ohio, and St. Louis No. 1 assembly plants are scheduled to be down an additional three weeks following the holiday week. Production is expected to resume Jan. 21.

The company's Sterling Heights, Mich., facility will be down an additional four weeks following the holiday week. Production is scheduled to resume Jan. 28. All downtime is due to inventory adjustment.

All U.S. plants will be closed this week for the holidays.

Canada cars up 7% for '90

Estimated 1990 car and truck production in Canada fell 0.34 percent short of 1989.

Car assembly is estimated at 1,078,123, up 7.04 percent over 1989. Truck production for 1990 is estimated at 851,046, down 8.35 percent.

Get lean, warns MIT book, but Ford already has

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

ATLANTA — The squeak-and-rattle team at Ford Motor Co.'s Atlanta assembly plant pondered the problem of screws.

Loose screws were falling from workers' shirt pockets onto the carpets of Taurus and Sable models as the cars rolled down the assembly line. A dozen members of the team met recently and — almost as quickly as you can say *kaizen* — solved the problem. A plant shop was asked to sew work aprons with deep side pockets to accommodate the screws.

LEAN NEW WORLD

- Book: Lean is king, Page 26.
- Europeans outdated, Page 27.

This latest example of worker involvement and continuous improvement showed once again why Ford was the one non-Japanese automaker that has already joined the triumphant new world of "lean production," as proclaimed by the authors of an influential new book.

The Atlanta workers seem pleased to have escaped the wrath of the Massachusetts Institute of Technology team that spent five years and $5 million studying the world's auto industry.

The Machine That Changed The World, which preaches a change-or-die message to most of the non-Japanese automotive industry, casts a gentle eye on this 42-year-old plant.

While warning that the West in general and that General Motors, Renault S.A., Fiat Auto S.p.A. and Volkswagen AG in particular are operating under antiquated manufacturing systems, *Machine* suggests that Atlanta — and maybe other Ford plants — aren't doing so badly.

The book declares the imminent death of Henry Ford's "mass production" and its replacement by "lean production," characterized by flexible manufacturing; low inventories; communication with suppliers, workers and distributors; and continuous improvement, known in Japanese as *kaizen*.

Relations with people are central.

"The way things were before, I couldn't have come in here and talked to the plant manager about something I didn't like," explains J.C. Phillips, chairman of the

Overcapacity blots future for U.S. makers

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Factory overcapacity continues to darken the U.S. auto industry's immediate future, despite the announced closing of four General Motors plants in November.

North American assembly plants (United States and Canada) shut their doors on 1990 after producing about 11.8 million cars and trucks — shipping below 12 million for the first time since 1983.

Output is down about 1.23 million units from 1986, the U.S. industry's best sales year. Car output has fallen 1.63 million units during the last four years.

On the car side, where the overcapacity has been concentrated, output has fallen 1.6 million units during that same span, to 7,156,449. According to DRI/McGraw Hill, that's a capacity utilization rate of 72.29 percent, compared to 83.7 percent in 1986. In other words, North American car plants can build about 2.74 million more units than they did in 1990.

The current sales downturn exacerbates what industry officials have believed for years to be serious factory overcapacity in North America.

Even companies that are operating plants at full tilt are affected. They must sell products in a market flooded by bold sales promotions and endless factory rebates. For firms carrying too much capacity, profit margins are squeezed as they operate at a higher cost level than sales demand.

Analysts generally welcomed the $2.1 billion GM plant writeoff as a necessary step toward easing the problem, which has been widely blamed for third-quarter operating losses for both GM and Chrysler Corp.

The permanent closing of GM's Framingham, Mass.; Lakewood, Ga.; Leeds, Mo.; and Pontiac, Mich., plants effectively removes 900,000 to 1 million units of car-production capacity from the market, although operations at those

see CAPACITY, page 3

1990 Newsmakers of the Year

A year to remember

Even for those who came out ahead, change was a constant and challenges seemed ubiquitous in 1990. The year's top stories are highlighted in *Automotive News Insight*, which follows Page 14.

Jerry Curry: NHTSA's new boss proves to be a forceful negotiator, gets safety regulations off the dime after years of lethargy, then lashes out at safety activists as fronts for trial lawyers.

Robert Eaton: General Motors Europe president boosts sales and market share, races into Eastern Europe, returns tidy bundle of cash to headquarters to bolster Detroit operations.

Ray Green: NADA's "quiet man" is effective successor to aggressive Ron Tonkin, wins improvements in GM franchise and sets up certification program for salespersons.

Carl Hahn: Opens East Germany even before the government does, wins the race to have Skoda as a production partner, gets an extension to stay at Volkswagen AG past retirement age.

Kirk Kerkorian: Auto industry's newest mystery man adds to turmoil at Chrysler by buying 9.8 percent of common stock for $272 million. But why? Is he a raider or an investor?

Richard G. "Skip" LeFauve: Saturn president gets the car into the showrooms after seven years of hoopla, but production problems hold supply to a trickle and delay test of sales strength.

Robert McCurry: Lashes back at Lee Iacocca, picks up market share for Toyota, introduces the import 10-day sales report to act like the locals, sells a million cars and trucks.

J.C. "Jim" Perkins: Untangles the snarls in the Geo line and makes it a major player in Chevrolet's successful quest to beat Ford and regain first place in car sales.

Robert Stempel: "Car guy" instills new aura of confidence at GM. Makes tough decisions such as writing off plants, giving three-year job guarantees and slashing output to match sales.

Shoichiro Toyoda: The doctor takes personal charge of product development at Toyota, sees his company make big hit with Lexus, announces plan to double capacity at Georgetown.

: assessment" of the beleaguered maker of Subaru vehicles and
about his firm's future. Story on Page 2.

Three of the transplants were unable to keep their factories up to speed in 1990: Mazda's Michigan plant (pictured), Diamond-Star's Illinois plant and Hyundai's Quebec plant. All other transplants operated at overtime, including Toyota's Kentucky Camry plant, which added almost 10 percent to its normal 200,000-unit capacity.

CAPACITY

FROM PAGE 1

plants had already halted.

GM has also indicated it could close plants in Pontiac, Mich.; Scarborough, Ontario; and Lordstown, Ohio — which would delete another 700,000 units of capacity.

But North America still could remain glutted for years.

In the past year, at least 240,000 units of new capacity came on stream at Saturn Corp. Another 110,000 units of capacity came from Ford Motor Co.'s Louisville, Ky., plant. Honda of America Manufacturing Inc.'s plant in East Liberty, Ohio, is ramping up to produce up to 150,000 cars a year.

At least 925,000 units of additional capacity will enter the market in the next two years. A good chunk of that will come from former car plants that either will be replaced by truck plants or will be converted to build trucks.

Another 300,000 to 400,000 units will be added by 1994, led by a new 220,000-unit Toyota Motor Manufacturing U.S.A. Corp. plant that will double U.S. Camry output.

Independent of any plant closings or cutbacks, those plans combined represent new capacity of as many as 1.7 million vehicles between mid-1990 and 1994.

NORTH AMERICAN CAR CAPACITY

(Figures in millions)

	Car capacity	Car output	Percent
1986	10.50	8.79	83.72
1988	10.10	8.13	80.49
1990	9.90	7.16	72.29

SOURCE: DRI/McGraw Hill, Automotive News

Industry officials and market analysts have debated the overcapacity question for years. Estimates of the size of the surplus range from a few hundred thousand units during a healthy sales year to nearly six million units.

Carmakers are loathe to pin down their overall production capabilities, arguing that plant capacity is fluid.

Three unknown factors in the overcapacity equation are how high U.S. vehicle sales will be during the next two to three years, how many older plants might be closed by then and how many vehicles will be exported.

Phil Fricke, first vice president for equity research at Prudential-Bache Capital Funding in New York, predicts exports from U.S. factories will total 440,000 cars and trucks by 1994, compared to about 250,000 in 1990.

Fricke believes capacity is less a threat than the industry fears.

"A lot of analysts fail to separate the capacity question into market segments," he says. "Adding a truck plant doesn't worsen the car capacity situation."

Fricke argues that GM's plant closings, along with political pressures on the Japanese and a number of Big 3 plants shifting from car to truck output will result in an equilibrium in the next two years.

Few analysts appear as optimistic as Fricke. More typical is the view that some makers will get burned by the plethora of auto plants and will close them.

Numerous plants are under-utilized. More than 30 Big 3 plants were idled for part of the fourth quarter, and 28 closed early for the holiday shutdown.

Detroit now has more flexibility in eliminating capacity if necessary. This year's UAW contract negotiations produced agreements that give manufacturers the freedom to close plants permanently.

UAW negotiations with Chrysler produced an agreement that will allow the union to try its first three-shift schedule at Chrysler's St. Louis minivan plant. The move expands the plant's capacity by 50,000 units a year — without using brick or mortar.

Transplants' output continues to grow

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

No new Asian transplant auto factory opened in North America in 1990 — a news event in itself, considering that 12 opened during the previous eight years.

Yet the group's combined output continued to climb. Plans for a 13th Asian transplant factory were announced, while several of the existing plants operated overtime to stretch capacity.

The Asian transplants built 400,000 more vehicles in North America this year than last year. By comparison, the Big 3 built 1.46 million fewer than in 1989.

As the year ended, the 11 Japanese and one Korean transplant operations in the United States and Canada had produced 1.79 million cars and trucks.

According to plans, the same 12 factories will build as many as 2 million vehicles in 1991 — still without reaching their full existing capacity of 2.26 million annually.

This year, factories owned by the two largest transplants — Honda of America Manufacturing Inc. and Toyota Motor Manufacturing U.S.A. Inc. — had output that exceeded straight capacity.

Honda's Marysville, Ohio, plant built more than 380,000 cars, at least 20,000 more than the plant's stated 360,000-unit capacity. Honda of Canada Manufacturing Inc.'s Alliston, Ontario, plant yielded more than 100,000 cars this year, or at least 10,000 more than its stated capacity.

Toyota's Camry plant in Georgetown, Ky., was expected to produce 218,000 cars in 1990 — 18,000 more than its listed capacity.

Toyota will double its Camry capacity by building a second 200,000-unit-a-year factory.

Honda opened a Civic plant in East Liberty, Ohio, in December 1989. The new plant made it possible for Honda's Marysville plant to expand Accord production from about 230,000 in 1989 to nearly 330,000 in 1990.

One new transplant vehicle line will come on stream next September when Toyota begins building pickups at New United Motor Manufacturing Inc. in Fremont, Calif. That line will give Toyota capacity for another 100,000 vehicles a year.

Two other transplant factory projects will remain under construction in 1991. Nissan Motor Manufacturing Corp. U.S.A. will complete its project to double the 240,000-unit capacity of its Smyrna, Tenn., plant in 1992. A joint project between Nissan and Ford Motor Co. under construction in Avon Lake, Ohio, also will not begin production until 1992.

When all existing projects are up and running, the transplants will have combined capacity in North America of 3 million units a year.

How analysts see capacity:

So long, glut

Fricke

Philip Fricke, first vice president of equity research, Prudential-Bache Capital Funding: *The overcapacity problem will be solved.*

Fricke believes the clouds of costly overcapacity that threaten the industry are rapidly fading.

"I think North America is coming into equilibrium over the next two years," he says. "From 1995 to 2000, the industry will need at least 500,000 more units of capacity than it now has."

Rising transplant production in North America is reducing the flow of Asian imports, he says. While total transplant production in Canada and the United States rose to 1.75 million vehicles in 1990, Fricke predicts Japanese imports will drop to about 1.7 million units annually by 1992. He argues that the Japanese are "too sensitive to political pressures" to import their quota of 2.3 million units a year.

He predicts U.S. car sales by transplants will rise by another 500,000 units a year by the early 1990s, arguing that even at that level, total U.S. transplant sales will reach 1.7 million at the most.

Transplant production and imports combined limit the Japanese share of the U.S. market to 3.3 or 3.4 million by 1992, he calculates. Should U.S. car sales return to the 11 million units a year level, the scenario could spell *undercapacity* for the Big 3, he suggests.

Trouble for everyone

Pitcoff

Joel Pitcoff, manager of research and analysis, Ford Motor Co.: *If the overcapacity problem were solved, do you think dealers would still be offering $1,000 rebates on new cars?*

This year, the Big 3 slashed North American factory production to stay in line with falling industry sales. In Ford's case, 1990 car output was down by nearly 500,000 units from 1989.

Pitcoff believes the North American industry is still grossly over-capacitized.

"It's going to take more than GM giving last rites to a few factories to get us out of this situation. It's arguable that four of the plants GM is closing weren't even part of the problem, since they had already ceased production."

Pitcoff believes that the Japanese, as well as the Big 3, face overcapacity problems. He points at Nissan Motor Co.'s failure to increase U.S. market share this year, despite being in the process of doubling its North American plant capacity.

Several transplants also operated under capacity this year.

"The argument has been made that every new unit of transplant capacity that comes on line takes one unit of sales out of the hide of the Big 3," Pitcoff comments. "You can't assume that. There's fairly intense competition among the Japanese themselves."

Too many trucks

Campbell

Bernard Campbell, director of automotive analysis, DRI/McGraw Hill: *We believe the light-truck market is headed for a problem.*

Campbell believes that overcapacity has been spread unevenly across market segments. As a result, he suggests, the Big 3 have been spared some pain.

The light-truck market has been the least over-capacitized so far, he says. And light trucks have been a key profit center for the Big 3.

But that is changing. Ford, GM and Chrysler are all converting car plants to truck plants. Other plants are adding truck capacity, including Ford's Louisville plant, Isuzu Motors Ltd.'s joint-venture plant in Lafayette, Ind., Toyota Motor Co.'s joint-venture plant in Fremont, Calif., and probably Nissan Motor Manufacturing U.S.A. Corp.'s plant in Smyrna, Tenn.

"Light truck capacity has looked very good historically. But the combination of this new capacity in the next few years, plus a slowdown in the growth of truck sales indicates a utilization problem."

Campbell predicts truck sales will continue growing, but at a slower rate than in the 1980s.

He notes that manufacturers have plans to increase North American sport-utility capacity by 60 percent in coming years. "We see that segment being particularly under-utilized by 1993 to 1994."

Relief from overseas

Swonk

Diane Swonk, regional economist, First Chicago Corp.: *Changing situations around the world are helping alleviate North American overcapacity.*

Diane Swonk looks at the big picture when analyzing the auto industry's overcapacity outlook.

Her premise is that manufacturing capacity remains out of line with current sales. But her observation is that the fluid world of market pressures is slowly but surely correcting it.

One factor is the continuing improvement in foreign economies. As standards of living rise in Asian and East European nations, increasing personal consumption levels will require more automotive production. That means that U.S. factories will have more opportunities to export excess capacity, she argues, and offshore factories will be less intent on shipping to North America.

The opening of East Bloc nations to European makers in the past 18 months should remove much of Europe's excess plant space, she suggests.

Another factor is what Swonk believes will be a 1990s shift away from consumption spending in the United States and more toward investment spending. That will mean lower or stagnant U.S. car sales, but it will create a better industrial base for exporting, she predicts.

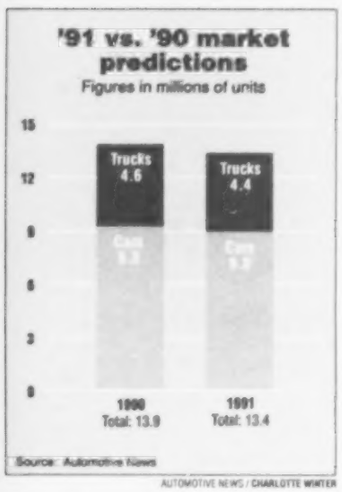
INSIGHTS



AUTOMOTIVE NEWS / CHARLOTTE WINTER

STAFF SEES DECLINE: New-car sales in the United States will decline by 310,000 units in calendar year 1991, and light-truck sales will drop by 210,000 units. That is how the *Automotive News* editorial staff sizes up next year's market. Twenty-nine reporters and editors participated in the survey.

TRUCKS DROP MOST: The overall 1991 tally will be 13,403,000 car and truck sales, according to the staff's projection. That would be down 3.73 percent from the 13,923,000 expected this year. The average of estimates is 8,970,000 car sales in 1991, a dip of 3.34 percent from this year's anticipated 9,280,000, and 4,433,000 truck sales in 1991, a decline of 4.52 percent from 1990's anticipated 4,643,000.

IMPORTS DIP DEEPER THAN DOMESTICS: The staff's 1991 forecast includes 5.4 million sales of Big 3 domestic cars, down 5.15 percent from the 5,693,000 expected for 1990, and 2,270,000 imports, a dip of 8.80 percent from this year's 2,489,000.

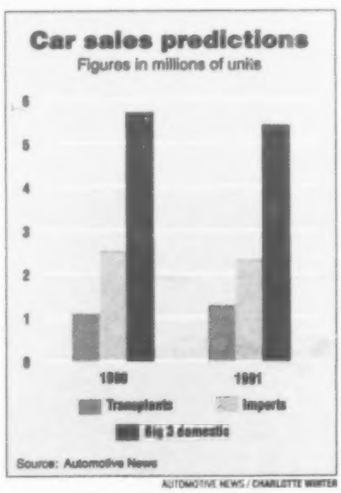
TRANSPLANTS SOAR: The third element in the car sales picture is slated for a major increase in the coming year, the *Automotive News* staff predicts. Sales of cars made by transplant and joint-venture companies are expected to climb to 1,300,000, up 18.40 percent over the 1,098,000 projected for 1990.

HIT OR MISS FORECASTING: The *Automotive News* staff did a so-so job of estimating 1990 car sales. At this time last year, it predicted 9,578,000 cars would be sold. The projection was off 3.11 percent from the anticipated figure of 9,280,000. The staff overestimated Big 3 domestic car sales by 5.09 percent and imports by 6.79 percent, but greatly underestimated transplant and joint-venture sales by 16.28 percent. But they were only off on the high side by 1.63 percent in combined Big 3 domestic and transplant sales.

TRUCKS R US: The *Automotive News* staff was practically clairvoyant in guessing the 1990 truck market, though. A year ago, the staff predicted sales of 4,641,812 light trucks in 1990. That is only 0.03 percent and 1,188 units shy of the 4,643,000 units now projected.

DEALERS MORE UPBEAT: While also forecasting a market decline, the National Automobile Dealers Association sees a brighter 12 months ahead than *Automotive News* does. The dealer association forecasts new-vehicle sales for 1991 will total 13.8 million units, comprised of 9.35 million new cars and 4.45 millions vans and light-duty trucks.

NADA SEES SMALL UP, BIG DOWN: NADA analysts say fears of escalating gasoline prices will produce market-share gains in the high-end of the small-car segment next year. Mid-sized vehicles will not experience a market-share decrease, according to NADA, but there will be some joint ventures in vehicle production among manufacturers. Large-vehicle share of market will continue to decline because of higher gas prices and changing population demographics.



AUTOMOTIVE NEWS / CHARLOTTE WINTER

TAXING SITUATIONS TO HURT MAKERS: Despite the luxury segment's sales increase in 1990, NADA says the coming year could see a downturn in that market as a result of the 10 percent luxury tax on vehicles selling above $30,000, the doubling of the gas-guzzler tax and tax boosts for high-income households. Light-duty trucks and vans will feel the squeeze of decreased 1991 sales due to higher gas prices and a slow economy.

CRUNCH TIME FOR CREDIT: NADA also sees a lending crunch occurring in 1991, as finance companies tighten credit and demand larger down-payments from customers. The crunch may make it difficult for consumers to finance new vehicles to replace those bought in 1985 to 1986, since most of those vehicles will be paid off in 1991. "Even though we forecast a mild recession for fourth-quarter 1990 and first-quarter 1991, we don't believe it will cause a big fall-off in auto and light-truck sales," says Tom Webb, NADA chief economist.

USED POPULARITY: Used vehicles tell a different story. In 1991 a record 15 million units will be sold, NADA says. The figure represents a 5-percent increase over 1990. Automaker buy-back programs and the surge of "nearly new" auction program and off-lease cars are the reasons for the increase. Today's used-vehicle department generates 25 percent of dealership operating profit, according to NADA.

Auto trade deficit climbs 16%

WASHINGTON — The U.S. automotive trade deficit in cars and light trucks increased 16 percent in August as exports declined and imports surged.

Statistics released by the U.S. International Trade Commission show the automotive trade deficit was $3.31 billion in August compared with $2.86 billion in August 1989.

Imported vehicles were valued at $3.98 billion for the month, while the value of exports was $670 million.

Large increases in car-truck shipments to the United States were chalked up during August by Germany, South Korea and Mexico. Germany increased its value of exports 46.6 percent, and Korean shipments rose 36.6 percent. Mexican exports, which now include the new Ford Escort and Mercury Tracer, increased 226.9 percent.

Japan registered a 4.5 percent increase in its value of automotive shipments, while French imports were up 16.7 percent from a relatively small base.

The value of U.S. exports to Japan increased 237.7 percent for the month, but that export growth was offset by a 1.6 percent drop in the value of automotive shipments to Canada, the largest market by far for U.S.-built cars. The value of automotive shipments to countries designated as "others" by the U.S. Commerce Department increased 17.8 percent during August.

For the 12-month period ended in August, the annualized automotive trade deficit fell to $40.88 billion, a 4.5 percent dip.

TOYOTA

FROM PAGE 4

tional pickups) it would definitely trigger trade tension," says Jesse Snyder, director of product analysis for AutoPacific Group Inc. in Santa Ana, Calif.

"Toyota could do a lot of other things that are a lot less risky to increase its market share," Snyder says. "If you build more cars here, you look like you're becoming more American. If you build big trucks, that's a lot more threatening."

Robert McCurry, Toyota Motor Sales executive vice president, is pushing for the truck. He says the domestics have nothing to worry about and, therefore, it's not a political decision. "We're never going to hurt GM or Ford with big trucks; they own it. Our goal is to give (Toyota buyers) something to move up into," he says.

McCurry admits that for a Japan-based company, anti-Japanese and protectionist sentiments are a part of doing business in the United States. "As long as there is a place called Washington, D.C., it'll be an issue," he adds.

In the last six months alone, Toyota has been targeted by Texas financier and Japan critic T. Boone Pickens, a group of congressmen organized by a former Toyota distributor and an organization of building trade unions in the Midwest.

> "We're never going to hurt GM or Ford with big trucks; they own it."
>
> **Robert McCurry**
> Toyota Motor Sales

In the distributor case, 32 congressional representatives and former Sen. Birch Bayh, D-Ind., rallied behind independent distributor Mid-Atlantic Toyota in its unsuccessful attempt to stop Toyota from taking over vehicle distribution in its five-state region.

As for Pickens, he has expanded his fight to get on the board of Toyota supplier Koito Manufacturing Co. into a crusade against the Japanese cartel-like *keiretsu* system.

He established and advertised a Fair Trade Hotline last September and asked like-minded Americans to call and send telegrams to Yuki Togo, president of Toyota Motor Sales U.S.A.; U.S. Trade Representative Carla Hills; and Japan's ambassador to the United States.

During a three-week period, Western Union received 7,076 calls over the hotline. For each call, Western Union sent a Pickens-authored telegram to Togo, Hills and the ambassador.

Earlier this month, a group of building trade unions in the Midwest banded together to evaluate the impact the Japanese transplant facilities are having on the economy of the Midwest.

Nissan delays decision on Seattle store

CARSON, Calif. — Nissan Motor Corp. in U.S.A. has postponed until mid-January a decision on whether to add an 11th dealer in the greater Seattle market.

Nearby Seattle dealers have asked Nissan not to add the point and have presented their arguments before the company's Policy Review Board.

Nissan was scheduled to rule on the issue Dec. 20, but asked for an extension to mid-January. The Policy Review Board, headed by Jerry Butts, Nissan vice president for parts and service, has asked both Nissan and the dealers to submit current data on sales and penetration in Seattle.

viced, a release switch on the cruise control of the Luce, which is sold in the United States as the 929. None of the faulty 929s was exported to North America or Europe.

The faulty switch could increase the distance required to stop and could mean that the brake lamp would not light.

But after the *Asahi* reports gained wider publicity, the company announced a recall Dec. 25, the day the ministry delivered its second warning. A Mazda spokesman said the defects were not related to safety and added that it is often difficult to determine which defect should be posted in a recall.

Mazda says it acted in good faith, but says it will thoroughly review its recall system. Mazda President Norimasa Furuta, through a video linkup with all of Mazda's Japanese facilities, urged all employees to "reflect on our work" and to accept the rebuke modestly and sincerely, with an eye toward improving customer satisfaction.

Furuta

A year ago, the Ministry of Transport delivered a similar warning to Toyota Motor Corp., which had made repairs on a part affecting 200,000 units of the 4S-FI engine without announcing a recall. The engine was used in several car lines, including the Celica, Corolla and Mark II, which is sold in the United States as the Cressida.

Nissan sacks its distributor in Britain

By Daniel Ward
STAFF CORRESPONDENT

LONDON — Nissan U.K. Ltd., the privately owned importer and distributor of Nissan vehicles in Britain, said Friday that it was preparing a suit of at least £250 million (about $485 million) against the carmaker for what it called an "invalid" decision to cancel its franchise.

Nissan, by far the best-selling Japanese marque in Britain, sacked the distributor shortly after Christmas after a long-simmering dispute between the two over pricing and marketing strategy.

In a brief message transmitted to the importer by telefax, Nissan Motor Co. said it believed that "the basis of trust essential to a trading relationship is no longer present."

Barring a victory for Nissan U.K. in the courts, the franchise will be discontinued at the end of 1991.

In a letter delivered Friday, Nissan U.K. attorneys told the Japanese automaker that it was commencing legal action. "We must make it clear that there are no grounds entitling you to terminate the agreement and, therefore, your purported notice is both invalid and of no effect," the letter said.

A spokesman for the importer said Nissan U.K.'s planned legal action against the carmaker would, at the minimum, "take account of the investment of some £250 million which has been made at Nissan's request, and the substantial market share and sales built up in Britain since the agreement was entered into in 1971."

220 dealers cut off

The Christmas firing stunned industry circles here. It effectively severs more than half of Nissan's retail-distribution arm in Britain and means that it must start building a fully-owned network from scratch.

Nissan U.K., founded and controlled by reclusive German-born entrepreneur Octav Botnar, owns or has financial ties to some 220 dealers out of a total of 400 that sell Nissans in Britain. It distributes cars to all 400.

Nissan sold an estimated 100,000 cars in Britain last year, down from nearly 140,000 in 1989. Wholly independent dealers, who received their cars from Nissan U.K., accounted for about half of total sales. Beginning in 1992, they would have to get cars from Nissan U.K.'s successor.

Since its founding, Botnar has

Mercedes to show off concept car

A highlight of the North American International Auto Show, which opens this Saturday in Detroit, will be Mercedes-Benz AG's F100 van-like concept vehicle. Mercedes-Benz officials, pooh-poohing rumors in Europe that the show would be used to announce a decision to build a minivan, said response to the F100 would "help" the automaker decide whether or not to add a minivan to its range in the 1990s. But any production van would bear only passing resemblance to the glassy F100 showpiece, they cautioned. The five-passenger car features a center seating position for the driver and a design for improved visibility and safety in side-impact collisions. See Page 2 for coverage of the Greater Los Angeles Auto Show and Page 4 for a preview of the Detroit show.

1990 another downer for industry

Sales fall below 14 million

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Total light-vehicle sales in the United States in 1990 declined 4.8 percent to 13,842,338 cars and light-trucks.

New-car sales lagged 1989 figures by 510,060 units. Chrysler Corp. held on to third place, outperforming American Honda by 5,955 units.

Chevrolet regained first place in divisional car sales with an edge of 42,947 over Ford Division. Overall, new-car sales totaled 9,261,793, down 5.2 percent; 4,580,545 trucks were sold, a 4 percent decline.

The Big 3 sold 6,113,420 cars for a 66 percent share of the car market, a loss of 1.9 percentage points. Their share of the light-truck market fell from 85 percent to 83.7 percent.

General Motors' share of the car and truck market rose 0.5 percentage points; Ford's fell 0.6 percentage points, and Chrysler's dropped 1.5 points.

Toyota's share, including Lexus, rose 1.1 points while Honda's share, including Acura, rose 0.8 percentage points.

As a group, the Japanese makers were the big winners picking up 2.3 percentage points in the car market and 1.2 percentage points in truck sales.

See 1990 sales table, Page 33

Production plummets 11%; lowest output since 1983

By Anne E. Wright
CHIEF STATISTICIAN

Car and truck production in the United States last year was the lowest since recession-wracked 1983.

U.S. manufacturers built 9,878,461 cars and trucks in 1990, down 11.17 percent from the 11,120,912 produced in 1989.

Last year's car production was 6,075,331, down 11.05 percent from 1989. Truck output was 3,803,130, down 11.37 percent.

The Big 3 car production dropped 16.52 percent in 1990 while production by transplant manufacturers increased 16.14 percent. The Big 3 built 4.76 million cars, down from 5.70 million in 1989. Transplants, on the other hand, rose to 1.32 million from 1.13 million in 1989.

U.S. car production for the final quarter of 1990 was 1,435,753, the lowest total for that period since 1982 when 1,203,660 cars were built.

Fourth-quarter car output dipped 12.12 percent from 1,633,710 in 1989.

December's car build of 336,624 was the lowest for that month since 1951 when 284,837 cars were built.

Last month's car production dropped 21.84 percent from the 430,666 built in 1989.

NEW GUY IN TOWN

Clark Vitulli joined a changing Mazda; Here's how a Chrysler pro from Detroit is shaping an importer on the coast

By David Versical
NATIONAL EDITOR

IRVINE, Calif. — On a Saturday afternoon in September 1989, Yoshi Taura stepped into the Irvine Marriott Hotel to meet yet another candidate for the job of chief operating officer of Mazda Motor of America Inc.

The prospect, a 43-year-old Chrysler Corp. middle manager named Clark Vitulli, had been a reluctant recruit. He had initially brushed off calls from Mazda's headhunter. And he wasn't going to miss work for a job interview. Thus the Saturday afternoon appointment with Mazda's U.S. president.

Vitulli, content as Chrysler Divi-'on' [illegible] anager, [illegible]ose by [illegible]iura, [illegible]ucial [illegible]ency. [illegible]epa- [illegible]as in the Eastern and Western United States, Mazda was in no shape to fight modern auto wars. Taura, commander-in-chief of the consolidated company, needed a strong American general to lead it.

In Vitulli, Taura would look for a veteran sales and marketing man to transfuse the lessons and experience of 20 years in Detroit into a reborn importer. The candidate, seasoned through Chrysler's struggles for survival and its internal squabbles, would be in charge of harmonizing what had been two distinct Mazda cultures.

Vitulli would be going from an established automaker — marketing-strong and product-weak — to an importer with potent products and a nascent sense of how to promote them. There would be no small irony in the prospect of a Lee Iacocca disciple and believer pitching products for the Japanese.

Taura had been part of a team that had studied Mazda's prospects for entering the U.S. market 20 years before.

Now, the company could realize Taura's vision for the future. He saw American consumers admiring virtually everything connected with the name Honda. By the end of the century, Taura wanted them to hold that same respect for Mazda.

Before that, he wanted to reach the half-million sales mark. A stream of new products, arriving at the start of the 1992 model year, would make that possible. But only

see MAZDA, page 34

JAVIER MENDOZA

Clark Vitulli, right, with fellow executives Tetsujiro Nagamitsu, center, and Nariaki Yamamoto. Vitulli is trying to foster a creative vision inside Mazda. "I want to show people that we can make mistakes. If you can make mistakes, you will get fresh thinking."

Chrysler expands electric van project

Utilities will try to leap high hurdles of cost, low range

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. has teamed up with the electric utility industry to begin engineering an electric minivan "for possible commercial production," said Francois Castaing, Chrysler's vice president of vehicle engineering.

Castaing announced the $10 million engineering and development program Friday at the Greater Los Angeles Auto Show. The vehicle is not likely to see production before 1995.

Castaing conceded that Chrysler hasn't overcome the big hurdles. "The current state of battery technology has not yet achieved success against two of our greatest technological concerns — initial high cost and limited range," he said.

Chrysler's partner in the 28-month joint effort is the Electric Power Research Institute of Palo Alto, Calif., which manages technical research and development programs for the electric utility industry. Some 660 utilities are members of the institute.

The institute will be responsible for trying to overcome the two great barriers to an economic electric vehicle: developing a battery-supply source and a recharging infrastructure. For this contract, the institute will be partially funded by Southern California Edison, which displayed a concept version of the Chrysler TE van at the Los Angeles auto show.

Volkswagen of America Inc. also displayed an "experimental" electric vehicle at the show.

Last year, General Motors made big news at Los Angeles with its introduction of the Impact electric car, which GM says is slated for eventual production. Los Angeles is a hot spot of interest in electric cars because its thick air pollution has prompted government officials to require some non-polluting cars in the late 1990s.

Arnold Fickett, vice president of the Customer Systems Division of the Electric Power Research Institute, said the engineering phase of the Chrysler program will involve building six vehicles. A first phase yielded four jointly produced

5 Ford dealers to test rental-car sales plan

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. this year will test a used-car marketing concept for former daily rental cars in five of its dealerships. The plan is designed to expand Ford's presence in the used-car market without reducing its new-car sales.

Ford Division General Manager Thomas Wagner said the test program will require a dealer to establish a separate lot away from his new-car showroom and existing used-car lot to sell the former daily rental cars. Ford is concerned that if consumers see new cars sitting next to low-mileage, less-expensive former rental cars of the same model year, new-car sales will suffer.

"We're doing a lot of research to see if the substitution (of used cars for new cars) is lower when they're on a separate lot," Wagner said last week.

"If the lot where former rental cars are sold is away from the new-car lot or showroom, we think that they (the shoppers) will be mostly used-car buyers. The Avis and Hertz lots attracted mostly used-car buyers," Wagner said.

Three Ford Division and two Lincoln-Mercury Division dealers will be involved in the test. Ford has not chosen the dealers, but Wagner said that they and any other dealers using the program in the future must have high customer satisfaction index ratings on the company's in-house system.

Ford announced in June 1990 that it will buy back the cars it sells to daily rental companies in the 1991 model year. Those cars, called program cars, will be put through auctions so Ford and L-M dealers can buy them for their retail operations.

The only exceptions to the buyback program are the 1991 Ford Festiva and 1992 Crown Victoria and the 1991 Mercury Capri and 1992 Grand Marquis.

Ford's June announcement followed a similar announcement by General Motors.

Ford officials estimate that the buyback program will put 100,000 more Ford cars and trucks through the auctions annually. Ford sold 160,000 to 170,000 rental cars through its factory-sponsored auctions in the 1990 model year.

Wagner said dealers have been concerned about the implications of the new program. Ford has agreed that a dealer can set up a lot for a program cars, but only within the dealer's franchised sales territory. Only franchised Ford and L-M dealers will be included in the program.

"Usually when they hear that other dealers can't set up a (program-car) lot right across the street from their store, the concerns go away," said Wagner.

But some dealers aren't fond of the idea and have nicknamed the program "Uncle Henry's Used Cars," according to a member of the L-M dealer council.

Wagner declined to comment on the nickname.

Wagner emphasized that the test is not a separate franchise, but a marketing plan. There is no fee to participate. If it is successful, Ford will begin selecting other dealers to participate in the program-car marketing plan nationwide.

HEIDI BRADNER

At a private used car lot in Prague, Czechoslovakia, Wojciech Korybalski checks out a '75 FSO 125, a Fiat derivative from Poland, priced at 21,000 koruna, or about $700 at the official exchange rate.

CZECH-ING OUT CAPITALISM

New freedoms bring opportunity for freestyle car sellers

By Mary Beth Christie
SPECIAL CORRESPONDENT

BRATISLAVA, Czechoslovakia — Two short years ago, "Martin," who quite rationally insists on anonymity, would have been packed off to have his attitude readjusted for trying to sell the Ford Country Squire wagon that he has parked, unobtrusively to be sure, in a line of Skodas on Fucikova Street here.

Still, everything is relative: 10 years ago, he might have been shot as a "profiteer."

But this is Czechoslovakia in the full flush of its post-*Glasnost* freedoms, and such unfortunate impediments to commerce have become as unheard of here as Communist Party membership books. While street vendors of Country Squires and other symbols of capitalist excess know they still have to be *careful*, they also know they are at least peddling wares that have official-dom's sanction.

The new freedoms have spelled opportunity to quick young people like Martin, a university student who has become a used-car dealer without a dealership. Or a license, for that matter.

In the past six months, Martin says, he has imported six American cars and five bicycles into Czechoslovakia and sold them quickly for what he calls tidy profits to people who have somehow accumulated hard currency.

Already, in the best capitalist fashion, Martin is thinking bigger. "I want to build a new company in Czechoslovakia," he says, casting a salesman's eye over passersby near his Country Squire, fishing for a glint of exploitable interest among the strollers. "I am trying to see how many cars I could sell here. Until now, it hasn't been so bad."

Indeed, Martin's short career has been a crash course in the perils and intricacies of the free market. Not the least of his challenges, he already has had to solve a complicated problem involving the effects of demand and supply on price.

"Since Germany unified, prices of used German cars have

Car design on menu of World Congress Gala dinner

DETROIT — Two of the industry's top design executives, one from the old world and one from the new, will speak at the Tuesday Evening Gala dinner during the Automotive News World Congress next week.

Europe's Wolfgang Reitzle, management board member and head of the Development Division at BMW AG, and America's Fred C. "Fritz" Mayhew, chief design executive of North American Design at Ford Motor Co., will offer their respective views on the state of car design.

Reitzle

Mayhew

Reitzle's speech, "BMW's Research and Development — Creating Products with Individuality and Global Relevance," will provide insight into the stainless-steel world of European design.

Mayhew's speech, "Playing to Win," will discuss the guts-and-bolts tactics of aggressive American design teams.

The two are well-qualified. Reitzle has enjoyed rapid success since he joined BMW AG in 1976 as a production specialist out of Munich Technical University, and Mayhew is setting the stage at Ford for a strong design showing in an increasingly competitive world market.

Tickets to the dinner are included with full registration to the Automotive News World Congress or may be obtained separately.

The Automotive News World Congress will run from Sunday, Jan. 13 through Wednesday morning, Jan. 16 at the Westin Hotel in Detroit.

To register for the dinner or the entire Automotive News World Congress, call the registration office at (313) 764-5592.

Automotive trade deficit grows 7% in September

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks widened 6.9 percent in September due largely to a drop in exports to Canada and an overall increase in imports.

Statistics released by the U.S. International Trade Commission show the automotive trade deficit was $3.26 billion in September, compared with $3.04 billion a year earlier.

Imported vehicles were valued at $3.94 billion for the month, while the value of exports was $684 million.

The value of exports to Canada fell 17.3 percent in September. Because Canada is the largest market for U.S.-built vehicles, that drop far outpaced the increase in the value of exports to Japan, which was 5½ times that of September 1989.

Japan remains a relatively small market for U.S.-manufactured vehicles.

The value of automotive shipments to countries designated as "others" by the U.S. Commerce Department fell 5.2 percent in September.

Increases in the value of imports came from Canada, 1.7 percent; South Korea, 10.3 percent; Italy, 17.7 percent; France, 226 percent; Mexico, 450 percent; and "others," 95 percent.

In September 1989, Ford's U.S. export plant in Hermosillo, Mexico, was closed.

It now builds Escorts and Tracers for the U.S. market.

The value of imports from Germany fell 30.6 percent, while imports from Japan were down 11.1 percent. The value of imports from Sweden declined 10.5 percent in September.

It dropped 12.5 percent from the United Kingdom.

For the 12-month period ended in September, the nation's annualized automotive trade deficit fell to $41.1 billion, an improvement of 5.3 percent.

OBITUARIES

Zollie S. Frank

CHICAGO — Zollie S. Frank, owner of the Z Frank Auto Dealership Group (Chevrolet-Hyundai-Oldsmobile-Subaru) in Chicago, died Dec. 29. He was 83.

Frank opened his first Chevrolet dealership in 1936 and is considered a founding father of the automobile leasing industry. His leasing company, Wheels Inc., has a fleet of 90,000 vehicles.

Henry S. Clime

NEW BRITAIN, Pa. — Henry S. Clime, owner of the former North Penn Lincoln-Mercury in Lansdale, Pa., died Dec. 28. He was 78.

O.H. Coffman

WARSAW, Ky. — O.H. "Monte" Coffman, former president of the automotive aftermarket company Dorman Products in Warsaw, died Dec. 14. He was 77.

Robert A. Liedholm

LAGUNA NIGUEL, Calif. — Robert A. Liedholm, a field parts specialist for Volvo Cars of North America in Los Angeles, died Dec. 12. Liedholm, 49, had worked for Volvo for 20 years.

There were 9 selling days in the period this year and last year.

Industry sales off 16.5% in mid-December

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Sales of U.S.-built and imported cars and trucks took a big dive the middle 10 days of December.

A total of 273,291 cars and trucks were sold in the Dec. 11-20 period, a 16.5 percent drop from the comparable period a year ago. Combined imported and domestic car sales fell by 28,981 units; truck sales lagged by 24,840 units.

There were nine selling days in each period.

Four automakers reported actual import sales: Chrysler Corp., General Motors, Ford Motor Co. and Toyota Motor Sales U.S.A. Inc. *Automotive News* estimated all other import sales.

Volkswagen of America Inc., which reported 10-day sales for the first time the Dec. 1-10 period, said it inadvertently released those figures and will report sales on a monthly basis only.

Chrysler earlier announced it would cease releasing 10-day reports as of Dec. 31.

Only three of the nine carmakers that build cars in the United States reported increases from year-ago figures. Domestic truck sales were down across the board.

U.S.-based automakers reported sales of 127,577 cars in the period, a 17.6 percent decrease from a year earlier. Truck sales totaled 79,347, off 20,988 units. Cars and trucks combined were off 18.9 percent.

American Honda Motor Co. Inc. suffered most among domestic carmakers; Honda's sales fell 43.2 percent.

Each GM division reported lower figures, as GM car and truck sales tumbled 16.6 percent. Ford got a 10 percent boost from its Lincoln nameplate, but its overall sales were down 21.4 percent, and Chrysler Corp.'s car and truck sales were off 29.1 percent.

Mazda Motor of America Inc., Mitsubishi Motor Sales of America Inc. and Nissan North America Inc. were the only U.S. manufacturers to sell more cars than during the same period last year.

Among the four automakers reporting import sales, only GM reported an increase, up 1.7 percent. The four reported selling a total of 18,450 imported models, down 4.2 percent.

Automotive News estimated that the manufacturers who did not report import figures sold 37,084 units, down from the estimated 37,959 units sold in mid-December last year.

Total reported and estimated import car sales were 55,534, down 2.9 percent.

Chrysler, GM and Toyota reported selling 4,730 imported trucks, a 12 percent increase from a year ago. *Automotive News* estimated that 6,103 additional imported trucks were sold for a total of 10,833, off 3,852 units.

Ford endorses NADA shop system for small dealerships

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. is recommending to its dealers that they consider adopting the service operation program of the National Automobile Dealers Association.

Ford has endorsed the NADA's Manual Shop Scheduling and Loading System, a complete system of organizing and operating service departments at small to medium-sized dealerships.

While large dealerships use computers for scheduling and loading, this manual system is more cost-efficient for smaller dealers.

The NADA system, already used by some dealers, features a scheduling and loading chart designed to track a full day's work assignments. It enables the scheduler to determine the flat-rate hours generated by service technicians. He then can compute a technician's work load in billable hours, giving dealerships an accurate picture of individual and shop productivity.

Ken Myers, marketing manager for Ford Parts and Service Division, said: "All manufacturers recognize now that customers are kings and that they have to do what customers want. Our concern is to take care of as many customers at dealerships as possible. It is important to reduce the time customers have to wait in line for car repairs."

NADA President Ray Green commended Ford for embracing the NADA program. Green has not approached other manufacturers with the program, but said he believes that when they see what Ford has done they will adopt it.

"In the past, manufacturers would not have endorsed NADA programs because there was always some type of adversary relationship there," Green said. "There is a difference in the attitude of manufacturers toward dealers and the NADA."

The review by all manufacturers of an NADA model franchise agreement is further evidence of this changing attitude, Green said.

"The manufacturers are . . . looking for ways to improve their relationship with dealers," Green said. "This system is one way, and I believe that between now and the NADA convention in February, there will be other new programs announced by manufacturers to help dealer profitability."

Makers extend incentives, but not much is new

Cabriolet	$1,000	None

Chrysler's program, which runs through Jan. 31 and covers all 1990 and 1991 cars, pays dealers rebates of $250 per unit sold between 50.1 percent and 75 percent of their sales quotas, $750 per unit between 75.1 percent and 99.9 percent and $1,000 for each unit over 100 percent of quota.

Chrysler also announced an incentive for selected 1990-91 Jeep and Ram trucks and 1991 minivans. Rebates include $250 per unit on Cherokee base and Sport models and $2,000 on Grand Wagoneer; $1,000 on Ram Charger and Ram D and W Club Cab pickups; and $500 on minivans without air bags. Those programs also run through Jan. 31.

On Jan. 1, Ford Motor Co. reduced its dealer rebates by $200 on all 1990 Ford cars and trucks except Probe GT, Taurus SHO, Crown Victoria and Bronco and on all Mercury Topaz, Sable and Cougar models. Rebates in the new program, which runs through Feb. 28, range from $800 to $3,000.

Nissan Motor Corp in U.S.A. announced a new program that runs through April 2. It pays dealers up to $1,500 per unit on 1990 and 1991 Stanzas for performance against quota, $1,200 on 1990 and 1991 pickups and $1,500 on 1900 Pathfinders.

Dealers will receive $800 for the first 1990 Stanza sold, $1,000 for the second, $1,300 for the third and $1,500 for the fourth and up. For 1991 models, dealers will receive nothing for the first three units sold, $400 for the fourth and fifth, $500 for the sixth and seventh, $650 for the eighth and ninth, $750 for the 10th, $900 for the 11th and $1,200 for the 12th and up.

Volkswagen of America Inc. added Jetta and Cabriolet to its dealer rebate program on 1990 models and extended it indefinitely. The new program includes per-unit payments of $500 on Jetta and Golf, $750 on Fox, $1,000 on Cabriolet and $1,500 on Corrado.

Audi of America Inc. extended through Jan. 31 its incentive program that pays dealers $3,000 on the 1990 Audi 100.

American Isuzu Motors Inc. announced a quota-type rebate program on 1990 and 1991 Troopers that pays dealers $1,300 per units for one through eight sales, $1,500 for nine through 16 and $1,700 for 17 and up.

The Isuzu program also covers 1991 pickups and pays dealers $600 for one through nine sales, $900 for 10 through 18 and $1,300 for 19 and up. Dealers also receive an added $200 per unit for each 4x4 model sold during the period. Both programs end March 31.

Isuzu also is paying dealers $1,500 for each 1990 Impulse sold between Jan. 1 and Feb. 15.

On the consumer side, Mazda Motor of America Inc. extended its program on cars and trucks through Feb. 28, while Jaguar Cars Inc. will continue to pay owners of 1988 Jaguars $5,000 on the purchase of 1990 and 1991 models, except the XJ6, through Jan. 31.

Toyota Motor Sales U.S.A. Inc. announced a dealer incentive program that ends Feb. 4. It covers 1989, 1990 and 1991 Corolla, Camrys and trucks.

The quota-type dealer rebates range from $300 to $700 on Corolla, $500 to $900 on Camry, $600 to $900 on base 2x2 and 4x4 trucks and $200 to $500 on other trucks.

Toyota also has a consumer incentive that offers an $800 discount on optional equipment packages the 1991 Celica GT and 4Runner throughout the model year.

The option package for the Celica GT includes such items as power package (power windows, locks and mirrors), cruise control, air conditioner, AM/FM cassette, rear spoiler and floor mats. The 4Runner package include power package, cruise control, chrome package (chromed front and rear bumpers, grille, door handles and windshield molding), air conditioner, AM/FM cassette and floor mats.

Westcott buys 6% of Sandy

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Westcott Communications Inc. purchased a sizeable chunk of Sandy Corp., creating the potential for a merger between two major suppliers of sales training materials to automakers and dealers.

Westcott, based in Carrollton, Texas, owns the Auto Satellite Television Network.

Last fall, Westcott presented the outline of a merger proposal to Sandy's board through John Sheehy, a board member who represented Troy, Mich.-based Sandy in discussions.

The two firms could not reach an agreement and haven't talked since, according to William H. Sandy, Sandy Corp.'s chairman and chief executive officer.

But in December, Westcott purchased 142,900 shares, or 6.38 percent, of Sandy's outstanding stock for about $156,000.

In a 13D filing with the U.S. Securities and Exchange Commission Dec. 27, Westcott said it bought the stock "for investment, with a view to acquiring an equity interest in the company or, subject to future developments, the possible acquisition of the company," leading to speculation of a possibly hostile takeover.

William Sandy said, "Since I vote 51 percent of the stock, I don't see how a hostile takeover is possible. Everything else is speculative."

Sandy said he has authority to vote not only his own shares, but other family members' and employee shareholders' stock.

The question of how he would vote on an attractive offer, Sandy said, "is purely hypothetical since there are no discussions going on between the companies right now."

Westcott provides training information and sales motivation programs for auto dealers through its niche television network, ASTN, and similar services for other niche markets.

ASTN handles all the firm's automotive training educational and informational programming. Some 4,400 dealers subscribed to the TV service as of Sept. 30, 1990.

Sandy provides consulting, training and communications service for automakers and dealers.

Westcott President Jack T. Smith said his company was interested in Sandy because "they do a lot of work with GM and do a lot of communications with GM dealers."

Smith said Westcott has "not made any determination of whether we will acquire any more (Sandy) stock, sell it or attempt to acquire the company again."

Sandy has piled up yearly losses since it began being publicly traded on the American Stock Exchange in 1986. It lost $1,882,000 on revenues of $33,473,000 for its fiscal 1990 ended Aug. 30, 1990.

Sandy's stock traded at $2 a share last Friday, up from $1.25 the previous Monday.

Westcott has been trading for between $4.50 and $5 a share, according to Wayne Maynard, Westcott's chief financial officer.

He said the company earned $1.023 million on revenues of $16.375 million for the first nine months of its 1990 fiscal year ended Sept. 30.

PRODUCTION

FROM PAGE 1

Fourth-quarter truck output was 802,853, the lowest total for the period since 1984 when 780,055 trucks were built.

Truck production in the final quarter fell 11.99 percent below the same period in 1989.

December's truck build was the lowest for that month since 1982 when 128,948 units were built.

Last month, 171,223 trucks were produced, 36.90 percent below 1989.

Last week, U.S. makers scheduled 64,793 cars and 38,155 trucks.

Ford has scheduled all but two assembly plants to be idle temporarily this month. The following plants will be idle this week: Kansas City, Mo., car and truck lines; St. Louis; Chicago; Wayne, Mich.; and Kentucky Truck. Scheduled to be idle this week and the week of Jan. 14 are the Lorain, Ohio, car and truck lines; Norfolk, Va.; Michigan Truck (Wayne, Mich.); and Dearborn, Mich.

In addition, the St. Paul, Minn., car facility will be idle the week of Jan. 14, and Atlanta will be idle the weeks of Jan. 14 and 21.

Ford has also reduced the Edison, N.J., truck facility for a single shift for seven weeks. Normal production is expected to resume Feb. 25.

General Motors scheduled five truck plants and six car plants to be idle this week. The truck plants are: Tarrytown, N.Y.; Flint, Mich.; Fort Wayne, Ind.; Pontiac, Mich. (East); Detroit; and the truck line of the Lordstown, Ohio, facility. Car plants idle are: Lansing, Mich. (B); Linden, N.J.; Lansing, Mich. (Reatta Craft Centre); Kansas City, Kan.; Oklahoma City; and Van Nuys, Calif. All lines except Allante will be idle this week at the Detroit-Hamtramck, Mich., facility.

Chrysler has scheduled the St. Louis (No. 1) car plant and the Toledo, Ohio, Jeep facility to be idle this week and next week. The Sterling Heights, Mich., car plant is scheduled to return Jan. 28.

Canadian car production in 1990 was 1,056,704, the highest since 1986 when 1,073,312 cars were produced. The 1990 total was up 4.91 percent over 1989.

Fourth-quarter car production was 282,898, inching above 1989 by 0.78 percent.

December's car build was the lowest for that month since 1982 when 50,088 cars were built.

Last month's total build was 59,129, a drop of 27.45 percent below the same month in 1989.

Total Canadian truck production in 1990 was 826,617, down 10.98 percent below 1989.

Fourth-quarter truck production was 201,146, down 9.35 percent from 1989.

December truck production was the lowest since 1986 when 47,483 units were produced.

Last month's truck output was 51,629, a drop of 17.41 percent below December 1989.

Former Oldsmobile-Cadillac dealer to repay buyers of auction cars

The former owner of an Oldsmobile-Cadillac dealership in Maryland has agreed to set aside $80,000 in refunds for customers who bought used cars thinking they were new.

Refunds will go to those consumers who bought cars for personal use and who were not told that Joseph Thacker Oldsmobile-Cadillac of Parole, Md., had purchased the cars through General Motors' auction program and who also were not told that the cars had been part of a rental company's fleet.

Maryland Attorney General J. Joseph Curran Jr. started investigating last March after the state Motor Vehicle Administration tried to revoke Thacker's license.

In October, Thacker retired and sold the dealership to Fitzgerald Oldsmobile-Cadillac of Kensington, Md., effectively ending the agency's effort to take away Thacker's license. The attorney general's office then took over.

Worried makers brace for Middle East war

Automakers braced for the aftershocks of a Persian Gulf war last week as Iraq and the United States headed for a showdown.

The failure of U.S. and Iraqi negotiators to settle their differences brought the industry a step closer to the prospect that a conflict could disrupt the world's oil supply and cast the U.S. economy into further turmoil.

That uncertainty was widely evident at the North American International Auto Show in Detroit, where many of the world's automotive elite had gathered.

Predictions about 1991 were already clouded by recession and the U.S. savings and loan crisis. They were made more difficult last week as the United Nations' deadline for Iraq to remove troops from Kuwait by tomorrow approached.

"Our planning is based on the assumption that if shooting starts, customer buying and dealer orders will drop very dramatically," said Philip Benton Jr., Ford Motor Co.'s president and chief operation officer. Benton added that some dealers have been holding off their orders until the Jan. 15 deadline.

This story was reported by Automotive News Staff Reporters Lindsay Chappell, Laura Clark, Mary Connelly, Phil Frame and Jim Henry.

But there was no universal feeling that war would mean disaster for carmakers.

Ellie Torre, Cadillac's director of marketing, noted that Cadillac fared well during the Korean and Vietnam wars.

And on Wall Street, analyst Ann Knight called consumer confidence the "great unknown."

"Our feeling is that the media coverage of the S&L crisis is more troubling to car-buyers than the possibility of shooting thousands of miles away," said Knight, a first vice president at Paine Webber Inc.

Projections aside, there were more immediate concerns as automakers attempted to protect employees from possible violence.

Japanese take 2.5 points more in a declining U.S. car market

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The Japanese continued to get stronger in the U.S. car and light truck market last year, taking ground from the Big 3 carmakers and the Europeans.

Of the 11 car makes that had increased sales last year, six were Japanese and two were American. Japanese-make cars picked up 2.5 points of market share as overall sales fell.

Reversing a downward trend in truck sales from 1988 to 1989, Jap-

'90s will stagger U.S., World Congress told

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Gorman

Lutz

DETROIT — Staggering challenges in the decade ahead could dwarf the nightmares of the 1980s.

That somber news was delivered by two auto industry executives as the 1991 Automotive News World Congress opened last night. The 15th Automotive News World Congress, co-sponsored by *Automotive News* and the University of Michigan Transportation Research Institute, is being held through Wednesday at the Westin Hotel.

In remarks prepared for his keynote address to the opening Sunday night session, Chrysler Motors President Robert Lutz said that an anxiety-stricken automotive industry must tackle some tough realities in the 1990s.

TRW Inc. Chairman Joseph T. Gorman, also in prepared remarks, said industry changes will require "a complete transformation of the OEM/supplier relationship around the world."

Both executives made it clear that the problems of the 1990s could make the hurdles of the 1980s look benign.

"With a recession and possible war staring us in the face, it is no wonder we are edgy tonight," Lutz said. "There are a lot of other things to be edgy about as well. Like a looming bank crisis in America. Like the tremendous overcapacity problems that continue to plague our industry. Like the new three-year labor agreements, which essentially turned labor into a fixed cost. Like the reincarnation of another monster — that nightmare known as the Bryan CAFE bill."

Lutz said the industry doesn't want to face its problems.

"What are some of the things we seem afraid to talk about?" he asked. "Harsh reality No. 1: an auto worker making nine to 14 dollars an hour more than an auto worker working at a transplant will eventually be out of a job if he

TEAMWORK

GM rebuilds Bertone's damaged dream

By Colleen McDonald
SPECIAL CORRESPONDENT

DETROIT — In 30 years of crafting some of the world's hottest cars — heart-pounding classics like Maserati's 3500GT, Ferrari's 250GT, the Lamborghini Countach, the Mustang — Nuccio Bertone has often punched through the barriers of science and form to reach the far limits of design.

He had to come to Detroit, though, to discover that you *can* put Humpty Dumpty back together again.

Bertone, the 77-year-old chairman of Italy's world-renowned Carrozzeria Bertone S.p.A. body works, came to the North American International Auto Show, which opened last week, to unveil his "Emotion" theme car. The design is meant to convey his concept for a new Lotus Esprit, Bertone said.

In one way, the Emotion was to represent a capstone to Bertone's illustrious career — he had never before brought a concept car to a U.S. show.

But on Friday, Jan. 4, when Bertone technicians opened the container in which the model had been shipped from Turin, Italy, what greeted them looked more like the concept for a nightmare. Three short days before its unveiling to the world's press, the Emotion was cracked and scarred.

"It was not until Friday when the Emotion was lifted from the box, that damage over the two rear wheel arches was discovered," Gian Beppe Panicco, assistant to Bertone, confirmed.

AUTOMOTIVE NEWS/JOE WILKENS

Nuccio Bertone at last Monday's unveiling of Emotion concept car.

The prototype car, in reality a plaster model, had been shipped to Detroit by air. According to reports that Panicco said he could not con-

FORECAST '91

Peace: Would sales rise or not?

The Big 3 predict sales will improve with the resolution of the Middle East crisis, but one analyst disagrees. "There were trouble signs in the economy before Kuwait," says Kidder Peabody analyst Jack Kirnan. See Economic Forecast '91 on Pages 16-20.

Group launches boycott of Chrysler, cites Playboy ads

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. many have to do battle with a conservative religious group in its fight to stop market share erosion.

The group, the American Family Association, is a formidable opponent. It once pressured a convenience store chain into halting sales of select men's magazines and convinced a pizza chain to stop advertising on a television program it found objectionable.

Now, it has turned its wrath on Chrysler Corp. The association is asking readers of its publications to boycott Chrysler because the carmaker is running ads in *Playboy*, which the group deems pornographic.

American Family Association is a Tupelo, Miss., non-profit religious group that opposes sex, violence and profanity on television and materials it deems obscene.

The Jeep ads in the January issue of *Playboy* mark the first time in recent history that Chrysler or any domestic manufacturer dared to advertise in the men's magazine noted for pictures of nude women.

Automobile manufacturers usually avoid advertising in adult-oriented publications such as *Playboy* and *Penthouse* because they can reach those readers by other means, and because there is the risk of offending some buyers, said other automobile marketing and advertising executives.

"It's not worth the grief," said one advertising executive asked not to be named.

Jeep ads also appear in the February issue of *Playboy*, which is already available. The ads are part of Chrysler's 10-page commitment with *Playboy* in 1991, said Chrysler spokesman Steve Harris.

Harris said Chrysler decided to advertise in *Playboy* because its readers are mostly upscale, young and male and because Chrysler was able to negotiate a good deal.

"They (*Playboy*) came to us with a good package," said Harris. "We're always concerned when anyone is offended. We'll take it into consideration when we make future (media buying) decisions."

John Damoose, Chrysler marketing vice president, made the decision to advertise in *Playboy*. Damoose was not available for an interview last week, Harris said.

Harris denied the media schedule is related to Chrysler Chairman Lee Iacocca's interview in *Playboy's* January issue.

Donald Wildmon, president of American Family Associations, said he is disappointed about Iacocca's interview but not surprised.

"Any chief executive officer who would grant *Playboy* an interview would place ads in it," Wildmon said.

American Family Association called for the boycott in the January 1991 issue of its monthly magazine, *American Family Association Journal*, and the group's supplemental insert for church newsletters and bulletins, *Christians & Society Today*.

American Family Association Journal has a mailing list of 425,000, Wildmon said.

While Harris said he doesn't know if Chrysler advertised in *Playboy* before, Cindy Rakowitz, vice president of public relations for Playboy Operating Groups, said Chrysler has advertised in the publication within the last 10 years and that Volkswagen of America Inc. is also an advertiser.

She said independent studies indicate that few consumers get involved in economic boycotts simply because it sponsors a particular television show or advertises in a particular publication.

In 1986, the group pressured 7-Eleven stores to cease selling publications such as *Playboy* and *Penthouse* magazines, and under the threat of a boycott convinced Domino's Pizza to stop advertising on NBC television's "Saturday Night Live" because of a skit it found objectionable.

ONE PRICE ONLY

Gordon Stewart dumps the wheelin' from car dealin' and wins customers

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

GARDEN CITY, Mich. — Patricia Gasko brought her husband along to watch her in action as she wheeled and dealed for a new family minivan.

But she says she ultimately got the best deal around just by walking into Gordon Chevrolet and paying the price in the window.

"I didn't believe this no-hassling, no-bickering, no-problems approach in getting a low price on a car," said Gasko, who drove 40 miles from her home in Howell, Mich., to get to Gordon.

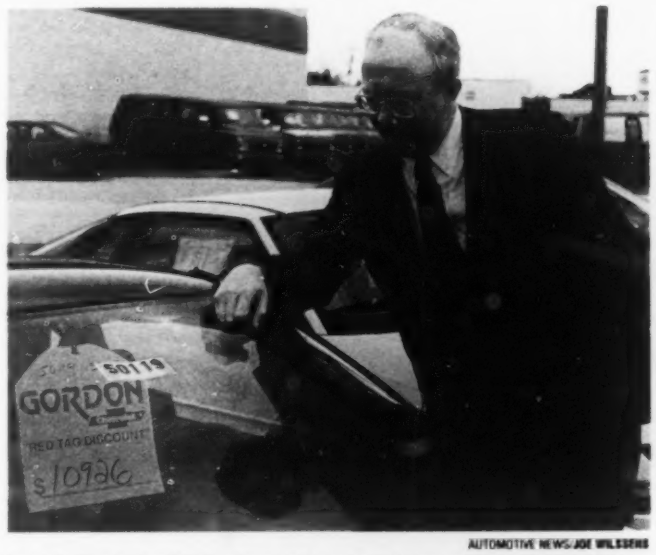
"But when I saw the red tags on the cars, I couldn't believe it. The 1990 Astro conversion minivan I bought had a red-tag price of $16,051, regularly a $24,000 van. I know that's for real because I've shopped around. But my husband was a little disappointed that he didn't get to see me do my stuff."

Gordon Stewart is challenging the stereotype of wheeling-dealing car salespersons. His Chevrolet-Geo dealerships in suburban Detroit practice one-price selling on cars and trucks — no haggling, no horsetrading and no negotiation.

Other dealerships have tried to list actual selling prices, but most have failed and have returned to dickering. Stewart says he's doing great and won't go back.

Another form of one-price car selling is the $49 over the factory invoice concept developed in the late 1970s by Howard Van Bortel. Customers are given copies of the new car or truck invoice and pay only $49 over factory price for cars in stock. For cars ordered, the customer pays $49 below factory invoice. The customer gets any rebate when the car is delivered and pays no prep or dealer document fee. Dealers who use this method live on dealer holdbacks and floor plan interest credit.

Stewart, 45, bought what is now Stewart Chevrolet in Woodhaven in July 1980 and Gordon Chevrolet in Garden City in June 1983. The revolution came in 1987, when he switched over to bottom-line pricing for new and used vehicles.



AUTOMOTIVE NEWS/JOE WILSEREK

Detroit-area dealer Gordon Stewart began tagging new and used cars with a no-dicker price in 1987.

Stewart says sales volume at his Garden City dealership has doubled since adopting red-tag pricing. Combined new-car and truck volume for both stores rose from 2,102 in 1987 to 3,134 in 1990, a down year for the industry.

"People smile and chuckle when they first sit down to talk with a salesperson before they realize we're serious, and the price is what it says on the tag," Stewart says. "Once you're past that point, your credibility heightens with customers, and the sales transaction ac-

Saturn survey shows buyers bypassed imports

DETROIT — Thomas Shaver, Saturn Corp. director of consumer marketing, said he is "thrilled" with the results of a recent survey of Florida and California Saturn buyers that indicates Saturn's import-busting marketing strategy is right on target.

Of 400 Saturn buyers surveyed, 80 percent listed a non-General Motors vehicle as their second choice. Sixty percent of those who listed non-GM vehicles named Japanese imports. Only 4 percent of the buyers surveyed listed Geo as their second choice. Saturn sold 1,881 cars during the 1990 calendar year.

The survey also showed: the Saturn buyer's median age is 41; 50 percent are college graduates; and the median income is $50,000.

EPA's clean air man lifts legal fog surrounding new law

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The hard part is over for William G. Rosenberg, the assistant administrator who carried the banner for the EPA during last year's clean-air debate.

No more sleepless nights, wrangling with Congress, endless meetings at the White House or tightrope balancing the concerns of industry and environmentalists. The nation now has a new Clean Air Act.

The auto industry faces a new round of mandates including an order to build as many as 300,000 cars annually that run on alternative fuels by 2000.

And Rosenberg, who penned the provisions, will be in charge of carrying them out as the federal government's top air-quality cop: assistant administrator for air and radiation.

Now that the politicking is over, Rosenberg's staff has to translate the 200-plus pages of legalese into regulations. The first installment, a calendar of events, or "implementation plan," as approved by the White House, is due this week.

Writing the regulations should be considerably easier than the political process, says Rosenberg, 50, who was dubbed the "pit bull of clean air" by a Detroit newspaper after taking office in 1989.

He has also been disparagingly called a "clean air head" and one of "EPA's garbage men." And a *Wall Street Journal* editorial has noted that "Mr. Rosenberg is widely credited with working to make the recently passed clean-air bill as onerous as possible."

Rosenberg begs off on taking that much credit, saying that he, on behalf of the EPA, tried to put the president's proposal into place.

Automobiles were dealt a complicated and expensive role in cleaning the air — an estimated $800 per car if a second tier of tailpipe standards takes effect. Rosenberg says that's because cars represent more than half the problem.

Cars continue to be prime culprits in urban air pollution because they're driven more today than in 1977 when the first clean-air bill was passed.

"As we increase fuel economy and as we reduce the emissions from cars, we're offsetting a lot of those improvements in increased use of vehicles," Rosenberg says calmly in his soft Brooklyn accent. "We end up with a pollution problem that is almost as severe as when we initially started."

KEN HEINEN

Since autos cause more than half the pollution problem, they must bear more of the clean air burden, says the EPA's William Rosenberg.

Years of living in Michigan haven't made him "pro-auto."

Rosenberg, who was educated at Syracuse and Columbia universities, practiced law in Detroit in the late 1960s. In the 1970s, he worked for the state of Michigan and later was President Ford's assistant administrator at the Federal Energy Administration. He left the government in 1977 and made millions as

Larger cars lead sales increase in Japan in '90

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japanese car and truck sales, fueled by a 69 percent surge in demand for models over 2 liters, jumped 7.4 percent last year, to 5.97 million units, according to a preliminary estimate by the Japan Automobile Dealers Association.

Including minicars, those under 660 cc, the Japanese market grew 7 percent from a year earlier, to 7.77 million units. Sales of the popular midget cars jumped 6.3 percent, to 1.8 million, capturing 23 percent of the total market.

The trade group, which traditionally reports about one week ahead of official industry figures, said import growth again outstripped the increase in domestic sales. Led by demand for German cars, import sales rose 22.9 percent from 1989, to 224,000 units, the association said.

Import market share edged up four-tenths of a percentage point, to 3.7 percent.

Although cars between 660 cc and 2 liters continued to account for the largest single market segment — 3.8 million units, or a 49 percent share — sales increased only 2.8 percent, the trade group said.

Source: Japan Automobile Dealers Association

In the fiercely competitive battle for market share, only three companies — Toyota Motor Corp., Mazda Motor Corp. and Mitsubishi Motors Corp. — came out winners.

- Toyota, with an 8.5 percent surge in car and truck sales to 2.5 million units, gained four-tenths of a percentage point in share, to 41.9 percent.
- No. 2 Nissan Motor Co. gave up two-tenths of a point, falling to a 23.5 percent market share, despite a 6.5 percent increase in unit sales, to 1.4 million.
- No. 3 Mazda, on the strength of an 11.1 percent gain in sales of 503,085 units, enlarged its share of market by three-tenths of a percentage point, to 8.4 percent.
- Sales of fifth-place Mitsubishi jumped 11.7 percent to 426,115 units, yielding a two-tenths of a point increase in share, to 7.1 percent.
- Honda Motor Co., the industry's third biggest overall maker, but No. 4 in Japan, lost one-half of a percentage point of market share, its first setback in seven years. Honda sales increased by only 1.5 percent in 1990, to 443,826 units, giving the company a 7.4 percent market share.
- Daihatsu Motor Co., primarily a minicar producer, reported the largest sales decline. Excluding minis, Daihatsu sales plunged 11.3 percent, to 49,648 units.

Analysts expect the market to cool this year as high interest rates begin squeezing the economy.

December sales were off 2 percent from the year earlier period, the second consecutive monthly decline.

Kawamoto's answer to dim performance? Back to basics

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Honda Motor Co., jolted by figures showing that it lost home-market share for the first time in seven years, intends to go "back to the basics," President Nobuhiko Kawamoto told analysts and journalists here last week.

Honda, the Japanese industry's third-biggest producer but the No. 4 maker in home-market sales, lost a half point of market share in 1990 on car and truck sales of 443,800 units. Despite a 7.4 percent increase for the entire market, Honda's volume rose only 1.5 percent for the year. The automaker had set a target of a 12 percent increase for 1990.

Kawamoto, conceding that "some members of the younger generation in Japan have abandoned Honda," said the carmaker needed to move quickly to "develop attractive products and dealerships in order to exceed our customers' expectations."

"The most important objective for Honda is to enhance our sales operation in Japan to provide the capability of achieving sales of 800,000 autos," he said.

Analysts said they viewed Honda's dip in share as an indication of the company's continuing problems in building up a domestic marketing system. Honda's existing sales system has evolved from a network of small dealers who once sold only motorcycles.

"Honda has never been a big player in the Japanese market," said Neal Doying, who follows the Japanese industry for Baring Securities in Tokyo.

"As a late entry in an already saturated automotive field, Honda moved to the United States to make its name. But the continuing struggle in Japan only emphasizes the discrepancy with Honda's strong showing overseas," he said.

Indeed, Honda surpassed itself in North America last year, selling more than 950,000 units — or more than two cars for every one sold at home. It is aiming for one million units in 1991.

Commenting on Honda's failure to meet its sales target this year, Kawamoto said the company had "learned from this experience" and would respond by introducing a new car this spring.

The car will represent a new concept and be lighter and more fuel efficient, he promised. It is intended only for the Japanese market, at least for now.

Honda also will start importing the Accord wagon from the United States, in addition to the coupe.

Besides new models, Honda will try to expand its dealer network and to add more salesmen in the next three years, Kawamoto said.

"Honda's strong point has been car development, not marketing," said analyst Koji Endo of Nomura Securities. "And when the market is strong, those with strong sales networks score better."

Honda attributes part of its problem in the domestic market to the lack of a new model in the subcompact car segment. A new Civic and Prelude are due next year.

Toyota Motor Corp. managed an 8.5 increase in sales last year despite a similarly aging lineup, Doying said.

The difference between the two is that "Toyota's dealerships can continue to move products, even at the end of their cycle," he said.

Part of Honda's problem in the domestic market was due to "some weakness on our part in sales and services, which we will seek to correct," Kawamoto said. But he acknowledged that Honda's focus on becoming a global company during the latter half of the 1980s may have distracted the company from developments on its home turf.

"At the same time, Japan was becoming more of a niche market, and the two trends did not mesh with each other," he conceded.

By over concentrating on four-door family sedans, he said, Honda missed the shift to three-door cars by younger Japanese buyers. "For good or for bad, Honda's management tendency is to go to one extreme or the other," he said.

Henceforth, Kawamoto said, Honda will attempt to give models individual treatment to fit specific segments in the domestic market, and to make the Accord "more conspicuous" in Japan.

Honda President Nobuhiko Kawamoto, conceding that "some members of the younger generation in Japan have abandoned Honda," said the carmaker needed to move quickly to "develop attractive products and dealerships in order to exceed our customers' expectations."

High-performance Stealths exceed sticker's limit

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Porsche and Ferrari owners are buying them as second cars. They compete in the market with Corvette ZR-1s. And they are part of the Dodge family.

For a change, Dodge dealers have a hot seller in the new Stealth R/T twin-turbo 300-horsepower 2+2 sports car, which is commanding as much as $10,000 over its $30,000 sticker price.

This limited-edition, all-wheel drive, four-wheel steer sports car is built by Mitsubishi for Dodge and accelerates from 0-60 mph in 4.6 seconds, and according to dealers, attracts the attention of anyone over age 16.

"Finally Dodge has got back into the sports car market," said Shawn Kasper, sales manager for Luke Potter Dodge in Winter Park, Fla., who sold the dealership's first Stealth R/T for $8,000 over sticker. "It's the same design as European sports cars, but it's an all-around superior vehicle that sells for $20,000 to $30,000 less."

Dodge dealers say they have BMWs and Ferrari drivers pulling into their lots to discuss the purchase of the new 160-mph dynamo, a sight they never thought they would see.

"Car enthusiasts are buying them if they can get their hands on them," said Duane Emery, sales manager at Kearney Mesa Dodge in San Diego, who sold two of the Stealth R/Ts for $10,000 over sticker price. "Owners of Porsches, Ferraris, Corvettes and BMWs are interested in them because of the way the car is put together — the way it looks and performs."

Jack Mayberry, salesman at Celebrity Dodge in San Jose, Calif., says his dealership won't even take deposits on the car until it lands in the showroom, and is selling each for $8,000 over sticker.

Tom Conland, salesman for Tate Dodge in Glen Burnie, Md., said the second Stealth R/T the dealership received was rolled in the door at 3 p.m. and sold at 3:30 p.m.

But Midwest and Northeast dealers are having to settle for selling Stealth R/Ts at sticker, at least until the weather breaks and sports cars are in demand again, says Pat Gilmore, sales manager at Chicago's Haggerty Dodge.

Only 1,200 Stealth R/Ts are planned for 1991 model year production; 676 were sold by Dec. 31.

ECONOMIC FORECAST '91

ANALYSTS: *A year of split personalities; somber first half, brighter second*

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Auto analysts predict 1991 will look like two different worlds — recession in the first half and mild recovery in the second.

The panel of 10 automotive analysts interviewed by *Automotive News* based their predictions on a mild recession scenario for 1991, but they did not factor a Middle East war into their base forecasts.

"The economic problems we have, we have whether or not we have a Middle East crisis," said Jean-Claude Gruet of UBS Securities.

Wendy Needham of Smith Barney in New York said, "The fourth quarter of 1990 was the worst and we are looking for a recovery starting the end of the second quarter. So this time next year things should look a lot better than they do now."

Most analysts see the economic problems affecting car sales separate from the Middle East crisis, but concede that a Middle East war would only further recede consumer attitudes. Those consumer attitudes already are "abysmally low" says Maryann Keller of Furman Selz Inc. in New York.

The analysts compare consumer confidence levels to those dominant during the last recession in 1982, with peace in the Middle East offering modest improvement but not enough to return attitudes to the robust levels of recent years.

Further erosion of consumer confidence could come with more corporate staff cutbacks in the first half of 1991 as industries prepare for a recession, which Jack Kirnan of Kidder Peabody says will have a major impact on the product mix of the industry.

"Who buys minivans, sport-utility vehicles, full-sized luxury passenger cars? It is largely speaking white collar workers. If they're bearing the brunt of unemployment, the mix issue becomes a problem for the industry. Blue collar workers are more loyal to the Big 3 but buy less expensive vehicles than do white collar workers, compounding earnings record of the Big 3," Kirnan says.

Consumers are more nervous about their economic future than about the Middle East crisis, says Ann Knight of Paine Webber in New York. Concerns about retirement, children's education, rising health care costs and higher taxes weigh heavily on consumers in 1991 and will be contributing factors in a decline in automotive sales, according to analysts.

Kirnan said there has been a modest increase in small-car market share in the last four months, but a "noticeable deterioration" in larger vehicles, minivans and sport-utilities.

Long- and short-term interest rates are expected to decline in 1991, but with little effect on car sales.

Half the analysts interviewed said there would not be a Big 3 market-share winner in 1991; the other half agreed that General Motors would be the biggest share winner of the Big 3.

Most of the analysts believe Chrysler Corp. will be the biggest market-share loser among the Big 3.

"It's not so much product related, but the purchase of 9.8 percent of Chrysler's stock by (Kirk) Kerkorian that I'm concerned about," said Michael Luckey of the Luckey Consulting Group. "I just don't believe he's in it for a long-term investment and am afraid he's going to stir up trouble for Chrysler that could result in buyers becoming concerned about the future of the company."

Many of the analysts believe that the worst of the market-share losses are now behind the auto industry. "There will be some share movements between Big 3," said Needham, "but production in North America will be stable, so to a large extent the worst is probably already behind us."

Forecasts for 1991 total U.S. motor vehicle sales averaged 13.4 million, some 500,000 units below 1990 totals. Forecasts for 1991 new-car sales in the United States averaged 8.9 million, compared to about 9.3 million in 1990, and new-truck sales predictions for 1991 averaged 4.5 million, a drop of about 100,000 from 1990 totals.

"To get auto sales to rebound, we need recovery in real wage income growth, which just turned negative," said Gruet. "We need to see recovery in residential real estate prices, because homes are the primary saving vehicle of the people. If homes are worth less, people become defensive and buy less."

Toyota and Honda are expected to be the biggest share gainers of the imports, with Volvo, Subaru, Nissan and Hyundai losing market share in 1991. Import car sales for 1990 were about 2.6 million and analysts predict 1991 import car sales to be about 2.4 million.

European car sales are expected by all the analysts to continue to decline, mainly because of the new 10 percent luxury tax that took effect at the start of the year.

The U.S. unemployment rate is expected to average 6.7 percent for the year, with the white collar segment of the work force suffering the most.

The 10 analysts surveyed were Bernard Campbell of Data Resources; Jean-Claude Gruet of UBS Securities; John Hammond, J.D. Power & Associates; David Healy, an independent analyst; Maryann Keller of Furman Selz Inc.; Jack Kirnan of Kidder Peabody; Ann Knight of Paine Webber; Michael Luckey of Luckey Consulting Group; Wendy Needham of Smith Barney; and William Pochiluk of Autofacts Inc.

Canadian tax shift lowers cost of cars

By Alex Law
STAFF CORRESPONDENT

TORONTO — Car prices in Canada have dropped by about four percent on average since a new goods and services tax took effect Jan. 1.

Previously, new cars and trucks were subject to a 13.5 percent manufacturers' sales tax, which was applied to manufacturers' costs and built in to the sticker price. That tax has been replaced by the 7 percent goods and services tax, which is added to the final selling price.

The result is consumer prices that are lower by varying degrees, though they generally have been close to 4 percent.

Price drops aren't at uniform levels because manufacturers' costs differ and because the companies are factoring in some specific market considerations. For example, Ford of Canada is lowering the list prices on some vehicles by more than 4 percent so it can claim that it has five vehicles that list for under $10,000 ($8,669 U.S.).

Prices on parts will be affected similarly. But the new tax will increase the labor portion of repair because such services now are subject to a federal tax that was not assessed before. Extended service contracts also are taxable.

On used cars, the goods and services tax is applied to vehicles sold by a dealer — but not by private individuals.

Because the car companies lobbied strenuously for a move to a goods and services tax when it was first proposed a couple years ago, makers and their dealers are generally happy to see it become law. The lower prices now are being looked at as a godsend in an increasingly soft market.

The domestic manufacturers especially are counting on it to reverse the recent slide in their sales.

Ted C. Goellner, Ford of Canada's vice president of sales, says: "We expect the GST will work for us in the first quarter, as customers who delayed purchases from the last three months can now purchase at the lower prices."

Provincial taxes, which range from 4 percent to 12 percent, remain unchanged.

Mitsubishi shifts rental fleet sales to Value subsidiary

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Mitsubishi Motor Sales of America Inc. will cut back sales to several daily rental companies in 1991 while boosting sales to its own rental subsidiary, Value Rent-A-Car.

Among other things, Mitsubishi wants to reduce the number of program cars that are competing against new Mitsubishi models in dealers' showrooms. The company says it will sell 10,000 fewer units to rental companies than in 1990.

Mitsubishi would not release annual totals, but sources estimate that Mitsubishi had about 45,000 total fleet sales last year, a majority of them daily rentals. Fleet sales accounted for about 25 percent of Mitsubishi's 190,730 car and truck sales last year.

By concentrating sales on Value, Mitsubishi will still be able to maintain a supply of late-model-year used cars, but will have more control over pricing. And according to one dealer, Mitsubishi could ask Value to keep cars in its rental fleets longer. That would make the program cars less of a competitive threat to new models.

Mitsubishi says that much of the decrease to other daily rental companies will come in the first quarter, when it will sell a total of 8,200 units to daily rental fleets. Budget Rent A Car Corp. and Alamo Rent-A-Car have been Mitsubishi's two biggest customers.

Mitsubishi purchased a controlling stake in Florida-based Value last June, becoming the first importer to buy a U.S. rental car firm. Value has fewer than 30 facilities in the Southeast, Arizona, Colorado and Nevada.

Since then, Mitsubishi has been trying to wean Value of its non-Mitsubishi product. In 1991, Mitsubishi hopes to account for 85 percent of Value's approximately 25,000 units, or 21,250. Mitsubishi wants to push volume to 40,000 in the mid-1990s by moving into new markets such as California.

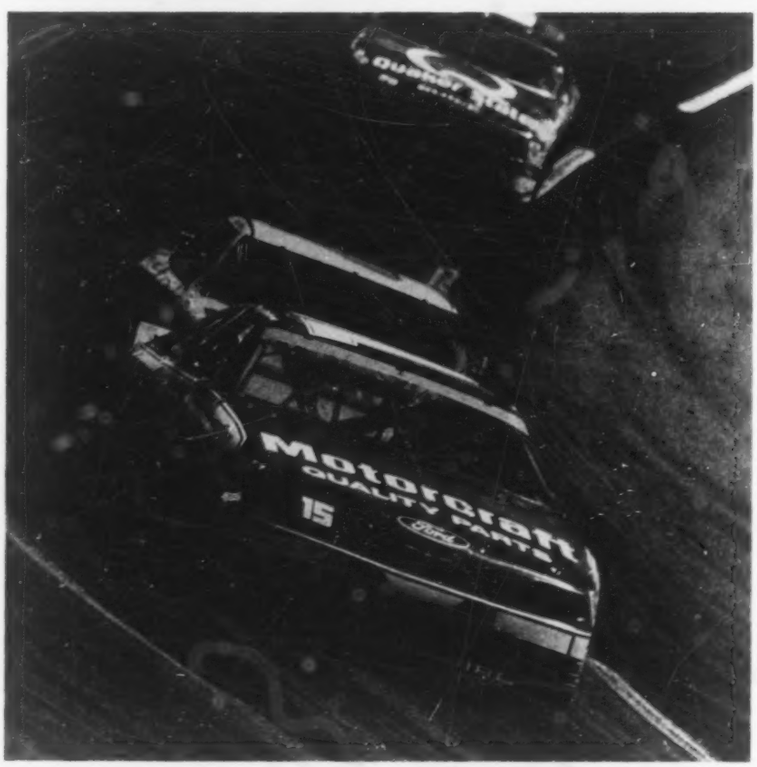
"Value was still buying Fords last year because they were getting such a good price on the cars," says Richard Recchia, Mitsubishi executive vice president. He said Mitsubishi "just can't compete" with the prices such companies as Ford and General Motors are asking and still sell to so many fleets. "If we're going to make a sweetheart deal for anyone, we want to do it for our own company."

Mitsubishi dealers said they welcomed the move, but one former dealer called the measure "too little, too late." An automotive resale analyst said Mitsubishi's resale values for used cars have suffered because the company has "dumped too many cars onto the market that they have to buy back."

Ramsey Gillman, owner of Gillman Mitsubishi in Houston and president of Mitsubishi's dealer advisory board, said: "They've had too many cars out there. Every time you sell a buyback car, a program car, you probably could have gotten the guy into a new car."

Joe O'Brien, principal at Parkway Mitsubishi in Normal, Ill., says Mitsubishi has an aggressive program to get dealers to attend auctions and purchase fleet buybacks.

WHEN IT COMES TO LIVE AUTO RACING, TNN IS IN THE DRIVER'S SEAT.



TNN: The Nashville Network offers over 20 **live** motorsports events. Starting March 1991 we'll be cablecasting the biggest races live, including the Winston Cup Series, the Busch Grand National Series and the AC-Delco Challenge Series.

And, with programs like *NHRA Today*, *TNN Motorsports Magazine*, and *Inside Winston Cup Racing*, we keep racing fans abreast of the latest race results and in touch with top drivers.

If you want to reach the most motorsports fans where they live no one drives your message home like TNN.

SALES

FROM PAGE 1

anese-make trucks picked up 1.3 points. Ten of 18 truck makes had increased sales last year; six of those were Japanese.

Last year was the worst year for selling vehicles in the United States since 1983. A total of 13,886,809 cars and light trucks were sold in this country in 1990, a 4.6 percent drop from 1989 totals and 2,171,733 fewer vehicles than were sold during the record year of 1986.

Combined car and truck sales by Big 3 manufacturers, including captive imports, dropped 6.9 percent to 9,949,472, and the Europeans fell 4.5 percent to 469,303 units.

Truck sales for the Big 3 dropped 5.4 percent, and the Big 3 truck market share fell from 84.9 percent to 83.6 percent.

Clear winners in the sales race last year were American Honda Motor Co. Inc. and Toyota Motor Sales U.S.A. Inc.

General Motors was the only Big 3 carmaker to pick up market share last year, and Nissan North America Inc. was the only major Japanese manufacturer to lose ground.

Despite hefty incentives by the Big 3 throughout the entire year, GM was the only Big 3 manufacturer to gain market share. GM's light vehicle sales of 4,934,308 were a 3.4 percent drop from 1989. But GM's market share rose 0.4 of a percentage point to 35.5 percent. Ford Motor Co.'s share slid 0.7 of a percentage point to 23.9 percent; Chrysler's share dropped 1.6 percentage points to 12.2 percent.

American Honda came within 5,955 units of dethroning Chrysler Corp. as the third largest corporate seller of cars in the United States.

The Toyota make raced past Dodge to become the No. 3 seller of cars and light trucks in the United States by 166,829 units. Toyota including Lexus trailed combined Chrysler Corp. lines for the No. 3 spot in total vehicle sales by 640,063 units.

Toyota's Lexus Division, in its first full year, sold 63,534 cars, only 112 fewer than BMW and 14,841 fewer than Mercedes-Benz.

Sales by Nissan, including its Infiniti division, dropped 41,849 units largely due to decreased production of its Sentra model in Smyrna, Tenn.

Chrysler battered; sales dive

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

The automotive industry was bruised in 1990, but Chrysler Corp. was battered.

The industry watched new-car sales in the United States fall 4.9 percent while Chrysler saw its car sales plummet 15.6 percent. Industry light-truck sales declined 3.9 percent for the year, but Chrysler light-truck sales nosedived 14.9 percent.

Perhaps worst of all for Chrysler, the company's two most profitable vehicle lines — its minivans and the Jeep Cherokee — took a beating from new competition.

Despite Chrysler's attempt to hold up the Cherokee as a sport-utility legend, Cherokee sales fell 20 percent due to the introduction of the Ford Explorer, the four-door Chevrolet S-10 Blazer and the four-door GMC Jimmy.

The competition that began last year in the four-door sport-utility market is likely to intensify as Japanese manufacturers introduce a new generation of higher-volume products within two to three years. Chrysler will volley back with the 1992 introduction of the more aerodynamic Jeep ZJ sport-utility.

Similarly, sales of Chrysler's top-selling vehicles — the Dodge Caravan/Grand Caravan and Plymouth Voyager/Grand Voyager minivans — fell last year. Total minivan sales, including the Chrysler Town & Country, were off 6.4 percent due to new competition and a model changeover.

None of the company's divisions emerged unscathed in 1990. Dodge car and truck sales plunged 16.9 percent. Plymouth sales dropped 13.6 percent. Eagle sales were off 13.0 percent, and Jeep sales fell 21 percent. Chrysler sales dipped just 4.8 percent.

Chrysler Corp. managed to hold on to third place in U.S. new-car sales by selling 5,955 more units than American Honda Motor Co. Inc. last year, but Chrysler's share of the U.S. car market fell to 9.3 percent, down from 10.4 percent in 1989, and its share of the U.S. truck market dropped to 18.2 percent, down from 20.6 percent a year earlier.

Chrysler had anticipated a drop in market share and volume in 1990 and blamed its weak showing on several factors. They included the decision to end production of the high-volume Dodge Omni/Plymouth Horizon subcompacts in February 1990; reduced fleet sales early in the year; and the purchase of 50,600 fewer units last year from Chrysler's Japanese partner, Mitsubishi Motor Corp.

The only bright spots in Chrysler's 1990 performance were sales of the Plymouth Laser/Eagle Talon sport coupes and Chrysler's bread-and-butter sedans, the Dodge Spirit/Plymouth Acclaim.

Laser/Talon sales climbed 142 percent, to 68,404, due to increased availability at the Chrysler/Mitsubishi Diamond-Star Motors joint-venture plant in Normal, Ill. Spirit/Acclaim sales rose 20.2 percent, to 202,557, boosted by generally favorable product evaluations in the motoring press and a controversial advertising campaign that pitted the sedans against the best-selling Honda Accord.

Ford suffers; sales, market share plunge

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

After picking up 4.2 points of car market share in the late 1980s, Ford Motor Co. met 1990 by losing 1.4 points.

Market share dipped to 20.9 percent from 22.3. Car sales totaled 1,943,603, a drop of 10.76 percent from 2,177,866 in 1989.

Only three car lines — Ford Crown Victoria and Lincoln Town Car and Continental — posted gains in 1990.

Ford Division sold 1,321,149 cars in 1990, down 12.09 percent from 1,502,878 in 1989. Lincoln-Mercury sold 622,454 cars in 1990, down 7.78 percent from 674,988 in 1989.

Though 1990 was tough for Ford and Mercury car sales, Ford managed to pick up 0.6 of a point in truck market penetration. Ford Division sold 1,373,493 light trucks in 1990, down 2.03 percent from 1,401,994 in 1989. Ford's truck share was 29.9 percent in 1990, up from 29.3 percent in 1989.

Ford also lost much of its lead over Chevrolet in total light-vehicle sales. In 1989, Ford beat Chevrolet by 246,605 combined car and light-truck sales. In 1990, Ford's lead over Chevrolet was only 87,541.

Chevrolet regained the lead in car sales, although Ford increased its light-truck advantage. Ford beat Chevrolet by 130,488 light trucks in 1990, up from 92,157 trucks in 1989. It was the fifth year in a row that Ford topped Chevrolet in truck sales.

All Ford truck lines showed sales declines except for the combined Bronco II and Explorer, which soared 66.76 percent over 1989's Bronco II total. Explorer replaced the Bronco II when it was introduced in March 1990.

On the car side, the biggest sales losses occurred in the automaker's small and specialty lineups.

A redesigned Escort debuted in April 1990, but Escort sales dropped 13.43 percent for the year, due in part to production changeover.

The redesigned Mercury Tracer, Escort's counterpart, arrived in June. Tracer sales were down 40.49 percent for the year.

Ford said the 23 percent decline in Mustang sales was related to a large fleet order for Mustangs from a daily rental company in 1989.

Festiva sales declined 24.24 percent, and Probe sales were off 23 percent in 1990.

Ford and Mercury mid-sized cars also suffered:

- Thunderbird sales were off 12.04 percent
- Cougar declined 23.44 percent
- Taurus dropped 10 percent
- Sabie dropped 12.76 percent.

Another small contributor to Ford's overall car sales decline in 1990 was the elimination of the European-built Merkur cars.

Ford sold only 2,622 leftover Scorpio and XR4Ti models in 1990, down from 8,765 in 1989.

GM market share inches upward

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

General Motors' rise in U.S. light vehicle market share last year was led by something old, something bold and something cold.

GM's 1990 share was 35.5 percent, up from 35.1 in 1989.

Chevrolet, Pontiac, Buick and Cadillac increased their shares of the U.S. light-vehicle market, despite small sales dips.

The solid performers in the something-old category were the N-cars — Pontiac Grand Am, Oldsmobile Cutlass Calais and Buick Skylark, all due for replacement in the 1992 model year.

Chevrolet provided the "bold" with its marketing of the Geo line of Japanese-created vehicles. Sales of the four Geo vehicles were up 49.9 percent from 1989.

The GM10, or W platform, intermediates — Chevrolet Lumina, Pontiac Grand Prix, Oldsmobile Cutlass Supreme and Buick Regal — all showed sales increases after starting life as cold sellers.

GM's aged H-sedans — Pontiac Bonneville, Buick LeSabre and Oldsmobile 88 — showed that a reputation for quality counts. LeSabre sales rose 4.6 percent on the strength of positive J.D. Power survey results. The other two cars dropped more than 20 percent.

The E-cars, Oldsmobile Toronado and Buick Riviera, gained sales in 1990. Of the high-volume J-cars, Pontiac Sunbird was up 21 percent and Chevrolet Cavalier held firm.

Sales were dismal for GM's aging A-cars. Pontiac 6000 (down 29.6 percent), Oldsmobile Cutlass Ciera (down 30 percent) and Buick Century (down 16.7 percent).

Cadillac saw a 44.3 percent increase in Seville, despite its looming replacement next fall.

Allante was up 4 percent, while DeVille and Fleetwood were down just 1 percent from 1989.

GM suffered double-digit percentage drops with the Chevrolet Camaro and Pontiac Firebird, Chevrolet Corsica-Beretta and Pontiac LeMans.

Chevrolet's light-truck share dropped from 27.4 percent to 27.1. Only the Geo Tracker and Chevrolet Lumina APV gained sales.

GMC's light-truck share fell from 7.4 to 7.1 percent. Only the Safari minivan and Suburban utility avoided sales drops.

Asian makers win 29% of U.S. car market

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — As a group, Asian automakers again bucked the industry's downward sales trend and posted a 2.9 percent increase for 1990.

The figures include North American-built vehicles sold by the Asian firms, but they do not include captive imports sold by domestic automakers.

In 1990, the nine Japanese import companies and one Korean firm held 29.3 percent of the U.S. car market and 24.9 percent of the total car and truck market. That was up from 27.1 percent and 23.1 percent in 1989.

Toyota Motor Sales U.S.A. Inc. and American Honda Motor Co. Inc. were the big volume gainers. Mitsubishi Motor Sales of America Inc. scored the biggest percentage increase, 26.8 percent.

Nissan Motor Corp. in U.S.A., Mazda Motor of America Inc., American Isuzu Motors Inc., American Suzuki Motor Co., and Daihatsu America Inc. posted mixed results. Nissan, Mazda, Isuzu and Daihatsu sold more trucks in 1990 than they did in 1989, but each fell behind in cars. Suzuki beat year-ago car sales but lost ground in trucks.

With 63,534 Lexus sales, Toyota Motor Sales topped 1 million sales for the second time. And Toyota Division overtook Dodge Division as the third biggest marketer of cars and trucks.

Honda's Accord was again the best selling car in the United States.

Nissan had a tough year. Truck sales rose but not enough to offset a 15.3 percent drop in Nissan-badged car sales. Its new Infiniti unit sold 23,960 cars.

Mazda had a 2.3 percent gain, with cars down and trucks up.

Sales continued to decline sharply for Hyundai Motor America — down 25 percent in 1990.

Isuzu introduced the Rodeo sport-utility and continued to gain in trucks. But a big decline in car sales brought its overall sales down 6.7 percent. Subaru sales fell 20.3 percent; Suzuki was off 32.1 percent; and Daihatsu dropped 2.8 percent.

VW, Mercedes rise, but Europeans slide

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Sales of European imports fell 4.5 percent in 1990 to 469,303 units as only two major importers — Volkswagen and Mercedes-Benz — reported improvement over 1989.

Volkswagen United States Inc., the U.S. volume leader among European importers, posted a 2.0 percent increase for the year on sales of 136,348 units, with increases in both cars and vans. It was VW's first year-to-year gain since 1985.

Volvo Cars of North America, sputtered to 89,894, a 12.4 percent decline. Halfway through 1990, Volvo's volume had been down about 7.1 percent.

Despite a strong December, Saab Cars USA fell 16.4 percent to 26,397 for 1990, after a dip of about 18 percent the year before.

Mercedes-Benz of North America Inc., BMW of North America Inc. and Jaguar Cars Inc. also reported strong sales in December sales as buyers moved to beat the Jan. 1 luxury tax.

Mercedes posted 1990 sales of 78,375, a 3.5 percent improvement over 1989 and its first year-to-year increase since 1986.

BMW sold 63,646 cars in 1990, down 1.9 percent. Through November, BMW's sales had been down 6.0 percent. Jaguar volume fell 1.3 percent for the year to 18,728, after being down 3.3 percent through November.

Audi of America Inc., which had had been ahead of 1989 through November, ended up with 21,106, down 177 units for the year.

Porsche Cars North America Inc. declined 3.6 percent to 9,139 for 1990 after posting a 12.7 percent gain in the first half.

Among the smaller importers, Alfa Romeo Distributors of North America was up 22.2 percent. Its 1990 sales of 3,482 cars were helped by the debut of the 164.

Range Rover of North America Inc. sold 4,582 luxury sport-utilities in 1990, down 5.0 percent.

Sales were particularly poor for other small importers.

Peugeot Motors of America fell 29.6 percent; Sterling Motor Cars dropped 32.0 percent; and Yugo America plunged 39.9 percent.

Car inventory off slightly in Dec.

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Domestic and overseas automakers reported a slight decline in new-car inventories in December, largely due to holiday plant closings and decreased production at U.S. auto plants.

Despite a lower daily selling rate in December compared to November, combined stocks of domestically produced and imported cars decreased to 1,942,913 on Jan. 1, compared to 2,005,207 on Dec. 1. The days' supply dropped to 75 days on Jan. 1 from 76 days on Dec. 1.

Stocks dropped for cars produced in the United States but increased for imports.

The number of unsold domestic cars was 1,386,181 on Jan. 1 for a 74-day supply. A month earlier, domestic inventories were at a 77-day supply with 1,471,897 cars waiting to be bought. Import inventories increased to a 77-day supply on Jan. 1, compared with 74 days in December. The number of unsold imports was 556,732, compared with 533,310 Dec. 1.

Among domestic automakers, Toyota Motor Sales U.S.A. Inc. reported the lowest days' supply — 24 — down from a 37-day supply on Dec. 1. General Motors and Ford Motor Co. lowered their stocks, but Chrysler Corp.'s inventories bulged from an 85-day to a 92-day supply.

The number of unsold American Honda Motor Co. Inc. cars swelled from a 29-day supply on Dec. 1 to a 61-day supply Jan. 1.

Incentives just keep on growing

Six makers announce programs; even Honda gets into the act

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

The parade of consumer and dealer incentives continued last week with the announcements of new programs by six makers.

In one of its rare incentive programs, American Honda Motor Co. Inc. is offering a $300 per unit payback to dealers on all 1991 Accord models except the Special Edition and station wagon. The program runs through March 31.

Extended and/or revised incentives were announced last week by General Motors, Chrysler Corp., Hyundai Motor America, Mitsubishi Motor Sales of America Inc. amd Subaru of America Inc.

Buick, Oldsmobile, Pontiac and Chevrolet revised and extended their consumer incentive programs through April 7 on most 1990 and 1991 models, while Cadillac extended its current program through March 31.

Some GM divisions eliminated or cut rebates on some high-volume models and those whose inventories have been trimmed by incentives.

Chevrolet eliminated rebates on 1990-91 Geo Tracker, Camaro and Corsica; reduced rebates on the 1990 Geo Prizm by $500, Geo Storm by $300, Beretta by $250 and Cavalier by $100; but raised the payment $250 on the 1990 Lumina and 1991 Caprice.

Pontiac cut rebates $350 to $600 on most 1990 and 1991 models, while Oldsmobile slashed payments $500 to $1,500 on some 1990 models and $250 on the 1991 Cutlass Ciera. Buick cut the Reatta rebate $1,000.

Cadillac's customer incentive program pays dealers $1,200 on 1990 DeVille, Eldorado, Seville, Fleetwood and Brougham and $1,500 on the 1991 Brougham.

Buick's rebates, which are based on the option package selected, range from $250 to $1,000 on 1990s and 1991s. It is $2,000 on Reatta.

In lieu of a rebate, Buick, Oldsmobile, Pontiac and Chevrolet buyers may select cut-rate loans.

At Oldsmobile, rebates on 1990 models are $750 on the Cutlass Ciera and Silhouette, $1,000 on the Cutlass Calais, Cutlass Supreme, 88 and 98 and $1,250 on Toronado.

Rebates on 1991 models are $500 on Cutlass Ciera and Silhouette; $750 on Cutlass Calais, Cutlass Supreme and 88; $1,000 on Toronado.

Pontiac rebates on 1990s are $400 on LeMans, Firebird and Grand AM and $1,000 on Grand Prix and Bonneville. Rebates on 1991s are $400 on LeMans, $600 on Grand Prix and Bonneville and $750 on Grand Am.

Geo rebates on 1990 and 1991 models are $300 on the Metro, $500 on the Prizm and $800 on Storm.

Chevrolet consumer rebates on 1990s and 1991s are $400 on Cavalier, $500 on Beretta and $750 on Lumina. The 1991 Caprice has a $750 rebate.

Chevrolet also is offering $3,000 rebates to dealers on 1990 and 1991 Corvettes through Feb. 4.

Buyer rebates on 1990 and 1991 Chevrolet trucks are $500 on Astro and Lumina APV and $500 to $1,500 on others.

Chrysler Corp. announced a consumer incentive program on 1989, 1990 and 1991 models. It ends March 31. Cut-rate financing is offered instead of the rebates.

All 1989-90 minivans carry a $1,000 rebate. Top rebate on 1989 and 1990 models is $2,500 on Dodge Raider. Payments on other 1989-90 Dodge trucks and Jeeps range from $500 to $2,000.

The rebates are $1,500 on 1989-90 Dodge Monaco and Eagle Premier. Other 1989-90 cars are in the $500-to-$1,000 range.

Rebates on the corporation's 1991 models are $1,500 on Dodge R/W pickup (excluding diesel); $1,000 on Dodge Dakota pickup, Ram van and wagon and Ramcharger; and $700 on Jeep Comanche and Cherokee.

Also, $500 on all minivans; Dodge Monaco, Dynasty, Spirit and Shadow (excluding America and convertible); Chrysler Imperial, New Yorker Fifth Avenue, New Yorker Salon and LeBaron sedan; Plymouth Acclaim and Sundance (Except America); and Eagle Premier.

Chrysler also is offering a $400 rebate on the 1991 Plymouth Laser and Eagle Talon and a $300 rebate on the Dodge Ram 50 pickups.

Mitsubishi announced a quota-type incentive program for 1990 and 1991 Galant, Eclipse, Mirage, Montero and two-wheel-drive and 4wd pickups that pays $1,000 per unit for 26 to 50 percent of quota and $1,500 per unit for 51 percent or more. It also pays the dealer a bonus of $500 per unit retroactive to the first when combined Galant and Eclipse sales reach 25. The program ends Feb. 28.

Hyundai has dealer and consumer programs that run through April 3.

Under the consumer phase, rebates on are $500 to $1,000 on 1991 Excels and $750 to $1,575 on 1991 Sonatas.

Hyundai's dealer program includes a quota-type plan with rebates of $100 to $500 on 1991 Sonatas, per-unit payments of $1,000 to $1,500 on 1990 Excels and $2,000 on all 1990 Sonatas.

Subaru also has consumer and dealer incentives on 1990 and 1991 models. Consumer cashbacks are $500 on 1990 and 1991 Justys and $300 to $1,050 on 1991 Loyales.

Subaru dealer rebates are $700 to $900 in a quota-type plan on 1991 Legacys, $1,500 on 1990 Legacys without anti-lock brakes and $2,000 for models with ABS.

The 1990 Loyales bring $800 to $1,500 per unit. The rebates end Feb. 12.

BERTONE

FROM PAGE 1

firm, the Emotion has been dropped while being loaded onto a truck at Detroit Metro Airport.

According to Bertone officials, a "frantic" search began to find someone capable of patching the car back together.

But the search was complicated by the fact that the car is plaster — an old-world European styling medium. Most Japanese and American studios turned to wood, clay or fiberglass years ago.

The search quickly focused on General Motors.

"I got a call Friday morning stating that the plaster car had been damaged, and that it had to be back by Monday morning," said Dan Sullivan, executive in charge of prototype and process engineering. "I said send it over, but I hadn't worked on plaster in 36 years."

Working through the weekend on the unfamiliar material, however, Sullivan and his prototype team at GM's Design Center had the Emotion back on the stand at Cobo Center Monday morning, as promised.

One potential snag — matching the car's British racing-green paint — was solved when the Bertone factory shipped some by air.

"We thought it was going to be a big problem because of the time constraint," Panicco said. "But GM saved the car."

AUTOMOTIVE NEWS/JOE WILSDENS

Bertone's two-seat mid-engine concept car, the Emotion, is the designer's interpretation of the Lotus Esprit. The car is 162.4 inches long, 74 inches wide and has a 98-inch wheelbase.

Later, standing in front of his restored showpiece at Monday's debut, tears streaming down his face, Bertone said the same.

"GM saved this car," he said through an interpreter. "Without them, I could not have introduced it to Detroit."

The two-seat, mid-engine sports car drew rave reviews from most automotive journalists at its unveiling last Monday. Low, compact yet powerful, new but not bizarre, most in that first-day press crowd agreed that the Emotion model represented a *logical* extension of the Lotus pedigree.

Another Bertone score. *A triumph.*

"Bertone wanted to start a new trend, as well as express something with originality," said Paulo Caccamo, another Bertone assistant. "He thought that by displaying the model in Detroit, it would receive the recognition it deserved."

Not many noticed the scars around the wheel wells.

Bertone is exhibiting some other significant models at Detroit: His Nivola, powered by a Chevrolet Corvette engine; a GM-Opel convertible; the Citroen XM; and the Genesis, a van powered by a V-12 Lamborghini engine.

IRAQ

FROM PAGE 1

Ford Chairman Harold Poling said it had banned employees from flying commercial overseas flights this week. The company had also increased security at offices around the world.

Chrysler Corp. is advising employees not to travel to the Middle East but has no ban on trans-Atlantic trips.

GM said it was taking precautions over international travel but would not disclose details. It did fly a group of 60 European journalists back home from the Detroit show a day early "in the interest of safety," a spokesman said.

No matter what happens in the Persian Gulf, auto executives said the next few days could be critical in deciding what kind of year 1991 will be.

"If we have a protracted deployment of our troops — with all the uncertainty that brings with it and the drain on the nation's financial resources that brings with it — then we are going to have a pretty bad year," said Chrysler Motors President Robert Lutz.

"If we get this thing behind us, either through a negotiated settlement or through a short, sharp military conflict, then I think consumer confidence would return to a certain degree and we might have a fair year."

On another front, Subaru of America Inc. said it will reduce lease car payments by half for the families of reserve and national guard members serving in the Middle East. The offer is good until the lessee returns from active duty, or for a maximum of six months.

Overseas, Rolls-Royce Motor Cars' parent company, Vickers p.l.c., has employees in the Middle East because it is a tank manufacturer.

"They'll continue to be out there, or at least up until the very last minute," said Vickers spokesman Terrence Collis.

But those non-defense subsidiaries that do business in the Middle East, like Rolls-Royce Motor Cars, are abiding by British government advice to avoid regions of possible conflict, he said.

CONGRESS

FROM PAGE 1

doesn't overproduce the other guy by at least nine to 14 dollars an hour and give the customer equal or better quality at the same time."

Lutz's harsh reality No. 2: "The public is right now in grave danger of being made suckers of by environmental extremists and by politicians pandering for cheap votes."

Lutz blasted a proposed corporate average fuel economy bill defeated last fall as "a crazy piece of legislation" that carries an exorbitant price tag.

The legislation would have increased fuel economy standards to more than 40 mpg by 2000. The bill died in the waning hours of the 101st Congress but its sponsor, Sen. Richard Bryan (D-Nev.), has said it will be reintroduced, perhaps this month.

TRW's Gorman said the automotive business today "can say our last goodbyes to the industry as we have known it for most of our working lives."

The globalization of markets, more stringent requirements on vehicle emissions, fuel economy and safety, more demanding consumers, shorter vehicle cycles and more differentiated models are reshaping the industry, Gorman said.

As the industry copes with fundamental and continuous changes, OEMs and suppliers must forge partnerships for a new era, Gorman said. Suppliers should be selected on the basis of their overall capabilities, not per-unit cost, he said. Systems suppliers should be involved from initial concept design to production. Manufacturers should commit to long-term supplier contracts. And both OEMs and suppliers "must develop a true partnership with a greater sense of common objectives and shared purpose than in the past," Gorman said.

Two scheduled speakers at the Automotive News World Congress have changed.

Robert E. Boruff, newly named vice president of manufacturing for Saturn Corp., will speak at 3:35 p.m. Tuesday. He replaces Guy Briggs, formerly vice president of Saturn's manufacturing operations, who was named group director of operations for General Motors' Truck & Bus Group earlier this month.

M.A. "Raz" Razaq, GM's regional director for Eastern Europe, will be unable to travel to Detroit because of GM's international travel ban caused by the Middle East crisis. Razaq was scheduled to address the Wednesday morning closing session of the congress. He will be replaced.

U.S. output far above early 1990

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

In the second week of 1991, U.S. car and truck production rose 57.96 percent above the year-ago week, when 31 Big 3 plants were down in response to high inventories.

Estimated U.S. auto production last week was 86,791, up 40.25 percent from the prior week and 74.30 percent above 1990.

Year-to-date, 148,675 cars have been produced, 69.81 percent ahead of 1990.

Last week, U.S. truckmakers' estimated output was 43,387, up 20.73 percent over the prior week and 33.01 percent above the same week in 1990.

So far this year, 79,325 trucks have been assembled, 18.01 percent above 19[illegible].

All General Motors plants are scheduled to run this week except the Reatta Craft Centre in Lansing, Mich.

GM's Lordstown, Ohio, car line (Chevrolet Cavalier and Pontiac Sunbird) worked Saturday overtime last week.

Ford Motor Co. Chairman Harold Poling announced last week that the company expects to have 36 plant weeks of downtime in the first quarter. That averages about 2½ weeks of downtime per U.S. assembly plant.

Six Ford Motor Co. assembly plants are idle this week. They are: Lorain, Ohio (car and truck lines); Norfolk, Va.; Michigan Truck in Wayne, Mich.; Dearborn, Mich.; St. Paul, Minn.; and Edison, N.J. (truck).

Chrysler Corp.'s Warren, Mich., truck facility is idle this week for inventory adjustment. Production is expected to resume Feb. 4.

Chrysler's St. Louis (No. 1); Toledo, Ohio; and Sterling Heights, Mich., plants remain idle this week.

Canada cars show big gain

Canadian auto production was estimated at 16,907 units last week, 133.07 percent above the prior week and 75.44 percent above the same week in 1990.

So far this year, 30,792 units have been assembled, 111.32 percent above last year's total.

Truckmakers' estimated assembly was 12,017 units last week, 38.22 percent above the prior week and 4.04 percent below the year-ago week.

Year-to-date, 20,711 trucks have been assembled, 7.82 percent below last year.

War comes home to auto industry

Security tight, CAFE returns

By Lindsay Chappell and Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTERS

As cruise missiles sailed into Baghdad last week and Big 3 office buildings tightened security, Congress was preparing tough new fuel-economy legislation.

The war and anxieties over foreign oil are expected to give momentum to two new bills to raise corporate average fuel economy. They are similar to the CAFE measures hotly opposed by the industry and narrowly beaten in Congress four months ago.

One would require a 60 percent increase in current fleet mileage by model-year 2001.

The allies' war against Iraq, and the uncertainty leading up to the war, sent waves throughout the industry:

- Customers stayed away from showrooms in droves. Sales of domestic cars declined 30.8 percent Jan. 1-10 from a reasonably good period last year, and no one predicted increases once Operation Desert Storm was launched Wednesday, Jan. 16.
- To protect against terrorism, automakers increased security at plants and offices and have restricted foreign travel.
- Automakers from Turin to Tokyo say war adds more uncertainty to national economies that are already declining.

In Washington, the allies' war against Iraq could make it more difficult for the auto industry to defuse the movement to cut fuel consumption through tighter CAFE rules.

Sen. Richard Bryan, D-Nev., is expected this week to reintroduce a CAFE-raising bill defeated last fall. His bill would force each automaker to raise its average fuel economy 20 percent by 1995 model year and 40 percent by the 2000 model year. The current car CAFE standard is 27.5 mpg. Japanese

Ad strategy revamped to fit times

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Some automakers and dealer groups have changed advertising strategies with the advent of war.

While many manufacturers said last week it was too early to determine how advertising will be affected during the war, two said they have pulled their commercials from television news coverage of the war.

They and others either have toned down or are considering toning down the content of ads to match the somber mood of the country. Dealer group advertising reaction is mixed.

For several hours after the war started Wednesday evening, major networks devoted all of their time to news coverage. Few or no commercials were shown.

Toyota Motor Sales in U.S.A. and Ford Division told television networks they do not want their commercials to air during news coverage of the war, even if time is available.

WORLD CONGRESS

Environment, car regulation are hot topics

By Mary Beth Vander Schaaf
NEWS EDITOR

DETROIT — The specter of government regulation and environmental issues remain primary concerns of the auto industry despite the Middle East War and the U.S. economic downturn.

Twenty-eight industry experts hammered away at those topics as they addressed several hundred attendees during the four-day Automotive News World Congress last week.

AUTOMOTIVE NEWS/JOE WILSSENS

Keith E. Crain, center, *Automotive News* publisher and editorial director, visits with opening night speakers at the Automotive News World Congress. They are Robert Lutz, left, president of Chrysler Corp., and Joseph T. Gorman, chairman of TRW Inc. Additional Automotive News World Congress stories: Pages 3, 20-31 and 46.

Although the war crisis set the backdrop for the 15th Automotive News World Congress, the regulation and environmental issues dominated right from the start. In his keynote address Sunday night, Chrysler Corp. President Robert Lutz cautioned that environmental extremists may make suckers of the public and called the Bryan corporate

Runkle urges 'moon shot' on energy, air and safety

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' top engineer has called for a joint Big 3-government "moon shot" to solve energy, environmental and safety problems by the end of the decade.

Donald L. Runkle, GM's vice president of advanced engineering, said his vision for cooperation includes only American companies and the government.

"What I've been thinking about goes something along the lines of John F. Kennedy's challenge to America ... put a man on the moon," Runkle said at the Automotive News World Congress last week. "It was an extraordinary, high-risk proposition, one that required an extraordinary degree of cooperation between government and industry."

Such national cooperation is common in the Japanese industry. And Wolfgang Reitzle, head of research and development at BMW AG, told a World Congress audience that German carmakers have joined to develop technology to meet California's emission standards.

Other automotive executives have argued that in a global industry, U.S. antitrust laws hamper American automakers in competing with companies in countries that allow cooperation. For example, Chrysler Corp. President Robert Lutz, who has long European experience, has made a regular theme of the non-cooperation between the U.S. government and industry.

Runkle

Runkle acknowledged that adjustments to U.S. antitrust law might be required.

While Runkle said his proposal was just his personally, he also said it had at least tacit approval from GM Chairman Robert Stempel.

"Look, Stempel let me make this speech," Runkle said. "These problems are a big job. Maybe they're bigger than us alone. And Stempel will be talking about this more in the months ahead."

Just the previous week, GM President Lloyd Reuss asked for industry cooperation to develop better batteries for electric cars.

The Big 3 have been increasing cooperation in recent years.

Runkle said that the National

MIDDLE EAST CRISIS

WAITING GAME

Television grabs more takers than cars at California dealer on first day of war

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

CARSON, Calif. — The two 30-foot American flags waving in front of Don Kott's three dealerships have rarely seemed so significant.

When the United States began bombing Iraq last week, Kott and dealers like him across the country had to go about the business of selling cars. The flags served as a reminder of battles much larger than those being fought on showroom floors.

Kott retailed more than 5,000 new cars and trucks last year in his Ford, Lincoln-Mercury and Chrysler-Plymouth stores on 26 acres south of Los Angeles, a stone's throw from the crowded San Diego Freeway.

But on Thursday, the day after American-led forces began bombing Iraq, the war was on everyone's mind and showroom traffic was almost non-existent.

For those buyers with immediate needs, however, life went on. Unfortunately for Kott, there were precious few such buyers at his biggest-volume store, Don Kott Ford, during the 13-hour day:

8:45 a.m. A few employees sit in the waiting area of the service department. On the television, ABC's Peter Jennings is reporting on the Gulf.

9:15 a.m. Dealer principal Don Kott strolls over from the adjacent Lincoln-Mercury store. Kott and general sales manager Jim Leimbach discuss the war. Both say they've been glued to the TV.

"So far the military reports and financial news is encouraging. Maybe we'll sell some cars today after all," Kott says with a smile.

9:30 a.m. Kott and Leimbach are joined by general manager Jeff Childers. Childers says that the crisis and recession have been relatively kind to Kott's operations, and that sales have been steady.

9:45 a.m. No customers in the showroom and no traffic on the lot, but a few salesmen are working deals over the phone.

10:05 a.m. Salesman Bill Siravo stares out the floor-to-ceiling window and says he's upbeat about the day. "This area has a lot of blue-collar, middle-class people. They're steady. It's a good fit for Ford," Siravo concludes.

10:40 a.m. What appears to be the first "up" of the day wanders down a row of Ford Explorers. The chatting salesmen don't see her at first.

Jenny Jones, 25, says she needs "something a little more conservative and a little more reliable" than her aged Jeep, because she's got a new job.

VINCENT DE LEON

The day after U.S. forces began bombing Iraq, the television in the service waiting room at Don Kott's dealerships in Carson, Calif., attracted more attention than the new and used cars outside.

Jones says she's worried about the war, and is only prepared to "look, not buy," because of the cloudy economic climate.

10:50 a.m. Five service customers watch Peter Jennings and wait for their cars. Little traffic on the lot.

11:00 a.m. Two men arrive from Bel-Air Patrol, a local home security company. Jim Hutchinson and his partner are there to pick up two new, white 1991 Tauruses. Hutchinson says that in spite of the war, he's working "like it's any other day."

11:10 a.m. Anthony Goodall, 21, his father and brother drive onto

PAUL WEIGLE

Russ Collins, showroom manager at Waller Buick in Nashville, Tenn., thinks people may be using war as an excuse for being nervous about buying.

'The situation in our showroom is horrible'

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Middle East crisis, recession, wintry weather — consumers had lots of reasons to stay home in early January.

Sales of domestic vehicles dropped 31 percent in the first 10 days of the month. According to most dealers surveyed last week, things got no better in the days approaching Jan. 15.

Here's a sampling of their comments, taken before and after the U.S. attack on Iraq:

● "In one word the situation in our showroom can be described as horrible," said Susan LaTorre, sales manager for Bast Chevrolet in Seaford, N.Y. "It's the most frightening experience I have ever had after 10 years in the car business."

● "Customers aren't in a buying mood because of the Gulf situation," said Harold Neeley, owner of Central Dodge in Springfield, Mo. He said sales were terrible in the first half of the month because of heavy snow and ice cover. "We're just now thawing out."

● "People seem to be more patriotic during war times, and if it's a long drawn-out thing I think it will be good for American cars and bad for imports," predicted Ron

EUROPE: *Automobile companies beef up security and worry about further sales declines*

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — The European operations of General Motors, Ford Motor Co. and Chrysler Corp. are taking special security precautions in the wake of Middle East hostilities.

Meanwhile, there are concerns that a protracted war may intensify the current slide in the European new-car market.

GM and Ford each have about 115,000 employees throughout Europe. Chrysler has a fledgling sales organization in Europe and is setting up a joint manufacturing venture with Steyr Fahrzeugtechnik in Graz, Austria, for production of Voyager minivans beginning later this year.

GM and Chrysler have sharply reduced commercial air travel by company employees. Ford has issued a warning for its employees and is considering an outright ban on flying commercial aircraft.

"Certain meetings may be postponed or may be conducted over the telephone," said a GM of Europe spokesman.

General Motors' low-profile European headquarters in Zurich, Switzerland, houses about 200 employees and company officials have sought to draw little attention to the operation.

Chrysler's European sales headquarters in Dreieich, Germany, near Frankfurt, closed its offices last Tuesday as a security measure. Employees were working out of their homes late in the week.

Michael O'Mara, manager of sales for Chrysler Europe, conducted a security briefing with the 28 employees in Dreieich and appointed a security officer to be the liaison with local police.

In Italy, a frequent target of terrorist attacks in the past, a Fiat S.p.A. spokesman said Italian internal security officials will supervise special police checks of key industrial facilities in the country. Fiat has arranged for the evacuation of employees' families in other countries in the region, including Algeria, Egypt and Turkey.

A GM Europe spokesman said the war "could have a major impact not on only oil supplies, but the economy and motor industry."

The European market is already under siege. In December, nine European markets were down by levels ranging from 15 percent to 47 percent.

"There could be a short-term dip in sales unconnected with the economic impact," said analyst Edmund Chew of DRI Europe in Frankfurt. "You could see a bit of postponement of sales."

"The uncertain situation can do no good," added a Fiat spokesman.

A BMW spokesman said it is difficult to predict the outcome of hostilities on the auto industry.

"Will it suddenly strengthen the U.S. dollar? Will it mean sudden new confidence in the American economy?" he asked. "Nobody knows."

JAPAN: *Industry leaders fear anti-Japan backlash unless more aid goes to U.S.-led war effort*

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — After war began last week, Japanese business leaders warned their government of political fallout over Japan's aloofness, and thought about revising their 1991 projections.

Auto companies are drawing up budgets for the next fiscal year, which begins for most of them in April.

Most profess not to have drawn up any scenarios for changes in the exchange rate, the price of oil or a possible downturn in the world market. But after hostilities began last week, Toyota Motor Corp. and Mazda Motor Corp. immediately set up committees to monitor the crisis.

Many projections have been based on oil prices of about $30 a barrel and exchange rates at around 130 yen to the dollar. Those rates have held relatively steady despite the buildup toward war.

On the first day of conflict, Mitsubishi Motor Corp. issued the projections for 1991 that had been drawn up earlier, forecasting a 5 percent increase in sales.

Nissan Motor Co. projections due to executives next week were still based on a $30-a-barrel scenario even as hostilities began, and Mazda last Friday predicted sales growth of 4.5 percent, using an economic model of $25-a-barrel oil.

Both Mazda and Nissan said a long war would change their outlook. Nissan President Yutaka Kume said prolonged attacks on oil fields would cause a sharp rise in oil prices that "would have an impact on the entire world economy that is already showing signs of a slowdown."

One change many Japanese fear is a backlash in the Unites States over the Japanese public sense of non-involvement.

Japan, like other nations, has adopted an oil reserve policy that has helped maintain price stability. Not unduly pressed in the pocketbook, the public has tended to view the Gulf situation as an American problem and the country has largely sat out of the crisis. It was slow and fumbling in its initial response. While other nations sent armies and aircraft, Japan's government promised money, and then was late in delivering the funds.

Now the business community is concerned that the real fallout from even a short war could be an anti-Japanese backlash from an incensed American public.

A government official privately expressed concern that "Japan might be isolated" in the world community if it were seen to be standing idly by while others spilled blood, essentially to preserve world oil supplies.

Some business leaders last week called on the government to act quickly to carry out measures for assistance that have already been adopted. Rokuro Ishikawa, president of the Japan Chamber of Commerce and Industry, urged the government to make what he called "brave decisions" to offer some kind of contribution in manpower, possibly in the form of medical or refugee relief.

Chrysler raises capacity goal for Eurostar minivan venture

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — Chrysler Corp. has doubled the early-phase capacity and production targets for its Eurostar minivan joint venture in Austria.

Tony Richards, Chrysler's chief of new venture development in Europe and the executive with overall responsibility for Eurostar, said the joint venture has doubled its former second-year capacity target to 50,000 Voyagers in order to accommodate a projected output of 36,000 units, up from a planned 25,000.

Eurostar, which still expects to build 19,000 minivans in 1992, its first full year of production, has targeted an annual output ceiling of 125,000 by 1996 or 1997.

The first Voyager II built with partner Steyr Fahrzeugtechnik GmbH in Graz, Austria, is scheduled to be produced Oct. 28. Voyager II's scheduled production rates are projected to be reached in March or April 1992.

A new 538,000-square-foot structure has been erected since the groundbreaking last March, although the original production start-up date has been pushed back.

Eurostar GmbH, the 50-50 joint-venture company formed last year, initially planned to begin building Voyagers in Graz by June.

The minivan should give Chrysler a jump on what many analysts and industry executives believe will be Europe's fastest-growing market segment during the 1990s.

Selling North American-built Voyagers, Chrysler already is No. 2 in Europe's growing minivan market, behind the Renault Espace.

Minivan sales in Europe totaled about 80,000 units last year. They are expected by 1995 to reach about 300,000 and to continue to grow in the second half of the decade as new entries come on the market.

Richards said the decision to increase capacity partly reflects increased optimism about Europe's minivan market.

"Our expectations are somewhat higher," he said.

But he said Eurostar's original four-stage plan for hiking production has been scrapped because the joint venture no longer plans to share a paint plant with Steyr.

"We're now obliged to build our own paint shop," Richards said. "That has caused us to want to go in a little bigger."

The Eurostar plant will have sufficient flexibility to add a second model, but Richards said there are no current plans to do so.

Eurostar will produce long- and short-wheelbase and front- and all-wheel-drive versions of the Voyager.

Steyr, an awd specialist, will supply the awd transmission and other drive components.

A 2.4-liter, four-cylinder turbodiesel engine that is considered essential for the European market will be supplied by VM Motori S.p.A. of Centro, Italy.

The new plant has been built alongside Steyr's existing facilities in Graz.

The Austrian company assembles the Mercedes-Benz Gelaendewagon, the Volkswagen Syncro Transporter van, the awd VW Golf Country and the long version of the Audi V8.

It also supplies awd components for Fiat, Lancia, Honda, the Opel Vectra/Vauxhall Cavalier and the Voyager.

Meanwhile, the European Commission is continuing its inquiry into the incentive package Eurostar received from federal, state and local governments in Austria.

Ford unhitches Taurus and Scorpio

U.S. and European cars won't share a platform, Gilmour says

By Daniel Ward
STAFF CORRESPONDENT

DETROIT — After several years of top-level internal debate, Ford Motor Co. has decided to develop the next-generation Taurus/Sable separately from the European Scorpio, said Allan Gilmour, president of the Ford Automotive Group, last week.

"Taurus will not be put together with Scorpio," he said in response to a question. "We had to bang some heads together, but we finally agreed that the two cars did not belong on the same platform."

The idea of coupling the Scorpio and Taurus/Sable programs had its roots in Ford's global Centers of Excellence approach to product development. The program aims to divide engineering responsibility among Ford units around the world and to reduce costs by using common platforms.

But according to Gilmour and other senior Ford executives, the company belatedly recognized that the two cars served radically different markets and that joint development could weaken both.

"The Scorpio had to have Autobahn performance and very tight turning circles and a huge rear seat" for European buyers, said Ford's design chief, Fritz C. Mayhew last week. "And the Taurus didn't need to go 180 mph all day, and it didn't need very tight turning circles. It needed to be a light and efficient car. There were different parameters between here and Europe in that car."

As recently as December, L. Lindsey Halstead, chairman of Ford of Europe, told *Automotive News* that no decision had been made in the long-running debate between Dearborn and Ford of Europe over who should develop the next-generation Scorpio.

A year ago, it appeared that the European management had won the argument and would develop its own car based on a stretched CDW27 chassis, the Tempo/Topaz/Sierra replacement that is being developed in Europe for introduction in 1993.

But Ford President Philip E. Benton said Dearborn was still in charge of the project, which was originally code-named DFC55.

According to Gilmour, the Scorpio replacement will be developed with another Ford "partner" and will remain rear-wheel drive.

Influencing that decision is the need to introduce a new Scorpio for Europe in about 1995. The Ford Falcon, built in Australia, is a possible candidate for joint development with the Scorpio.

Gilmour added that while Taurus and Scorpio will not be married for the next model, they are likely to come together as a single project for the successor.

Koreans flip-flop on luxury import policy

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — The Korean government has vowed to undo a policy that has cut deeply into sales of imported luxury cars, especially Ford Motor Co.'s Sable, said U.S. officials here last week.

The expressed optimism that the Korean government "at the highest level" will end the campaign that threatened to damage U.S.-Korean trade relations.

"Korean officials showed a willingness to deal with the forces that are behind these issues," said Richard T. McCormack, undersecretary of state for economic and agricultural affairs.

The government campaign, launched last year, is aimed at reining-in inflation by curbing domestic consumption, especially "luxury" goods. But the campaign quickly took aim at imports.

Last year, it was widely reported in the government-controlled press that buyers of imported luxury cars would face rigorous audits of their tax returns. Although government officials have strenuously denied making any such threat, sales of some imports plummeted.

One of the biggest losers was Sable. Sales plunged from an annual rate of more than 3,200 in the first quarter to 164, or a rate of 656, in the final quarter.

At the same time, the frugality campaign had absolutely no effect on sales of the Hyundai Grandeur 3.0. Each retails for about 28 million won (about $39,100). Sales of the Grandeur 3.0 were steady in 1990 at 300 to 400 per month.

"Imagine using the IRS in the United States to investigate Mercedes-Benz buyers," McCormack said here last week. "We acknowledge Korea's right to promote public frugality, but firmly object to any targeting of imports."

Within hours of the end of the bilateral consultations, Lee Seung-Yun, Korea's deputy prime minister, announced that the austerity campaign was not anti-import.

"The only way Korea can re-establish the credibility it is losing is through sustained action to resolve outstanding issues and to demonstrate meaningful progress in market opening," McCormack said.

There were 8 selling days in the period this year and last year.

Even before bombs fell, U.S. sales sank 30%

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The new year started as a dud for new-car and light-truck sales, quite a turnaround from the first 10 days of 1990 when warm weather and hefty rebates brought consumers out in droves.

Sales of domestic cars were down 30.4 percent. Domestic truck sales were worse, off 31.4 percent. The total of 179,963 domestic cars and trucks sold was 30.8 percent below the year-ago figure. Each selling period had eight days.

With war raging in the Persian Gulf, National Automobile Dealers Association analyst Tom Webb doesn't expect a rebound soon.

"Given the international situation, it looks like dealers are in for several more months of meager sales," Webb said.

"We feel consumer psychology is as much a factor as the consumer's pocketbook, and we look for sales to improve if, and when, international tensions are reduced."

Jan. 1-10 marked the first period of Chrysler Corp.'s refusal to report 10-day sales results. *Automotive News* estimated that Chrysler's combined sales in the period were off 41.1 percent, the biggest decline among automakers producing vehicles in the United States.

Ford Motor Co. and General Motors reported hefty drops in car and truck sales for the early January period.

For the first time, American Honda Motor Co. Inc. joined Toyota Motor Sales U.S.A. Inc., General Motors and Ford Motor Co. in reporting 10-day sales of imported cars.

Chrysler and all other importers report sales monthly.

Honda, Toyota, GM and Ford reported actual imported-car sales of 16,356 units, off 8.43 percent from last year. *Automotive News* estimated that all other import-car sales totaled 38,456, down 2,292 units or 5.6 percent.

Imported-truck sales reported by GM and Toyota were up 20.12 percent; estimated imported truck sales for all other manufacturers fell 22.78 percent.

Sales were off for all three Ford brands, including Lincoln, which enjoyed increased sales throughout 1990. Lincoln's sales were down 10.7 percent, and Ford's overall car and truck sales plunged 36.6 percent.

Cadillac, up 31.9 percent, was the only GM division to report an increase in sales. Overall, GM's car and truck deliveries were down 27.2 percent.

Domestic car sales rose for four transplant makers rose, but they were off for Toyota and Mitsubishi Motor Sales of America Inc.

The domestic-vehicle sales score for transplants showed:

- Toyota declined 35.4 percent.
- Mitsubishi plunged 30.1 percent.
- Subaru of America Inc. sold 574 U.S.-built Legacys this year.

The company had reported only 12 such sales for the year-ago period.

- Honda improved 2.6 percent.
- Mazda Motor of America Inc. rose 48.1 percent.
- Nissan Motor Corp. in U.S.A. jumped 99.8 percent.

GM nips Ford, places 4th in new-car sales in Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — General Motors appears to have edged Ford Motor Co. out of fourth place in European new-car sales for 1990, a year in which the overall market in Europe dipped for the first time since 1984.

According to industry sales estimates of 17 Western European markets compiled by *Automotive News*, new-car sales in 1990 slipped to 13,382,000, down a barely measurable 18,800 units, or 0.14 percent, from 1989's record total of 13,400,800.

Most analysts and industry executives expect a steeper drop in 1991. European sales declined from the year-earlier total for five consecutive months last year.

Germany's Volkswagen Group led European sales for the sixth straight year in 1990, capturing 15.6 percent of the market with its VW, Audi and SEAT brands.

But GM registered the biggest gain of any volume manufacturer in Europe, improving 5.3 percent, to 1,566,200 units, the estimates show. That would put GM ahead of Ford's sales of 1,555,900, which reflected a 1.9 percent decline from the previous year.

The GM figures exclude Saab Automobile AB, the 50-50 joint venture between GM and Sweden's Saab-Scania AB, but the Ford figures include Jaguar, which is 100 percent owned by Ford. The estimates yield an 11.7 percent market share for GM and 11.6 percent for Ford.

In 1989, excluding both Saab and Jaguar from the totals, Ford held fourth place and an 11.6 percent market share, versus 11.1 percent for GM.

"The jump GM has made is very significant," said Peter Schmidt of Automotive Industry Data Ltd. in London. "Ford had been well ahead of GM in Europe and, within 12 months, GM has surpassed Ford. It underscores the problems Ford had last year."

Ford of Europe has not conceded. According to Ford estimates, it edged GM by a tenth of a point in market share, 11.8 percent to 11.7 percent. That calculation excludes Saab, includes Jaguar and counts only 15 markets.

A Ford spokesman said there may be other variations in the way the two companies tote up their sales. "We cannot strictly compare our figures because of differences in calculations," he said.

GM's biggest gains were registered in Germany, Europe's largest market, where it added more than 100,000 sales last year.

Volume at GM's Adam Opel AG subsidiary climbed 23.5 percent, to 562,800, and market share rose from 15.1 percent to 17.3 percent last year.

In contrast, Ford's first-place share in the United Kingdom, by far its largest European market, fell from 27.1 percent in 1989 to an estimated 25.8 percent last year. Sales plunged an estimated 17 percent, to 517,900.

Ford's best news was in Italy, where it was the main beneficiary of a sharp loss in market share by Fiat Group. Ford sales there jumped 58 percent, to 177,500, helped by a 147 percent surge in demand for its Fiesta supermini, to 128,400 units. Market share rose to 7.7 percent from 4.9.

Ford's off-year has been marked by a troubled launch for the Escort/Orion subcompact model in Europe's largest segment. Much press reaction to the car was negative. The car also has suffered from a slow production build-up.

Schmidt said he does not see a sudden turnabout for Ford in 1990.

Among Europe's six volume makers, VW, GM and third-place Peugeot Group increased sales for the year, while second-place Fiat, Ford and sixth-place Renault slipped.

In 1988 and 1989, Fiat mounted a serious challenge to Volkswagen's lead in European market share. But after running neck and neck in the early months of 1990, Fiat fell back to a 13.8 percent share on a sales decline of 4.8 percent, to 1,846,900 units.

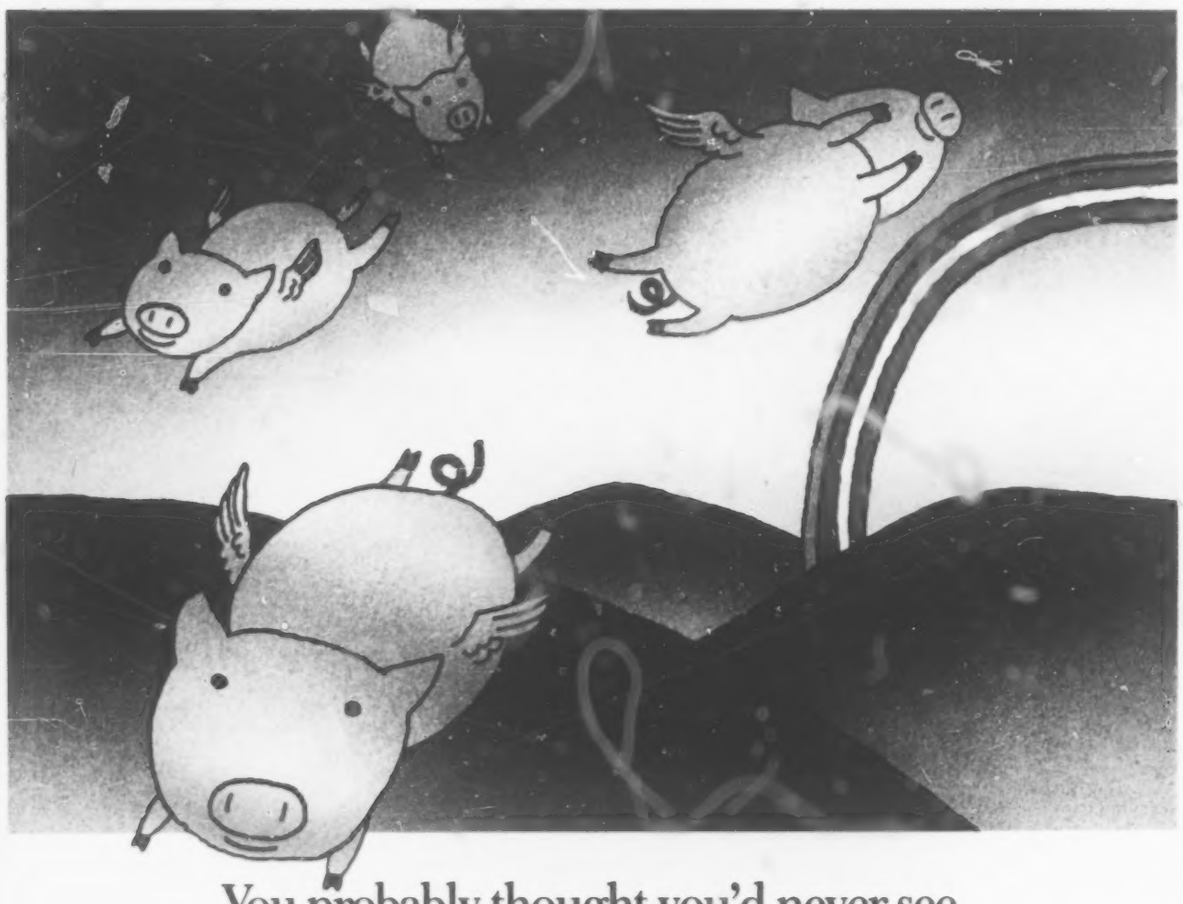
Fiat's share of its home market skidded 4 points, to 52.4 percent, on a 7.7 percent drop in volume, to 1,200,000 cars. The Fiat figures include sales of the Fiat, Alfa Romeo and Lancia makes.

Combined Japanese share across Europe rose from 11 percent in 1989 to 11.7 percent last year on a 6.5 percent increase in volume, to 1,563,400 units. Sales for both Honda and Mazda rose 18 percent.

Among the five major markets, only Germany and France grew last year, while Italy, the United Kingdom and Spain fell.

The German market, buoyed by strong demand in the former East Germany, eclipsed its old sales record, set in 1987. Sales totaled 3,248,600, up 14.7 percent over 1989.

For the full year, Britain and Spain were off 12.7 percent and 13 percent, according to estimates.



You probably thought you'd never see a secure, profitable alternative to factory service contracts, either.

But here it is. It's the Platinum Protection service contract program developed by GE Capital, a leader in automotive financial products for more than 15 years. And it's one you can sell with confidence. After all, our name's on the line.

Priced lower than factory programs, Platinum Protection gives you the opportunity to sell a quality product to your customers and build profits for your dealership.

Designed to be flexible, Platinum Protection is available for every major make and model — new or used. It's a program that doesn't restrict you to using one manufacturer's replacement parts. And it doesn't prevent you from collecting full retail charges on your parts and normal labor rates.

O.K., O.K., so pigs can't really fly. But you can find the service contracts that offer you security, profitability and flexibility. Call **1-800-828-1392** for a copy of our Platinum Protection brochure.

GMC aims Syclone, other new models at niche markets

By Joseph Bohn
TRUCK EDITOR

DETROIT — John Rock, GMC Truck Division general manager, sees his market as "nothing but a group of niches" all the way through the light- and medium-duty segments, and GMC's newest niche offering is the $25,500 Sonoma-based Syclone, which goes on sale Feb. 1.

Rock, speaking at the North American International Auto Show, projected sales of about 3,000 to 3,500 of the high-performance Syclones during the 1991 model year. The trucks can reach 60 mph in less than five seconds.

The two-door, two-passenger Syclone features a full-time all-wheel-drive system for extra traction and the first four-wheel antilock braking system offered on a pickup.

Ray Rota, GMC general sales manager, said the division already had 2,600 orders on hand, so the Syclone could easily exceed its projected sales target.

GMC is capable of producing up to 1,200 Syclones a month. It plans a Syclone look alike that will have the styling, though not all the equipment, of the performance model for about $10,000 less.

Next fall, GMC will also come out with a similar specially outfitted version of the Jimmy, call the Typhoon, Rock said. It also will introduce all-new full-sized Jimmy and Suburban lines.

Concept versions of the 1992 Jimmy, dubbed Sagebrush, and the 1992 Suburban, dubbed Rio Grande, were displayed at the show. They closely resemble the 1992 trucks.

A concept version of the 1992 GMC Jimmy, dubbed Sagebrush, was displayed in Detroit.

The GMC Jimmy and companion Chevrolet Blazer will have a seven-inch-longer wheelbase than current models, while the Suburban will stay about the same size.

The Jimmy/Blazer and Suburbans will get significantly improved suspension systems to provide more of a passenger car ride and upgraded interior appointments.

GMC also plans to beef up merchandising support for its four-door S-Jimmy sport-utility in hopes of improving sales.

Traditionally, the division always sold its compact sport-utilities "with very little sales push," but current market conditions require extra marketing, Rock said.

GMC plans to sell about 360,000 trucks in calendar 1991, just marginally more than the 353,788 it retailed in 1990, Rota said.

GMC officials see an overall truck market of 4.6 million units in calendar 1991 compared with 4,853,336 in 1990.

About 4,380,000 of the projected 1991 sales are expected to be light-duty and about 220,000 are medium/heavy.

That compares with 4,575,951 light-duty and 277,385 medium/heavy sales in calendar 1990.

GMC now is focusing on export opportunities and recently changed some of its engineering operations to prepare vehicles for that effort.

It sees compact pickups as early candidates for export with South America, Latin America and Mexico as the most receptive countries to U.S.-style trucks.

GMC has dropped out of the school bus market because of growing distribution and sales complexities and inherent liabilities in selling such products.

That means it will have to focus more heavily on other truck niches to recover the roughly 12,000 sales yearly that school buses used to add to its medium-duty truck business, Rock concluded.

The Bronco will get a redesigned exterior and interior in 1992; most of Ford's light trucks will get some type of update.

POPULAR MECHANICS/JIM DUNNE

Four Ford light-truck lines slated for redesign for '92

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. will update nearly all its light trucks in the 1992 model year.

Ford's F series, Aerostar, Bronco and Econoline will get both interior and exterior redesigns. The 1992 Aerostar and E-150 and E-250 Econoline vans will have a standard driver-side air bag.

The redesign on the four truck lines will affect seven of 12 Ford assembly plants that will be down for changeover in the next year.

But Allan Gilmour, president of the Ford Automotive Group, said the changeovers will not be as technically complex as the Ford Escort changeover at the Wayne, Mich., plant which caused a major loss of production and cost the company nearly a point of car market share.

At the North American International Auto Show, Gilmour said that the 12 plant changeovers "represent a little threat (to our market share) but not a big one; we will lose some units but not a big number."

Ford's biggest gamble is losing any F-series production. The F series has been the top-selling vehicle — car or truck — in the United States for nine years in a row. Ford sold 522,034 F-series pickups in 1990 compared with 487,508 for the next best-selling vehicle, the Chevrolet C/K pickup.

In addition to a new exterior and interior design, Ford also will offer a new Flareside pickup in the F-series lineup in the 1992 model year, according to Ford President Philip E. Benton Jr.

Ford Division General Manager Thomas Wagner said Ford will try to get 30 percent of the truck market in the 1991 calendar year. Ford is projecting light- and heavy-truck sales for the industry will be about 4.7 million in 1991.

Ford captured 29.9 percent of the light-truck market in calendar 1990, compared with 29.3 percent in 1989. But Ford's light-truck sales declined to 1,373,493 units in 1990 from 1,401,994 in 1989.

Philip Novell, Ford Division general sales manager, said the largest declines were in the commercial-use segment. He said commercial-use orders dropped nearly 30 percent in the second half of 1990.

Whether Ford will link up with a partner in the heavy-truck business is an open question.

Benton said Ford and Italy's Fiat have talked about a joint venture in heavy trucks, but found that the deal did not make sense for either company. He previously said the Ford/Fiat discussions centered around truck components, rather than a buyout of either company's truck operations.

Gilmour said Ford intends to keep its heavy-truck business, despite rumors it is for sale. In the past 13 months, Ford sold its aerospace, steel and tractor operations.

SERVICE MANAGEMENT

Nov. index up from '89, but not Oct.

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

November service and parts volume in new-car dealerships dipped from the October pace, but still showed a gain over the year-ago month, according to the Automotive News Service Index.

November's service-parts business amounted to 101.7 percent of the volume dealers recorded in November 1989. In October, the volume was up 9.8 percent over the same month of 1989.

November was the fifth consecutive month to show an increase over the year-earlier service and parts business.

The lead gainer in November was total labor sales (customer-paid and warranty), which showed an increase of 6.5 percent over the year-ago volume. Sales of shop parts were up 4.1 percent.

The only other indicator in the Service Index to register a gain over the year-earlier figure was gross profit on all labor parts and accessories — the most important indicator from the dealers' viewpoint. Gross profit was up 2.9 percent, the fifth consecutive month that it has risen.

Two indicators, sales of all parts and accessories and repair orders written, were down 1.3 percent and 0.1 percent from the year-earlier volume.

Figures used in the Service Index are averages compiled from reports on shop operation from a cross-section of the nation's new-car dealerships.

Service and parts business for dealers from January to November 1990 was 6.6 percent above that of the year-ago period.

SERVICE INDEX
101.7★

	Nov. '90 vs. Nov. '89	Jan.-Nov. '90 vs. Jan.-Nov. '89
Gross Profit on All Labor and P&A Sales	+ 2.9%	+ 6.1%
Repair Orders Written	– 0.1%	– 0.1%
Total Labor Sales (Customer & Warranty)	+ 6.5%	+ 8.4%
Shop Parts Sales (Customer & Warranty)	+ 4.1%	+ 7.3%
Sales of All P&A	– 1.3%	+ 5.3%

★ Survey by Automotive News shows that dealers' service and parts business in November 1990 was 101.7 percent of business in November 1989. Service business in the first 11 months of 1990 was 106.6 percent of business in the corresponding period in 1989.

Chrysler unveils revisions of extended service contracts

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. has introduced a revised extended service contract program with a comprehensive list of plans that allow car buyers to tailor coverage to meet their needs.

The program has a menu of eight plans from which the car buyer can choose to obtain coverage more compatible with intended length of ownership, budget and monthly payments.

The new service contracts go beyond what has been traditionally offered, said James C. Lowry, manager of service contracts for Chrysler's Service and Parts Operations. The plans are designed to stand alone or complement one another. Prices range from $50 to $1,420.

According to Lowry, Chrysler's top service contract, the Ultimate Customer Care plan, is a combination of three plans — the bumper-to-bumper Maximum Customer Care, Maintenance Care and Motoring Assistance — and includes such features as $500 trip interruption protection, $100 "sign and go" road service, $100 towing allowance and more.

Other plans are:

- **Maximum Customer Care**, which carries a $50 deductible per visit and covers more than 700 components in the suspension, brakes, electrical, frame, bumper mechanisms, fuel system, heating and cooling, steering and body interior. It offers road assistance, towing and rental allowance.
- **Maintenance Care**, covering maintenance service at mileage intervals outlined in the owner's manual.
- **Motoring Assistance**, which provides a package of travel and emergency services.
- **Added Customer Care**, covering more than 200 components including steering, front suspension, brake, electrical and air conditioning systems. It provides reduced powertrain warranty deductible, towing and car rental.
- **Protection Plus**, which extends the basic 12-month/12,000-mile warranty up to 18 months/18,000 miles for buyers of dealer demonstrator, factory official, driver education and dealer rental vehicles.
- **Alternate Transportation**, providing a car rental allowance if a covered vehicle is in for overnight repairs because of a breakdown of a component covered by Chrysler's basic, Crystal Key or powertrain warranties.
- **Custom Coverage**, a transferable plan that provides extended powertrain and major assembly component coverage for Chrysler and competitive engine, transmission, front suspension, rear axle housing, steering, brakes, electrical and air conditioning components beyond the vehicle's factory warranty period.

Exec predicts aftermarket growth in high-performance end in '90s

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — The automotive aftermarket will continue to grow during the next 10 years, according to John King, parts and service engineering manager for Ford Motor Co.'s Parts and Service Division.

King

Speaking at a symposium at the Automotive Parts and Accessories Association's convention here, King said the high-performance phase of the aftermarket will continue to expand during the next decade.

"Electronic controlled engines are proving as receptive to improving with electronic software and other changes, as carbureted engines with improved manifolding," he told the symposium.

King said the need for accessories is likely to expand as the option content of vehicles is reduced to simplify the production process and improve quality.

"However, owner desires for differentiation will demand greater variety," King said. "Some imported and domestic models feature minimum option content to simplify assembly; personalization, through accessory installation, occurs at the service centers."

King also noted that expanded use of modules in vehicle production may lead to business opportunities for "repair facilities that can provide quick diagnosis and replacement of remanufactured replacements and help customers maintain a reasonable cost of ownership."

With regard to basic maintenance items on today's cars and trucks, King said, "No major revolutions are expected in spark plugs, filters, belts or hoses, although electric drives, air conditioning and power steering could simplify or eliminate belt use. Oil and filter change intervals are probably optimal now and are unlikely to change in the next 10 years."

Privacy glass from PPG

Amy Roginski of PPG Industries shows new glass that offers privacy while reducing sun rays entering vehicles. The glass, Solarban 20/20, will be used in Chrysler Corp.'s minivans in 1992.

Florida dealer scores downtown

By Patricia A. Kelsey
SPECIAL CORRESPONDENT

ST. PETERSBURG, Fla. — As auto dealership traffic continues to migrate north from downtown streets, Scott Buick has opted to "[illegible]owntown."

Four months ago, it opened a satellite sales and service branch in the heart of St. Petersburg for three reasons: To serve its shop customers better, to add new service customers and to attract new- and used-car buyers.

So far, it's working, say Al Leo, vice president and general manager.

Long-time customers are pleased that they no longer have to buck heavy traffic to get service at Scott Buick's main store in Pinellas Park, Fla., Leo said.

He said other Buick owners also are coming in for service. There's a solid base of people in that locale representing Buick's traditional retiree-base demographics plus the younger set, he said.

There are four service bays, manned by two technicians, in the 5,000-square-foot building that was a bowling alley before Scott Buick's owner, the Polett/Lustgarten Dealer Group, invested $1 million to renovate it.

To staff the satellite, the dealership drew on its experienced sales and service people.

"We staffed it entirely from our current employee base and replaced those people at the main store," Leo said.

The dealership is nearing its goal of 60 to 70 sales per month — 30 to 35 new cars and 30 used.

The satellite has already had a 51-unit month, Leo said.

What's equally important is that the new business has not hurt it's other store, Leo said.

SERVICE BRIEFS

ATF funds ASE program

HERNDON, Va. — The American Trucking Federation has donated $30,000 to the National Institute for Automotive Service Excellence to fund a heavy-duty truck certification program.

The funds, donated in memory of Zenon C.R. Hansen, retired chairman of Mack Trucks Inc. and federation president, will be used to begin the development and implementation of a certification program for high schools, vocational schools and community colleges and for private school truck-repair training programs. The program will be administered by the National Automotive Technicians Education foundation, the institute's educational subsidiary.

Ford graduates 15

DETROIT — Fifteen Detroit-area students have received degrees in Ford Motor Co.'s Automotive Student Service Educational Training program.

During the two-year program, students alternate between the classroom and dealerships every nine weeks, learning the latest developments in engines, ignition and fuel systems, turbocharging and diesel and computer controls. They also take courses ranging from mathematics and physics to computer studies and critical thinking.

Since 1985, Ford has expanded the program to junior colleges in 38 cities across the country. Ford hopes to have approximately 50 programs in 1991, said Lee Miskowski, general manager of Ford Parts and Service Division.

GM, Bakony sign pact

FLINT, Mich. — General Motors' AC Rochester Division has signed a supply agreement with Bakony Works for Metal and Electrical Equipment in Veszprem, Hungary, as a prelude to a possible venture.

Under the agreement, Bakony, an AC Rochester supplier for two years, will manufacture spark plugs for the division's European customers, according to Daniel L. Welton, plant manager for AC Rochester-France in Gennevilliers, France.

AC Rochester currently makes spark plugs in the Gennevilliers plant, but intends to use some capacity there for other products. A joint venture between the two companies for spark plug production may be formed as early as June, according to Welton.

Dealership has top techs

MEYER, Iowa — Meyer Garage (Saab) is batting 1.000 in employing technicians, according to Michael Parahus, car training manager for Saab Cars USA Inc.

He said Meyer Garage is the first of 351 U.S. dealerships to employ only Saab master technicians.

Parahus said that to earn the title of master, technicians must advance through three levels: associate, certified and qualified technician; have five years' experience at a Saab dealership, pass required technical courses and earn full certification by the National Institute for Automotive Service Excellence in eight categories.

Rebates, leases and college spiffs

Makers continue to prime the pump for dealers and customers

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Incentive programs ranging from dealer cashbacks to special lease deals and allowances for college graduates have been announced by American Honda Motor Co. Inc., Chrysler Corp. and Oldsmobile, Chevrolet and GMC Truck divisions.

In one of its infrequent incentive excursions, American Honda is paying dealers $300 for sales of 1990 and 1991 Accords. The $300 payment on the 1991 models was announced early this month; it excludes the Special Edition and station wagon.

American Honda also is paying dealers a rebate of $300 on sales of 1990 and 1991 Acura Integras. The Accord program ends March 31, while the Integra rebate runs through April 2.

Chrysler Corp. said it is increasing the new-vehicle purchase or lease incentive to $500 from $400 in its College Graduate Allowance program, which has been renewed for the 1991 calendar year.

Chrysler said the rebate applies to new 1990, 1991 and 1992 Chrysler, Plymouth, Dodge, Jeep and Eagle domestic or imported vehicles and can be added to any other national consumer incentive in effect on delivery through participating dealers.

Oldsmobile is offering General Motors Acceptance Corp. Smartlease incentives on 1990 and 1991 Cutlass Supreme and 88 models that are leased for terms up to 48 months.

Payments are as low as $229 per month (no money down) for 48 months on the Supreme and $259 for 48 months on 88 models. The program expires March 31.

Through April 7, Chevrolet has a similar lease plan for all 1991 Caprice models, including the new Classic LTZ. Customers can lease a fully equipped car for $275 for 48 months or $292 for 36 months. That compares with $377 and $419 on a standard Smartlease.

GMC Truck announced a consumer incentive program that offers cash or special finance rates in lieu of cash on 1990 and 1991 trucks. It runs through April 7.

The GMC rebates are $1,500 on the 1990 G-Van; $1,000 on the 1990 S15 pickup, S15 Jimmy, V Jimmy and Suburban; and 1991 Sonoma, V Jimmy and S15 Jimmy two- and four-door models.

Also, $750 on 1990 and 1991 RV pickup and cab chassis and $500 on 1990 and 1991 G-Van, 1990 and 1991 Safari and Safari XT, 1990 and 1991 Sierra pickup cab chassis and 1991 Suburban.

Instead of cash, buyers may choose finance rates of 8.9 percent for 48 months or 10.9 percent for 60 months.

DIARY

FROM PAGE 2

the lot and get out of their tiny, 1970s-vintage Honda Civic. They begin talking to a salesman.

In less than five minutes they're through.

Goodall and his family say they came to Kott looking to take advantage of an first-time buyer program advertised in the paper. They are disappointed, and a bit angry, to learn that Goodall's 32-hour-a-week job as a clerk at a huge local grocery chain doesn't qualify as the "full-time employment" necessary for the promotion.

The Goodalls leave. That leaves the lot empty again of prospects.

11:35 a.m. Salesman Henry Daood spies an "up." It's 55-year-old Ermon Johnson. Johnson needs a car to get to a sick family member in Texas. He says he's worried about the war with Iraq, but personal circumstances have priority over international ones.

Johnson says he likes a dated Dodge Colt and Mercury Tempo, but "they don't like me. They cost too much."

12:00 noon Down at the Chrysler-Plymouth store, a few families are milling around in the showroom.

General sales manager Fred Guzowski sits behind a cluttered desk in the front. He has a television tuned to a local news show.

Guzowski says he's surprised that anyone is in the store. Guzowski opines that the war may help Chrysler and other domestics.

"This is really bringing out the Americana, the flag-wavers," he says. "The import dealers may see a backlash because Japan hasn't helped much in the Gulf."

12:45 p.m. A salesman shows some 1991 Escorts to two young women. They too are interested in the first-time buyer program. Florence Miller, 20, says she thinks the subcompacts look good but would look even better if she was driving off in one. She too is having trouble meeting the promotion's requirements.

Miller is disappointed but says her attention is really focused on the Gulf. Her brother is a Marine stationed in Saudi Arabia. "Sure I want a car," she says. "But if I could have anything I'd have him home," she says.

Miller and her friend leave.

12:55 p.m. A Japanese couple get out of their Cadillac. They're there to finish up paperwork on a Ford Club Wagon van for their business, running tours for Japanese tourists in Southern California.

VINCENT DE LEON

Florence Miller checks out an Escort at Don Kott Ford last Thursday. Miller was one of few customers who visited the dealership the day after war broke out in the Gulf.

1:35 p.m. "Right. Green. That's mine," says salesman Kevin Burckhardt, as an "up" parks his green car on the right side of the lot. Burckhardt meets the prospect by his car. Later he "turns" the gentleman over to another salesman who he thinks may have a better chance of closing the deal. If a deal is made, Burckhardt would be credited with half a sale.

"Right, green" does not buy.

2:10 p.m. Jeff Pool, a fleet and leasing account manager at the Lincoln-Mercury store, sits at his desk. Half his attention is on his work, the other half on the little radio on his desk.

Pool says the phones "have been quieter than usual."

"I did have someone tell me that they 'just didn't feel right about buying today' because of the war," Pool says. "Luckily that guy's only looking at one Explorer, and I think he'll be back."

2:40 p.m. Trinidad Torralba, 68, writes a check and signs a deal. He has just bought a 1987 Taurus to replace a car he sold to a scrap yard. "I can't worry about the war. I need the car," he says.

2:50 p.m. The TV in the service waiting room continues to attract more attention than the new and used cars outside. Five people watch for war updates.

3:30 p.m. Walterine Crisp, 52, can only think, and talk, about her new 1990 LTD Crown Victoria. This is the second car she's bought from Kott, and she says the "Lord led me to this dealership." She says she is praying for the soldiers in the Gulf, but she thought it was time to buy before "things get any more unpredictable."

4:10 p.m. Jeff and Lisa Hancock, a couple in their 30s, test-drive a Ford Aerostar minivan. They are concerned about the war, but feel that buying a new car is a separate issue.

"We've got one baby and another one on the way, and we just have to buy a more practical car," Lisa says.

4:40 p.m. Salesmen, always optimists, think business will pick up as people get off work. Then the news breaks that Iraq has attacked Israel. Suddenly all attention reverts back to war.

A dozen people, from sales staff to porters and mechanics, join a few customers back in what has become the TV room.

6 p.m. The showroom and lot are dead. All but two salespeople, now the night shift, are inside listening for radio and television reports.

6:10 p.m. What looks like an "up" turns out to be a pizza delivery man in an unmarked car. Six pizzas are taken to the backroom staff.

6:30-10 p.m. Traffic all but winds to a halt. Three "ups" come onto the lot. One pokes around and leaves. Two agree to take test drives. One of those buys a Ford Ranger pickup.

10 p.m. Francisco Palau, the sales manager on duty, closes the doors and the books. On this first full day of war, Don Kott Ford retailed four new and used cars from the floor, compared to seven on an average weekday.

Palau calls it "slow, but not terrible."

Ford Mexico to make new Zeta engine

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Ford Motor Co. S.A. de C.V. will spend $700 million to expand its Chihuahua, Mexico, engine plant for production of a new four-cylinder engine for the North American market.

The plant will build Ford's Zeta engine, said plant manager Lyle Raymond. Ford made the announcement at Los Pinos, the official residence of Mexican President Salinas de Gortari.

The Mexican Zeta will be a 2.0-liter version. In Europe, Ford builds the Zeta in 1.4-liter and 2.0-liter configurations in Bridgend, Wales.

Ford said that the Chihuahua plant will shut down this summer and reopen in about two years. The plant will have the capacity to build 500,000 engines annually in two shifts and will employ more than 1,100 people.

Chihuahua currently produces about 200,000 2.3-liter four-cylinders engines a year. Most are used for Ford Tempo/Mercury Topaz models sold in the United States.

The Mexican-built Zeta engine will go into the next-generation Tempo/Topaz, code-named CDW27, scheduled for launch in the 1995 model year. It could also appear later in the decade in a Ford specialty sports coupe built at Mazda's Flat Rock, Mich., plant, according to Ford Engine Division product planning documents.

According to Raymond, production at the new plant will represent 20 percent of Ford's four-cylinder engine production in North America and between five and 10 percent of all the engines produced by the company in North America.

The Chihuahua plant opened in 1981.

Range Rover gains weight, escapes tax

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The Range Rover sport-utility has put on some weight and apparently squeezed through a crack in the new luxury tax.

The Internal Revenue Service has labeled the Range Rover a "multipurpose vehicle." As a result, it won't be subject to the tax, said Range Rover of North America Inc. spokesman William E. Baker.

The tax would have cost customers about $1,300 on a $42,975 Range Rover — or 10 percent on the amount of the transaction above $30,000.

Range Rover dealers have been warning customers that they might be liable for the tax, said Range Rover's No. 1 dealer, Michael Lazarus of Range Rover Land in Glen Head, N.Y. Lazarus said last week he'll continue to warn customers until there's no doubt Range Rover is exempt.

A 60-day public "comment period" began when the IRS luxury tax rules were published in late December. The IRS will entertain comments or objections as to how the tax is applied, Baker said. Range Rover's exemption will stand unless someone raises a successful objection, he said.

Ironically, Range Rover escaped a 25 percent tariff on imported trucks two years ago because the Treasury Department classified the Range Rover as a "passenger car," along with other four-door sport-utilities.

The luxury tax apparently would have applied to Range Rover if the Internal Revenue Service had decided to put the vehicle in the same category.

Even with the truck-versus-car ruling, Range Rover only managed to escape the luxury tax because it "gained" 22 pounds.

The tax applies to trucks with a gross vehicle weight less than 6,000 pounds. Gross vehicle weight refers to the weight of the vehicle plus passengers and the maximum cargo it's designed to carry.

Range Rover had listed its gvw as 5,997 pounds, only three pounds under the limit that would have made it tax-exempt. At the request of the U.S. subsidiary, Rover Group in Britain "recalculated" its gvw, which turned out to be 6,019 pounds, Baker said.

He said the gvw hadn't been updated since 1987, despite some changes to the vehicle that pushed it over the 6,000-pound threshold.

Car output climbs 31% to 111,538

By Anne E. Wright
CHIEF STATISTICIAN

All U.S. assembly plants will be closed today in observance of Martin Luther King's birthday.

Scheduled U.S. output of 111,538 cars last week was 31.10 percent above the prior week's total and 32.59 percent over the same week in 1990.

Year-to-date, 258,500 cars have been produced, 47 percent above 1990's total.

Truckmakers scheduled 55,823 units last week, 31.47 percent above the prior week and 2.28 percent above the year-ago week.

So far this year, 134,223 trucks have been assembled, 10.41 percent ahead of 1990.

General Motors reported that two plants will be idle this week: the Lansing, Mich., (Reatta Craft Centre) car plant and the Baltimore truck plant.

Ford Motor Co. has extended downtime for one week at the following plants: St. Paul, Minn.; Atlanta; and the car line of the Lorain, Ohio, facility. Downtime at the Wayne, Mich., truck plant has been extended for two weeks.

Ford resumed one shift of production at the Edison, N.J., truck plant today.

Ford's Hermosillo, Mexico, facility is idle this week because of weak sales. The plant produces the Ford Escort and the Mercury Tracer for sale in the United States.

Mazda Motor Manufacturing (USA) Corp. reduced each of its two shifts by 70 minutes each day last week in response to a 20 percent decrease in orders for the Ford Probe. The reduction is scheduled through Feb. 2.

Five of Chrysler's seven car and truck plants are slated to operate this week. The Warren, Mich., and the Sterling Heights, Mich., truck plants are idle.

Canada cars rise to 22,574

Canadian auto output was scheduled at 22,574 units last week, 32.56 percent above the prior week and 68.46 percent over the 1990 week.

Canadian truckmakers estimated assembly at 10,635 units last week, 13.43 percent below the prior week and 20.19 percent below 1990.

Production at GM's Scarborough, Ontario, truck plant has been reduced to one shift effective today. The plant will run alternating shifts until the end of February.

Unrest and lack of cash cloud Soviet auto ventures with West

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — Lack of funding and political upheaval in the Soviet Union are combining to put the brakes on four proposed automotive ventures involving Western firms.

Specifically:

- Chrysler Corp.'s talks with the light-truck manufacturer RAF in the embattled Baltic state of Latvia appear to be going nowhere.
- Plans by Italy's Fiat S.p.A. and France's Automobiles Peugeot to build some 1 million cars a year in separate ventures are proceeding through difficulties.
- A proposed joint venture between Germany's Mercedes-Benz AG and Japan's Mitsubishi Motors Corp. to build as many as 300,000 mid-sized cars a year has been placed on hold.

"The general economic situation in the Soviet Union is so depressed that they have postponed the thing," a Mercedes spokesman said. "Passenger cars are not a priority for them."

Two years ago, Ford Motor Co.'s talks with Soviet officials about possible production of the Scorpio sedan at the GAZ plant in Gorki collapsed, primarily because of financial issues.

Chrysler's talks with the RAF factory in Jelgava, not far from the strife-torn Latvian capital of Riga, are understood to have involved licensing the Voyager minivan. Last year, Chrysler officials confirmed talks with RAF and also with the UAZ factory in the Soviet Union.

The two sides discussed replacement of the Latvian

War, recession batter buyers; industry retreats

Plants shut as sales fall 25%

This story was reported by Automotive News Staff Reporters Joseph Bohn, Kristine Stiven Breese, Laura Clark, Phil Frame, Jim Henry, Kathy Jackson and Liz Pinto.

The Persian Gulf War and a widening recession are beginning to pummel auto industry sales, forcing cutbacks in dealer orders and factory output.

Domestic manufacturers moved swiftly to close 11 plants this week in response to a sharp drop in dealer orders. At the same time, Big 3 and transplant vehicle sales dropped 25.5 percent for Jan. 11-20.

Big 3 shut 11 plants, Page 42

Even some previously high-flying importers like American Honda Motor Co. Inc. and Toyota Motor Sales U.S.A. Inc. are getting shot down.

Among the automakers producing vehicles in the United States, only Mazda Motor of America Inc. and Nissan Motor Corp. in U.S.A. reported sales increases.

The Big 3 and transplant carmakers delivered 191,029 cars and trucks in mid-January, 25.5 percent fewer than a year earlier. The falloff was exaggerated by the fact that there were eight selling days this year and nine last year.

A total of 124,240 cars were sold, a 20.3 percent drop; truck deliveries of 66,789 plunged 33.7 percent.

Toyota reported the biggest sales plunge among domestic automakers; its sales fell 44.8 percent. Chrysler Corp. does not report 10-day sales. *Automotive News* estimated that Chrysler's total vehicle sales were down 43.4 percent.

Cadillac was the only Big 3 car division that had an increase in sales. Cadillac's sales rose 33.2 percent; Lincoln suffered a 50.6 percent drop in deliveries.

All domestic truckmakers except Nissan reported sales declines.

Import sales weren't much better, but when combined with domestic deliveries, the sales decline wasn't quite as bad. A total of 301,992 imported and domestic vehicles were delivered in mid-January, down 23.2 percent from last year.

The four automakers that reported import car sales delivered 17,835 cars in the mid-January period, 31.57 percent fewer than last year. Pontiac and Mercury were the only import makes with increased sales.

Automotive News estimated all other import car sales of 31,019, down 9.63 percent from mid-January last year.

General Motors and Toyota are the only automakers that report import truck sales. They sold 4,563 trucks, down 31.56 percent.

Automotive News estimated other import truck sales at 8,692, a 5.36 percent drop from last year.

Ford may swing ax at suppliers

One-third could be dumped to provide jobs for UAW members

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. may ax as many as a third of its 3,000 suppliers under an agreement with the UAW to try to create jobs for union members.

At a week-long meeting of top Ford and UAW officials in Florida this month, Ford agreed to give the union a list of all its suppliers so the union can target the ones with which it believes it can compete.

That list should be in the union's hands by mid-February.

The Florida meeting was called to update the company and the union on provisions in the national contract that was signed last October. Those present included Jack Hall, Ford's chief bargainer, and Ernie Lofton, UAW vice president in charge of the union's Ford department.

Under the new contract, Ford agreed to work with the union to preserve and to replace jobs that may be lost due to outsourcing. The contract gives the union the right to bid for those jobs and to bring the work in-house to Ford plants.

Jeff Washington, president of UAW Local 900 in Detroit, who attended the Florida meeting, said Ford officials claimed that about a third of Ford's suppliers could be eliminated and replaced by UAW workers.

'Call to arms' requires credit firms to trim interest rate on car loans

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

It's a small favor to anyone on active duty in the Persian Gulf war. But under the Soldiers and Sailors Relief Act of 1949, National Guard personnel and reservists called to active duty are entitled to have interest rates on car loans and mortgages reduced to 6 percent, which could cost lenders an estimated $12 million annually.

As a result, all of the Big 3 automakers, their subsidiaries and other lending institutions are busy rewriting loans for men and women in service. On a $12,000 48-month auto loan at 12 percent, the lender would lose about $300 a year at the lower rate.

An estimated 40,000 reservists called to active duty have car loans.

Despite flagging auto sales and sinking profits, none of the automakers are tracking the number of loans being rewritten, nor are they calculating projected losses caused by reducing interest rates.

Rob Strickland, manager of customer relations at Ford Motor Credit Co., said the law requires creditors to rewrite interest rates on installment loans to 6 percent simple interest while a soldier or sailor is on active duty. "We go beyond that by deferring a customer's payments to the end of the contract if they are in tough financial straits," he said.

Automakers also have extended reduction of interest rates to auto leases.

Deferring payments may not be as gener-

WAR PAY:

Honda supports called-up workers best; Two makers may improve their plans

By Colleen McDonald
SPECIAL TO AUTOMOTIVE NEWS

Two automakers are considering giving more support to employees who are called to active duty.

Honda of America Manufacturing already has said it will make up the full difference in pay for its workers — military pay is about a third of factory pay — for as long as they are on duty. The Big 3 have been making up the difference for just 30 days. Most transplants are somewhere in between.

Health benefits are kept up for the same periods.

Both General Motors Corp. and Toyota Motor Manufacturing USA Inc. are reviewing their 30-day policies for possible extension, said spokesmen.

The law requires only that pay differences be made up for two weeks and a reservist's job be held open until active duty is complete.

At least 476 employees of automakers are among the 188,000 reservists who have been called up so far, and another 2,294 are in reserve units.

● At Honda of America Manufacturing Inc., 17 employees have been called up to active duty; 65 more remain in the reserves.

● At Toyota Motor Sales USA Inc., four workers have been called up; 50 more are in the reserve. Spokesman John McCandless said they will receive full pay and benefits up to one full year. At Toyota Motor Manufacturing USA Inc., 12 workers have been called up; close to 100 remain in the reserves, said spokesman Jim Wiseman. The difference in pay is made up for 30 days, but a proposal to extend support for six months is being considered, said Wiseman.

● At Nissan Motor Corp. in U.S.A., 11 employees have been called up; another 68 are in reserves, said spokeswoman Janice Cunningham. Pay difference is made up for 180 days, she said.

● At General Motors, nearly 300 employees, including three from Saturn, have taken military leave. Spokesman John Maciarz would not say how many were on active duty, and he said he did not know how many other employees are in the reserves.

"The 30-day policy was constructed to alleviate financial strain on the GM employee and family, and to show we care and support our military," he said.

Maciarz said that the present policy is being re-evaluated because the callup is lasting longer than first expected.

● At Chrysler, 57 reservists have been called to active duty, said spokesman Lee Sechler. He said he did not have the number of employees in the reserves. The 30-day policy is not being reviewed, said Sechler.

● At Ford, 70 workers have been called up; 2,000 are in the reserves, said spokeswoman Lin Cummins. The 30-day policy is not being reviewed, said spokesman Jim Foote.

● At Mazda Motor Manufacturing (USA) Corp., two employees have been called up; 12 more are in the reserves, said spokesman Tom McDonald. Pay will be made up for 90 days.

Dealers wary of patriotism as sales tool

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Dealer ad groups and dealers who had been running ads with patriotic themes in weeks leading up to the Gulf war have backed away from the theme to avoid any impression that they are trying to capitalize on the war.

The 4-County Honda Dealers in metropolitan Detroit and the Kansas City Region Toyota Dealers Association had been running television commercials to let consumers know that some of their vehicles are built in the United States.

The Honda ad features a man reading his newspaper over breakfast. The voiceover informs him that "the No. 1 selling car in America is made by Americans in America."

The Toyota ad carries the themeline "Toyota value is downright American."

Both groups said the ads were created before the war started and there are no plans to run the ads currently.

Toyota president backs U.S. effort

TOKYO — While the Japanese public generally remains aloof from the Gulf war and opposes the government plan to give another $9 billion to the cause, Toyota Motor Corp. is waving an American flag of support.

"That situation is not just someone else's problem, and we support Japanese contribution efforts," said Shoichiro Toyoda, president of Toyota Motor Corp., at a press briefing.

"We are an American company," he said afterward. "We are in Kentucky. Our own people are being called up in the reserves. We feel that what is happening there is happening to ourselves.

"I believe the Japanese government has to start making its efforts in earnest, and the Japanese people have to recognize this matter requires urgent action."

Toyoda: "We are an American company."

Big 3 intensify efforts to reduce costs

By Phil Frame and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

About 250 top General Motors suppliers were asked by the automaker to cut costs, and each will get a personal visit from GM purchasing executives to discuss potential savings.

The GM action is part of the current round of Big 3 cost-cutting.

No across-the-board target percentage for cuts was included in a letter sent to suppliers Jan. 10 by Donald Pais, GM vice president in charge of the materials management staff.

GM does have an internal overall goal for savings from suppliers, but is not making the figure public, said Merrill Almquist, executive director of purchasing activities.

In one-on-one meetings with suppliers, GM is offering long-term contracts of three years or more in exchange for actual price cuts of 3 percent in the first year and 2 percent in each of the next two years, according to a supplier. The cuts must be real: Suppliers may not hold prices and claim they are lower because of inflation.

"He (Pais) just summarized . . . the overall competitive environment and the need for us to work jointly in cost reduction," Almquist said. "He went on to indicate they would be contacted personally by executives from the materials management staff from each of the divisions."

At a supplier conference in early December, Ford Motor Co. asked its suppliers for a 1 percent price reduction starting Jan. 1 on components, material, machinery and equipment.

Chrysler Corp. said last week it has not asked its suppliers for price cuts.

The GM visits, which have started, are from senior purchasing officials from Buick-Oldsmobile-Cadillac Group's Cadillac, Flint and Lansing automotive divisions, the Chevrolet-Pontiac-Canada Group, Powertrain Division, Truck

Industry groups file suit to block N.Y. air law

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — The auto industry has challenged New York's plan to adopt California emission standards beginning in the 1993 model year.

The suit, filed by the Motor Vehicle Manufacturers Association and the Association of International Automobile Manufacturers, seeks to overturn the regulation, which took effect last November.

The decision could have major ramifications for the industry. The new federal Clean Air Act mirrors California's emissions standards when it begins to take effect in model year 1994.

Massachusetts moved first to adopt California standards and passed a law — but has yet to write regulations. Other states in the Northeast may follow, and Texas and Illinois have considered it.

The 1977 Clean Air Act allowed states to adopt California standards as long as they gave two years notice.

Until last year, no state had exercised that right. But states are discovering they may be able to comply with federal clean air standards earlier — and not be subject to other more onerous requirements — by cracking down on cars a year earlier than the new bill would require.

The states would be avoiding penalties applied to heavily impacted urban areas that might affect vehicles, highway funding and construction projects.

General Motors, Ford and Chrysler also are named as plaintiffs in the suit. So is Bob Johnson Chevrolet in Rochester, N.Y. The dealer claims his costs would rise significantly, his choice of vehicles for sale would shrink and his duties to inspect, maintain and service would increase if the rules are passed.

The industry's suit, filed in the State Supreme Court in Albany, argues that only legislators can vote to adopt California standards. It can't be done by regulators, the suit contends.

The New York rules were set by Thomas Jorling, commissioner of New York's Department of Environmental Conservation and a former official with EPA in Washington.

Jorling thinks the industry tried to kill the California adoption provision in the federal law, but so far the industry has not objected to the Massachusetts law.

The main thrust of the suit is against the additional burdens because New York wrote rules that differ from California's.

Manufacturers are concerned about changes in sampling of assembly line testing; about defect and warranty data reporting; about redefinition of small volume makers; and about bringing in vehicles from out of state.

But the most important point, according to the manufacturers, is how many engine families are involved. These are crucial because development of emission systems may stop long before production stops.

States are discovering they may be able to comply with federal clean air standards earlier by cracking down on cars a year earlier than the new bill would require.

CLEARING THE AIR

Under California rules, automakers will be required to meet strict tailpipe emissions standards in the 1993 model year. But under the new federal Clean Air Act, cars sold in the rest of the country will have to meet those same limits between the 1994 and 1996 model years. A second nationwide phase could begin in 2003 if the EPA says it's necessary.

Emission	Current limit	1993 Calif. 1994-96 U.S.	Possible U.S. 2003
Hydrocarbons	0.41 gpm	0.25	0.125
Carbon monoxide	3.4 gpm	3.4	1.7
Nitrogen oxide	1.0 gpm	0.4	0.2

Autolatina boosts prices 19.9%

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Despite a pricing row with the Brazilian government, Autolatina raised prices 19.9 percent last week. Autolatina is the joint venture between Ford Motor Co. and Volkswagen AG.

The increases come amid soaring inflation in Brazil. Since late last year, inflation has been rising 20 percent per month.

Autolatina is facing charges that it has increased prices in recent months in excess of inflation even though sales are down and dealers have had to offer discounts to clear their stocks.

Two other Brazilian automakers, Fiat and General Motors, also raised prices last week, but much less than Autolatina. Fiat's prices went up 9.9 percent, and GM's increases ranged from 6 percent to 9.7 percent.

The charge against Autolatina was made in December by Economy Minister Zelia Cardoso de Melo.

Cardoso de Melo forwarded her complaints to the justice minister. He sent them to the secretariat for economic defense, which is in charge of protecting consumers and impeding monopoly practices.

Autolatina directors were summoned to Brasilia late last year and were given until Jan. 18 to provide detailed information to the secretariat on the company's investment plans for the next three years.

That information, much of it confidential, was delivered Jan. 18, according to a spokesman for the company. The spokesman said Autolatina is not engaged in cartel pricing and that the price increases have been made to cover higher costs for parts and other expenses.

The government is studying the documents for further action.

The Autolatina spokesman said that if anything is done, it will be on the price question and not, as has been speculated in the local press, on the composition of Autolatina. Cardoso de Melo has expressed interest in investigating the partnership, which was announced in 1986 and began operating in 1987. Ford and VW now control 60 percent of the Brazilian market.

RANDY SANTOS

Fairfax County, Va., sheriff's deputies talk with Chrysler dealer Will Graves, center, after executing a court order to take over the dealership for Chrysler Credit Corp.

POPULAR MECHANICS/JIM DUNNE

Mercury dealers gain a minivan for the 1993 model year, a vehicle about the same size as Plymouth's Voyager.

First peek at Ford, Nissan minivan

Ford Motor Co. is testing near-final versions of its new minivan, which is being jointly developed with Nissan. The vehicle will be built at a Ford plant in Avon Lake, Ohio, and is set for a spring 1992 introduction as a 1993 model.

The tape disguise and front and rear coverings, above, cloak softly rounded styling similar to the Toyota Previa with flush-mounted glass and door handles. But it has a squat car-like stance akin to Mazda's MPV or the Chrysler minivans, which the Ford/Nissan entry virtually mirrors in dimensions.

Power will come from a transversely mounted 3.0-liter V-6 that will be sourced initially in Japan but later will be built at Nissan's plant in Smyrna, Tenn.

A crease down the right side indicates that the rear door slides along the body rather than opening outward. The backlight runs the width of the one-piece liftgate.

The Ford version likely will be called the Villager; it will be sold only through Lincoln-Mercury dealers.

Chrysler Credit claims delinquent Va. dealership

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Maverick Chrysler dealer Will Graves was talking on the phone with his lawyer last Thursday when sheriff's deputies and Chrysler Credit Corp. employees trooped into his dealership in the Washington suburb of Falls Church, Va.

By the time Graves hung up, Chrysler had taken possession of virtually everything inside Graves Quality Chrysler-Plymouth, and the deputies had shooed his employees out the door.

Before long, his 109-car inventory was loaded on car carriers and driven away, to be used to partially satisfy an overdue debt of $2.6 million.

The following day, Graves was philosophical, angry, upbeat, defiant, grimly humorous and in shock — all at the same time.

"They asked me for $2.6 million, and I didn't have it on any given day to give it to 'em," he said last Friday.

Graves said most of the debt was for floorplanning.

To pitch in and try to save the dealership, Graves said half of his 22 employees had been working without pay since Jan. 1, and half were getting only part of their pay.

Despite everything else that had happened, it really seemed to bug him that the Chrysler people didn't wait for him to get off the phone before they started taking over.

Chrysler Corp. spokesman Tom Jakobowski said Chrysler Credit obtained a seizure order from the Fairfax County (Virginia) Circuit Court.

The 36-year-old Graves said he made a name for himself with touches like giving out his home phone number with every car sold and in every advertisement, as well as delivering free loaner cars to service customers.

He said the dealership had exceeded all of Chrysler's goals for customer satisfaction and sales, but the business had been plagued by financial troubles and run-ins with Chrysler Credit since he bought it 2½ years ago.

"The two things you need in this business are ability and money," Graves said, "and we were long on ability but short on money. We are very profitable in every department — except new cars."

He said he was in the midst of his "grand opening" in February 1989 when Chrysler Credit called and told him the dealership had been put on "finance hold," meaning he would get no more cars to sell until further notice. Graves estimated that the store was on finance hold about one-third of the time that he owned it.

GM dealers happier, Power survey reports

Happier days appear to be here again for General Motors dealers.

Each of GM's car and truck divisions scored significant gains in J.D. Power & Associates' 1990 dealer attitude survey. The annual study, reflected in Power's Dealer Satisfaction Index, allows dealers to grade manufacturers in four areas: business terms, service support, sales support and vehicle supply.

In 1990, dealers representing 14 divisions gave their franchises higher scores than in 1989. Half of the gainers were GM divisions. Pontiac's score was up four points; Geo rose an industry-leading nine points. Buick, GMC, Oldsmobile, Cadillac and Chevrolet all gained between five and seven points.

Only Porsche, Honda and Mercedes-Benz improved as much a. any GM nameplate. Last year's top scorer, Range Rover, also improved, but it was topped by newcomer Lexus.

Chevrolet, Geo and GMC — which were at the bottom of the list a year ago — still fall below average on Power's index. So does Oldsmobile. Buick, Pontiac and Cadillac — the three top domestic brands — were just above average.

In its 1990 survey, Power did not release below-average scores; they were obtained independently by *Automotive News*. Power did release them in 1989, though, making industry-wide year-to-year comparisons possible.

GM's newest division, Saturn, scored an industry-high 147. But Saturn, Infiniti (133), Sterling (102), Jaguar (101) and Alfa Romeo (100) were listed on a separate scorecard for new operations or small samples.

2 RV executives buy Starcraft

Owners promise to repay dealer holdback, warranty claims

By Joseph Bohn
TRUCK EDITOR

Two RV executives have purchased Starcraft Corp. of Goshen, Ind., for $12 million. They promise to repay dealer holdbacks and warranty claims and restore the company to prominence.

Kelly Rose, former co-owner of ASA Inc. in Elkhart, Ind., an electronics supplier, and Steve Kash, owner of Kentron Inc. in Elkhart, another major van conversion firm, purchased Starcraft Jan. 18. The firm had been in Chapter 11 since December.

Starcraft officials immediately sold the RV operations, which produce motor homes, travel trailers and fold-down camping trailers, to Jayco Inc. of Middlebury, Ind., for an undisclosed amount. Starcraft now produces only van conversions.

Rose, who sold his interest in ASA last August, is Starcraft chairman.

Kash, who also owns Kentron, is Starcraft chief executive officer.

Richard Newberry, who guided Starcraft through its financial difficulties, will stay on as president, chief operating officer and a board member, Rose said.

Newberry also became a stockholder in the firm.

Greg Hardin, formerly an executive with Explorer Van Co. in Elkhart, was named Starcraft vice president of sales last week. He also became a stockholder and board member.

Rose and Kash paid almost twice their original bid for Starcraft after getting into a last-minute bidding war with the Schrock Warrick Group, formed by another pair of Elkhart-area RV executives.

The $12 million included $7 million in cash, plus $5 million paid to CitiCorp for previous loans, Rose said.

Of the $7 million, $2 million was disbursed to unsecured creditors, which include company suppliers and junk bond holders.

Some of the money also went to pay employee medical costs.

Officials also agreed to pay 0.5 percent of their net sales to all unsecured creditors for five years. They estimate they owe about $500,000 to dealers for holdbacks and warranty claims.

"We figure about $35 million was lost in this whole deal (by former investors and creditors)," Rose said. "We're making every effort to restore the confidence of our suppliers, our unsecured creditors.

"We also want to restore dealer confidence in the firm as one of our top priorities," he said.

Rose said that after taking Starcraft out of Chapter 11, he and his partner purchased it "free and clear," with a "very minor" amount of debt.

Its assets are secured with lending institutions, he added.

Rose reportedly became a multimillionaire from the sale of ASA, which he co-founded and operated for 14 years.

Kash is sole owner of Kentron.

Starcraft and Kentron will be operated as separate companies, Rose said.

He conceded that there should be some synergies between the two van conversion operations that "we ought to be able to take advantage of."

He said Newberry, as Starcraft president and chief operating officer, and Richard Roush, as Kentron executive vice president and chief operating officer, will explore ways to cooperate for the benefit of both firms.

Starcraft was the industry's third-largest van converter last year.

Kentron was a top 10 pool account with Chevrolet and Ford.

Starcraft has been producing 10 vans a day during its financial difficulties. Rose said his short-term goal is to increase production to 20 a day. At its peak, Starcraft produced 80 a day.

He said longer-term production increases depend on general economic conditions.

"Our short-term goal is to restore Starcraft's name and to build on the strength of the quality people here," Rose said.

Starcraft will exhibit nine vans at next month's National Automobile Dealers Association convention in Atlanta.

BOBBY UNSER AND ANGLO AMERICAN.

Lessons in competition

Europeans see the future today in Japan

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — At home, France and Italy have built a Maginot line of resistance to an onslaught of their markets by the Japanese industry. But in Japan, French and Italian automakers are trying to claim a slice of the Japanese market, however thin.

Trade barriers limit Japanese sales in France and Italy. In 1990 Japanese car sales in Italy were 46,030, or 2.0 percent of the market; in France, Japanese sales were about 79,400, or 3.4 percent of the market.

But that hardly compares to the paltry numbers in Japan, where French sales last year totaled 14,018 units in a market of 5.97 million, 0.23 percent of the market. Italian makes sold 5,933 units, 0.1 percent of the market.

The figures are minuscule, but many of the companies only started to make major investments in the last four years in Japan after a barrage of trade pressures led to an opening of the market and the rising affluence of consumers led to an import boom.

Import sales in 1990 were a record 223,923 units, or 3.7 percent of the Japanese market, but growth rates of about 30 percent a year for the last few years have attracted companies that wasted little time on the market in the past.

Japan's import market — what there has been of it — has been dominated by high priced luxury cars, mostly German. Mercedes-Benz became the No. 1 import in 1990, and cars with engines larger than 2 liters increased to 112,010 units, half of all imports.

Learning from Japan

Growing sales are not the only benefit from doing business in Japan. There is also something to learn, according to Giorgio Donetti, Far East regional director for Fiat S.p.A.

Referring to the effort to restrict Japanese cars in Europe, Donetti said, "We can't keep them out forever." And in the meantime, by selling in the Japanese market, "you can see your car vis-a-vis other cars on the road."

By learning to meet the demands of the Japanese market, Fiat and others can prepare for what might happen in Europe. Automatic transmissions and air conditioning are still not common in Europe, Donetti said. "But in Japan, these are standard. They will be standard in Europe, too."

In Japan, companies must offer what Donetti calls "a complete car." But adding air conditioning and automatic transmission just for the small volume of sales in the Japanese market is expensive, particularly on smaller, low-margin cars.

Moving to the right

In addition, there is the matter of right-hand drive. Although traffic in Japan is regulated for right-hand drive, left-hand-drive imports have been popular for a kind of snob appeal as something different. But Donetti says right-hand drive is a necessity for volume to surpass 2,000 units annually.

Of the 1,843 Fiat cars sold in Japan last year, 20.4 percent offered automatic, but there was no right-hand drive. In the hopes of increasing sales by at least several hundred this year, Fiat will start to increase the use of automatic transmission, reaching 30 percent by 1992, and to add right-hand drive, which will increase to 25 percent in two years.

Fiat's right-hand drive models are built in Italy for the British market. Japan-bound versions get required catalytic converters.

Donetti estimates Fiat sales have a potential of 10,000 to 15,000 annual sales, or more, with the right product line. This year, the Fiat Panda sold in Japan will offer right-hand drive, automatic transmission and electronically controlled variable transmission, which Fiat is buying from Japan's Fuji Heavy Industries.

The Lancia line may have more promise in Japan than Fiat nameplates, Donetti said. The company sold 1,948 Lancia models in Japan last year, 30 percent of them with automatic transmission. The target for this year is 2,700. But the long-range potential, according to Donetti, is closer to the 40,000 to 50,000 unit volume of BMW and Mercedes-Benz.

Peugeot has moved more rapidly in the Japanese market, climbing from 401 units in 1986 to about 5,600 units last year. The target for this year is 8,000. Peugeot also is planning to increase right-hand drive, from the current level of 35 percent to at least 50 percent. Some of these vehicles are imported from Britain, but more and more, a Peugeot spokesman said, the vehicles are being built in France for the Japanese market.

Renault never sold more than 300 units annually in Japan until 1986. But sales were near 2,500 last year, and the company is adding a number of new models, including the Clio, in hopes of reaching 3,500 units this year. Right-hand drive will increase from 7 percent last year to 35 percent in 1991, automatic transmission from 60 to 65 percent. Bela Horvath, director for Renault Export Japon, says the company is trying to introduce models more specifically attuned to Japanese standards and tastes.

Business is costly

A final, and costly, element of any long-term commitment to doing business in Japan is setting up a dealer network. The price of land is growing so high that many foreign businesses now refer to it as a trade barrier. It is particularly difficult for companies that have only started to expand in the market.

So far, 90 dealerships sell Fiat models through a Japanese importer, Summit Motors Japan. Expanding the network is costly, Donetti says, especially when the margin per unit is limited.

Renault also has only 90 outlets, through a Japanese importer, Jax Ltd. Renault is working with Jax to expand the network, but that effort is restricted by the price of land. Horvath estimates it will take about 250 outlets to match the kind of range Renault would like to develop in Japan.

But Renault has an additional option. Horvath says there is the possibility Renault could join forces with its new international partner, Volvo. The two could help each other to boost sales in Japan. Volvo sold a modest 10,915 units in Japan last year and is hoping to boost sales by 39 percent this year.

Import sales fall 3.4 percent in December

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Import sales fell 3.4 percent to 179,898 in December. For 1990, the import total fell 11.0 percent to 2.45 million.

European imports shone in December, as customers bought cars like the Mercedes-Benz S class and the BMW 5 and 7 series to beat the new luxury tax. The Jan. 1 levy added 10 percent to the amount of the transaction price over $30,000.

European imports rose to 42,327 in December, up 19.3 percent compared to the year-ago month.

Japanese imports fell 10.9 percent to 120,450 in December, closely matching the overall reduction in Japanese imports for the year. For 1990, Japanese imports fell nearly 10 percent to 1.72 million, but that decline was more than offset by increased production of Japanese cars in the United States.

Japan's new luxury imports — Lexus from Toyota and Nissan's Infiniti — enjoyed strong December sales. Infiniti sold 3,078 cars for the month, including 1,818 top-of-the-line Q45 models.

Lexus sold 6,743 cars in the month, including 4,956 of its most expensive model, the LS400. At 63,534 units in its first full calendar year, Lexus sold only 112 fewer cars than BMW of North America.

And BMW needed a banner month, along with its first month of significant sales of its new 850i model, at 301 units, to outsell Lexus for the year. BMW's December sales of 6,862 topped the year-ago month by 53.8 percent.

Monthly sales included 2,899 5 series models, 70.5 percent more than December 1989. Sales of the 7 series were 1,229, up 73.6 percent from the year-ago month. The 7 series starts at $50,900, which now means a $2,090 luxury tax.

Mercedes-Benz of North America had its best sales month in four years at 9,158, up 28.8 percent. The December success helped raise Mercedes sales by 3.5 percent for the year to 78,375. Sales of the 300SE jumped 87.5 percent to 943 in December.

1990 sales drop 10% in Canada

Year ends on sour note as December deliveries plunge 20%

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

New-vehicle sales in Canada declined significantly in December from the year-ago month. The total was down 20.83 percent, with cars falling 20.44 percent and trucks 21.57 percent.

From a percentage standpoint, the December plunge was nearly twice as severe as for the year as a whole.

Total vehicle sales for 1990 were 1,302,393, a decline of 10.89 percent from the previous year. Cars sales were off 10.21 percent and trucks 12.31 percent.

It was the industry's worst year since 1982.

Each of the Big 3 reported sharp declines in sales of North American-built cars and trucks for the month and the year.

Domestic automakers pinned part of the blame for the sluggish December on a year-end tax change.

Customers — especially fleet buyers — were expected to put off purchases until after Jan. 1, when a new goods and services tax took effect.

The levy, which replaced a 13.5 percent manufacturer's tax, has effectively reduced car prices about 4 percent.

Automakers also blamed concern about oil prices and Canada's high interest rates for the dip. The prime rate was 12.25 percent last week.

Sales of imported cars increased 9.09 percent in December but still slipped 1.63 percent for the year.

With its imported and domestic cars, Honda Canada Inc. topped 100,000 sales in Canada for the first time.

In doing so, it closed the gap between itself and No. 3 car-seller Chrysler Corp. to 10,971 cars.

Just a year earlier, Chrysler sold 54,483 more cars in Canada than Honda.

Imported truck sales fell 1.08 percent in December but climbed 2.12 percent for the year.

Staff Correspondent Alex Law in Toronto contributed to this report.

War may kill Canada's bid for sales gain, Toyota says

By Steve Mertl
SPECIAL CORRESPONDENT

VANCOUVER, British Columbia — The president of Toyota Canada Inc. says the Persian Gulf War could end the Canadian auto sales recovery before it starts.

Toshio Kunii, here for the opening of the Vancouver Auto Show, said he had hoped Toyota's Canadian sales would increase 5 percent this year after a slump in 1990. Like other auto executives, he expects the recession that started last summer to begin lifting by May.

But a prolonged war in the gulf could change all that.

"Psychologically, customers will be in a very indecisive mood," Kunii said in an interview. "That will keep them from making big spending decisions."

If the war continues, he said, oil prices are bound to go up, triggering inflation.

"That means less purchasing power," he said.

"We do hope the war won't last — not for our business, but for the peace of the world."

> "We do hope the war won't last — not for our business, but for the peace of the world."
>
> **Toshio Kunii**
> president, Toyota Canada

Toyota sold 94,264 cars and trucks in Canada last year, a decline of less than one percent from 94,605 in 1989.

The overall decline for the industry was 10.9 percent.

Toyota introduced the Lexus in Canada last fall and sold 600 cars in the first three months.

Kunii acknowledged a slump in luxury car sales in Canada. The market share for luxury autos in Canada in only half what it is in the United States. But he still hopes to sell 2,000 Lexus models in 1991.

"This is our second year, so we are still in the launching stage," he said.

Toyota's Cambridge, Ontario, assembly plant, which builds the Corolla subcompact, is running at full capacity — 63,000 cars a year on two shifts, Kunii said. About 70 percent are exported to the United States.

CONTROL THE KEYS... CONTROL THE SALE...
Sell More Cars!

Supra KeyBoxes will make your salespeople more professional, productive, and profitable.

- KeyBoxes give salespeople instant access to the keys to any vehicle on the lot. Since they never have to leave a prospect, they stay in complete control of the sale.
- KeyBoxes help salespeople concentrate on their customers' needs, allowing them to move quickly from one vehicle to another, for a smoother, more professional sales presentation.
- Salespeople aren't wasting time looking for keys, they can spend more time selling. And customers appreciate not having to wait for keys. They look at more cars in less time - which means they're more likely to make a buying decision.
- Instant access to keys, control of the sale, a smooth presentation, and customer convenience make the entire sales force more efficient - and each sale more cost-effective.

The Supra MAX is the most popular auto key box on the market. No other auto key box can match its strength, durability, and storage space.

There were 8 selling days in the period this year and 9 last year.

SALES

FROM PAGE 1

Meanwhile, even uncharacteristically heavy discounting isn't saving Honda and Toyota dealers who are cutting back on accepting their new-car allocations for the first time.

American Honda, like many other importers, tells dealers what their allocation is when the vehicles arrive at the port or come off the assembly line. At that time, a dealer can accept, refuse or alter his allocation.

Bob Butorac, American Honda spokesman, said, "Until recently, demand for Hondas far exceeded supply so dealers very rarely refused their allocation."

While most of the Honda and Toyota dealers contacted by *Automotive News* are still accepting their full allocations, some, such as a Phoenix Honda dealer who asked not to be named, are beginning to cut back.

The Phoenix Honda dealer said falling sales forced him to accept only 64 percent of the 140 cars he was allocated in his last shipment, and he plans to accept a similar percentage of his next shipment.

He said his sales were off 20 percent despite "discounting the heck out of Hondas now, which is something we have never had to do."

Similarly, a Gardena, Calif., Honda dealer reported he is cutting back on vehicle allocations by 20 to 30 percent.

Rich Meyers, sales manager for Jerry's Toyota in Parkville, Md., also cut his allocation by 15 to 20 percent.

Another Toyota dealership sales manager in Illinois said he'd cut back "a little bit" and would "certainly be very selective in what I take in allocations."

And Pat Reilly, sales manager at Torrington Toyota in Torrington, Conn., said, "I guess you could say that" he had trimmed his orders.

"The lots are full and not moving too fast. December into the first part of January was very poor compared to any other year lately," Reilly added.

Nissan spokesman Don Spetner said, "Dealers tell us traffic is slow and it's tough out there." He conceded "some dropoff" in dealer orders.

At Mossy Nissan in National City, Calif., Jim Evans, general sales manager, echoed that, saying he reduced his orders by 20 percent. "We feel we can do as much business with less inventory so that's where we're cutting our budget," he added.

Ray Venegas, general sales manager for West Covina Nissan in West Covina, Calif., said he was trying to get his inventory down to 45 days' supply by accepting only 80 percent of his factory allocation.

But he said, "Since news on the war is slowing down and people aren't so glued to the TV, we're starting to see people back in the showroom again."

Rick Lepley, Mitsubishi Motor Sales of America Inc. senior vice president of sales, said, "Business could actually be much worse," but added that "it depends on what area of the country we're talking about. The Southwest is pretty strong, but the Northeast is very weak."

In Winston-Salem, N.C., Bob King, owner of Bob King Mitsubishi, said, "Orders are down 30 percent from this time last year. So, needless to say, I have a pretty good inventory."

Primarily because of the war, Mercedes-Benz of North America Inc. found early January sales results were even worse than expected, said Mercedes spokeswoman Linda Paulmeno.

"What's happening in the Gulf is having an effect out of proportion to any other factor," she said. "The state of the economy, the luxury tax, those are adding to it, but not anywhere in proportion to the effect the (Gulf) crisis is having."

Mercedes was already planning on poor sales in early 1991 before the fighting broke out.

The new luxury tax on cars costing more than $30,000 boosted sales in December to the best month in four years, but the Jan. 1 tax pulled forward sales that otherwise probably would have taken place in the first quarter.

Nissan's Infiniti Division is still riding high due to special circumstances. Debra Sanchez Fair, Infiniti spokeswoman, said orders are up 300 percent because dealers are replenishing stocks after a big sales month in December during which customers "tried to beat the increased gas-guzzler tax and luxury tax."

"In addition, last January we had only 51 dealers. Now we have 78. And last January was really our first full month of operation," she said.

General Motors' Saturn Corp. is also benefiting from still being in the launch phase. Saturn's demand has steadily outstripped supply because of a slow production startup.

"Our orders are strong," said Mark Tanter, Saturn spokesman.

Other GM divisions are struggling, though.

Chevrolet's dealer orders have dropped by 50 percent during the past seven weeks from their normal 50,000 to 60,000 vehicle-a-week rate, according to General Manager J.C. "Jim" Perkins.

Reg Harris, Pontiac spokesman, said business was soft before the war began and went further downhill after that.

Pontiacs sales were down 31.1 percent for the second 10 days of January. He declined to provide information on Pontiac's orders.

Stephen Wasley, owner of Wasley Buick-Oldsmobile in Bristol Terrace, Conn., said he has about an 85-day supply of Buicks and Oldsmobiles and basically has stopped ordering any cars until he sees some encouraging news about the war and some turnaround in the economy.

"Business has virtually stopped since the middle of December. I have about 90 units in stock and about 50 more coming, which is a lot of cars for my dealership."

He said Buick sales are a little better than Oldsmobile sales, with four-door Regal and Park Avenue doing the best. He said the factory is not really pressuring dealers to take cars but said Oldsmobile is playing games by making dealers take slow-moving units if they want to get the better-selling Bravada, Custom Cruiser and 98.

Wasley said he is not ordering any more units beyond what he has coming.

Richard H. Orr, Buick director of distribution, said Buick "hasn't seemed to be affected as much as other companies," but admitted dealer concern about the war.

As of last week, Buick's order bank was 180,000 cars. In the last four weeks, Buick received 43,000 new orders, that includes the week of Christmas.

Joel Pitcoff, Ford Motor Co. research and analysis manager, said dealer orders for Ford and Lincoln-Mercury vehicles, excluding fleet sales, are coming in at the same rate as early December.

But he called customer reaction in dealer showrooms "mixed," with some "people's minds elsewhere. It's hard to sign a sales contract with your fingers crossed."

Mark Smith, president of the 1990 Ford Division National Dealer Council and owner of Dick Smith Ford in Raytown, Mo., said he and other dealers have seen an increase in traffic since the war.

"In the weeks leading up to Jan. 15, traffic was very slow; but we've seen an increase in traffic since the war has started," said Smith.

Still, a large Florida dealer said his sales and showroom traffic are off 50 percent from recent months. He has stopped advertising and laid off several non-sales employees, but continues to be optimistic.

"I'm counting on March to be a blowaway month," said the Florida dealer.

Chrysler Corp. won't discuss its dealer orders any more than it will its 10-day sales, according to Tom Jakabowski, company spokesman.

Dealerships such as Don-A-Vee Jeep Eagle, Bellflower, Calif., say they are cutting back on orders and replacing inventory selectively.

Douglas Dennet, Don-A-Vee's general sales manager, said he reduced his orders by 25 percent.

Big 3 shut down 11 plants as orders dry up

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

The Big 3 have closed 11 assembly plants and one line in response to sharp decreases in dealer orders.

Output dips for cars, trucks, Page 45

The following Ford Motor Co. plants are idle this week: the Wayne, Mich., car facility; the St. Louis and Edison, N.J., truck plants; and the car and truck lines at the Kansas City, Mo., facility.

General Motors reacted to the cut in dealer orders by closing car plants in Van Nuys, Calif., and Oklahoma City, and truck plants in Baltimore; Pontiac, Mich. (West); Shreveport, La.; and Detroit. The truck line at the Lordstown, Ohio, facility was also idled. The closings are for one week except at Pontiac, which is scheduled to resume production Feb. 18, and Shreveport, which is slated to return to work Feb. 11.

On Jan. 2, GM indefinitely reduced production at its Willow Run, Mich., car facility and the Flint, Mich., truck plant to one shift.

GM also announced that the Kansas City, Kan., and the Van Nuys, Calif., car plants will be reduced to one shift indefinitely as of April 2.

Mazda reduced each of its two shifts by 70 minutes Jan. 7 in response to a 20 percent decrease in Ford Probe orders. The reduction is scheduled through Feb. 2.

Chrysler Corp.'s Warren, Mich., truck facility remains down this week. It closed the week of Jan. 7 and is expected to resume production Feb. 4.

Chrysler transmissions target of NHTSA inquiry

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The federal government is investigating whether as many as 4.45 million Chrysler Corp. cars and trucks could be prone to jump from park into gear.

The investigation covers 1981 to 1990 front-wheel-drive vehicles with automatic transmissions and shift levers on the steering column.

The National Highway Traffic Safety Administration opened the investigation in response to a petition filed by the Center for Auto Safety. The consumer group said it has 269 consumer complaints and 235 reports of accidents that caused 93 injuries and four deaths.

"We're confident we don't have a problem," said a Chrysler spokesman. He said the automaker will cooperate with NHTSA during the investigation.

NHTSA said the transmission could jump with the engine either on or off.

The investigation covers: 1981-1989 Dodge Aries and Plymouth Reliant; 1982-1983 Dodge 400; 1982-1987 Chrysler LeBaron; 1983-1984 Chrysler E Class; 1983-1987 Dodge 600; 1983-1988 Chrysler New Yorker; 1984-1990 Plymouth Voyager/Grand Voyager, Dodge Caravan/Grand Caravan and Dodge Mini Ram Van; and 1985-1987 LeBaron GTS, Dodge Lancer and Plymouth Caravelle.

The Chrysler case has been opened as an "engineering analysis." That is usually the second stage leading to a possible recall following a preliminary investigation.

NHTSA has also begun an engineering analysis to determine whether the seat belts on the 1990 Ford Taurus are defective. The safety agency has received 19 complaints that occupants can't get out of the belts. A defect could affect 308,650 cars.

The agency also opened several preliminary investigations:

- 1990 Honda Accord, for rear trunk lid torsion bars that are unable to support the lid, allowing it to fall unexpectedly. A total of 180,501 cars could be affected.
- 1988-1989 Eagle Medallion, for doors that will not stay latched (33,130 cars).
- 1986-1987 Ford Escort and Ford Tempo/Mercury Topaz, for a fuel pump that unexpectedly stops working, causing the engine to stop (914,310 cars).

Toyota, Mitsubishi try 4-day workweek in Japan

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Toyota Motor Corp. and Mitsubishi Motors Corp. are experimenting with a four-day week in an attempt to reduce overtime hours.

The Japan Automobile Workers Union is willing to try the plan, but a union spokesman calls it "a second best solution."

The union prefers a five-day week of eight-hour days with weekends off, compared with the periodic Saturday shift that is involved in a four-day week of 10-hour days.

But Ichiro Ogiso, assistant director for International Affairs at the union, said, "the reduction of hours is crucial and a No. 1 priority."

"If we continue the current production system, we cannot do it. We need another system."

The union has been pushing for reduced work hours for several years. Last year, the union finally won agreement for a base contract of 1,960 hours annually.

But the tremendous sales surge in Japan has kept most plants running on overtime, with each worker averaging 2,300 hours annually including overtime. That is the equivalent of working 44 hours a week without time off for vacation or holidays.

In last spring's negotiations, the union pushed manufacturers to make special arrangements so their workers, who rarely take their full vacation, could at least take three consecutive days off once a year without feeling they were burdening their fellow workers.

Both Toyota and Mitsubishi plan to begin trial sessions limited to small machining sections for about six months.

Under Mitsubishi's plan, 100 workers in a machinery shop will be divided into three groups to work a 21-day cycle. That results in three consecutive days off twice every three weeks.

Toyota will follow a similar pattern with a total of 400 workers including 330 in the machine tools section at one plant and 70 in casting at two other plants.

The companies will study the results before deciding whether to expand the process throughout the system.

Toyota says the objective is to "reduce overtime, improve working conditions and allow families to improve their lifestyle." Another company official suggested the different work hours might attract new recruits.

But Ogiso says "it is not the best program," primarily because it requires regular Saturday shifts.

But he admitted that management and the union have to consider every possible solution.

Theoretically, a company using a four-day system can operate six days a week and reduce individual work hours without reducing production, Ogiso said.

It also means hiring more workers, perhaps 25 percent more, at a time when Japan is experiencing a severe labor shortage, particularly in the manufacturing area.

Both the Mitsubishi and Toyota trial sessions are limited so as not to affect suppliers' schedules. In addition, neither company plans on hiring more workers, although some workers might be transferred into the test programs.

Although the Japan Automobile Workers Union is determined to reduce overtime, and is even considering making an official demand for a 20 percent reduction in overtime each year, the trial sessions raise a particular dilemma.

The limited trials would mean reduced overtime, and therefore a reduced paycheck, for a small segment of workers.

There is discussion now about compensating them for the difference, so there will be no discrepancy between them and the rest of the work force.

UAW loses 3rd attempt to organize

U.S. workers at Japanese auto suppliers turn down union

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

The UAW failed last week in another attempt to bring the union to the Japanese auto supply industry in the United States.

The loss, at Indiana Precision Technology Inc. in Greenfield, Ind., was the UAW's third straight election failure among transplant parts-makers in a month.

Indiana Precision, which is partially owned by Honda Motor Co. Ltd., produces fuel injectors for Honda of America Manufacturing Inc.'s engine operations in Ohio.

The election followed by one week a UAW loss at a U.S.-Japanese joint-venture supplier, Western Wheel-Huntington in Huntington, Ind., where employees rejected representation by a wide margin.

Workers at that plant — a venture between Nippon Light Metals and Kelsey-Hayes Co. that supplies aluminum wheels to Honda — voted 242-95 against the union.

Last week's election at Indiana Precision saw the union bid defeated 214-163, with nine challenged votes.

LOST ELECTIONS

The UAW has been defeated in union votes at three Indiana suppliers in recent weeks.

Supplier	Against	For
Indiana Precision Technology Inc.	214	163
Western Wheel-Huntington	242	95
Toyoshima Steel Spring Inc.*	37	29

*Results under review

A third election one month ago at Toyoshima Steel Spring Inc. in Indianapolis resulted in a narrow 37-29 defeat for the union.

But that election is under review by the National Labor Relations Board because 10 votes were challenged.

Because of the three plants' proximity to Subaru-Isuzu Automotive Inc. in Lafayette, Ind., as well as their supplier ties to both SIA and Honda, the three elections promised a foothold for organizing those transplant car plants.

Only three of North America's 11 Japanese auto assembly plants are represented by the UAW, but those three plants are either jointly owned by or have close ties with a Big 3 automaker.

None of the more than 350 transplant parts suppliers are unionized.

"Organizing the transplants is a crucial issue for the UAW," said Harold Stack, director of labor studies at Wayne State University in Detroit.

"They've made a major commitment to doing it. It isn't going to be an easy job, but the union isn't going to go away," he said.

The UAW failed in a 1989 attempt to unionize Nissan Motor Manufacturing Corp. U.S.A. in Smyrna, Tenn.

Plans to begin organizing Toyota Motor Manufacturing U.S.A. Inc. in Georgetown, Ky., were subsequently postponed.

UAW organizers say they will step up efforts to unionize SIA in February.

Initial organizing activities already have begun.

SUPPLIERS

FROM PAGE 1

parts," Washington said. "If you own a car and the starter breaks, you blame Ford and its workers, not the supplier."

Sourcing was a big issue for the union during last year's contract talks with Ford, General Motors and Chrysler Corp. Lofton said Ford has taken the first step. He said non-union shops are the first ones the UAW will challenge, citing tool-and-die shops as an example.

"We must show we can do the jobs on a competitive basis; we're prepared to do that," Lofton said.

The process could prove politically sensitive for the union and the company because most of Ford's 375 minority suppliers are not organized.

Current suppliers are not likely to be furloughed without a fight.

Mark Jeschke, spokesman for the 3,100-member National Tooling & Machining Association in Fort Washington, Md., said only about 4 percent of his membership is organized, but he said they can do the work more efficiently and at lower cost.

"I would be surprised if Ford saved money by keeping that work in-house," Jeschke said. "Our members have made a good living with the auto industry and want to continue to do so.

> "We have a vested interest in getting that work done on time and at a competitive price."
>
> **Mark Jeschke**
> National Tooling & Machining Association

"We have a vested interest in getting that work done on time and at a competitive price."

Jeschke said the average tool-and-die shop has about 23 employees and is located in a large urban manufacturing area. He said the shops are not unionized because they are too small.

Lofton said that until the union gets a list of the suppliers, he could not estimate how many suppliers the union may target for competition or how many jobs can be created in the plants for UAW members. He said the union would target skilled and non-skilled work.

Ford spokesman Dick Routh said the company will determine competitiveness based on cost, delivery and quality. "At a time when cost efficiency is very important to us, we should deliver the best quality at the lowest cost; that's the aim of this one," Routh said.

The union never before has had access to a list of the Big 3's suppliers. Lofton described Ford's decision as a major breakthrough in union/management cooperation. "Ford is way out in front of GM and Chrysler" on this issue, Lofton said. "Ford is very serious about cooperating with its hourly work force."

Honda's 656-cc R-X minicar for the Japanese market will have a removable hardtop, and its three-cylinder engine (from the Honda Today) will develop 61 horsepower.

Honda will install an air bag in its R-X minicar for Japan

CRAIN NEWS SERVICE

When Honda Motor Co. introduces its 656-cc R-X minicar in Japan, it will be equipped with an air bag, according to Honda President Nobuhiko Kawamoto. This will make R-X the first car in the Japanese 660-cc class to be so equipped.

The R-X will have a removable hardtop and its three-cylinder engine (from the Honda Today) will develop 61 horsepower, according to *AutoWeek*, a sister publication to *Automotive News*.

Kawamoto wouldn't say when the car will make its debut.

Honda also will introduce a new Civic derivative this summer that will be a "new concept and will advance current technology for gains in emission control and fuel efficiency," Kawamoto said.

The car will be a result of Honda's view that environmental issues are No. 1 on the company's research and development priority list. Kawamoto said that Honda has done extensive research in that area and now is ready to release what it has learned in a new product.

"(The new car) will set a new standard and lead the industry into the next century in the environmental, energy and safety areas," he said.

Few details are available, but Honda engineers say fuel economy could increase 10 percent over the current Civic.

The R-X and the new concept car represent what Kawamoto refers to as Honda's "back-to-basics" strategy for the Japanese market.

Kawamoto said Honda also must to develop attractive products that will exceed its customers' needs.

Kawamcto says the Civic concept car will "lead the industry into the next century in the environmental, energy and safety areas."

In addition to the R-X and unnamed concept car, a new Civic and new Prelude are scheduled to be introduced this year.

Kawamoto says an eventual goal is to establish four independent companies, located in Japan, North America, Europe and Asia.

LOANS

FROM PAGE 1

ous as it sounds. A spokesman for GMAC Financial Services said the law also prohibits creditors from foreclosing on property or repossessing vehicles without a court order. The law was passed to protect reservists whose military pay is often markedly lower than their civilian pay.

"We will give as much consideration as we can to people under these circumstances," said a Chrysler Corp. spokesman.

The Big 3 finance companies require letters from persons called to active duty and copies of their orders before rewriting the loan.

Interest rates are reduced from the day a person is called to active duty until 90 days after the tour of duty ends, said a spokesman for First Nationwide Bank, a subsidiary of Ford Motor Co.

"As we understand the law, it affects anyone whose income changes dramatically after they are called to active duty," said Dan Brigham, vice president of communications for First Nationwide. He said First Nationwide has 200,000 mortgages in its portfolio. The thrift already has had 125 requests under the act, and Brigham said that number is "growing rapidly."

Financial institutions never recover the difference between the rate the loan was written at originally and the 6 percent cap on interest rates. Fixed-rate mortgages are running at about 9.5 percent, and adjustable rate mortgages are 10.3 percent. Interest rates on car loans are averaging about 14 percent.

HUMMER

FROM PAGE 2

states require a dealership in the state in order to sell to the public."

MacNab says the other tricky question is what to charge. Last year, the government price for the base model was "$26,000 and change."

AM General can build up to 100 vehicles on a single shift, but the line is now running at 57 per day. A second shift is used for plant maintenance.

Hummer power is provided by a 6.2-liter V-8 diesel built by General Motors in Moraine, Ohio. The engine generates 150 horsepower and provides 250 pounds-feet of torque at 2,000 rpm. Power is transmitted to a three-speed automatic and then to a two-speed transfer case.

All four wheels are driven through a unique driveshaft system that provides 16 inches of ground clearance. The vehicle is constructed using aviation-style riveting and adhesive-bonding techniques. Top recommended speed for the aluminum, steel and composite-plastic vehicle is 65 mph. Company insiders say it will run at close to 80 mph during an emergency. A 25-gallon diesel fuel tank gives it a range of 300 miles.

MacNab says a Hummer will climb a 60 percent grade and is capable of traversing a 40 percent grade. A standard Hummer weighs 5,200 pounds empty and can carry 2,500 pounds. A "heavy Hummer" version with a beefed-up suspension provides for more than 10,000 pounds of gross vehicle weight.

There are 15 primary variations on the Hummer theme. Some wear a canvas skin; others are armored with steel sheets and a fiberglass-like material called E-glass.

Hardtop versions can be fitted with various weapons: a 7.62mm machine gun, a 40mm grenade launcher, a .50-caliber machine gun and a TOW (tube-launched optically tracked wire-command-guided) missile system. The list includes a radio-electronics command vehicle and an ambulance.

Tires are Goodyear Wranglers and look relatively standard from the outside. But inside the pneumatic tire is a magnesium run-flat doughnut that provides 30 miles of run-flat capability — important if your tires are shot out.

AM General says it has not received any additional orders for vehicles or requests to speed up production as a result of the Middle East conflict.

"I can't be specific," says MacNab, "but we're ready to respond to any increases that might be required. We've looked at all of our suppliers, too, to make sure they could supply us. There is a lead-time to speed up production. It certainly wouldn't be overnight. But we are prepared to respond to whatever need."

The U.S. military has about 79,000 Hummers in service; AM General started building them in 1983. Other nations with Hummers include China, the Philippines, Thailand and Mexico.

There's even one Hummer in Baghdad. It was a demonstration model being shown to the Iraqi government. But contract negotiations broke down. An AM General representative was in Iraq to see to its return when that country invaded Kuwait. The rep caught a bus into Jordan, but the Hummer remains.

ADS

FROM PAGE 2

Andrew Jacuzzi, account executive at Chenoweth & Faulkner, the Tampa, Fla., ad agency for the Honda group, said the commercials ended a 13-week cycle last week. He doubts they'll run again: "They didn't want to seem to be capitalizing on the war effort."

A Kansas City dealer who did not want to be named said the Toyota ads last aired about six weeks ago and he's "not sure we'd run it in today's climate."

Billy Bender, of Billy Bender Chevrolet in Garrett County, Md., has similar thoughts about his own advertising: "I have thought about a war theme but it's such a personal situation I don't want to offend somebody."

An ad created by the North and South Carolina Ford Dealer Association for a high-school football game in December appealed directly to patriotism: It was a tribute to the many area men and women sent to the Middle East.

The theme song words: "From the Carolinas that heed our country's call, we salute our sons and daughters who protect our red, white and blue. Return to the Carolinas: we're so proud of you."

Harry Hastings, owner of Hastings Ford in Greenville, N.C., and chairman of the group, declined to comment about the commercial's propriety now. "We don't have any current plans to run it again," he said, "but that could change."

Automotive News Staff Reporter Liz Pinto contributed to this report.

CUTS

FROM PAGE 2

& Bus Group and Automotive Components Group.

Almquist said GM is not trying to strong-arm suppliers. GM believes in the need for cooperation with suppliers and realizes that suppliers also are being squeezed by higher costs, Almquist said.

"The tone (of the letter) was we're going to work jointly," Almquist said. "There is a need for us to deal with the competitive realities of the global automotive marketplace, which demands continuous improvement.

"We reminded our suppliers we believe our products . . . are a key success factor, and our aggressive marketing plans and the cost of developing products is enormous. (We told suppliers) the cost cannot merely be recovered through increased prices and that efforts must be placed on reducing cost," he added.

Almquist said that while GM is concerned with the state of the economy and the war in the Middle East, the aim of the cuts is to deal with more long-term industry issues, including clean air and fuel economy standards that will require large sums of money to meet.

Meanwhile, Chrysler Chairman Lee Iacocca told a group of automotive analysts that Chrysler will increase its cost-cutting goal from $2.5 billion to $3 billion. Chrysler spokesman Tom Houston said the company hopes to identify the cost cuts that would result in $3 billion in annual savings by mid-1991.

The increased cost cutting goal is not likely to include cutting the company's quarterly common stock dividend of 30 cents a share. Iacocca steadfastly has said that he would not suggest cutting the dividend under any circumstances "short of a nuclear war."

Ford last week said its cost-cutting efforts are on-going. The company has a corporate effort underway that looks at "how to make the company more efficient," spokesman Dick Routh said.

"When there's a recession and a war going on, you are going to look at cost cutting more closely," he said.

Routh denied a recent report in the *Wall Street Journal* that Ford is contemplating the sale of its 25 percent stake in Mazda Motor Corp. or any other major asset to raise cash.

Ford Automotive Group President Allan Gilmour said three weeks ago that the company will consider cutting the dividend only if the recession worsens.

SOVIETS

FROM PAGE 1

plant's 11-passenger van with a lengthened version of the Chrysler minivan, but that deal might have withered even before the recent violence in the Baltic states. Chrysler officials never said any agreement was imminent, and Soviet auto industry officials have said they are "quite pessimistic" about the Chrysler talks in Latvia.

Boris Hubaev, a Brussels-based official of Autoexport, the ministry that oversees sales of Soviet cars abroad, said last week that if the Chrysler-RAF talks are still alive "they are going very slow."

A Chrysler spokeswoman confirmed last week that "nothing is imminent, and there have been no recent discussions."

> We have the feeling (the Soviets) don't have a lot of money to spend.
>
> **Corrado Provera**
> Automobiles Peugeot

Fiat sources say the company's plans to set up production for 900,000 cars a year in the city of Elabuga by the end of the decade have slowed considerably due to political uncertainties. The planned $1.6 billion joint venture with the Soviet carmaker Elaz is spread out over three stages, beginning in 1992 with the 770-cc Oka II minicar.

The ambitious deal was concluded in 1989, but a Fiat source said the project "is definitely going slow." Fiat will not become directly involved until the plant, about 600 miles southeast of Moscow, is built. The Soviets have begun work on the foundation.

The Fiat source said the basic agreement is not threatened. But he said political uncertainties have interfered with completion of various approvals and legislative changes necessary for the project.

To help expedite the process, Fiat is preparing to open an office in Moscow.

"We are concerned, but we are not worried," he said.

The Soviet Union's lack of hard currency reserves is holding up completion of an agreement between Soviet carmaker GAZ and Peugeot. The plan is aimed at producing the French automaker's Peugeot 605 sedan in Gorki.

Automobiles Peugeot spokesman Corrado Provera said discussions are still under way, but he said, "We have the feeling they don't have a lot of money to spend."

The Soviets approached Peugeot with a proposal to put the new 605 sedan into production at GAZ's existing facilities in Gorki, where the outdated Volga sedan now is built. Peugeot, however, is insisting on a substantial upgrading of the plant.

"We are checking the technical and economic feasibility," Provera said. "It is still going on, we have a lot of technical and industrial people there right now. The big concern is financing the operation. We don't yet have all we need to have. But it is definitely still being studied."

The Soviets want to build 50,000 to 100,000 Peugeot 605s per year for their market. None would be exported, but the Peugeot badge would be used, and Provera said quality levels will be maintained.

"It will not be a robotized factory, but it will still be a Peugeot," he said.

Meanwhile, a Soviet official denied reports that the VAZ plant in Togliatti, maker of Lada models, is preparing a stock offering that would be sold on the New York Stock Exchange and the exchange in Milan, Italy. Also denied was a report that the company is seeking a Western partner to take a 45 percent interest in the company.

According to a report in an Austrian publication, 20 percent of VAZ stock would be sold on the two stock exchanges. Another 35 percent would be held by the Soviet Union's Gosbank, and the remainder would be acquired by a foreign partner.

Autoexport's Hubaev denied that VAZ is planning a privatization move, but he said a Western partnership could occur. The VAZ plant is the world's largest auto manufacturing complex. The highly integrated operation produces about 700,000 vehicles a year.

"I do not think it will be privatized," he said. "VAZ is too big. But some joint venture on a product or plant is possible in principle."

Car output drops 14% for week

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. automakers scheduled production of 94,650 cars last week, 14.76 percent below the prior week and 19.59 percent below the same week in 1990.

Big 3 shut down 11 plants, Page 42

So far this year, 352,646 cars have been assembled, 19.83 percent above 1990.

Truckmakers planned to build 52,205 units last week, 5.72 percent below the prior week and 33.95 percent below the year-ago week.

Year-to-date, 185,978 trucks have been assembled, 7.40 percent below 1990.

Ford Motor Co.'s Louisville, Ky., truck plant worked daily overtime last week. The plant produces the Ford Explorer and Ranger and Mazda Navajo.

General Motors' Reatta Craft Centre in Lansing, Mich., is scheduled to resume production this week following three weeks of downtime.

Mazda Motor Manufacturing (USA) Corp.'s plant in Flat Rock, Mich., was forced to suspend production last Tuesday after a fire in the batch mixing room of the paint shop.

The plant produces the Mazda 626 and MX-6 and Ford Probe. Production is scheduled to resume today.

Ford's Dearborn, Mich., car facility was idle last week but is expected to resume production today.

The company's Wayne, Mich., truck plant will resume production today, one week earlier than scheduled. The plant builds the Bronco and light trucks. An increase in dealer orders prompted the return to production.

Canada hikes truck assembly

Canadian automakers' scheduled output was 18,546 units last week, 18.59 percent below the prior week and 0.72 percent above the 1990 week.

Year-to-date, 65,609 cars have been produced, 39.50 percent above 1990.

Truckmakers' targeted build was 14,310 units last week, 24.40 percent above the prior week but 13.54 percent below 1990.

So far this year, 46,792 trucks have been assembled, 12.52 percent below 1990.

Chrysler's Pillette Road facility in Windsor, Ontario, is scheduled to resume production today following five weeks of downtime. The plant produces the Dodge Ram Van and Ram Wagon.

Iacocca battles to salvage minivan's reputation

Lee Iacocca to Chrysler's dealers last week: Transaxle problems could ruin minivan sales and kill Chrysler. "Without minivans," he said, "we don't eat."

Consumer Reports cites snag in A604 Ultradrive gearbox

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Consumer Reports magazine's warning against some Chrysler minivans could threaten the life of the company and its dealers, Chrysler Corp. Chairman Lee Iacocca told the company's 4,000 dealers last week.

An indignant and obviously worried Iacocca launched an extensive damage-control operation last week.

The February issue of the influential *Consumer Reports* told consumers not to buy Chrysler cars and minivans equipped with the company's A604 Ultradrive four-speed automatic transmission because of reliability problems. The 1.4 million vehicles equipped with the 2½-year-old transmission include most Chrysler minivans.

Iacocca clearly doesn't want the minivan to go the way of the Suzuki Samurai, another vehicle that was panned by *Consumer Reports*.

Last week, Chrysler executives told dealers that the company will take several actions, including a national minivan advertising campaign, a public relations hotline, daily monitoring of consumer reaction nationwide and telephone calls to all owners of A604-equipped vehicles.

Iacocca also told the dealers: "If it still has problems, find 'em and fix 'em." He has designated a top engineer to be the A604 troubleshooter.

The minivan is Chrysler's most profitable vehicle — bringing in an estimated $4,000 pre-tax profit per unit. That makes it a critical vehicle for a company that, analysts suggest, will report 1990 financial results on Thursday that will be break-even at best.

Most minivans are equipped with the A604, which is paired with the company's V-6 engines.

"We have a very serious problem right now that could drive us all out of business if we don't address it — and I mean fast," Iacocca said in a satellite telecast to dealers Wednesday.

"A604 is not the problem I am

Production cutbacks go worldwide

Japanese, European makers join Big 3 in trimming schedules

By Mary Ann Maskery
and Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTERS

World automakers, stung by plummeting sales and burgeoning stocks, are scrapping 1991 estimates issued only weeks ago and slashing production in a bid to ride out what for many has become an unexpectedly severe recession.

The Big 3 U.S. carmakers have temporarily idled thousands of workers and cut tens of thousands of units from first-quarter production schedules. Japanese automakers, who started the year with forecasts many analysts regarded as "too bullish" anyway, are pondering U.S.-inspired cutbacks.

And European makers, battling for share in a 17-nation market where the only bright spot has been Germany, are cutting jobs and output in plants from Scandinavia to Italy.

"We're learning that nobody's immune from weak demand," said Jerry Paul, analyst for Sanford C. Bernstein & Co. in New York.

Chicago unveilings

Lincoln-Mercury's Mystique, an upscale four-door minivan concept, is unveiled this week at the Chicago auto show. Mystique displays some styling cues from the 1993 Mercury minivan being developed jointly with Nissan. Mystique features an in-line eight-cylinder engine. Also being unveiled are three 1992 production vehicles: Pontiac Bonneville, Buick LeSabre and Ford Econoline/Club Wagon. Story on Page 4.

Ford uses 'dedicated team' to develop 1995 Mustang

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — A team of young, enthusiastic car nuts is developing the 1995 Ford Mustang in a top-secret, experimental skunk-works project outside Ford Motor Co.'s Engineering Center.

Kenneth Dabrowski, program manager for international and small car programs, says the Mustang development group is Ford's first experiment with the dedicated team approach. If successful, it could be used for future programs.

The 200 engineers — many in their 20s and 30s — work in a separate building secured by coded-entry doors and isolated from Ford's other engineering buildings.

The group's only guidelines are to comply with government regulations and to meet cost targets.

The Mustang group, smaller than most vehicle development teams, was formed around six hand-picked engineers who are sports-car enthusiasts or Mustang owners.

The purpose of the program is not only to reduce cycle time on the new car, but to see how a relatively small, self-contained group of engineers operates within Ford.

The Mustang development team meets with Dabrowski once a week, and so far he's impressed.

"There's a tremendous amount of enthusiasm on the team," he says.

Dabrowski calls this kind of car-

Worried German auto leaders work to stem anti-U.S. protests

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — The leaders of Germany's automotive industry are moving quickly to try to counter worldwide television-news images of German protesters besieging U.S. military bases, defiling the American flag and carrying placards accusing the United States of murder.

Mindful of the potential for a backlash from customers in the key U.S. market, the automakers have launched an intensive lobbying effort to win a statement from German political leaders decrying the anti-American nature of recent anti-war demonstrations.

And in one company's attempt to distance itself from the protesters,

GM, Chrysler expected to slash ad budgets

Convinced that the war and recession won't end soon, General Motors will likely chop $140 million from its ad budget and Chrysler $50 million. Story on Page 2.

Auto show blows into Windy City

But will Gulf war, recession put the big chill on attendance?

By Rick Kranz
CHIEF EDITOR, COPY DESK

The Windy City will be the stage for world debuts of 1992 models from Pontiac, Buick and Ford, and concept vehicles that offer viewers much more than a glimpse of what Lincoln-Mercury and Oldsmobile plan for the near future.

The 83rd annual Chicago Automobile Trade Association Auto Show will provide the spotlights, giving consumers a clear look at the 1992 Pontiac Bonneville, Buick LeSabre and Ford Econoline/Club Wagon. Each vehicle has been significantly restyled and re-engineered for the coming model year.

SPOTLIGHT ON AUTO SHOWS
Birmingham
Paris
Los Angeles
Detroit
Chicago
Geneva
New York

On the concept scene, L-M will take the wraps off Mystique, a four-door minivan designed with upscale buyers in mind, and Oldsmobile will unveil Achieva, a four-door sports sedan that shows the styling direction of Oldsmobile's future compact cars.

And while consumers check out the new models, automakers will monitor show attendance, a barometer of what may be in store for the spring selling season.

Over the years, the nine-day show has consistently attracted about one million persons who usually had to brave sub-zero temperatures or a lake-effect snowstorm to reach McCormick Place.

But this time, automakers will look closely at attendance at Chicago for similarities to last month's Detroit auto show. Concerns about the Persian Gulf war and the weakening economy resulted in 100,000 fewer people attending the North American International Auto Show.

Among the cars that will generate considerable interest at the Chicago show are the 1992 Bonneville and LeSabre. Both have abandoned the wedge look, adopting a silhouette that is rounder, more jellybean-like in shape.

Similar to the 1992 Oldsmobile 88 Royale, unveiled last month, Bonneville and LeSabre carry side window glass that is flush with the surrounding body work. Each has a windshield that wraps smoothly into the forward pillar and a backlight that is angled to stress both appearance and aerodynamic performance.

But unlike General Motors' styling themes of the 1980s, Buick and Pontiac avoid the clone-like designs that failed to strongly differentiate Oldsmobile 88s from LeSabres, Bonnevilles from 88s, and cost GM sales. The styling goal for the 1990s is to create a family resemblance within a division, unlike the 1980s when the emphasis was on corporate similarity.

larity.

Pontiac's revolving platform will feature the redesigned Bonneville, which goes on sale this spring, and that line's new star — the limited-edition Bonneville SSEi.

SSEi is a high-performance sedan that packs GM's 195-horsepower, supercharged 3800 V-6. The engine uses an Eaton supercharger and produces 255 pounds-feet of torque at 3,200 rpm.

When SSEi production begins later this year, the standard equipment list will include traction control and air bags for both driver and passenger.

About the same time that the new LeSabre begins appearing in dealerships this fall, Ford's new Econoline/Club Wagon will go on sale. The redesigned full-sized van sports a rounder shape, larger window glass areas and considerable improvements in ride and safety.

Volvo will use the Chicago stage to introduce its 240 Special Edition wagon. Production is limited to 600 vehicles, and each wagon will carry a black grille, blacked-out window moldings, multi-x pattern alloy wheels, anti-lock brakes and other equipment.

The Chicago auto show is scheduled for Feb. 9-17 at McCormick Place.

Mystique: Clues to the future

Designers of Lincoln-Mercury's Mystique set out to create a four-door minivan that appeals to upscale buyers.

Mystique is L-M's concept vehicle that will be unveiled at the Chicago auto show (photo on Page 1). The vehicle displays some styling cues that will be adopted on the 1993 Mercury minivan that is being developed jointly with Nissan.

The flexible concept vehicle could lead to front-wheel, rear-wheel and all-wheel-drive versions. A VCR entertainment system is mounted in each seat back. And passengers can control sun shading with the turn of a knob — the sun visors and all-glass roof contain liquid crystal film.

Mystique's large interior compartment is achieved, in part, through a T-drive powertrain configuration. The inline eight-cylinder engine is transversely mounted, and the transmission is integrated longitudinally at the center of the crankshaft.

An additional benefit of the powertrain configuration is a low floor. Seats in the first two rows swivel outward for easy entry and exit. Second- and third-row seats slide forward on power floor-mounted tracks.

BY THE NUMBERS

Business was down for all areas in '90; West fared best, East sales were beastly

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — While 1990 was a tough year for anybody selling cars, it was tougher in the depressed New England market and not quite so tough in the Southwest.

Car and light-truck registrations in Boston plummeted 16.1 percent in the 1990 model year ended Sept. 30. Neighboring Providence, R.I., was hit even harder, falling 17.2 percent from the 1989 model year.

Meanwhile, if you were selling cars in Honolulu, Seattle or Cleveland, you were selling in an expanding vehicle market during the model year.

An *Automotive News* analysis of 42 U.S. Metropolitan Statistical Areas, broken down to eight regions based on a U.S. Department of Commerce classification, showed wide regional swings in the 1990 decline. The analysis was based on registration statistics provided by R.L. Polk & Co.

With exceptions, including the notable exception of three sluggish California markets, the West fared better than the East, as the West was supported by a greater percentage of truck sales.

All eight regions were down, model year-to-model, year in total light- vehicle registrations. But the Southwest and the Rocky Mountain regions showed a year-to-year improvement in light- truck registrations.

In the 42 urban markets, total registrations fell 7.6 percent, nearly the same as the 7.7 percent drop in total nationwide car and light-truck sales for the 1990 model year. The markets surveyed accounted for total light-vehicle sales of 5.56 million, about 40 percent of total national sales.

New England, whose economy is in the tank, was the worst region, down 16.3 percent to 202,646 light vehicles in the Boston and Providence markets. The five urban markets of the Southwest were the best overall, down just 0.9 percent to 477,641.

Only six of the 42 urban markets showed a year-to-year improvement in light-vehicle sales.

Way, way out West, the most successful market was Honolulu, where registrations rose 13.2 percent to 56,468. Light trucks gained 11.6 percent; cars rose 13.8 percent.

Other winners: Seattle, up 11.3 percent; Portland, Ore., up 5.2 percent; Houston, up 3.4 percent; San Antonio, up 2.7 percent; and Cleveland, up 0.8 percent.

Thirteen of the 42 markets suffered double-digit declines. Minneapolis/St. Paul had the biggest dip, down 18.4 percent.

Despite the successes of the Pacific Northwest markets in the Far West region, the Far West markets were down 7.1 percent overall to 941,846.

The Southwest was represented by five cities in Arizona, New Mexico, Oklahoma and Texas. Car sales there declined 2.1 percent, while light-truck sales increased 0.9 percent to 178,571. Light trucks had a 37.4 percent market share in the region.

Registrations in other regions:

- Mideast, (Baltimore; Newark, N.J.; Buffalo, N.Y.; Philadelphia; New York City; and Pittsburgh), total sales off 10.2 percent. Cars fell 10.7 percent; trucks, 8.6 percent.
- Great Lakes (Chicago, Indianapolis, Detroit, Cincinnati, Milwaukee and Cleveland) — Registrations fell 6.59 percent; cars fell 7.9 percent; trucks 2.6 percent.
- Southeast (Miami; Tampa; Atlanta; Louisville; New Orleans; Charlotte, N.C.; Chattanooga and Memphis, Tenn.; and Norfolk, Va.) — Down 7.59 percent, matching the average decline for the eight regions. Cars fell 8.1 percent; trucks, 6.4 percent.
- Rocky Mountain (Denver, Salt Lake City/Ogden) — Down 3.0 percent; cars down 5.7 percent; trucks up 2.4 percent.
- Plains (Kansas City, Mo.; Kansas City, Kan.; Minneapolis/St. Paul; St. Louis; Sioux Falls, S.D.; and Wichita, Kan.) — Down 9.2 percent; cars down 10.1 percent; trucks down 7.3 percent.

NEXT WEEK: A close look at 46 North American markets and interviews with some of the dealers trying to make a living in them.

Teed off at Toyota, Trevino tees it up for Cadillac

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

KEY BISCAYNE, Fla. — After six years, Lee Trevino is trading in Toyota for Cadillac.

Cadillac announced last week it had signed Trevino as the 12th Cadillac-sponsored golfer on the PGA Senior Tour.

Trevino had been sponsored by Toyota since 1984, but said he allowed his contract to expire in December after a dispute with Robert McCurry, executive vice president of Toyota Motor Sales U.S.A. Inc.

"He (McCurry) put a friend of his in to manage my contract and that guy was supposed to get 15 percent," Trevino said. "About two years into the contract, the two guys (McCurry and the manager) had a falling out. They weren't even talking to each other."

Trevino said he tried to buy out the manager, but the two couldn't agree on a figure. Trevino said he sought help from McCurry, who supposedly agreed to intercede.

When Trevino's attorney contacted McCurry some time later, McCurry denied offering to get involved, Trevino said.

"Then I read somewhere that he (McCurry) said my leaving took him by surprise," Trevino said. "I left because of him."

Golfer Lee Trevino showed off his new colors for Cadillac last week.

James Olson, Toyota public relations director, said: "We don't intend to get in a shouting match with Lee. We wish him well, and that's life. He's moved to Cadillac and that's it."

McCurry was unavailable for comment.

Trevino said he went to Cadillac because of the company's staunch support of the Senior Tour and also because it is a domestic auto company.

Trevino said he frequently received hate mail from people who opposed his work for a Japanese company.

"I think I can play in Michigan now without people throwing things at me," Trevino said. "This is another day, another year, a new career. I hope to work with Cadillac for many years."

Peter R. Gerosa, general sales manager, and Peter Levin, director of advertising for Cadillac, said they were ecstatic about the idea of getting Trevino.

Cadillac announced Trevino's signing here on the eve of the Royal Caribbean Classic, the first stop of the 1991 Senior Tour and the first of 15 tournaments in the Cadillac Senior PGA Tour Series.

Trevino was signed to a five-year contract, with Cadillac retaining the option on the final two years, Gerosa said.

Gerosa would not disclose how much Cadillac will pay Trevino, but sources familiar with the contract put it at $1 million per year.

Trevino's contract calls for him mainly to play golf, although there are endorsement, appearance and advertising components of the pact, and he must wear Cadillac shirts while playing.

Gerosa and Levin said Trevino probably will play in at least 10 of the 15 Cadillac tour events this year. There are two or three appearances they would like Trevino to make and two television commercials will be shot.

Chrysler juggles incentive offers

Ford extends Lincoln program; Jaguar drops $5,000 bounty

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. has revised and extended its dealer rebate program and has sweetened cash payments on some vehicles in its consumer program that expires March 31.

In the dealer program, which has been extended through March 31, the company announced payments of $400 on the 1991 Eagle Summit and Dodge/Plymouth Colt three-door base models and $700 on the Summit three- and four-door ES and Colt GL.

Dealer rebates on 1990 and 1991 trucks are $1,000 on the Dodge Ram D-W Club Wagon and Ramcharger and $400 on all Jeep Cherokees and Wranglers.

The Jeep Grand Wagoneer model now carries a dealer rebate of $3,000.

Dealers also can choose either a $1,000 cash payback or the existing consumer rebate on the 1991 Dodge Dakota, Ram van and wagon and Jeep Comanche.

In its consumer rebates, Chrysler increased the payment to $1,000 from $500 on the 1991 Dodge Spirit; Plymouth Acclaim; and Chrysler Imperial, New Yorker Fifth Avenue and LeBaron sedan, coupe and convertible.

The automaker also increased the rebate to $700 from $400 on the 1991 Eagle Talon and Plymouth Laser and added the Dodge Shadow convertible to the incentive list with a $500 payment. Chrysler Corp. also adjusted its lowest alternative interest rate to 5.9 percent from 7.9 percent for one- to 24-month contracts.

Ford Motor Co. has extended through Feb. 28 the $2,000 cash rebate to dealers and the $1,500 payment to consumers on all 1990 Lincolns.

Jaguar Cars Inc. said it has discontinued paying owners of 1988 Jaguars $5,000 on the purchase of 1990 or 1991 models.

CUTBACKS

FROM PAGE 1

"Everybody must watch inventories. Dealers are nervous about the future, and they're reticent to order. The Middle East has caused even the best guys to cut back."

Indeed, the current round of cuts has been heavy with symbolism:

- Japan's Honda Motor Co., maker of the Accord, the best-selling car in the United States for two consecutive years, said last week it would trim output in Japan and Marysville, Ohio by 25,000 units in the first quarter. The cuts, equivalent to about 3 percent of 1990 U.S. sales, are Honda's first ever.
- Chrysler Corp. will idle its minivan plant in Windsor, Ontario, the week of Feb. 18, union officials said last week. The shutdown will mark the first time that slow sales have stopped the plant since it began making Dodge Caravans and Plymouth Voyagers in 1984.
- And Britain's Rolls-Royce Motor Car Co. Ltd., a company widely viewed to be recession-proof, said it will cut 340 jobs at its plant in Crewe, England, and "adjust" production accordingly.

Honda read U.S. signs

Despite mounting evidence in the fourth quarter of a downturn in the economy, most carmakers declined to announce steep production adjustments until the likely effects of the Persian Gulf war became more apparent. But the startling pace of the downturn in the U.S. market during the first 20 days of January provided a sharp enough focus for Honda to react.

"It's a very urgent adjustment" to changes in the U.S. market, Honda spokesman Shinichi Tanaka said in Tokyo of his company's cutback. "We have been affected the least so far, but we worry that demand was soft even before the Gulf war. Now, things can only get worse."

Honda's U.S. sales were off 5.3 percent in the first 20 days of the year. Sales rose 9.6 percent in the first 10 days, but slid 15.9 percent in the next 10-day period, marking the spillover from the outbreak of hostilities in the Persian Gulf.

Honda is the only Japanese carmaker so far to change production plans, but Mitsubishi Motors Corp. and Nissan Motor Co. Ltd. have indicated they may be quick to follow suit.

And Toyota Motor Corp., while not talking about a production cutback, announced plans to reduce management costs by 10 percent for the rest of the company's fiscal year, which ends June 30.

The automaker, Japan's biggest, listed the overall downturn in the world economy, the effects of the war and the general slowdown in the American market as factors.

Japanese prepare to act

Toyota's U.S. sales declined 27.1 percent, from 24,820 to 16,079, for the second 10 days of January.

Mitsubishi says it is "considering" revising downward by 5 percent its earlier forecast for exports and overseas production. Production for overseas markets came to 1.32 million in 1990, and Mitsubishi had originally projected a 5 percent increase this year, to 1.38 million.

Nissan Motor Co. also says it is considering a revision of its forecast, but has not decided on any figure. It has not denied a Japanese press report that it is considering a cut of at least 60,000 units, or about 2.6 percent of current production, in the fiscal year that starts April 1.

Mazda Motor Corp. says the war is likely to have some effect on exports both to the Gulf region and to the North American market, but is holding to its forecast of a 2.7 percent rise in output, to 1.46 million units.

Even without the war's impact to consider, many analysts say that Japan's carmakers have every reason to cut back this year.

Ben Moyer, who follows the industry for Merrill Lynch Securities in Tokyo, expects Japanese production to fall 2 to 3 percent this year, to about 7.78 million units.

That estimate, he says, does not include the impact of the war on car sales. Rather, it is a projection of the current flat sales pace in Japan, a drop in exports and higher than usual inventories, which Moyer estimates increased 100,000 units last year.

The total Japanese market, including minicars (under 660 cc) was up 7.4 percent last year to 7.8 million units. But many analysts are anticipating a drop of at least 2 percent this year.

Europe takes major steps

Meanwhile, amid early estimates that January sales in Europe fell 25 percent from a year earlier, virtually every European carmaker announced significant production cuts last week.

Most analysts expect sales in the 17-nation European market to fall about 4 percent this year. Sales in Europe last year were fractionally below 1989's record volume, but have fallen for five straight months.

Analysts point out that continuing strong sales in Germany, Europe's biggest single market, skew the 17-nation total to the strong side, thereby masking the fact that some countries are off 15 to 25 percent from last year.

Ford of Europe said last week that it will cut production by 45,000 units at plants in Britain, Belgium, Portugal and Spain between now and April. Included in the cutbacks will be a one-week shutdown of the plant that makes the Fiesta and the new Escort, introduced only six months ago.

"European sales are being held up only by the German market, and signs of weakness in the French and Italian markets are mounting," Ford of Europe President Lou Lataif said last week. Fully half of Ford's 90,000 current orders for the Escort are from Germany, he said.

Elsewhere, Italy's Fiat Auto S.p.A. announced that it will lay off nearly 70,000 workers and shut every plant but one during the week of Feb. 11-17. The shutdown will result in a production cut of about 40,000 units.

More makers pinched

France's Automobiles Peugeot announced a 10 percent reduction in output during February and March and said temporary layoffs will affect 80 percent of Peugeot's work force in France.

The cuts, which will idle three plants for several days, will result in a reduction of 17,000 vehicles. Depending upon demand Peugeot officials said further reductions may be ordered later in the year.

Sweden's Volvo Car Corp. has announced that it will reduce the work force at six Swedish car plants by an additional 1,550 jobs. Volvo had earlier announced plans to cut its work force by 4,500-5,000 this year through attrition.

Volvo production fell from 414,000 in 1989 to 376,000 last year, and a further reduction is expected in the first quarter of 1991.

Saab Automobile AB last week also announced plans to cut out about 2,500 units this spring through a series of non-production days. The Trollhattan assembly plant in Sweden will be closed seven days, and the Malmo plant will be down six days.

Swedish engine and transmission plants also will be closed for seven days. Saab production last year totaled 89,000 units, down from 103,000 the year before.

Papers show Ford was aware of faulty gauge

SAN JOSE, Calif. — Ford Motor Co. knew about faulty gauges before a man was injured when his car ran out of gas, a newspaper reported.

Papers filed last week in a California court show that Ford knew about the faulty gauges in 1984, three years before Daniel Spencer, 19, had the accident that cost him his leg, the *San Jose Mercury News* said.

Spencer said in June 1987, he ran out of gas and was hit by a drunk motorcyclist as he tried to push his Ford Tempo off the road.

Spencer said his gauge read a quarter-tank full when he ran out of gas. Ford documents said about a million cars produced in 1983 and 1984 had the defect, which causes the gas tank to give false readings. Spencer won a seven-figure, out-of-court settlement in November, mostly from Ford and Tandem Computers Inc.

Ford said the part was used in Mustangs, LTDs, Escorts, Tempos and Thunderbirds. Ford said it did not believe a recall was warranted because there was no serious risk to drivers.

Price tag rises for Nissan's plan in Mexico

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Nissan Mexicana's tab for its ambitious expansion over the next five years is now estimated at $1.2 billion.

A year ago, the company announced it would spend $1 billion on building and equipping new plants and on modernizing existing facilities.

But because of inflation and currency fluctuations, "the final figure may be 20 percent more than that," said company President Shoichi Amemiya in an interview.

Much of Nissan's money will be spent on a new-car assembly plant in Aguascalientes, 300 miles north of Mexico City. Building started last year and the plant is expected to be commercially productive by October 1992. Plans call for it to ship 8,000 vehicles a month to Japan, the United States and Latin America by late 1993 and 16,000 a month by 1995.

Nissan also will expand the capacity of its engine, stamping and transaxle plants and aluminum foundry in Aguascalientes. It also will double the capacity of its grey iron foundry in Lerma and enlarge its domestic market assembly plant in Cuernavaca.

"We want to be a fully integrated manufacturing company," Amemiya said. He said that the company plans to increase the staff working on vehicle research and development and design in Mexico from 260 to 400 within four years.

But he emphasized that the car Nissan Mexicana will produce in Aguascalientes will be basically a vehicle designed and produced in Japan. Nissan has not said what the vehicle will be, other than describing it as a "popular entry vehicle" with a four-cylinder engine.

It is expected to be the current model Sentra.

Amemiya expressed concern about the possibility of a free-trade agreement between Mexico and the United States. Government negotiators are discussing the terms of such a deal.

"Industries keep innovating, and what we sell today could be obsolete tomorrow," he said. "Mexico has no innovative capacity to renew its products" as quickly as Japanese, European and U.S. automakers do.

He said he doubted whether a free-trade deal "will help Mexico to expand investment and build employment, and I doubt very much that American companies will want to come in."

Amemiya said that dealers in Canada who have started importing Nissan's B12 model, known as the Tsuru 2 in Mexico and the Sentra Classic in Canada, asked for shipments to be increased by 30 percent. Original plans called for Canada to get 5,000 Sentra Classics this year.

The boxy subcompact, which has been discontinued in the United States, is being sold in Canada alongside Nissan's new Sentra.

"Due to our production capacity problems, we can't ship them more," Amemiya said.

Last year, Nissan Mexicana produced 138,200 vehicles. This year, according to Amemiya, the company hopes to produce 150,000 vehicles.

Big 3 shut 19 plants as sales totter

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

U.S. makers will idle 17 more plants this week, bringing to 19 the number closed as the industry contends with slow sales caused by the recession and the Persian Gulf war.

U.S. car manufacturers expected to build 117,398 units last week, 24.99 percent above the prior four-day work week and 9.25 percent above last year.

So far this year, 469,319 cars have been built in the United States, 17.29 percent above the year-ago total.

Targeted truck output of 57,694 was 7.02 percent above the previous week but was 19.72 percent below the year-ago week.

Year-to-date, 245,376 trucks have been assembled, 9.54 percent below last year.

General Motors' Kansas City, Kan., car plant and its Tarrytown, N.Y., minivan facility are idle this week. Downtime has been extended through this week at the Van Nuys, Calif., plant.

GM will idle the Pontiac (East) Mich., and the Moraine, Ohio, truck plants today until Feb. 11 and the Fort Wayne, Ind., truck facility until Feb. 18.

GM's Lordstown, Ohio, truck facility will resume output today after a one-week shutdown.

Ford Motor Co.'s Chicago and Dearborn, Mich., car plants are down this week. Truck plants idle this week are Louisville, Ky.; Norfolk, Va.; St. Paul, Minn.; Edison, N.J.; and Wayne, Mich. In addition, the Lorain, Ohio, car and truck lines will be idle this week. All plants will resume output Feb. 11.

Chrysler Corp. will close the St. Louis (No. 1) and the Toledo, Ohio, facilities this week to adjust inventories. Both plants will resume operation Feb. 18.

Honda of America Manufacturing Inc. has cut production at its Marysville, Ohio, plant from 1,550 units per day to 1,500 by reducing overtime.

Canada cars move up 3%

Canadian automakers scheduled 19,242 units last week, 3.69 percent above the prior week's build but 14.04 percent below the year-ago week.

Year-to-date, 84,863 cars have been produced, 20.72 percent above 1990 at this time.

Truckmakers assembled 17,537 units last week, 30.19 percent above the previous week and 8.56 percent above last year.

So far this year, 63,489 trucks have been assembled, 9.35 percent below 1990.

Black dealers face many problems, but have a positive attitude, says Chuck Harrell, owner of a Chevrolet-Oldsmobile dealership in Flat Rock, Mich., and president of the General Motors Minority Dealer Association.

UPHILL BATTLE

Recession tests the mettle of black dealers

By Kathy Jackson, Laura Clark and Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTERS

Black car dealers, most of whom face their first economic downturn, are determined to increase their ranks in the tough 1990s.

They are turning to factories and other black dealers for support and seeking elusive import franchises.

Fewer than 100 black dealers were open in 1980. A five-fold increase in the 1980s puts hundreds of them in a position to survive the current recession and emerge as experienced, battle-hardened dealers.

Chuck Harrell, president of the General Motors Minority Dealer Association and owner of Harrell Chevrolet-Oldsmobile in Flat Rock, Mich., said black dealers face many problems but come into the 1990s with a positive attitude.

"Despite the battle (for automotive sales), blacks will move forward."

It will be an uphill battle.

About 65 black dealers went out of business in 1990, roughly 14 percent of all black dealers. That compares to a failure rate of 5 percent for all dealers.

Virgil Anderson, executive director of the National Association of Minority Automobile Dealers, says another 40 black dealers are in serious trouble.

"All of it isn't the economy," Anderson says. "A strong bit of it is lack of expertise in management."

The 1980s saw the first big push by automakers to establish black dealers. The number of black dealers for the Big 3 grew from 87 in 1980 to 408 last year. Most of that growth came from Ford Motor Co., whose ranks of black dealers ballooned from 19 to 245 by the end of last year. But 1990 itself reversed the trend: Chrysler Corp. added two black dealers net, but both Ford Motor Co. and General Motors lost black dealerships.

Anderson estimates that about half of the black dealers are profitable. But business and profits could sour fast.

Says Nathan Conyers, a pioneering black dealer who is president of Conyers-Riverside Ford in Detroit: "Since the last three years have been some of the industry's best sales years, the young black dealer body may find the current downturn a rude awakening."

Still, progress has accelerated for people of color. Some of them got excellent training and financial assistance from the Big 3 car companies, which offer training programs ranging from one to three years.

While the programs are not perfect, they have turned out success stories. Reggie Hubbard, 37, became a Dodge dealer in Charlotte, N.C., in 1986 after more than 10 years with Sears, Roebuck and Co. As an operations manager, he had managed 600 employees.

Hubbard assembled a highly motivated sales team. As a result, he bought out Chrysler's interest in his

Saab, posting huge loss, shuts prized Malmo plant

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — Saab Automobile AB, the embattled Swedish automaker that is 50 percent owned by General Motors, confirmed Friday that it will close its $240 million assembly plant in Malmo, Sweden, after only 18 months of operation.

Saab said it will take a 1.4 billion kronor ($255 million) charge against full-year results for the shutdown and other extraordinary costs. The charges contributed to a more than doubling of Saab's 1990 loss, to 4.65 billion kronor (about $852 million), from 2.13 billion kronor ($391 million) in 1989.

Saab said its loss from operations totaled 3.25 billion kroner (about $596 million), meaning that it lost the equivalent of about $6,700 on every car it produced last year.

The results will have a direct impact on GM earnings, already battered by plant shutdowns and slid-

GEO LOGIC: *Rebadged imports boost Chevrolet sales, but will buyers later join GM faithful?*

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Tina Case believes in "buying American."

So when she was ready for her first new car, she walked into a nearby Chevrolet dealership and drove out in a 1991 Geo Metro, a subcompact that Chevrolet gets from Suzuki.

Not exactly American, she admits. But close enough.

"I wanted something American, and I believe in Chevrolet," said Case, a 17-year-old sales associate from Bakersfield, Calif. "Metro isn't exactly American, but at least it's sold by an American company. That makes me feel better."

Case has a stronger buy-American ethic than most Geo owners. An informal survey of dozens of Geo owners suggests that the increasingly popular Geo line of three subcompacts and a sport-utility has captured one-time buyers for General Motors, and that the buyers of the Japanese-manufactured cars are more likely to return to other imports than to domestic GM cars.

Automotive News talked to Geo owners across the United States to examine how the line of small vehicles that are sold in Chevrolet dealerships became a key player in the import-dominated subcompact economy market.

In a January wracked by war and deep recession, Geo slightly outperformed the market. Geo's January sales slipped 18.18 percent from January 1990. Industrywide, cars and light-truck sales dropped 27.71 percent.

In 1990, Geo shot past Mazda Motor of America Inc. to become the fourth best-selling import passenger-car line behind Toyota, Honda and Nissan, with 290,785 cars sold. (Mazda remains fourth in combined car and light-truck sales.) Geo's year-to-year gain of

Toyota admits its U.S. exports may be trimmed

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Toyota Motor Corp. conceded Friday it may have to join other Japanese carmakers in trimming U.S. exports over the next few months because of weakening car sales there.

Sales of domestically-built and imported cars and light trucks plummetted 27.8 percent in the United States last month as consumers, skittish over the Gulf war and the economic outlook, shunned auto showrooms. Toyota's U.S. sales were off 13.4 percent.

At a press conference here to announce earnings for the fiscal first half ended Dec. 31, Toyota officials said a "small adjustment" to U.S. shipments over the next few months is being considered in view of market weakness. Any cuts would not affect sales or production plans for the year, they said.

Honda Motor Co. and Mazda Motor Corp. already had announced cuts in U.S. shipments. Honda said Jan. 29 that it would cut U.S. and Japanese production of the Accord by 25,000 units in February and March, while Mazda said last week it will cut exports to the United States by 8,000 units this month and next.

The Mazda cutback amounts to about 15 percent of its normal shipments to the United States in a two-month period, but the carmaker said it expects the Japanese market to expand enough this year to absorb the additional units.

Meanwhile, Toyota said its net income slipped 0.7 percent and operating earnings fell 15.6 percent in the fiscal first half because of increased spending on research and development and personnel.

The automaker reported that net income slipped to 156.2 billion yen ($1.2 billion) and income from operations fell to 200 billion yen ($1.5 billion) from a year earlier despite a 16.6 percent rise in sales, to 4.4 trillion yen ($33.8 billion.)

Toyota said worldwide unit sales jumped 8.5 percent, to 2 million units, but the cost of sales rose to 3.8 trillion yen from 3.1 trillion.

AUTOMOTIVE NEWS/JOE WILSSENS

Iacocca: "The year ahead is even more uncertain than 1990."

Chrysler stays in black

But 1991 fears overshadow 1990 earnings

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

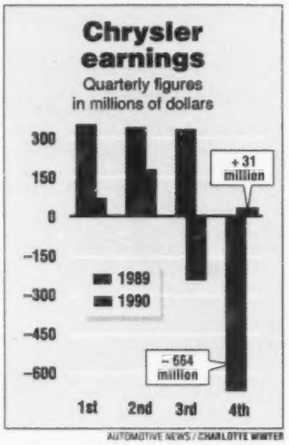
AUBURN HILLS, Mich. — Even as Chairman Lee Iacocca reported last week that Chrysler Corp. eked out a profit in 1990, he raised the specter of "horrendous losses" in the first quarter of 1991, and possibly further into the year.

Thanks largely to a $3 billion cost-cutting program and earnings from Chrysler Financial Corp., Chrysler Corp. reported 1990 net earnings of $68 million, or 30 cents per common share. That compares to 1989 earnings of $359 million, or $1.55 per common share.

Chrysler reported fourth quarter net earnings of $31 million, or 14 cents per common share, compared to a $664 million loss posted in the fourth quarter of 1989. The 1989 results included a $577 million one-time charge for restructuring.

Analysts had expected Chrysler to report a loss in 1990, or at best, to break even. And indeed, Vice Chairman Robert S. Miller Jr. said the corporation would have lost more than $1 billion in 1990 without the $3 billion cost-cutting program begun 18 months ago.

Jerome B. York, vice president and controller, said Chrysler's net loss in automotive operations totaled $7 million in the fourth quarter of 1990 and was $240 million for the full year.



AUTOMOTIVE NEWS / CHARLOTTE WINTER

Chrysler posted a profit because its subsidiary Chrysler Financial Corp. earned $56 million in the fourth quarter of 1990 and $313 million for the entire year.

In addition, Chrysler's bottom line was boosted by an after-tax credit of $63 million in 1990. The

Green, Stempel say teamwork is vital

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Car manufacturers and dealers share a common key to success in 1991 — teamwork, according to Robert Stempel, chairman of General Motors, and Ray Green, outgoing president of the National Automobile Dealers Association.

Green offered words of encouragement and optimism to his fellow dealers Saturday in his last speech as NADA president.

In remarks prepared for his address to the opening session of the NADA convention in Atlanta, he said he was proudest of the new dealer/manufacturer relationship forged during his tenure and said "let's hold on to that relationship like never before. . .because I believe it holds the most promise for the future."

Green

He stressed the importance of a fair and equitable franchise agreement giving dealers "equal rights, equal responsibilities and equal opportunities."

Other good news reaped during the past year, according to Green, were GM's, Ford Motor Co.'s and Toyota Motor Sales U.S.A. Inc.'s 100-percent buy-back programs for fleet cars; the 5 percent carryover allowance reinstated by GM and Ford; and the new shared-hub/shared satellite dish agreement among NADA, GM, Chrysler Corp. and Hughes Network Systems.

Green also cited Ford's endorsement of NADA service systems consultants and its move to drop customer rebates as recognizable accomplishments.

Green touted NADA's new voluntary salesperson certification program and NADA's year-long warranty study as examples of good ideas that developed into excellent programs.

He warned the audience about the inevitable push in the coming years for further legislation that would adversely affect the automobile industry.

"But, as we have in the past, NADA will be watching and fighting to keep the government out of our business," Green said.

After further reflection on his year-long presidency, Green said that even though he thought he could do it all, he realized he was leaving "plenty on the plate" for the next president, Raleigh, N.C., dealer Frank Anderson Jr.

"To you dealers here today and throughout the country, my advice is the same as it was when I took office," he said. "Run your own business, play by the rules and be above reproach in all your dealings."

Stempel echoed the theme of teamwork in his keynote address, adding commitment as an additional ingredient in the formula for success in the 1990s.

Stempel

"The contribution of the dealer to a team, like the GM team, is invaluable, and in my mind, we are going to have to work more closely than ever before to get through the months ahead," he said.

He stressed the importance of outstanding products to this success, calling it "GM's highest priority."

Stempel outlined GM's policies to aid dealers' success, highlighting GM's increased interest credit days as one benefit it passed on to dealers.

"On Jan. 16, GM dealers received an additional 60 days of interest rate protection as a result of changes in the prime rate," he said. "We are pleased to announce that on Feb. 16, interest credit days will increase from 25 to 28. We've

Correction

A story in the Feb. 4 issue should have said that an April 10-11 meeting between Japanese automakers and U.S. parts suppliers is being arranged by the U.S. Department of Commerce and the Japanese Automobile Manufacturers Association, not JAMA and the Motor and Equipment Manufacturers Association.

Volvo picks its new ad agency

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Volvo's "monster truck" ad scandal haunted Volvo Cars of North America as it searched for a new ad agency for the first time in more than 20 years.

Volvo's agency review was "a very, very tense one," said Robert Schmetterer, a partner at Messner Vetore Berger Carey Schmetterer, the New York-based agency that won the $40 million account last week.

Though he said the episode was "not at all in the forefront" of the agency's discussions with Volvo, he described the search as "more rigorous than virtually any other comparable experience I've had in the business."

Scali, McCabe, Sloves — Volvo's agency for 23 years — resigned the account after news of the deceptive ad broke last November.

Schmetterer is a Scali, McCabe alumnus, having managed the Volvo account for that agency from 1971 to 1984. He also used to work for Volvo, as market research director from 1967 to 1971. Messner Vetore Berger Carey Schmetterer was founded in September 1986.

The winning agency was one of three finalists in the search, out of close to 50 applicants. Its clients include MCI, *Life* magazine, New Balance shoes and Commodore computers. With Volvo, it will have billings of about $200 million.

Schmetterer said Volvo officials were "a very careful, very, very rational audience. They asked a lot of astute questions." He said the agency "spent enormous amounts of hours" with Volvo.

Volvo spokesman Robert C. Austin said that in choosing a new agency, Volvo paid particular attention to the "reputation for integrity of the people involved."

The monster truck ads, which were filmed in Austin, Texas, showed a truck crushing a line of cars, except for a Volvo 240 station wagon that remained more or less intact.

The Texas attorney general charged last November that Volvo specially reinforced its car and weakened the other cars. Volvo admitted no wrongdoing but pulled the ads, apologized and paid more than $300,000 in investigative fees to settle the attorney general's complaint.

Volvo officials claimed they didn't know the cars had been doctored and blamed the production company that Scali, McCabe hired to shoot the ads, Perretti Productions. A Perretti spokeswoman said last week that co-founder Jim Perretti has been advised by his attorneys not to comment.

Volvo said last November that it would share with the public the results of its internal investigation into the monster truck affair. But last week, it would say only that it has adopted more "checks and balances" in its internal procedure for reviewing ads.

"There are more reviews in the system than there were in the past," spokesman Austin said.

"Realistically, no matter how many checks and balances you build into the system, the system is only as good as the people who are in it."

New Ciera, Century delayed as GM trims its sails

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

The scheduled 1993 calendar year redesign of the Oldsmobile Cutlass Ciera and Buick Century has been delayed at least a year as part of General Motors' grand strategy to regain competitiveness in North America.

The delay clouds the future of two more GM assembly plants that build A-body cars.

As GM Chairman Robert Stempel announced last week that the board of directors had slashed the first-quarter dividend nearly in half, he also laid out a comprehensive cost-cutting plan that included lower capital spending through 1994.

"Clearly, in this highly uncertain economic environment, we must conserve cash and reduce costs further in order to provide GM with sufficient financial resources to maintain our important forward product development programs," Stempel said in a statement.

The key word in that sentence is "important," said a GM engineer, adding that the mid-sized Ciera and Century are not considered to be in that category.

One way to conserve capital is to delay spending the money, which is what GM plans with the Ciera and Century — both built off the A-body platform — according to four engineering sources inside and outside GM.

The delay was announced to some suppliers in late January, the sources said. The sources added that the very existence of the A-body platform is in serious jeopardy and that a decision on whether to keep it at all will depend in large part on 1991 sales.

Sales of the A-body cars in 1990 provided no encouragement.

- Sales of the Ciera plummeted 30 percent in calendar 1990, compared with 1989.
- Century sales dropped nearly 17 percent over the same period.
- Sales of the Pontiac 6000, also built off the A-body platform, fell 30 percent in 1990, but the car was scheduled to be dropped after the 1991 model year anyway.

Although the A-body cars have enjoyed success since their introduction in 1982, they became redundant after the 1988 release of the ballyhooed mid-sized W-body platform: Chevrolet Lumina, Pontiac Grand Prix, Oldsmobile Cutlass Supreme and Buick Regal.

In fact, the W-body platform was intended to replace the A-body platform, but GM kept some of the A-body cars because they continued to sell well.

Chevrolet immediately dropped the A-body Celebrity sedan, coupe and wagon in favor of the W-body Lumina line, and Pontiac began phasing out the 6000 line in favor of Grand Prix.

But the Century and Cutlass Ciera remained because they continued to fit with their divisions' marketing plans and customers continued to buy them.

The A-body and W-body cars were to share a number of chassis components beginning in 1993, when both platforms were to be redesigned. Now that plan has been mothballed, although the W-body cars will proceed as planned: Lumina and Grand Prix replaced in calendar year 1993, Cutlass Supreme and Regal in 1994.

One GM source said the delay of the A-body redesign means those vehicles will continue to be built with unique components at least until 1994, but added that sales will determine whether the platform survives until the mid-1990s.

Another GM source said all plans for the A-body platform are "in limbo now."

If the platform is axed, GM's Oklahoma City assembly plant would be left without a product.

The Ste. Therese, Quebec, plant

see GM CUTS, page 132

Other actions to cut costs

GM plans to:

- Reduce white-collar employment 15 percent, to 85,000.
- Reduce capital spending in 1991 to $7.0 billion, down from $7.5 billion in 1990.
- Seek price cuts from suppliers.
- Eliminate executive bonuses except in profitable subsidiaries.
- Cut employee stock-purchase programs.
- Continue $2 billion plan to close excess plants.

Dealers weigh-in lean

Scaling back, they say, is Job 1 in 1991

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Car dealerships are preparing for 1991 by turning themselves into lean, mean fighting machines.

Dealers across the country say they will run a tighter ship in the coming year to help them stay in the black.

"We're looking at everything — from little things like office supplies to bigger expenses like not hiring outside consultants," says Sheila Garcia, owner of Garcia Toyota-Honda in Albuquerque, N.M. Garcia is one of 44 dealers interviewed for the *Automotive News* feature that begins on Page 32: Face of the Dealer, 1991.

Face of the Dealer, Pages 32 to 108

Raymond Van Duren, owner of 12 franchises in New York and Florida, is expecting more out of a trimmed work force to keep his head above water in these trying times. Says Van Duren: "We've had to cut overhead and watch spending. People have to produce more and are expected to do a little bit more."

Also expecting more out of fewer employees is Peggy Kimnach, owner of Kimnach Ford Inc. in Norfolk, Va., who began to prepare for a worst-case scenario in the early 1980s.

Kimnach avoided over-hiring in the sales boom of the late 1980s and trained employees to handle a wider variety of tasks. She also diversified, investing in parts, repair and body work to cut dependence on new-vehicle sales.

But while most dealers agree that they plan to cut overhead, trim staff, and decrease inventory, they split on the question of maintaining advertising budgets.

"Advertising is a key element for us," says Scott Thomason, owner of Ford, Toyota, Nissan and Subaru dealerships in Portland, Ore.

"We spend what it takes to maintain a strong market presence, and we never back off."

On the other side, M.R. McIlwain, a Cadillac and Suzuki dealer in New Orleans, says: "There's no sense spending money on advertising if people aren't out there in the market."

Dealers believe that while people may not dish out the big bucks for a new car or truck, their aging vehicles will need repairs, parts or service — areas that dealers hope will pick up the slack from decreased new vehicle sales.

Many dealerships count on Yankee ingenuity and hard work to stay solvent in this difficult year. For instance, Kimnach is sponsoring auto-care clinics for women, a consumer group many dealerships admit they have neglected in the past.

Many will promote "consumers" to the ranks of royalty in 1991.

"You have to treat the customer as king," says Boston-area dealer William DeLuca III. "If he is satisfied, he will keep coming back."

Feeling the squeeze in the market for new vehicles, many dealers say they will increase emphasis on their used-car departments.

They are predicting that the aging U.S. car fleet will force many consumers to purchase replacement vehicles, whether they want to or not, and they believe the trend will be toward less-expensive used vehicles.

In 1989, the average age of passenger cars in use in the United States was 7.6 years.

So while dealers are slashing new-vehicle inventory, they are scrambling to boost the inventory of modestly priced used vehicles.

"We hired a new, aggressive used-car manager in the fall, and volume picked up in his first 30 days on the job," says Thom Lehman, owner of Hallett Pontiac-GMC in Miami. "There's a good market here for used cars and trucks."

But even with anticipated hardships and belt tightenings, all the dealers interviewed had positive outlooks, saying they have survived recessions in the past and plan on being around for years to come. They don't plan on letting negative vibes interfere with the success of their businesses.

Dealin' Doug" Moreland, owner of Cherry Creek Dodge in Aurora, Colo., is optimistic.

"For '91, we're going to maintain our inventory and go after a bigger piece of the pie," he says. "We're got the people, the product, the inventory, the advertising budget and the financing sources to make it a very successful year."

BUZANNE DE CHILLO

New York dealer Ed Hermann is convinced that by demanding that its dealers make substantial investments in facilities, BMW will be able to drop small-fry dealers like him. Hermann's Pace BMW store shares a showroom with his Oldsmobile store; his Honda showroom is in the same building.

BMW SHOWROOM BLUES

As sales fall, company pushes dealers to build for the future

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW ROCHELLE, N.Y. — Two years ago, Ed Hermann sold 120 BMWs, the most he ever sold in a year. Last year, like about half of the BMW dealers in the country, he sold fewer than 100.

Now, he's convinced that BMW of North America Inc. wants to dump him and other small-fry dealers like him.

"What they want to do is get rid of about one-third of their dealers," he says.

Not so, says BMW. The importer says it wants to keep its dealer count near its current total of 377. But the company is demanding that its dealers make substantial investments in people and facilities. If that means it makes "economic sense" for some dealers to drop the franchise — well, it's up to the dealers to decide, says James J. Ryan, BMW's executive vice president of automotive operations.

BMW has stirred up a hornet's nest among its dealers. They rated BMW near the bottom of the industry in J.D. Power and Associates' 1990 Dealer Satisfaction Index, while most of BMW's competitors scored near the top.

Dealers complain that BMW is demanding more from them precisely when they can least afford it, with a recession and war hanging over everyone's head.

But BMW says now is precisely the time, especially since BMW is competing with start-up franchises like Lexus and Infiniti, with their "Taj Mahal" dealerships.

To sweeten its demands, BMW announced last month that it will even lend money to dealers to improve their dealerships, provided they are in good financial shape and they agree to make BMW the only brand in their showrooms.

Meanwhile, without singling out Hermann, BMW's Ryan suggested that his sort of location is no Taj Mahal.

Hermann's Pace BMW store shares a cramped eight-car showroom with Oldsmobile. A $50,900 BMW 735i sits next to a $23,795 Olds Bravada sport-utility. The Honda showroom is a few feet away in the same building.

Three years ago, Hermann spent $1 million on renovations. Last year, Hermann sold 900 Hondas, 300 Oldsmobiles and 72 BMWs.

Car-truck sales battered by war jitters

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

New-car and truck sales took a whipping last month, caused in large part by the war in the Persian Gulf.

Ford Motor Co. took the biggest pounding among automakers building cars in the United States.

Domestic cars, as a whole, fared better than the imported models. Truck sales plummeted dramatically.

A total of 824,217 cars and light trucks were delivered in January, down 27.71 percent from last year.

Domestic carmakers delivered 416,644 units, a 23.5 percent drop. Only Mazda Motor of America Inc. and Nissan Motor Corp. in U.S.A. reported sales increases among the nine automakers with assembly plants in the United States.

Light-truck sales plunged 32.01 percent with 269,759 deliveries.

Imported-car sales for the month totaled 137,814, a 30.68 percent decline. Only seven of 39 import makes reported sales increases.

Ron Glantz, securities analyst with Dean Witter Reynolds Inc. in San Francisco, says the Jan. 16 at-

Panda Motors shutting down U.S. unit, looking for partner

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Panda Motors Corp., the fledgling Chinese automaker, told its U.S. employees last week it is phasing out U.S. operations while it attempts to find a "major partner" to support the project.

Panda planned to establish the largest auto making plant in China by the end of this year with help from its U.S. offices, which would supply engineering, manufacturing and product planning expertise.

But the automaker has had trouble finding investors, a source said. And it has not been able to secure a licensing agreement with another automaker that would allow Panda to revive an out-of-production vehicle.

Because of low investor interest in providing additional funds, Panda has chosen to cut its costs and concentrate its operations in Hong Kong and China. The company also made several management changes.

Panda has named Sung-Kyun Moon, president of Tong-Il, a Korean auto components and machine tool producer, as its president. Panda is backed by members of the Unification Church, founded by the Rev. Sun Myung Moon. Church members also hold 28 percent of Tong-Il.

Sung-Kyun Moon's appointment is intended to give Panda the automotive expertise it needs to complete the project. Former Panda President Dr. Charles Kim was named vice chairman. Dr. Bo Hi Pak remains Panda's chairman and chief executive officer.

> Panda's U.S. offices include an executive office in Vienna, Va., an engineering office in Troy, Mich., and a former General Motors' stamping plant in Fairfield, Ohio.

In a statement to employees, Pak cited world overproduction of vehicles and a changing global marketplace as reasons for the consolidation of Panda's resources to Asia.

"The world situation is changing rapidly, and the overproduction of vehicles is having its influence on the size and availability of the marketplace," the statement said.

"To consolidate our resources and to make the best use of our investment, Panda is actively seeking a major partner to participate with us in our China enterprise. To support this strategic objective, our focus will emphasize China and Hong Kong, with less influence resident in the United States," said Pak.

The source said Panda has had problems attracting investors because of the opening of East Europe to capitalism and the impending European economic unification in 1992 has shifted interest from Asia to Europe. In addition, Japanese investors have been nervous because of dramatic losses in the Japanese stock market since last fall.

But the sources said Panda feels that if it brings on a major partner — such as another automaker — there would be a duplication in efforts for Panda's engineering and manufacturing functions now being done in the United States.

Panda's U.S. offices include an executive office in Vienna, Va., an engineering office in Troy, Mich., and a former General Motors' stamping plant in Fairfield, Ohio. Panda purchased the plant in January 1990. During negotiations, Panda said it only wanted to purchase the equipment but GM would only agree to the deal if the building were sold, too.

Panda is in the process of building a plant in Dan Shui, China, that would produce 300,000 vehicles a year, 10 times the number of vehicles produced annually at China's largest operating auto plant, Volkswagen-Shanghai. The vehicles would most likely be small sedans and pickups.

The company was expected to make a product announcement last month, but it didn't.

Staff Correspondent Stephen Vines in Hong Kong contributed to this report.

Yugo goes hunting at NADA again

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Yugo America is staging a modest, no-frills dealer recruitment effort at this week's National Automobile Dealers Association convention in Atlanta.

The convention has been the site of some of the highest highs and lowest lows in Yugo's short history. The company jettisoned about 100 of its 265 dealers — many by mutual agreement — after announcing its bankruptcy at the NADA convention in New Orleans two years ago.

But the company has eaten a lot of humble pie since then, and now Yugo has decided it's time to add a few dealers, said John Spiech, Yugo's president and chief executive officer. Spiech joined Yugo about three months after the bankruptcy.

Spiech said Yugo has added about 15 dealers in the last few months, but the company eventually needs about 120 more for a total of about 300.

He said Yugo has no plans for a three-ring circus at NADA. Its only scheduled events are a make meeting and a reception open to anyone with an NADA badge.

"I don't care how big they (dealers) are or how small they are. I'm not looking for a huge facility. Put us in whatever you have. All we ask is that you just represent us well," Spiech said.

Yugo spokesman Zoran Basaraba said the strategy represents "a different approach for us, to try and project an image that's more in line with our product. We want to keep people's expectations under control."

> "I don't care how big they are or how small they are. I'm not looking for a huge facility. Put us in whatever you have. All we ask is that you just represent us well."
>
> **John Spiech**
> Yugo America

Yugo has a history of eventful NADA conventions:

- Yugo America was unveiled with a flourish at the 1985 convention in San Francisco.
- Yugo founder Malcolm Bricklin, with much hoopla, announced the formation of Global Motors at the 1987 convention in Las Vegas. Yugo's new parent company also planned to import cars from Malaysia, along with "other quality automobiles" to be announced. None ever arrived.
- In 1989, about eight months after Bricklin sold his controlling interest, Global Motors crashed and burned. Out of the bankruptcy ashes, Yugo America emerged a year later as a subsidiary of Zastava, the Yugoslavian manufacturer.
- Just in time for the NADA convention in Las Vegas last year, Yugo paid its remaining dealers about $1.7 million, representing 50 cents on the dollar toward dealer IOUs.

Yugo is slated to pay its dealers another 25 cents on the dollar when it sells another 20,000 cars. The countdown began one year ago.

But Yugo sold just 6,359 cars in 1990, down about 40 percent from the previous year. That was less than half the 1990 volume Yugo predicted in its bankruptcy reorganization plan.

Spiech said Yugo's main problems continue to be the mistaken belief that Yugo never made it out of U.S. Bankruptcy Court and Yugo's poor quality reputation.

As a result, financing is a third major difficulty, both for dealer floorplanning and for retail customers, he said.

In an effort to address all three problems, Yugo recently mailed a promotion to 500 bankers nationwide. It stresses that Yugo is still in business, that it has Zastava's financial backing and that hundreds of improvements have been made to the Yugo car since it was introduced.

Car inventories shoot skyward as sales dry up

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Slow sales have resulted in bulging inventories for most domestic and imported cars sold in the United States.

Even though January had one more selling day than December, 26 compared to 25, combined sales of domestic and imported cars fell 14.85 percent, and the supply of unsold cars rose to 95 days on Feb. 1, compared to 75 on Jan. 1.

Domestic cars fared better than the imports in terms of days's supply. There were 1,432,859 unsold domestic cars on hand Feb. 1 — an 89-day supply, up from 74 days the previous month. The imports faced an 111-day supply and 587,988 unsold units on hand. On Jan. 1, the imports had a 77-day supply.

Isuzu was the days-supply leader by far, sitting on an 897-day stock — 2½ years.

Mitsubishi Motor Sales of America Inc. cut its inventory to a 72-day supply from 92 days on Jan. 1. The figures include both imported and U.S.-built cars.

Among the Big 3, Chrysler Corp. had the highest days' supply — 100 days. General Motors had a 94-day supply; Ford Motor Co.'s stockpile represented a 92-day supply.

Forty-three domestic nameplates had a supply of 100-days-plus.

Toyota Motor Sales U.S.A. Inc. had a 39-day supply of domestic and imported cars, lowest of the Big 3 and transplant companies. But Toyota's days' supply was up from 24 days on Jan. 1.

Honda, Toyota franchises top Power wish list

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

The three most desirable franchises to own are Honda, Toyota and Mercedes-Benz, according to a new J.D. Power and Associates Dealer Attitude Study.

The study asked 12,000 dealers to name the franchise they would most desire to own other than the ones they own currently. More than 3,000 responded.

The three domestic makes in the top 10 were Ford (fourth), Chevrolet (fifth) and Cadillac (seventh).

Chrysler's franchises were rated from bad to worse, with its Jeep line placing 22nd in desirability out of 40 automotive franchises and Eagle showing up in the 35th slot. Only 2 percent of responding dealers voted the Eagle franchise an "excellent" franchise to own.

Chrysler-Plymouth dealerships placed 31st. But John Paladino, owner of Bronx Chrysler-Plymouth in New York City, says he wouldn't trade his dealership for the No. 1-ranked franchise.

"A Honda dealership is more desirable because it has a high profitability level because people are stupid," he said. "Hondas are pieces of junk just like anything else. They're no better than Chryslers, but people have a fixation about them in their heads. I make money, Chrysler is a good automobile and it's American, and that's what's important. I think it's awful dealers would want to own a Japanese dealership."

Paladino is in the minority on that issue.

Chip King, sales manager for Manchester Honda in Manchester, Conn., says dealers want Honda franchises "because the product is going to be there year after year after year. Since 1982, Honda has been the franchise to own."

> "A Honda dealership is more desirable because it has a high profitability level because people are stupid. Hondas are pieces of junk just like anything else."
>
> **John Paladino**
> Bronx Chrysler-Plymouth

The newest franchise member, Saturn Corp., was voted 24th, with only 10 percent of responding dealers rating the desirability of that franchise "excellent," compared to a 76 percent "excellent" rating for Honda.

Steve Norris, general manager of Saturn of Sunnyside in Cleveland, attributed the mediocre ranking to Saturn's newness.

"It's just a matter of time before the public becomes more educated about Saturn," Norris said. Saturn "had problems in the beginning, but they didn't ship the problem out the door. That's commitment. They're not looking for short-term profits, but rather the long-term customer."

Low-volume imports were the least desired franchises. There was a five-way tie for last place, with Suzuki, Peugeot, Alfa Romeo, Sterling and Yugo each receiving only a 1 percent "excellent" response. Of those importers, Suzuki sold the highest U.S. volume in 1990, with 20,504 cars and light trucks. Low-volume, exotic franchises were not included in this survey.

According to dealers, only strong, profitable car lines can be expected to survive in the "jungle-warfare automotive marketplace of the 1990s," the study reported.

FRANCHISE DESIRABILITY

Chart ranks franchises by percent of non-handling dealers who rate it "excellent." Chrysler Corp. franchises highlighted.

CAW tackles Hyundai Canada; work rules and pensions cited

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

The Canadian Auto Workers union has begun an organizing drive at Hyundai Auto Canada Inc.

This is the first union test of a non-Big-3-related Asian transplant auto factory in Canada. The 600-employee plant began producing the Hyundai Sonata in 1989.

Union organizers in the Hyundai campaign said that a victory in an election could still be months away. Under Canadian law, the union is recognized without an election when more than half of the eligible workers sign union-certification cards.

Organizers said the drive's central issues have been work rules and the company's recently adopted sliding-scale pension plan. According to company policy, higher wage earners will receive a larger percentage of their annual salary upon retirement than lower wage earners.

Workers at the plant currently earn $12 ($10.37 U.S.) to $18 ($15.54 U.S.) an hour.

In comparison, average Big 3 hourly wages are $18 for CAW-represented assembly workers and $22 ($19 U.S.) for skilled workers, a CAW spokeswoman said.

Organizers said work rules also have been a key issue. Jack Denis, a CAW representative on the project, claimed that some Hyundai workers are unhappy with the company's practice of moving employees freely from job to job.

CAMI Inc., a 50-50 joint venture between General Motors and Suzuki Motors Ltd. in Ingersoll, Ontario, is unionized. Volvo AB also operates a small CAW-represented assembly plant in Nova Scotia.

Honda Motor Co. and Toyota Motor Corp. both operate non-union car plants in Ontario.

Hyundai Canada builds Sonatas for California

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Hyundai Auto Canada Inc., the North American manufacturing arm of South Korea's Hyundai Motor Corp., has begun building California-specification Sonatas.

The move is expected to increase production by at least 10,000 units at the Bromont, Quebec, plant this year. Those models, equipped for different engine and fuel emission requirements, were previously supplied from South Korea.

With the additional output, Hyundai expects to increase Canadian production by at least 24,000 units this year.

The production increase, to approximately 50,000 units annually, will enable the Bromont, Quebec, plant to supply all North American sales of the Sonata sedan.

A Hyundai spokesman said the Bromont plant expects additional production from a projected increase of 4,000 sales in Canada. Last year's total was about 7,000.

The remaining growth will represent increased Sonata sales in the United States, the spokesman said. Last year, Hyundai sold 29,840 Sonatas in the United States.

Hyundai Auto Canada does not plan to export vehicles to any country other than the United States this year. Approximately 1,000 were shipped to an independent distributor in Taiwan last year.

The expected production increase would effectively place Hyundai Auto Canada at the level projected earlier. It had appeared that the plant would fall short of its production goal.

A plan to supply Chrysler Corp. with approximately 10,000 Canadian-made Sonatas a year fell through when Chrysler canceled the arrangement.

Hyundai considered the possibility of adding a second, higher-volume product at the plant to compensate for the setback, but no plans have been finalized.

Hyundai recently opened an $85 million sheet-metal stamping operation in Bromont. It enabled the transplant to begin purchasing North American steel for the Sonata.

A total of 32 metal parts and body panels will now be produced on site using North American-sourced steel, the spokesman said.

Bill would strip Congress of CAFE control

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The auto industry has been arguing that any increase in fuel economy standards should be part of an overall energy bill. And last week, the industry got its wish.

A comprehensive energy bill introduced in the Senate would authorize the Department of Transportation, rather than Congress, to increase the corporate average fuel economy standard.

The bill, introduced by Sen. J. Bennett Johnston, D-La., would boost CAFE to the "maximum feasible" level determined by the secretary of transportation for the 1996 to 2001 model years. CAFE would be set again for 2002 and beyond.

Johnston's bill is far less stringent than other CAFE legislation introduced this year. A bill reintroduced by Sen. Richard Bryan, D-Nev., and three bills in the House of Representatives would force automakers to increase their CAFE scores 20 percent by the 1996 model year and 40 to 60 percent by 2001.

Japanese manufacturers are particularly opposed to the percentage increases because, as the companies with the highest CAFE scores, they would be required to make the biggest increases.

Although Johnston's bill is more lenient, the Japanese are still likely to oppose it because it also would mandate percentage increases.

All automakers now must meet the same 27.5-mpg CAFE.

Under Johnston's bill, the transportation secretary would make several assumptions in setting the standard:

- Automakers would use all known fuel-saving technologies.
- Vehicles would maintain 1990 model-year CAFE performance levels, and the size mix would stay the same.
- Vehicles would meet all emissions and safety standards.

Separate standards would be set for each manufacturer and each broad vehicle class — cars, light trucks and other truck classes.

The transportation secretary would determine the percentage increase achievable by all vehicles in the class and would apply that percentage to each manufacturer.

For each tenth of a mile per gallon below the standard, an automaker would be fined $20, multiplied by the number of vehicles in that class that the manufacturer built during the model year. The current multiple is $5.

Saturn production grows, now matches sales demand

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — Saturn Corp.'s production is accelerating rapidly, but it still is months behind schedule.

The Spring Hill, Tenn., factory produced 3,904 cars in January — more than double the December output of 1,620. At that rate, Saturn says it is producing enough to satisfy current sales demand. Saturn sold 886 cars in the 10-day period ended Jan. 31, bringing its total for the month to 1,520.

But production bottlenecks and quality precautions continue to hold the new $1.9 billion plant as much as four months behind earlier schedules.

When Saturn began pilot production last June, plans called for a volume of about 4,000 units a month by last October and more than 8,000 a month by January, according to internal documents obtained by *Automotive News*.

"We are still increasing our production levels to meet customer needs," said plant spokeswoman Nicole Merritt.

The company denied reports that labor shortages had also put Saturn behind schedule in hiring a planned second shift.

The company expects to complete hiring of 1,000 additional second-shift workers in time for a scheduled spring startup, Merritt said. The automaker now employs 4,300 at the Tennessee operation and has been adding about 250 persons a month.

The company will not say how many of the necessary 1,000 workers remain to be hired.

By agreement with the UAW, Saturn has limited hiring to General Motors personnel and has given first priority to laid-off GM workers. About 2,000 of the more than 3,200 factory workers were recruited from GM's pool of laid-off employees.

Merritt said Saturn still has about 15,000 applications from which to choose the remaining workers. About 4,000 are from laid-off workers, company spokesman Bruce MacDonald said.

While the second-shift hiring is taking place, Saturn has assigned 100 to 150 temporary contract workers to plant-support functions, he said. They are employed by Premier Cleaning Contractors Inc. of Cincinnati and are represented by the UAW. They will be replaced after three months.

Premier also provides a range of janitorial and plant maintenance and industrial support services to other auto plants. They include New United Motor Manufacturing Inc., GM's joint venture with Toyota Motor Corp. in Fremont, Calif., and Diamond-Star Motors Corp., the joint venture of Chrysler Corp. and Mitsubishi Motors Corp. in Normal, Ill.

Ford, Chrysler offer dealer diagnostic systems

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. and Chrysler Corp. are marketing new computerized service diagnostic systems for their dealers in the United States.

Both units — Ford's Service Bay Diagnostic System and Chrysler's Mopar Diagnostic System — and their programs are being launched at the National Automobile Dealers Association Convention and Exposition in Atlanta this week.

Both automakers are relying on the systems to improve customer satisfaction by increasing service technicians' ability to diagnose and remedy malfunctions in today's electronically controlled vehicles on the first try. The systems also are expected to reduce repair time and increase shop productivity.

"There is no substitute for a knowledgeable technician when it comes to performing repairs and satisfying customers," said Lee R. Miskowski, general manager of Ford Parts and Service Division. "The diagnostic system is a powerful tool designed to help technicians keep pace with the ontinuing growth of sophisticated vehicle systems."

Tom McRea, manager of dealer development for Chrysler's Service and Parts Operation, agrees.

"The Mopar system helps keep service people on top of technology as increasingly complicated onboard electronic controls are engineered in today's more sophisticated vehicles," he said.

The personal computer-based units are similar to General Motors' Computerized Maintenance System. The Chrysler and GM systems use IBM computers; Ford went to Hewlett-Packard Co. for its hardware.

The price of the Ford Service Bay unit is $35,000. Ford also has a rental plan where dealers can rent units for as low as $19,000 a year. The rental fee is geared to the size of the dealership.

Morey Church, Ford Parts and Service Division technician, demonstrates the new Service Bay Diagnostic System.

Chrysler's diagnostic unit, which dealers are required to have in their service departments, is being offered under a lease program, with monthly rates ranging from $295 to $595 a month, depending on dealership size and usage.

"We decided to go the lease route because we didn't want to stick the dealer with a piece of obsolete equipment down the road," McRea said. "What dealer doesn't have a piece of obsolete equipment that no longer applies to today's technology?"

GM's unit costs $17,879. A dealer with multiple GM franchises pays $1,070 for a unit for the second franchise, $385 for the third, $380 for the fourth and $171 for the fifth.

Ford dealership installations begin March 1. About 1,500 dealerships will have the system installed by year end, according to J. Frank Kery, manager of diagnostic service planning for the Parts and Service Division.

Comprehensive hands-on training will be provided for technicians. Most of the training will be held at the dealership and will include a system overview, application of diagnostic tools, data interpretation, access to technical information and troubleshooting, Kery said.

The Ford unit, Kery said, is designed to address the two most frustrating service occurrences — intermittent problems and hard-to-find problems — in the base engine, electronic engine controls and ignition and fuel systems.

While the diagnostic unit is most effective when connected to a two-way data communication link presently available on certain late-model Ford, Lincoln and Mercury vehicles, Kery said the system also is able to provide up-to-date service repair information from bulletins and shop manuals, as well as various measurement functions on vehicles with EEC-IV built since 1986.

Kery said that by 1995, approximately 75 percent of the company's vehicles on the road will be equipped with the communication link.

The Mopar unit combines computers on the vehicle, monitors in the service bay and a satellite to find and fix problems.

Chrysler's unit not only diagnoses electronic systems, but also gives a step-by-step repair procedure if a problem is detected. It also allows access to any page from the company's technical information library or automated parts catalog. The system is starting out with 1987 through 1990 model service procedures and has the capability to be updated.

McRea said the Mopar unit will access the circuits of electronic fuel injection, charging system, engine control and body computers, instrument cluster, air bag and seat restraint systems, security system, anti-lock brakes and electronic transmission, load levelers and air suspension on Chrysler vehicles.

Service index rises 5.7% in 1990

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Despite registering its sharpest drop of the year in December, new-car dealers' service and parts business for all of 1990 recorded a moderate gain, according to the Automotive News Service Index.

Shop volume in dealerships across the country in 1990 amounted to 105.7 percent of the business for all of 1989. Service and parts business for all of 1989 was 101.4 percent of the volume in 1988.

December's volume dipped to 95.4 percent of the parts-service business recorded in the year-earlier month, marking the largest monthly decline since September 1989, when volume was 95.3 percent of the year-earlier total. December also marked the first time since July that shop business failed to top the year-earlier volume.

SERVICE INDEX
95.4★

	Dec., '90 vs. Dec., '89	Jan.-Dec., '90 vs. Jan.-Dec., '89
Gross Profit on All Labor and P&A Sales	+ 1.5%	+ 5.8%
Repair Orders Written	– 7.8%	– 0.6%
Total Labor Sales (Customer & Warranty)	– 2.9%	+ 7.6%
Shop Parts Sales (Customer & Warranty)	– 0.4%	+ 6.7%
Sales of All P&A	– 9.0%	+ 4.2%

★ Survey by Automotive News shows that dealers' service and parts business in December 1990 was 95.4 percent of business in December 1989. Service business in 1990 was 105.7 percent of business in the corresponding period in 1989.

All indicators used in the Service Index, except repair orders written, made gains in 1990.

But in December, all indicators, except gross profit on all labor, parts and accessories — the most important indicator to dealers — were down.

Gross profit was up 5.8 percent for the year and 1.5 percent in December, while total labor sales (customer-paid and warranty) were up 7.6 percent for the 12-month period and were down 2.9 percent for December.

Shop parts sales (customer-paid and warranty) rose 6.7 percent for the year, but dipped 0.4 percent for December. Sales of all parts and accessories climbed 4.2 percent for the year, but declined 9.0 percent in the final month. Repair orders written dropped 0.6 percent for 1990 and 7.8 in December.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross-section of the nation's new-car dealers.

Nissan cuts prices to fight non-OEM parts

CARSON, Calif. — Nissan Motor Corp. in U.S.A. has joined the battle against the use of non-original equipment parts in repairing vehicles by announcing a 33 percent price reduction in the suggested list price of 51 key bumper components.

The parts involved include bumpers, bumper covers and bumper reinforcements for selected Nissan vehicles.

Nissan becomes the second automaker and one of the first import original equipment manufacturers to cut component prices in the fight against the use of non-original equipment components by service facilities to repair vehicles involved in collisions.

Last year Ford Motor Co. reduced list prices an average of 14 percent on nearly 200 crash parts used in collision work.

The parts involved in the price cuts compete against non-original equipment sheet metal and plastic components certified by the Certified Automotive Parts Association and by insurance companies.

Jerry Butts, general manager of Nissan Parts and Service Division, said: "Nissan has been able to reduce prices on these select parts through continually improving inventory control and operating efficiency, as well as garnering cooperation from our suppliers. A number of recent developments in our industry have pressured shops to use cheaper non-original equipment parts, regardless of quality."

This movement to less-expensive non-original equipment parts has been opposed by collision repair shops, particularly those that have established a customer clientele based upon craftsmanship and reputation, Butts said.

"Customers don't always know that their car is being repaired with parts of less than original-equipment quality," Butts said. "This price reduction will help to ensure customer satisfaction in a marketplace that is being dictated primarily by price."

SERVICE BRIEFS

Ford ups repair times

DEARBORN, Mich. — Ford Motor Co. plans changes in its warranty labor standards for heavy trucks that will increase the time allowed for some major operations.

The revisions, expected to be announced in March, also will include time allowances for operations such as diagnostics and road testing, according to Norbert Reese, service and fleet support manager for Ford Parts and Service Division.

According to Reese, about two-thirds of the approximately 600 operations listed in the time standard book for heavy trucks are being studied, with a "majority probably being increased."

New warranty for Hino

ORANGEBURG, N.Y. — Hino Diesel Trucks (U.S.A.) Inc. is offering a new standard warranty for the 1991 model year.

The warranty includes basic vehicle coverage of 24 months/unlimited mileage, engine coverage of 36 months/unlimited mileage, anti-corrosion perforation coverage of 48 months/unlimited mileage, frame and crossmember coverage of 48 months/unlimited mileage and towing coverage of 24 months/unlimited mileage.

Hino also announced new parts warranty coverage for six months/unlimited mileage for replacement parts and 12 months/unlimited mileage for major component assemblies and air conditioner kits. Hino also introduced an extended powertrain warranty with coverage through the fifth year of use.

Western Auto expands

KANSAS CITY, Mo. — Western Auto Stores, a subsidiary of Sears, Roebuck and Co., will offer an automotive retail franchise under the name of Auto America in select markets.

The franchise has been developed specifically for medium markets not currently served by an automotive superstore, according to John Barlow, president and chief executive officer of Western Auto.

Modeled after Western Auto's four-stores-in-one strategy, Auto America will include a discount automotive parts store, a tire store, an accessory shop and a service center, according to Barlow. Fifteen stores are planned for 1991.

CAPA suspends firm

WASHINGTON — The Certified Automotive Parts Association has suspended one Taiwanese crash parts manufacturer for a minimum of nine months and has placed three others on probation for failing to meet the association's standards.

Chang Fu Cheng Enterprise Co. Inc. has been notified of the suspension and the decertification of 47 parts, resulting from failure to pass the association's annual quality approval inspection and because of the high number of complaints and decertified parts.

To re-enter the certification program, the parts firm must reapply as if it were entering the program for the first time.

Firms placed on probation for 30 days are Gordon Auto Body Parts Co. Ltd., Conjoin Key Industries Co. Inc. and Haur Tay Enterprises Co. Ltd.

If the companies fail to meet the association's quality re-approval process criteria within the 30 days, they, too, will be suspended from the program.

Ford keeps Australia sales lead despite Japanese gains

By Pedr Davis
SPECIAL CORRESPONDENT

SYDNEY, Australia — Ford Motor Co. of Australia retained its position as the country's sales leader last year, but lost nearly 2 points of overall market share to Japanese marques led by Toyota Motor Corp.

According to Paxus Corp. Ltd., which compiles data on the Australian market, combined passenger-car and light-truck sales rose 1.6 percent last year, to 617,298 units, despite a steep downturn in the final three months. Ford, the country's traditional sales leader, fell to a 22.66 percent share from 24.21 percent in 1989 as No. 2 Toyota gained 2 points, to 20.86 percent, on the strength of solid demand for both its cars and trucks.

AUSTRALIAN CAR MARKET SHARES

	1989 Percent	1990 Percent
Ford	26.97	24.94
GM-H	20.91	19.66
Toyota	15.07	17.52
Nissan	9.62	11.24
Mitsubishi	11.23	9.88
Others	16.2	16.76

SOURCE: Paxus Corp. Ltd.

AUSTRALIAN TOTAL MARKET SHARES
Includes passenger cars and light trucks

	1989 Percent	1990 Percent
Ford	24.21	22.66
GM-H	17.49	17.41
Toyota	18.76	20.86
Nissan	11.10	11.78
Mitsubishi	11.92	10.54
Others	16.52	16.75

SOURCE: Paxus Corp. Ltd.

According to the Paxus data, Ford also lost share in the key passenger-car segment, which accounted for more than 75 percent of Australia's total vehicle sales last year, or 462,500 units. Although Ford still accounted for a commanding 25 percent share of that market, it was down 2 points from 1989.

In the same period, Toyota's share jumped 2.5 points, to a third-place 17.52 percent, while No. 4 Nissan rose to 11.24 percent of the market from 9.62 percent.

No. 2 GM-Holden slid more than a point, to 19.66 percent of the market, while No. 5 Mitsubishi fell to 9.88 percent from 11.23 percent.

"Australia's market is notoriously influenced by new releases," said one Sydney-based analyst. "Toyota introduced an average of one new model every five weeks last year, and this paid off in increased share. Mitsubishi, on the other hand, offered nothing new, and lost share."

According to industry data, the most popular passenger models last year were the Holden Commodore, Ford Falcon, Ford Laser, Toyota Camry, Mitsubishi Magna, Toyota Corolla and Nissan Pulsar, in that order.

Ford finished the year 24,401 passenger cars ahead of Holden and 34,400 units ahead of Toyota. But Toyota sold more four-cylinder cars than any other marker.

Toyota also took a commanding lead in the commercial vehicle market with a 30.9 percent share, including a 40.4 percent share of the four-wheel-drive market.

Sales of four-wheel-drive vehicles boomed last year, rising to 66,329 units, or 11 percent of total sales. The most popular 4×4 model was the Toyota Land Cruiser, followed by the Toyota Hilux.

The locally-made Ford Capri outsold Mazda's Miata by 3-to-1. The locally-made Ford Fairlane was the top-selling luxury car, with 5,774 registrations.

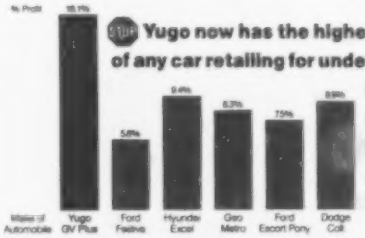
Compared with the previous year, the European segment of the 1990 market fell by 25 percent, to 13,912 units.

Only two makers managed a sales increase — Volkswagen AG's Audi unit and Automobiles Citroen. Fourteen others, ranging from Mercedes to Ferrari, slumped.

Worst hit was Fiat, which plunged 92 percent. It was followed by Ferrari, down 84 percent.

Why dealers no longer consider Yugo to be a four letter word.

It doesn't take heavy research to figure out why Yugo's picked up a lot of dealers recently. All you have to do is read the newspaper to figure out the economy isn't what it used to be. Add that to the fact that Yugo's the only car available for under $5000†, and it's just a simple case of being in the right car at the right time.



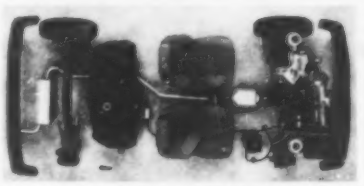
Yugo now has the highest profit margin** of any car retailing for under $10,000—16.1%. Plus being a Yugo dealer requires a low investment and no separate Taj Mahal.

Yugo America, Inc. is now a U.S. subsidiary of its Yugoslav manufacturer, Zastava. Which to Yugo means the extra backing of a couple of billion dollars. And to you it means Yugo's not only a better car, it's a better car company.

Zastava's presence also means Yugo now has better parts support; in fact, Yugo's initial fill rate for calendar year 1990 was 93%. Additionally, you can now count on Yugo for stronger field support, readily available personnel that can take the car apart and put it together again.

And speaking of taking Yugos apart, Yugo engineers have made more than 357 improvements, including the addition of a larger displacement engine and Bosch fuel injection. Because we've found there's always room for improvement. But now, there's a lot less.

We're so confident of our improvements we stand behind every new Yugo with a 4 year/40,000 mile warranty* and free maintenance for a year or 12,000 miles. Making the reliable new Yugo one of the best backed small cars anywhere. Which should be a comfy thought for every proud, new owner.



The Yugo has 357 improvements.

And now there's the Cabrio Convertible. It's not only the least expensive convertible available, it also has room for four and a power top that comes standard.

And if having great cars for the right times isn't enough, Yugo has something more. In fact, you're getting a taste of it right now. A substantial national advertising effort that was recently cited by *U.S.A. Today* as being one of the most outstanding in the entire automotive industry.

So these days, owning a Yugo is just plain smart. And as you can see, that goes for a dealership as well as a car. To find out how to become a Yugo dealer, call our Director of Dealer Development, Pete Haskell at (201) 825-4600.

YUGO
Peace of mind comes standard.

Visit the Yugo Hospitality Center at the Hyatt Regency Hotel during the NADA Convention.

DO NOT PASS

*Limited powertrain warranty. Call Yugo America, Inc. for details. †Manufacturer's suggested retail price 1991 model GV Plus. Outboard Marine expands pact on Orbital 2-stroke

SYDNEY, Australia — Orbital Engine Corp. said last week it has signed a new agreement with Outboard Marine Corp. that expands Outboard's rights to use Orbital's two-stroke engine technology.

Under the accord, Outboard also will purchase an undisclosed number of marine engines made at Orbital's manufacturing plant in Tecumseh, Mich. Value of the agreement was not disclosed.

Outboard Marine signed its first agreement with Orbital's founder, Ralph Sarich, in 1986 and has since run its own development program. However, the marine engine maker said it has decided to use the improved technology developed by Sarich's research center in western Australia.

The new accord gives Outboard access to Orbital technology developed since 1986.

"We have conducted extensive research in the field of advanced two-cycle engine designs," said Outboard President James C. Chapman. "Based on that research, we believe Ralph Sarich and his engineering staff have produced fuel-injected two-cycle systems that are technologically superior to any others in development today."

Chapman said that under the accord, Outboard will have the right to purchase Orbital's X-series automotive engine — the unit to be produced in Tecumseh.

Orbital spokesman Steve Hill declined to say how many marine units are involved in the agreement, but he said the technology is suitable for all engines that Outboard Marine manufactures.

— Pedr Davis

Secrets of selling cars, from 44 informed dealers

The men and women who operate auto dealerships in the United States and Canada keep their countries on wheels. They sell at least 15.5 million new cars and trucks each year, and they service many times that number.

In this section, *Automotive News* presents profiles of leading dealers in 44 U.S. and Canadian markets. Their backgrounds are diverse; their views of the industry differ; and their methods of operation reflect the characteristics of the makes they handle and the markets they serve. But they have one attribute in common: Each is successful in a mighty tough business.

Included are statistical profiles of the 40 U.S. and four Canadian metropolitan areas. The figures include population of the metropolitan statistical area, car and light-truck registrations for the 1989 and 1990 model years and the five top-selling nameplates in each area for those model years.

The population figures were supplied by the U.S. Bureau of the Census and the Canadian Census Bureau. Registration data was provided by R.L. Polk & Co.

There's a touch of class to Sheila Garcia's executive office suite on the top floor of the Garcia Toyota Honda building in Albuquerque, N.M. — antique Mexican chests filled with Spanish, Mexican and Indian artifacts, pricey hand-made Indian rugs, R.C. Gorman paintings.

There are books everywhere, and on her desk are "The Collected Poems of Emily Dickinson" side by side with Harvey Makay's "Swim with the Sharks." Those two books, perhaps, reveal the character of one of the most successful

Sheila Garcia

Honda, Suzuki, Toyota, Volvo

auto retailers in the state. She's a lady, in the best sense of the word, but she's nobody's fool.

"Times are tough right now for all of us in the car business, but I've managed to stay in the black, and I intend to keep it that way," she says. "But I won't do it at the expense of people. And the truth is, you don't have to."

Cutting overhead, she says, has kept her business, which includes Volvo and Suzuki franchises as well as Honda and Toyota, in the black.

"I think we'll be looking for more ways to cut corners and more ways to generate business for a while. For now, we're all saying, let's just wait and see."

After reviewing recent figures from NADA, which show 30 million older cars whose owners have them paid for, Garcia says she is less pessimistic about the latter half of 1991. "The theory is that they'll be buying new cars, replacing those old ones," she says.

In the meantime, Garcia says she's constantly reassessing, constantly looking at ways to make her ledger a little blacker.

"Of course we're cutting back on overhead, and that, quite honestly, is what's keeping us in the black. We're looking at everything, from little things like office supplies to bigger expenses like not hiring outside consultants. We're doing more work ourselves in the accounting department, for example, more sales training meetings ourselves."

Ford Ranger	664	Ford Tempo	660
Chev. S10	649	Chev. S10	649

She's also taking a more aggressive ploy by recently adding more used cars, particularly in the modest price range. "We've used advertising to increase service business, too, and we're going after more wholesale parts business. I know a lot of my friends in the business are picking up some with light trucks, but that doesn't work for us, because of the heavy import taxes we have to add on."

Inventory control is also receiving more scrutiny. "Last year we had too many cars. We had a 100-day supply. Now, we're trying to stay at 45. That's difficult to do, of course, but we manage to stay between 45 and 60."

Last year Garcia sold "slightly over 1,600 cars and 800 trucks" in her four dealerships.

"That's not a significant increase over the year before," she says, "and the truth is, every one of those deals was a lot harder to make than the year before."

Garcia says she doesn't mind a challenge, though, and showed her ability to "hang tough" six years ago when she was suddenly widowed, left with five children, ranging in age from 3 to 19 and a business that no one expected her to be able to run.

"I remember my lawyer asked me how committed I was to keeping the business, and I said, 'I'll show you how committed.' Well, I've built this building," she says, as her arm sweeps across the spacious room with it's panoramic view of the Sandia Mountains, "And I've added two franchises. I've found out that if you can run a family, you can run a business."

Garcia's success has won her local, state and national awards of recognition, including the 1987 Import Car Dealer of Distinction Award sponsored by *Sports Illustrated* magazine and the American International Automobile Dealers Association and a ranking each of the past four years in *Savvy* magazine's top 60 U.S. businesses run by women.

Getting there wasn't easy, and one of the first hurdles Garcia had to overcome was the fact that she was a woman, she says.

"There weren't, and there still aren't, very many female car dealers in the country. I would go to meetings and get the feeling my colleagues had the attitude, 'Oh, look, isn't that cute, a woman trying to do this.' It took a while for some people to realize that I could do something besides play bridge, and once or twice I had to tell people my name's not Honey. But things have worked out. I'm lucky, I guess, that I got into this six years ago when business was better. It would be even tougher now."

Garcia's hands-on managerial style, she says, serves her well in a constricting economy. "I know my style is very different from my husband's. He was very talented. Very good at delegating, but I never tried to do things like Julian. I always knew I had to be myself."

That meant selling off the company's Honda, Mercedes and Saab dealership in nearby Santa Fe, N.M., four years ago. "I wanted to put the money here in Albuquerque where I'd be around to supervise," she says.

Her style includes developing a personal relationship with most of her 160 employees. "I haven't had to lay anyone off during these tight times, but I do want to make sure everyone is working to the top of his or her capacity. I want to hear if someone has problems at home that may be interfering with work. If someone isn't selling as much or bringing in as much business as he or she should, I want to talk to them, I want to hear any ideas they might have to improve. I used to be a school counselor, so I feel I'm at my best when I'm dealing with people one-on-one."

Factory policies that take her too far away from the hands-on or personal touch are the ones Garcia has the most complaints about.

"The add-on for advertising at the factory gives me a real concern. At $225 per car, I feel I could make better use of the money. Honda allows us to have our own input. That's the way it should be."

Fleet subsidy programs don't escape Garcia's criticism. "Car dealers should handle fleet sales, and we should buy them back for resale. I'm competing with someone who can buy cheaper than I can. It's hurting me. It's hurting all of us.

"I don't want to sound complaining," Garcia says, "I have a good life. I live very well, and I'm taking time to smell the roses," she says in true Dickinsonian style. "But," she adds, with an eye toward the sharks that swim in today's economic waters, "I'm going to make sure I keep it that way."

Atlanta

Family, business traditions work for McNamara

By Scott McDaniel
SPECIAL CORRESPONDENT

For Dennis C. McNamara, the new automobile and light truck business is a family tradition.

McNamara, the owner of McNamara Pontiac-GMC-Isuzu in Tucker, Ga., an Atlanta suburb, practically grew up in the dealership of his father, Dennis C. McNamara Sr. The elder McNamara has been a Pontiac dealer in Orlando, Fla., since 1945 and is still going strong at age 70.

"He is one of only a handful of Charter Masters Pontiac dealers in the country," said the younger McNamara.

The father obviously set a good example for the son. "I guess I always wanted to go into the business," said McNamara Jr., 45. "It's all I've ever known."

After earning a bachelor's degree in business administration at Stetson University in DeLand, Fla., McNamara served two years in the armed forces in "friendly Southeast Asia."

"I was stationed in Thailand and Vietnam," McNamara said. He rose to the rank of first lieutenant.

In February 1971, McNamara left the military and began his cho-

Dennis McNamara

Isuzu, GMC, Pontiac

sen career. He first moved to Atlanta to begin work at a dealership jointly owned by his father and Whitey Whiten. He would later purchase this dealership.

Three months later he joined his father's dealership in Orlando and worked there for eight years learning the business. During that time McNamara attended the General Motors dealers' sons' school and was a member of the first graduating class of Pontiac College.

In 1979, he moved back to Atlanta and bought the dealership from his father and Whiten. Today, 11 years later, McNamara owns a 10-acre dealership in the middle of a fast-growing Atlanta suburb.

In the face of a national decline, McNamara's dealership increased its business in 1990.

Honda Civic	4,860	Ford Ranger	5,592
Chev. S10	4,689	Ford Escort	5,285
Toyota Camry	4,228	Ford Taurus	5,077

"We had the highest percentage of improvement of any Pontiac dealer in the Atlanta zone (total volume of $5.4 million in 1990 compared with $4.9 million in 1989), but that was because we had such a bad 1989," he said, laughing.

Unlike some dealers who depend heavily on new vehicle sales to stay afloat, 65 to 70 percent of his business comes from the body shop, service and parts departments. New vehicle sales, meanwhile, have steadily decreased from 3,009 units in 1985 to 1,900 last year.

McNamara noticed a marked decrease in floor traffic beginning last September, which he attributes to the crisis in the Persian Gulf.

"Big cars have slowed down dramatically," he said. "People are scared to death."

McNamara believes business in the next few months depends on how the crisis is resolved. "If there is a quick resolution, things might pick up, but if it drags out into a Vietnam-type situation, there will be economic chaos in this country."

McNamara plans to be extremely conservative in the next few months. "We tried some aggressive advertising back in the fall," he said. "We monitored the floor traffic carefully, and it didn't seem to be helping. You can shout all you want about great deals, but if no- ▶

FACE OF THE DEALER, 1991

body's listening, it's not going to do any good."

Help doesn't seem to be coming from the manufacturers, either. McNamara is concerned that Pontiac did not introduce any all-new models this year.

"I think they missed an opportunity there," he said. "The Japanese (manufacturers) bring out four or five new models a year and Pontiac didn't bring out even one. We are closing the gap quality-wise, but we are too slow to catch the leading edge of styling."

McNamara has only to look at his Isuzu franchise for an example, where the new Stylus, Impulse and Rodeo arrived for 1991.

As for manufacturers incentives, he generally discounts their lasting value in increasing sales. "You don't need an incentive program if you've got something that people want to buy," he said.

In such uncertain times, many dealers are worried about the future, but McNamara is confident he can continue to make a profit.

"We have a beautiful facility and we're on a major thoroughfare in a large metropolitan area," he said. "We're in a good market, although it's extremely overdealered. We have balance, too."

But perhaps the most important reason for his continued success, McNamara asserts, is his application of conservative business practices learned from his father.

"My father believes in sound expense control management," explained McNamara. "We don't overextend ourselves. We don't own airplanes or 15 franchises. The property is virtually paid for. We take a marginal profit and use the rest to retire debt service."

McNamara thinks that many new dealership fail because of unsound business practices.

"Dealers come in undercapitalized in overdealered markets," he said. "Many of them are barely there financially and they can't afford to stay for the long haul."

McNamara himself plans to be in the business for the long haul. "I'll be right here until I retire, but that won't be anytime soon."

Is there another McNamara growing up in his dealership? McNamara has a daughter, Kelley, who is a junior at the University of Alabama and "might come into the business." If so she would represent the third generation of McNamara Pontiac dealers, continuing the family tradition.

Baltimore

Consumer activist wears the mantle of an auto dealer

SPECIAL CORRESPONDENT

During his regular broadcasts over the area's biggest radio station, he tears apart his competitors' "deceptive" advertisements. His billboards blare the message that his customers are the smart ones in town. And he nominates himself to the post of unofficial watchdog of his factory's marketing activities.

Alan Abramson, the dealer principal of Archway Ford in Baltimore, is a consumer activist in car dealer's clothing. It hasn't won him a lot of friends in the industry, but he influences enough people so the floor traffic at his Ford dealership is steadily climbing higher and higher.

BALTIMORE, MD.

"I'm kind of like an anti-hero," says Abramson, whose father started the business in 1955. "After all, you have to stand for something."

Baltimore is a bastion of hard-driving, blue-collar domestic buyers.

Together they support an industrial community with just enough high-tech horsepower to keep it running in tough economic times. Abramson is a bundle of car-selling energy. The way he looks at it, the recent downturn in sales gives

Alan Abramson

Ford

him a chance to be like a sportsman, living for the hunt.

"I'm an old war horse who has been through god-awful times before," he says.

"I like the challenge, and I wouldn't give it up."

Abramson, a single-line dealer, is faring better than many in Baltimore, where 1989 saw a couple major dealers go out of business. He says he averages 1,000 to 1,200 car and truck sales a year.

In 1990, due to a serious slump in the fourth quarter, sales were down 20 percent.

"I'm doing pretty well, but for the last couple months, I've been treading water," the veteran dealer says.

"But there are several dealers around here who are hurting, and they are hurting badly.

"I don't want to be a harbinger of horror, but in the next couple months we're going to see a real squeezing in the market here."

Abramson credits some of his sales slowdown to the less-than-impressive showing of the new Ford Escort.

He doesn't believe that Ford has adequately expressed the "full significance of the newness" to consumers. He also laments that there was very little inventory available until August.

Abramson is also a big critic of the plethora of manufacturers' marketing incentives, which he thinks are making consumers increasingly cynical.

Car buyers, he says, "just want to know what the cost is going to be."

"With cash rebates, 99.9 percent of the assumptions go to the dealer, and many give the rebate in lieu of a dealer discount," says Abramson. "Rebates have been abused as a marketing tool."

To cope with the tough times ▶

There are two reasons why we publish new Used Car Market Guides weekly . . . one is fairly obvious.

See us at NADA Booth #2245

Thousands of dealers, wholesalers, finance and insurance people will not open their mouths on an automobile without first referring to this little book. So, it's in and out of pockets, brief cases and glove compartments hundreds of times each day. At the end of just seven days, it's pretty well worn out.

But by then a new one, containing up to the minute market information, is on its way to you.

We survey over 60 major wholesale auctions weekly. Our reporters look at the cars being auctioned. They classify them as to condition, record the mileage and the actual selling price as paid by dealers. This information is then tabulated and published weekly in a concise, easy to read format. We list each vehicle in 4 condition classifications, from rough to extra clean, plus adds and deducts.

FACE OF THE DEALER, 1991

ahead, Abramson, like his Baltimore brethren, is carrying less inventory and has cut back on an advertising budget that is already anemic.

He has also "put a lid on personnel," although he went into the last few months as lean as ever.

"I've always tried to keep the organization lean, but I definitely don't want to cut people from parts and service because the dealers who don't emphasize service are the ones hurting the most," he says. "And I've never been a six- or five-figure-a-month advertiser."

But his no-cost, every-other-day consumer-oriented broadcasts on WBAL radio certainly help keep his name in the limelight.

In his three-minute spots, Abramson criticizes the advertising practices of certai other local dealers and attempts to educate consumers to "protect them" from any deception. He doesn't mention the dealers by name, but he says he hopes that his efforts help discourage errant dealers and any others who might copy the ads.

Ethics in advertising has long been a concern of Abramson's. Several years ago, he wrote to a somewhat junior marketing executive — Bob Rewey, now Ford Motor Co. vice president for sales operations — to get a feel for Ford's position on the subject.

"To his everlasting credit, he wrote back saying that he thought advertising should be honest, truthful, without caveats and easily understood by customers," says Abramson.

Abramson, who has headed an ethics panel on advertising for the Maryland New Car & Truck Dealers Association, notes that "relations with the consumer begin with the advertising, not the sale."

Toyota "begged" Abramson to take a franchise in the 1960s, he says, but he now has few regrets about staying a domestic, one-shop operation.

He admits that his theory never came to fruition that if compact vehicles were going to become popular with consumers, the domestic industry would fill the void. But he is glad he decided to stay with a winner.

"It cuts both ways," he says. "I still look at the market as an ever-expanding and cyclical one, and I'm still not sure what the right product line is or whether it's better to be a big megadealer or single line."

One thing he is sure of is that there is considerable room for improvement in how the automotive industry treats the consumer it is trying to court.

He cites research that indicates that consumers say that buying a car is the worst purchasing experience they ever encounter.

Every dealership, he notes, is a reflection of the dealer. He says that point is often lost on many dealers who distance themselves from the advertising and marketing side of their products. And that is a big mistake, he says, because there's a captive — albeit confused — market out there.

"The average person is not about to opt for a boat or an airplane in lieu of a car," Abramson says.

"The American public is not going to give up the automobile."

Boston

Sales slump buries mega-mall revival by GMAC venture

By A.S. Plotkin
SPECIAL CORRESPONDENT

When a huge automotive mall near here went belly up around Christmas in 1989, Massachusetts dealers were intrigued when William DeLuca III took it over less than two weeks later.

The 34-year old DeLuca — whose father, William DeLuca Jr., owns four leasing companies and was a partner in the effort — said

William DeLuca III

Chevrolet, Buick, Cadillac, Pontiac

he felt the opportunity was "terrific, a big challenge."

The mega-mall sits on 24 acres of land in Tewksbury, near the New Hampshire state line. It was developed by Peter Hallissey starting in 1987, when the area's economy was still booming. Hallissey, a prominent and large-volume area dealer, combined four points, at a reported cost of at least $24 million.

At peak, it held seven franchises and a crew of 330 — including 100 salespersons, 70 mechanics and 16 service writers. The main building covered 4½ acres. Customers were driven around the site.

BOSTON, MASS.
7-1-88 Population: 2,845,000

REGISTRATIONS, MODEL YEAR

	1990	1989
Cars	137,012	160,473
Light trucks	33,856	43,155

TOP 5 MODELS, MODEL YEAR

1990	No.	1989	No.
Toyota Camry	7,140	Toyota Camry	6,824
Honda Accord	6,095	Honda Accord	6,085
Toyota Corolla	5,096	Ford Taurus	5,525
Ford Taurus	4,569	Toyota Corolla	4,711
Honda Civic	3,727	Ford Escort	4,679

The mall's demise under Hallissey has been attributed to the disastrous slump in the regional economy, to debts from high construction costs, and to his own ailing health.

The DeLucas have been in the automobile business for more than 35 years. The senior DeLuca, Bill, began as a used-car dealer when he got out of the Navy in 1954. He now runs four leasing companies with some 15,900 vehicles.

According to Billy DeLuca, Hallissey got the idea for his mega-mall from the much-publicized venture in San Francisco.

"We believed that what Hallissey did was terrific," he says. "There were big economies of scale possible. It was the finest facility east of the Mississippi. But he was 10 years ahead of his time."

General Motors Acceptance Corp. was Hallissey's biggest creditor, reportedly for about $12 million. He also was in heavy hock to three area banks. With the mall in big trouble by mid-1989, GMAC, says DeLuca, arranged for "a friendly foreclosure," taking over the land and buildings.

GMAC then asked if the DeLucas were interested in running the operation and in buying the vehicles and parts inventories, plus equipment such as the 75 lifts in the service shop.

"It sounded like a great opportunity," Billy DeLuca says. "It was the biggest investment in my career." He envisioned "filling the mall with 13 or 14 franchises. It would be one-stop shopping for the customers' benefit."

He knew there were risks. But shortly after he and his father signed up with GMAC, disaster struck — Toyota said it was yanking its franchise from the mall.

At peak, Hallissey was selling some 200 Toyotas a month and, to the DeLucas, the franchise was key to the business. "No question, if Toyota had not pulled out, we'd still be there," said the younger DeLuca.

Even as they were in the process of closing the mall "in orderly fashion," they have filed suit in state court against Toyota.

"We will pay our bills in a quality way. I think we'll come out of it with a whole skin. The only thing damaged will be a little eg."

The DeLucas think the Toyota litigation may take three years. Should they win, says Billy, they would readily use that valuable franchise in a new location.

FACE OF THE DEALER, 1991

In anticipating the mall operation back in 1989, Billy DeLuca had merged his four existing stores in the area into two — one currently in Andover and one in nearby Haverhill.

"Ironically," he said, the merger turned out "to be the right thing to do, regardless of the scenario of the mall. Now we have less to worry about."

Besides winding down the Tewksbury mall affairs in 1991, DeLuca plans to open a Saturn dealership in Andover, probably this April. His Chevrolet-Buick-Cadillac store in that town sold an average of 125 units each month in 1990, and the one in Haverhill about 75 Chevrolets and Pontiacs. Total business dropped 20 percent from 1989 to 1990.

"Fortunately," he said, "we have not let any employees go (at his two existing regular points). Our service business is very good."

He has a long work day, about 14 hours between both stores. He is "making money, but just barely. We have been in business since my dad started and have a good reputation. We're in control."

His father, whose leasing offices are a mile away in a converted former woolen mill, helps out with his son's two stores occasionally. So does his grandfather, 82-year-old William DeLuca. "He comes in every day, drives our service customers home. He has a ball," he said.

Billy DeLuca likes what he does. "It's not like pushing a time clock. Every day there are different challenges. It's hard at times, but it's fun. I am very organized. I have a good handle on things, even though I'm not especially interested in mechanics."

He finds time for community affairs, relaxes with boating in the summer and skiing in winter. DeLuca is president for the second consecutive year of the 450-member state auto dealers' association, which is based in Boston, 35 miles away from Andover.

As for coping with the slump, DeLuca limits his inventory to a 45-day supply. He keeps overhead costs in line, tries to improve marketing tactics and, above all, strives to improve and sustain the quality of service.

"You need to treat the customer as king. If he is satisfied, he will keep coming back. He should be involved with only one service writer; he should see the same writer when he comes back to pick up his car, so he can get an explanation of his bill. It's good follow-through. We try to run it like a doctor's office, with appointments."

DeLuca said he has talked to GM officials about cutting costs of financing inventory. "But we think it falls on deaf ears. Relations with the factory are hard to live with. But I'm not a crybaby; we knew the rules when we signed up. It's gotten better in the last two to three years, and relations with them are less adversarial now."

As for rebates, DeLuca thinks they should end. "The factory should price the cars properly. Incentives mean they are overcharging for the product. Let the car speak for itself. Now it's a mishmash."

Quadra-Version

The 4-Wheel-Drive System Exclusively from Quigley Where Continuous Year-Round Production Assures Consistent On-Time Delivery

"Making the Impassable Possible" for vans began in 1975 when Quigley engineered the duo-strut system which Jeep adopted nine years later as standard on most of its four-wheel-drive vehicles.

Quigley Quadra-Version is unmatched in its ability to provide a smoother, more stable ride—delivering superior handling and extended tire life. No matter what kind of driving you're contemplating, Quigley Quadra-Version is the only way to go.

Buffalo

Streng family tallies 68 years selling Olds

By James T. Madore
SPECIAL CORRESPONDENT

There isn't an historical marker outside Streng Oldsmobile Inc. but there probably should be.

The 68-year-old company is one of the oldest Oldsmobile dealerships in the country. It is part of our vanishing commercial heritage. A business owned by the same family for three generations that has not only survived but prospered throughout the tumultuous 20th century.

"We have been able to weather the storms; the good times and the bad," said Henry H. Streng, the company's president. "Our longevity is due to customer satisfaction. We're so concerned with satisfying people, that's why we've survived so long."

Over the years, Streng Oldsmobile has become a Buffalo landmark. The dealership's distinctive art deco building, featuring a green-marble facade topped off by a neon sign with a silver rocket, has become a favorite of architecture lovers.

And fathers and sons have been admiring the Oldsmobiles inside the 1940s structure for many years.

Henry Streng

Oldsmobile

They have purchased their first car and its successors from the Streng family.

Henry Streng and his brother, Herbert, acknowledge that automobile retailing has changed dramatically since they entered the business in the 1950s. Consumers have become more demanding as the number of models and dealers has proliferated. At the same time, the economy has been like a roller coaster, reaching new heights of prosperity and then falling into deep recessions.

"The mid-1980s were very good," said Herbert S. Streng, noting that Oldsmobile sold over 1 million new cars each year from 1984 to 1986. Since then, nationwide sales have plummeted about 50 percent.

New-car sales at Streng Oldsmobile totaled 515 units last year, a 23 percent increase over 1989's sales of 420. Cutlass Supreme continued to be the most popular model.

"Adapting to changing times is crucial," said Herbert Streng, the company's vice president. "You have to keep up with the times."

Herbert Streng said that in the 1990s dealers are going to have to sell more used cars that have been initially leased or owned by rental car companies. Some customers can no longer afford to buy a new car, he said, yet they also don't want worn-out vehicles with high mileage.

Like most dealerships, Streng Oldsmobile sells one used car for every two new-car sales. But Herbert Streng said he hopes to eventually reach parity.

A large and experienced service department also is vital in today's competitive marketplace, Herbert Streng said. "The credibility of everything you say upfront is backed up by the service department."

Henry Streng noted it was the company's service department that enabled it to survive the Great Depression when most people didn't have enough money to buy a new car, and World War II, when the government asked Detroit to produced tanks instead of autos.

Henry Streng and his sister, Patricia, recalled that their father and another Buffalo car salesman, George Eagan, started the dealership in 1923. Prior to going into business for himself, Herbert H. Streng worked for four years at the Meldrum Motor Co.

During that time, he also won a city-wide contest to determine Buffalo's best car salesman. The senior Streng used the $900 prize money to start his own dealership.

The 1920s wasn't an auspicious time to start any kind of business, but Eagan & Streng Inc. managed to survive because of the owners' work ethic and a talented band of mechanics who could keep the era's infamous jalopies on the road. The dealership received an Oldsmobile franchise in 1930, after initially distributing Maxwell and Chalmers vehicles.

The second- and third-generations of the Streng family credit the dealership's founders with establishing a reputation with consumers that has sustained the business long after their respective deaths.

Henry Streng and his two sons, Andrew and Kyle, recalled vividly how the family's patriarch learned "the automobile business from the ground up." They said Herbert H. Streng was still working at the dealership when he was in his 80s.

Although Streng Oldsmobile has moved in and out of several buildings during the last six decades, it has always been in the same Main Street neighborhood, near a 1913 brick factory built by Henry Ford to produce Model Ts.

The company's last major expansion occurred in 1973-74 when an adjacent building was converted into a 60-car showroom.

"The last four years have been pretty tough," said Andrew J. Streng, a member of the family's third generation. "Sustainability is important today . . . you just try to plug away and concentrate on what you do best," he said.

Like many dealers, the Strengs are keeping inventories low, concentrating on training their sales people and serving customers.

But the company also is capitalizing on its central location and longevity to lure customers into its showroom. Last year, Streng Oldsmobile joined three other dealers located on Main Street in a media campaign to get people to shop in Buffalo instead of the surrounding suburbs.

The group, known as the Main Street Motorcar Dealers Association, sought to remind western New Yorkers of the days when the Pierce-Arrow and Model T were produced in Buffalo. The dealers launched an advertising campaign and organized a classic car show featuring more than 200 vehicles.

Company president Henry Streng says the dealership has benefitted from Buffalo's recent transformation from rust-belt relic to boom town.

As people return to the city for work and play, Streng Oldsmobile's location is ideal; halfway between suburban homes and downtown office towers, he said.

Calgary

Golden touch aids perseverance in rocky market

By Ron Stewart
SPECIAL CORRESPONDENT

Defying risky odds in business is a game Gerry Wood likes to play.

And the 45-year-old Calgary entrepreneur is good at it.

Twice in 11 years he has plucked a rabbit out of the hat and almost magically turned the failure of others into success.

CALGARY, ALBERTA
6-1-90 Population: 724,800

REGISTRATIONS, MODEL YEAR

Taking on crippled car dealerships isn't everyone's idea of a plum investment — but for Wood it's like "diving off the high board for the first time."

Today, Gerry Wood is an industry innovator.

But it wasn't always that way.

He has traveled the rocky road — like when he arrived in Calgary 21 years ago from Scotland with very little money.

"I was virtually broke," he said. But he vowed he would never be again.

After five years as a car salesman with MacLin Ford in Calgary, he was appointed sales manager.

Another five years passed before Wood the entrepreneur was ready to emerge.

A GM dealership was in trouble in Vulcan, a small farming town a little over 60 miles from Calgary, and Wood jumped at the challenge.

A deliberately uncomplicated man, Wood readily admits his business acumen has been strongly influenced by philosophies adopted from his father.

These include: Do what you say you will do; and earn a reputation.

Thus armed — and never accepting that something can't be done — Wood has developed into the quintessential entrepreneur.

"My father was in the car business and the older I get, I realized just how much he had to offer me," said Wood.

In its first year, the country dealership, Vulcan Motor Products, made a profit.

Soon Wood and his team were selling in the neighborhood of 300 new vehicles a year in a town of 1,600 people.

You could say such success was due to plain old Scots determination — but Wood prefers to refer to his instincts.

Gerry Wood

Lincoln-Mercury, Honda

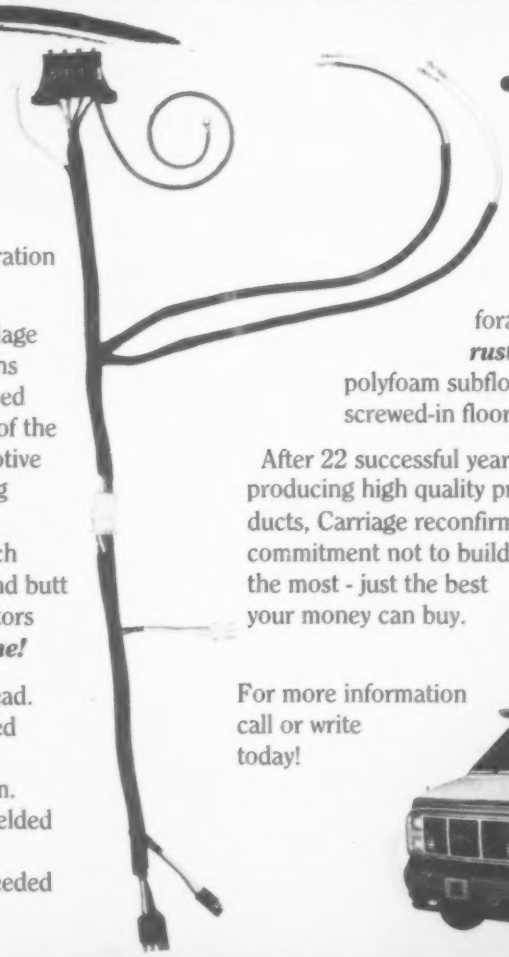
"I knew that it was a strong farming community and strong truck country. The overhead was also attractive."

Wood said country folk were hard to deal with — but fair.

"I learned a lot from them which was to stand me in good stead back in the city," he said.

After four years on his own, Wood felt he'd outgrown the rural dealership and sold out.

Most Van Converters Just Don't Have The Right Connections. . . To Build One Right.



Wiring and wiring related problems account for a large percentage of warranty headaches that dealers contend with on conversion vans.

We at Carriage Conversions have identified the causes of these problems. After careful research and systematic development we are offering the next generation of luxurious, trouble free, van conversions.

All Carriage Conversions are equipped with state of the art automotive style wiring harnesses.

- all scotch locks and butt connectors ***are gone!***
- we use Packard and AMP locking connectors instead.
- all harness splices are wound, soldered and shielded with shrink wrap.
- the entire harness is wrap protected with auto loom.
- our wiring systems are installed with mechanical shielded hangers - ***not duct tape***.
- all electrical accessories are easily accessible for needed servicing.
- batteries are disconnected at the beginning of the line and reconnected at the end.
- batteries are fully charged ***before*** vans are shipped.

In addition to our electrical system innovations, all necessary body perforations we make are ***sealed and rust proofed!*** Carriage uses a polyfoam subfloor instead of a plywood screwed-in floor which can cause rust problems.

After 22 successful years of producing high quality products, Carriage reconfirms it's commitment not to build the most - just the best your money can buy.

FACE OF THE DEALER, 1991

It was 1983 and the province of Alberta, and particularly Calgary, was still in economic doldrums following the crash of oil prices in 1981-1982.

A major auto dealership in Calgary, Southridge Lincoln-Mercury, was suffering and on the verge of receivership.

That was the kind of challenge that Wood was after.

Scraping together enough cash, he as able to move into Southridge — which he quickly renamed Woodridge — as a 20 percent partner with Ford.

"It was exciting. I wasn't concerned about the economy at the time. I believed the dealership could work on its servicing and selling used cars and trucks if new vehicle sales weren't strong."

Once again Wood's instincts proved correct.

Used car sales and service did do well — and despite the doom and gloom of recession — so did new vehicles.

He'd also keyed in on leasing at an early stage in the city.

And from day one, history was repeating itself as Woodridge, like Vulcan, was profitable.

In one year, the dealership that had been on the verge of collapse was No. 1 in Canada.

And in only three short years, Wood was able to complete the buyout of Ford's 80 percent interest.

Wood has always been strongly service oriented.

His was the first major dealership in the city to open the service department on Saturdays.

He was also the first to introduce a fleet of service loaner vehicles for customers.

Strongly influenced by the auto industry in the United States, his advertising program has been spearheaded all along by Graham Advertising out of Colorado Springs, Colo.

Woodridge has been the top Lincoln-Mercury dealership in Canada for most of the past seven years.

In its best year the dealership sold 3,000 new vehicles.

Today it's become a $60 million to $70 million-a-year business.

And a bonus for Wood was the parts department, which is one of the largest in Canada for a dealership and accounts for revenues of around $500,000 a month.

This success has allowed the dealer principal, who is married with three children, to enjoy some of the finer things in life. He has a holiday condo in the United States and a home just outside Calgary.

The city has grown over the past few years, and so have the number of dealerships — particularly imports.

Not one to sit on his laurels, Wood was quick to recognize the inroads being made by the Japanese in the Calgary market. So it was no surprise three years ago when he opened Village Honda, a new Honda dealership.

After two years in leased property, Village Honda is now housed in its own surroundings.

And yes, it's doing well.

Today, the effervescent Wood is negotiating the setting up of a new Lincoln-Mercury dealership in Okotoks, another small town about 20 miles from Calgary.

"It has a population of 8,500 and we already have customers who live there. I'm excited about the prospect. There are good existing premises and again it's good truck country," said Wood.

He also shares the view locally that things look good for the auto business in 1991.

Recent high oil prices have been a major bonus to Alberta's economy.

Despite his success in business, Wood never forgets when he was a hungry salesman on the showroom floor.

And because of this he's earned a reputation for looking after his people and caring for the community.

The annual Woodridge Charity Celebrity Golf Tournament is now five years old.

It has become one of the highlights of the golf year — and raised thousands of dollars for the Canadian Downs Syndrome Society.

Last year, Chrysler, Ford, GM, Honda, Hyundai, Mazda, Mitsubishi, Nissan and Toyota managed to keep the roof over their heads.

On February 25th, you'll see how.

The OEMs you see here know what it takes to make cars attractive to buyers.

That's why their cars and trucks now have, among other things, larger windows and more headroom.

The fabricators who supply these OEMs know what it takes to get their headliners into those cars.

That's why they're now making them with Dow Adhesive Films.

With Dow Adhesive Films, fabricators have a material that will bond to a broad range of headliner shapes and substrates (fiber glass, urethane foam, cardboard, resinated shoddy padding) as well as both polyether and polyester-based foam backings.

And, in choosing Dow Adhesive Films, the fabricators also saved on the costs associated with spray adhesives—capital, energy, raw materials, floor space, adhesive disposal and so on.

If you'll be at SAE, drop by booth 4207 and see how Dow Adhesive Films are helping to hold headliners together these days. If you're staying home, call 1-800-441-4DOW (1-800-441-4369) and we'll be glad to fill you in.

Charlotte

From cotton hand to $100 million, five-point dealer

By Susan Shackelford
SPECIAL CORRESPONDENT

When Charlotte car dealer Sam Johnson describes the current economy, he chuckles and says, "It's going downhill, like a runaway train."

Johnson, 51, one of the nation's most successful black car dealers, offers some levity despite the depressed car market because he's successfully weathered tough times before — as a dealer and as a person.

Born in West Memphis, Ark., to sharecropper parents, Johnson knows the meaning of tough times. One of 11 children in his family, he chopped cotton or sold nickel candy bars to field hands, earning $3 a day. At age 17, he moved to St.

Sam Johnson

Ford, Lincoln-Mercury

Louis to live with relatives and landed a $25-a-week job washing cars for a small used-car dealer.

That foothold in the car business diverted the enterprising teenager from a dream of becoming a postal carrier, and he is now a highly successful dealer.

Today, Johnson owns majority interest in five dealerships: two Lincoln-Mercury dealerships in Charlotte, one in Fayetteville, N.C., and Ford dealerships, in Tupelo, Miss. and Richmond. In 1990, *Black Enterprise* magazine listed him as the third largest black dealer in the country, up from 11th in 1989.

In 1989, Johnson's Metro Lincoln-Mercury dealership in Charlotte won the coveted President's Award from Ford Motor Co. He was the first black dealer to win the award based on customer satisfaction and market penetration.

"He is a man of total character," says John Hurley, who owned a Chevrolet dealership in Charlotte in the 1970s. "He gives you his

word and you can depend on it. He knows where he came from, and he's never changed. He is humble yet astute."

In launching his career, Johnson says, the owner of the dealership he first worked for, Jerry Ackerman, played a key role. "He was my mentor," recalls Johnson, whose five dealerships posted sales volume of about $100 million in 1990. "I saw how he lived as a dealer, and he was someone I could look up to. And as he grew, I grew."

Though it was the late 1950s and Ackerman was white, Johnson says, "He never showed prejudice and I never felt it."

After five years working as a handyman for Ackerman, Johnson became a salesman for the dealership, which two years earlier had added Buick. Today, on the walls of the Lincoln-Mercury dealership bearing Johnson's name in Charlotte, he displays the plaques he won for seven straight years as the top sales producer in Buick's St. Louis zone.

With that success, Johnson plunged into the ownership ranks in 1973. With the help of Ford, he bought a struggling enterprise in an area of high crime and unemployment in East St. Louis, Ill.

Though the economy was struggling, and soon to settle into a recession because of soaring oil and gas prices, Johnson sold 400 cars his first year in business — twice what the previous owner sold the year before.

Johnson paid off Ford — which put up 80 percent of the $250,000 purchase price — in 2½ years. He sold the dealership in 1980.

Working his way up through the business gave Johnson a keen appreciation for customer service — something that has helped him stay afloat in rough economic waters.

"We have a high percentage of return customers," he says. "My philosophy is anybody can sell customers out front but if you aggravate them in the back (in service), they won't come back."

Johnson personally spends more time overseeing service than sales — from washing cars if needed to fielding customer concerns. "None of my calls are screened," he says.

If someone has a complaint, Johnson generally gives the customer the benefit of the doubt, offering to absorb or share a disputed cost.

For example, he got a call from a customer who bought a car with a variable rate loan over 48 months. The customer was surprised he owed $322 more at the end of the 48 months because of interest-rate variations. The customer "said he didn't understand or had forgotten about the variable rate," Johnson recalls. "He didn't ask for help, but I agreed to pay half the $322. We want to keep good customers."

The current car slump has hit his five dealerships like it has socked everyone.

For example, Sam Johnson Lincoln-Mercury sold a third fewer new cars in 1990 compared to 1989 — 558 vs. 869. Used car sales declined about 10 percent from 1,106 to 1,028 over the same period.

But the dealership is still healthy. No employees have been laid off, although attrition has been allowed to reduce the work force.

"We're kind of self-sufficient because we don't have much debt," he says. "We had four to five good years before this, and we made ourselves as debt free as possible if and when something like this comes along. So basically all we have is our operating expense."

Another key is recognizing a downturn early and immediately cutting inventory and other expenses — "swimming to the nearest point of land," he says.

Johnson says he's reduced his television, radio and newspaper advertising by half over the last six months. "You don't shoot your guns if the ducks aren't flying," he says.

He believes factory incentives were helpful in depleting 1990 stock, but he's not enamored with rebates. "I hope they'll eliminate the $1,000 rebates by just lowering the price of a car by $1,000," he says. "The rebate programs often change every few weeks, and it's frustrating."

Johnson's family is involved in the business. His wife, Hester, is vice president. Son Dana is a parts trainee manager, Sam Jr. is in a dealer training program and Ken is a sales manager. His oldest son, Darryl, was president of the Metro Lincoln-Mercury in Charlotte until his death in 1984 from injuries sustained in a motorcycle accident. Darryl, who was 25 when he died, had been a dealer for two years after going through a Ford dealership training program.

Active in the Charlotte community, Johnson is a director of the year-old Crown National Bank in Charlotte, a former board member of the Charlotte Chamber of Commerce, and was vice chairman of a fundraising drive for the local Afro-American Cultural Center.

Chattanooga

Dealer adds Saturn to supply frosting for job he loves

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

As Nelson E. Bowers II gazes silently out the office window of his new Saturn showroom in Chattanooga, Tenn., he knows he's getting what he wanted out of the car business: the thrill and challenge of operating a company.

The Middle Tennessee dealer — with stores in Chattanooga, Nashville, Oak Ridge and Cleveland — concedes that he's like many in the industry these days: apprehensive about the economy; uncertain of the future; reluctant to predict too far ahead; turning a profit but not selling quite as many cars as he would like.

But Bowers isn't complaining.

Those are the realities of the moment.

New-car sales nationwide fell 4.8 percent in 1990 to 9.3 million units.The National Automobile Dealers Association reports that dealer profits rose only marginally in 1990, from an average of 1.0 percent of sales to about 1.1 percent, following four consecutive year of decline. ▶

FACE OF THE DEALER, 1991

He acknowledges that the industry has been in a slump for two years — a problem that he says is made worse by factory overproduction. But he isn't discouraged.

He entered the car business because he wanted to be his own boss, run his own business and do something, in his words, "that rewarded me for the amount of work I put into the job."

For the most part, the payback of the past 16 years has been rich. Since 1976, sales have marched steadily upward. Sales at his two Honda stores in Oak Ridge and Cleveland totaled 1,250 cars last year, up 6 percent from 1989.

The organization has grown, and his scale of operations has expanded.

He is one of only a few dealers nationwide to receive two Saturn franchises, one in his native Chattanooga and one 150 up the road in Nashville. Since there are no other franchises between the two, his territory stretches from northern Georgia to southern Kentucky.

Aside from the efficiencies that will come from sharing inventory between the two territories, the Nashville Saturn dealership promises to become one of the easiest Saturn markets in the country, since the new General Motors car is made near there.

"There's no place in America where Saturn awareness is greater than in Nashville," Bowers points out. "On top of that, 4,000 Saturn employees and their families live there."

Setbacks don't seem to faze the 45-year-old retailer. A slow startup at Saturn left dealers around the country sitting in expensive new facilities with few cars for throngs of customers.

Bowers is concentrating on minimizing expenses, swinging support staff among his dealerships and promoting used-car sales until new-car volume rises. The Chattanooga store had only 14 Saturns on site in mid-January, but careful arrangement of the cars around the lot created the appearance of more.

"We're planning to do well at this the only way we've ever done well in our business," Bowers says. "And that's by concentrating on what people want. We were working on our CSI back in the '70s, long before it became an industry buzzword."

For Bowers, customer satisfaction means "following through on everything. Being responsive. Continual follow-up. Correcting mistakes and not letting wounds fester." His strategy might find him meeting with customers in the service lanes in the morning or phoning buyers himself.

It's also a strategy of holding up profits by holding down expenses, but not at the cost of employees.

"We've tried to promote from within, which builds loyalty and commitment and cuts turnover," he explains.

"We've also maintained an industry-leading compensation package for each market we're in. Everybody here — from the lot attendant to the general manager — is on some kind of incentive program. That gives each person a clear picture that the harder he works to please the customer and make the operation succeed, the better his reward."

Reward was a big motivation in his early career, he says. He started as a manufacturer's rep, selling the Tom Sawyer line of children's clothing in eastern Tennessee, Georgia and the Carolinas. The rewards were good, he recounts — good enough for him to accumulate enough cash, by age 29, to buy a passive 51 percent interest in a friend's Volvo dealership in Chattanooga.

But by the mid-1970s, he was tired of traveling and was thinking increasingly about operating his own business.

He got the chance sooner than he expected. In 1976, after three tough years for Volvo sales, his friend's dealership went under. Bowers bought the remains out of bankruptcy from a local bank.

"I knew the product was a good value, and I knew I could make it work," he says.

The Volvo dealership was profitable from the outset, a turnaround due largely to Bowers' long hours and willingness to wear different hats — making appraisals, selling, helping in the parts and service departments and running the business operation.

He added BMW in 1977, and for the next several years he exceeded his sales quota.

In its first year, the store sold 100 BMWs and 150 Volvos. By the early 1980s, it was selling about 200 BMWs and 300 Volvos a year. By the mid-1980s, sales reached 350 BMWs and 500 Volvos a year.

More diversification came in 1984 when Bowers opened a Honda store in Cleveland, near Chattanooga. "We've been fortunate to be in a growing market," he points out. "This area has attracted more points over the past few years, and sales here have increased steadily."

Oak Ridge, a smaller, white-collar city about 100 miles north of Chattanooga, became Bowers' first real out-of-town expansion in 1987 when Honda awarded him another new point. Simultaneous with that expansion, Bowers sold the Volvo-BMW dealership.

His success with European and Japanese imports has put him into a market niche he's happy with. "I've been approached by domestic lines, because of our penetration numbers and our CSI," he says. "But you've got to go where you feel most comfortable. I know the import buyer intimately. I don't know the domestic buyer."

Yet he jumped at the chance to be one of the chosen dealers for made-in-America Saturn. And not once but twice. Original plans were for him to operate the Chattanooga territory, a market that spills over into northern Georgia. But when Nashville dealer Lee A. Beaman, one of architects of the Saturn retail program, opted out of the Nashville territory, Bowers snapped it up last year.

"Saturn was attractive to me because its key focus is on the import buyer, which is also my focus," he says. "I don't think I've meandered too far."

Concentrating on business — and more specifically, concentrating on your strengths — will be a key to surviving the current downcycle, Bowers says.

"The trend is away from the mom-and-pop business toward larger dealers with several stores," he notes. "I'm not sure yet how I'll fit into that trend. But however you end up, the important thing will still be taking care of the customer. That won't change."

Keep Your Profits Out of the Tank

Aeromate delivers 17 MPG

At 17 miles per gallon, Aeromate Walk-In Vans make more dollars and sense for you. Balance sheets benefit from the way Aeromate Vans balance fuel economy, performance, and cargo capacity.

The lightweight aluminum body and aerodynamic design keep your fuel expenses out of the fast lane. Aeromate delivers 17 MPG while supplying up to 317 cubic feet of storage. Compare this to 8 to 12 MPG, typical of parcel and cargo vans, and you'll see how Aeromate can better fill your pockets.

When considering an average fuel cost of $1.35 per gallon, an Aeromate Van will save you more than $5,000 every 100,000 miles in comparison to a van averaging 10 MPG. That's more than $5,000 saved in FUEL COST ALONE!

Driver-Friendly Features

Even better, Aeromate Vans are as friendly to drivers as they are to your overhead.

A six-foot high cargo area lets drivers load and unload comfortably and without back strain. A low 20" floor height provides easy and safe entering and exiting of cargo area.

Front-wheel drive makes handling a breeze in any conditions, and behind the wheel, any driver feels in control with the tinted, full-view windshield. The standard Aeromate driver's seat is a comfortable, vinyl high back captain's chair with armrests.

Backed by Strong Service

The power train is backed by a three-year 36,000-mile warranty that can be serviced at your local Aeromate dealer.

Plus the UMC warranty, parts, and service department is always just a toll-free phone call away. You can trust UMC. We're a member of the Harley-Davidson corporate family, so you're backed by the integrity of an 85-year-old American manufacturer.

Fuel economy, driver-friendly features, and exceptional service. Call today and see how you'll profit from Aeromate Vans. They're a Whole New Breed of Cat.

Chicago

Tamraz switched from ad boss to auto mall host

By Peter Elstrom

Paul Tamraz has seen many hills and valleys in the cyclical automobile industry during his 17-year ride as a dealer. But he thinks this may be the deepest downturn of them all.

The long-term trends of lighter profit margins and surging costs are squeezing Tamraz along with other dealers across the country. And sagging consumer confidence is depressing car sales.

Ford Escort	10,036	Honda Accord	9,597

"This is probably as difficult a period as any of the recent difficult times," said the 46-year-old owner of Motor Werks of Barrington Inc., located northwest of Chicago. "Maybe even more difficult."

Still Tamraz thinks there's room for measured optimism. Cars continue to be considered a necessity by most Americans and he believes that with his nine-franchise auto mall he will be able to survive the continuing dealer shakeout and provide customers with the selection, service and price they desire. That, he expects, will translate into a healthy profit in the long term.

"This is a cyclical business," said Tamraz, a Flint, Mich., native. His father spent his entire career working on the line at Buick. "But people are still going to need an automobile to go to work, to go to the store or get around in. I think the future is bright."

While Tamraz now expects to have to wait out the industry slowdown, he showed little patience when it came to taking advantage of business opportunities at the beginning of his career.

After graduating from Michigan State University in 1966 with a major in advertising, he took a position in the advertising department at the *Chicago Tribune*. Only two years later, the 24-year-old

Paul Tamraz

BMW, Cadillac, Honda, Infiniti, Mercedes-Benz, Pontiac, Porsche, Saab, Sterling, Suzuki

struck out on his own and founded an advertising agency with two fellow *Tribune* employees, Jordan Tamraz Caruso Advertising Inc.

Why did he leave the security of a big company for the uncertainty of a fledgling ad shop?

"You get to work a lot of hours," he quipped. More seriously, he added, "I think it's probably the desire to be self-employed, the ability to make decisions and act on them immediately."

The entrepreneurial bug bit again five years later. The ad agency had been specializing in car dealerships and Tamraz decided he wanted to try his hand at the business. Unfortunately, car manufacturers didn't think advertising experience constituted the proper qualifications to run a dealership. The search was frustrating.

Tamraz finally found the perfect match in AMC-Jeep: The car maker couldn't find anybody else to operate its new outlet in the Chicago suburb of Olympia Fields and Tamraz couldn't find another manufacturer that would entrust him with a dealership.

"It was the only franchise I could get," said Tamraz.

Nevertheless, through a combination of business savvy and good, old-fashioned luck, the dealership took off. "It did well," said Tamraz. "This was in the middle of the first oil embargo and the Gremlins and Hornets were seen as fuel efficient."

Tamraz kept the dealership one year because the one-way commute between his home in the northwest suburb of Long Grove to Olympia Fields, south of Chicago, took one hour and 45 minutes.

As a result of his experience in Olympia Fields he was able to buy a Pontiac dealership in Barrington, a wealthy enclave northwest of Chicago where he maintains his business to this day.

Tamraz has changed his operations dramatically over the 16 years he's worked in Barrington.

The most important shift occurred in 1987 when Tamraz built an auto mall, a 60,000-square foot enclosed structure with five franchises: Mercedes-Benz, BMW, Porsche, Sterling and Suzuki. (Pontiac was not willing to put its cars in a mall setting.) Motor Werks of Barrington has since expanded to slightly less than 100,000-square feet and added Cadillac, Saab, Honda and most recently Infiniti.

Tamraz said the idea to build the mall grew from years of watching trends in the automobile industry and other businesses. "The complexion of the business seemed to be changing," he said. "It just seemed to be a pattern of many more nameplates vying for the same size pie."

Tamraz pointed out that the auto mall concept has two distinct advantages over more traditional dealerships with only one or two franchises.

A mall is more convenient. Tamraz tells the story of a customer who wanted to trade his car for a Mercedes-Benz, a Cadillac or an Infiniti. At Motor Werks, he could get one estimate for his trade-in and test drive all three brands. "Would you rather do that three different times or just once? It's called one-stop shopping."

Tamraz said the mall is less expensive to operate. He pays for one building and one service department instead of nine separate facilities for each of these franchises.

"There are a lot more economies here in my opinion," he said.

The mall strategy appears to be paying off. Sales increased 19 percent to $104 million in 1990. Tamraz explained that the addition of Infiniti, which opened in May, accounted for about $10.5

million of the increase. But even without the new line sales rose a relatively healthy 7 percent. New units sold totaled 2,440 in 1990, up from 1,775 in 1989, with Infiniti accounting for 362 units. Parts and service have been particularly healthy. Combined sales in those areas rose 23 percent to $12.5 million in 1990.

Tamraz has had to tighten his belt in some areas. He reduced his workforce about 10 percent to 210 employees last year and may have to make more cuts. He trimmed advertising about 20 percent and is keeping inventory minimal.

Still Tamraz wants to grow and take further advantage of the mall concept. He'd like to add less expensive cars to expand his business' reputation beyond high-priced automobiles.

Cincinnati

When a name isn't enough, service to customers helps

By T. Anthony Lamb
SPECIAL CORRESPONDENT

An old newspaper advertisement hangs framed on Tom Sweeney's wall. Above a group of children arranged from the smallest to the tallest, the headline reads:

"Seven Good Reasons Why Walter J. Sweeney Must Sell Cars!"

Tom was in this photo, and so was his dealer brother Jake. Two other Sweeney children were born after the ad ran, and today Tom has nine of his own children. A total of 10 Sweeneys are now in the auto business in Cincinnati.

Tom Sweeney says the immediate recognition of the Sweeney name has helped in building his Nissan dealership.

CINCINNATI, OHIO
7-1-88 Population: 1,448,800

REGISTRATIONS, MODEL YEAR

	1990	1989
Cars	65,767	70,207
Light trucks	23,955	24,702
TOTAL	89,722	94,909

TOP 5 MODELS, MODEL YEAR

1990	No.	1989	No.
Toyota Camry	3,017	Ford Taurus	2,917
Chev. Cavalier	2,835	Chev. Cavalier	2,722
Honda Accord	2,555	Toyota Camry	2,588
Ford Taurus	2,370	Honda Accord	2,538
Chev. S10	2,298	Ford Escort	2,425

But today he has found that it takes more than name recognition to sell cars and make a profit, especially as a single-line dealer competing in a depressed Cincinnati auto market.

A few years ago as sales and profits began to sag for Tom Sweeney Nissan, he analyzed the problem and discovered that the customer had changed and his dealership had not.

"I realized that this became more of a people business almost overnight," Sweeney recalls.

"And I'll be the first to admit that we were doing a lot of things wrong. So the first change was in my attitude toward how we would serve the customer.

"And I wanted managers who shared my vision. Our managers needed to be interested in people, not just the money. The money will come if you treat people right because it's the customer who pays our salary."

To transform his company into a more people-centered dealership, he handpicked the managers and employees who could lead the customer service charge.

Tom Sweeney

Nissan

"Customer service from people who care is the main way we compete with the larger dealers," Sweeney says.

"We stress the people aspect. That's what sells cars and keeps customers coming back. The large dealers have a lot of mechanics and sales managers, but they aren't all good. The customer never knows what he's going to get.

"We have the best. Our employees know we care about them, and we seek people who also care and have a good attitude.

"I honestly believe that today's dealership must have people who can pamper the customer," he adds. "I see many of the larger dealers still trying to sell new cars only. Today, we are selling new cars through our service department. And customers will pay if they believe they are receiving the best service available."

This philosophy seems to be paying off.

Even though sales are down 16 percent, profits for Tom Sweeney Nissan are up. Used car sales, up 20 percent, have played a key role, but the service department has been the real winner for the dealership.

To make the service department more convenient, Sweeney extended the hours to 7 a.m. to 7 p.m., and he has boosted the operation by advertising over the radio a "unique grand opening" of the service department.

Along with the extended hours and advertising support, the change in service attitude helped the dealership garner a 76 percent increase in service revenues for the year and a 35 percent increase in parts.

"The last six months were profit months for us, and only two months of the last 12 were not profit months, and that's great in a very slow market," Sweeney says. "We stress excellence in our service department. There's no doubt that we have assembled one of the best groups of mechanics in the city. I put my son Shawn back there to organize the department and he's doing a great job.

"We are listening to customers. And we acknowledge when we are wrong. We are looking for criticism. That's how we get better and that keeps us on the leading edge."

The extended hours, Sweeney explains, also helped considerably because "it allows customers to bring their cars in before work and pick them up afterward. This is all part of our goal to give the customer what he wants, but it's also a way to make more during hard times.

"Our goal is not to participate in the recession," Sweeney adds.

"I want to get a bigger percent of a bad market and that's what we're doing. I want to get our CSI up and it's rebounding. And our goal here ▶

is to be No. 1 in the region in CSI."

While Tom Sweeney Nissan is the largest Nissan dealership in Cincinnati, it is dwarfed by the super dealers. But Sweeney uses his relatively small size to his advantage.

Unlike many super dealers, he was able to turn his company around with lightning speed. And he is ready to change again if his business or the consumer makes another shift. "We track our business daily. We track sales, service revenues, everything. We meet about the results and see if we can spot a trend and then we make adjustments daily."

The best selling models for Sweeney have been Maxima, Pathfinder and 300ZX. Sweeney says that sales were lost when Pulsar was discontinued.

Cleveland

Mullinax always on lookout for a good idea

By Lori Ashyk
CRAIN NEWS SERVICE

Ed Mullinax, one of the top-volume Ford dealers in the country,, says the business of selling cars is "a game" and that his aim is to have fun playing it.

"Business itself is pretty much a gamble," says the man who is best known to northern Ohio consumers as a down-home kind of guy (the voice of his TV commercials used to sing "Ed Mullinax is a friend of mine"), who loves the Cleveland Browns and despises foreign cars.

But judging from his strong financial results in an increasingly tough economic environment, the car business is a serious game that Mullinax seriously intends to win. And he's constantly coming up with new marketing plans and quality improvement strategies to prove it.

CLEVELAND, OHIO
7-1-88 Population: 1,845,000

REGISTRATIONS, MODEL YEAR

	1990	1989
Cars	113,859	113,575

Chev. Cavalier	6,805	Chev. Cavalier	5,687
Ford Escort	4,046	Chev. Corsica	4,200
Chev. Corsica	3,930	Ford Escort	3,979
Ford Taurus	3,793	Chev. Celeb.	3,840
Toyota Corolla	3,785	Ford Taurus	3,692

Ed Mullinax Ford consists of dealerships in Amherst, Ohio, about 35 miles west of Cleveland; Wickliffe, a suburb about 20 miles east of Cleveland; and Broward County, Fla. The Florida dealership opened at the end of 1989.

The company's sales totaled $161.6 million in 1990, compared to $114 million in 1989. Ed Mullinax Ford sold 4,443 new cars last year, compared to 3,639 in 1989. New-truck sales in 1990 numbered 4,068, compared to 2,692 the year before.

Mullinax says 1990 sales at his Ohio dealerships were about the same as in 1989, so the increases in vehicle sales and revenue came mostly from the new Florida operation. Despite the so-so sales, net income for Ed Mullinax Ford was up 50 percent in 1990. Mullinax declined to reveal specific profit figures.

He says he managed to have the third best profit year in the 20-year history of the company by slashing his advertising budget 15 percent,

Ed Mullinax
Ford

or $260,000; increasing the productivity of his employees; and reducing inventory.

"We used to buy 200 cars at a time and figured we'd apply enough pressure (on ourselves) to get them sold quickly. Now, we're working on a 60-day inventory instead of 90 days," he says.

Mullinax says he can't predict the near-term future of the economy, but he seems prepared for whatever lies ahead.

He's pushing hard on improving the quality of service for his customers, expanding his service operations and putting more emphasis on selling used cars.

Sales for his Ohio dealerships probably will be flat again for the first six months of 1991, he says. In the second half, some new marketing strategies will kick in and, he hopes, boost total sales for the year.

He's aiming to increase the percentage of repeat customers to 60 percent from 50 percent through an "organized campaign" to contact everyone who's done business with Ed Mullinax Ford in the last five years.

Another of Mullinax's goals for 1991 is to increase sales of used cars 15 to 20 percent. In 1990, his company sold 3,824 used cars, compared to 2,829 in 1989.

"I see used cars as an opportunity for growth," he says. In order to encourage used-car sales, Mullinax will institute a 30-day return policy in the second half of the year. Customers who buy a used car and are dissatisfied with it will be able to exchange it for another one if they return it within 30 days of the purchase.

If the exchange plan sounds like something a clothing or department store would offer, that's not a coincidence.

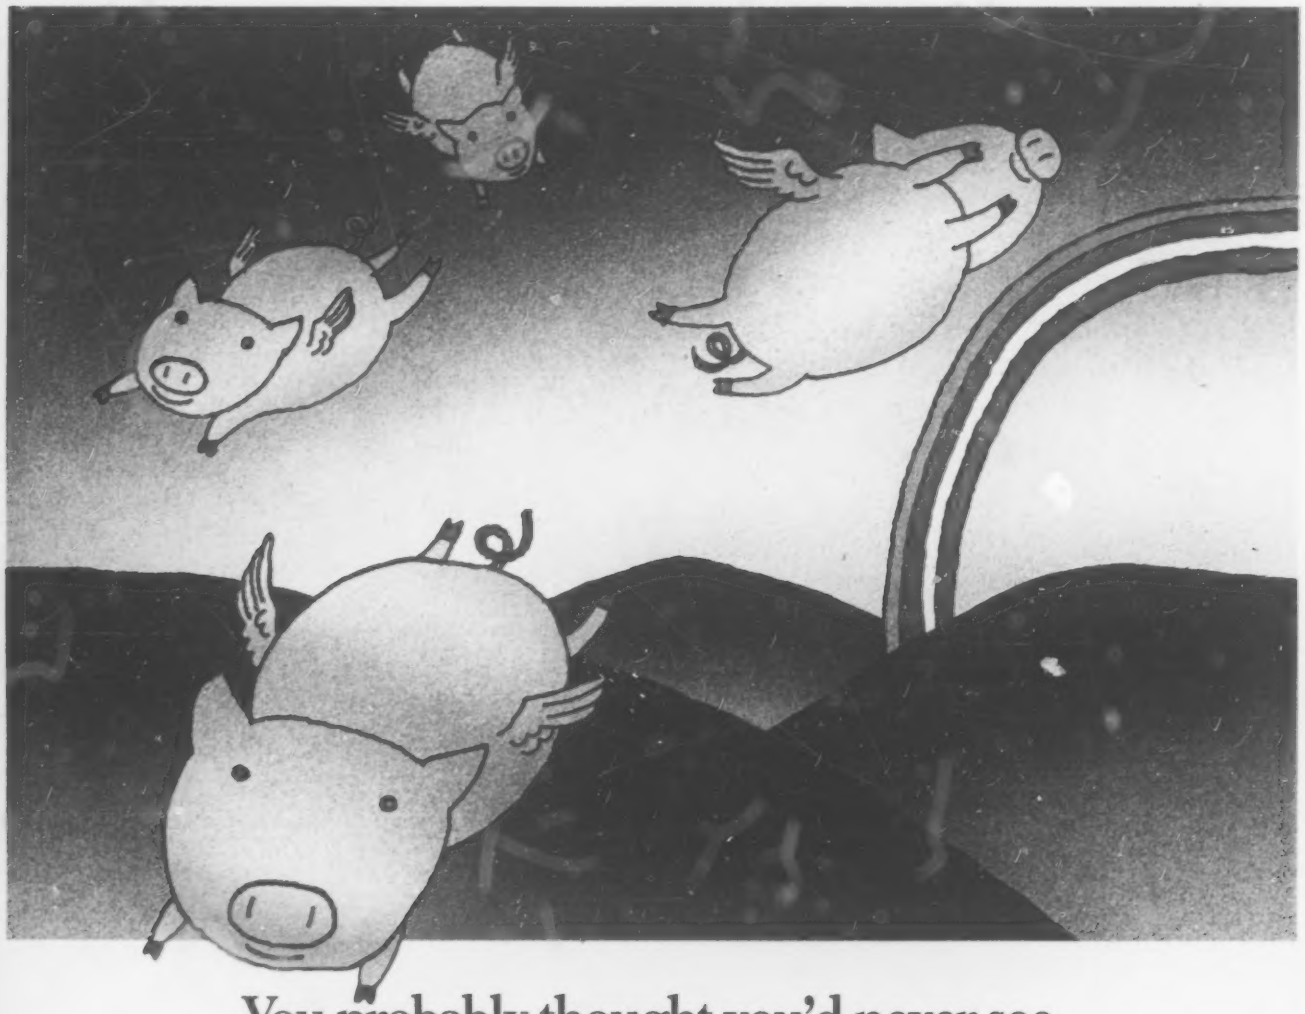
"I steal all the ideas I can get" from other industries, Mullinax says. "I use a lot of ideas from outside the auto industry. I've always tried to sell cars different than everybody else."

His ideas about car selling, pilfered or not, seem to have paid off. He's been ranked among the top 20 Ford dealerships nationally for several years.

Mullinax grew up in the Akron area and began his career as salesman in Canton, Ohio, in 1957. He had owned part of a dealership in North Canton before buying a bankrupt operation in Amherst in 1970.

One of the ways Ed Mullinax West grew was through "an awful lot of promotions." In late 1970, for example, he held a "grand ole opry" in which country-western singers performed six shows in two days for an audience of potential customers.

Mullinax credits the "selling technique" his dealerships have used since 1980 as one reason for his success. He said his salesper- ▶



You probably thought you'd never see a secure, profitable alternative to factory service contracts, either.

But here it is. It's the Platinum Protection service contract program developed by GE Capital, a leader in automotive financial products f- more than 15 years. And it's one you can sell with confidence. After all, our name's on the line.

Priced lower than factory programs, Platinum Protection gives you the opportunity to sell a quality product to your customers and build profits for your dealership.

Designed to be flexible, Platinum Protection is available for every major make and model — new or used. It's a program that doesn't restrict you to using one manufacturer's replacement parts. And it doesn't prevent you from collecting full retail charges on your parts and normal labor rates.

O.K., O.K., so pigs can't really fly. But you *can* sell the service contracts that offer you security, profitability and flexibility. Call **1-800-828-1392** for a copy of our Platinum Protection brochure.

FACE OF THE DEALER, 1991

sons don't discount the price of cars through negotiations with customers.

"Our first price is our best price. We do the discounting before the customer gets there," he says.

Size and visibility also have helped Mullinax sell Fords. Five years ago, he opened the Wickliffe dealership, which he believes has enabled his business to draw from a larger regional market.

The Wickliffe dealership, which has 95 employees, draws customers from as far east as Ashtabula, on Ohio's far eastern border; the Amherst dealership draws business from as far west as Toledo. Because the Amherst dealership can be seen from the Ohio turnpike, it's drawn the interest of travelers passing through from Michigan.

In late 1989, Mullinax launched the Florida operation, which has 110 employees and is run by his son, Jerry. His son, Larry, oversees the Amherst dealership. The Mullinax clan, along with Pat O'Brien, a fourth partner, own the company.

The company has spent much of its money and time in the last few years on upgrading the staff and on the parts and service business, Mullinax says.

In 1986, the company opened a 55,000-square-foot service center in Amherst, which Mullinax says is one of the largest operated by a Ford dealer nationally. A new service facility also is under construction in Wickliffe. Parts and service accounted for 9 percent of the company's revenue in 1990.

Service employees also are receiving training in how to interact with customers.

Salespersons are graded according to the quality-of-service surveys that Ford sends to its car buyers.

"Ford is doing such a good job in quality control," Mullinax says, adding that his dealerships tie bonuses and incentives to the quality rating that the salespersons receive.

"This (the quality rating) is the most important thing we do next to our financial statement," Mullinax says.

Mullinax thinks Ford is doing another thing right — ending rebates to customers. The automaker has said that it now will refund money to dealers, a move which Mullinax said will effectively cut his costs and the price of the cars he sells.

Denver

'Dealin' Doug' wants a bigger piece of the pie

By Bud Wells
SPECIAL CORRESPONDENT

The most readily recognized automotive personality by a country mile in Colorado is Dealin' Doug with his Cherry Creek Dodge dealership in Aurora.

This claim to fame is no challenge to Lee Iacocca. After all, the Chrysler Corp. chairman makes his pitch on a national basis.

The man from Colorado is Doug Moreland, and his television commercials have made Dealin' Doug and Cherry Creek Dodge almost household words in the state.

In fact, near the end of 1990, Cherry Creek Dodge had climbed to No. 7 in retail sales among Dodge dealerships. Ironically, the climb came even though the dealership experienced a sales decline in 1990.

There's more to Moreland's operation than his Cherry Creek dealership — lots more. Since his purchase of the Cherry Creek business 11 years ago, he has expanded into six other new-car dealerships.

And he's probably not through, "depending on what opportunities arise," he says.

Sales were lean for Chrysler Corp. products when Moreland bought Cherry Creek Dodge in suburban Aurora on Jan. 5, 1980. But he jumped right into it with little fear. He'd been associated with the products since getting into the business as a salesman for a Dodge dealership in Reno, Nev., in 1969.

"Don't forget that back then and through the mid-'70s, Dodge had some really rough stuff to sell, but we did it," Moreland says.

With the little front-wheel-drive Omni on the showroom floor and

Doug Moreland

Chrysler, Dodge, Eagle, Jeep, Mitsubishi, Plymouth, Pontiac, Yugo

what would become an excellent-selling K-car on the horizon, Moreland optimistically launched his Denver business career in 1980.

With lots of hard work and long hours and a good local advertising campaign by Dealin' Doug, plus the benefits of the Aries K-car, the business showed steady progress during the next several years.

Moreland's first expansion came in 1985, when he purchased a dealership 70 miles north in Fort Collins, Colo. His Foothills Auto Plaza there now handles Chrysler, Plymouth, Dodge, Yugo, Jeep and Eagle.

In 1987, a deal was made for the Colorado Chrysler-Plymouth dealership in Denver.

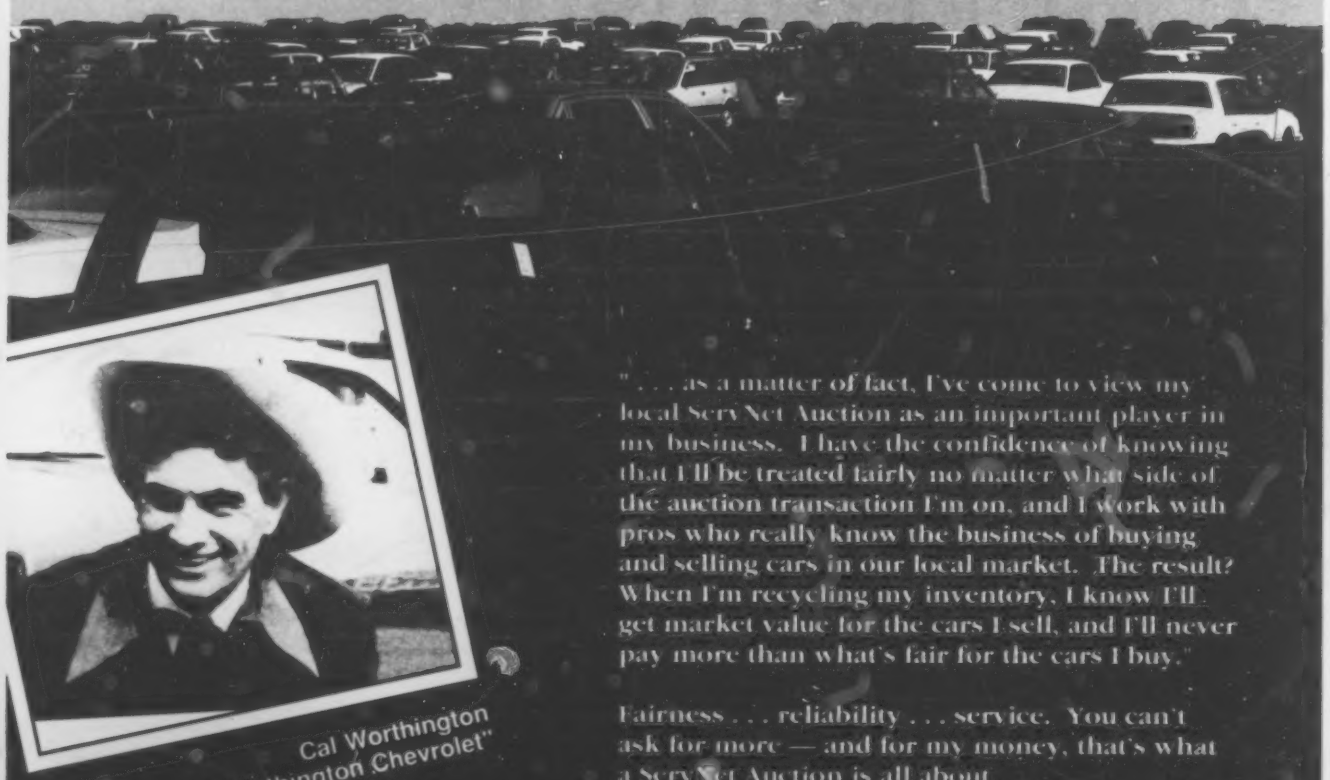
He moved into the impressive "auto row" along Interstate 25 in Colorado Springs in 1988 with the Jeep-Eagle franchise.

His first venture outside the Chrysler Corp. circle of cars came in 1989, when he purchased Grand Pontiac in the Denver area. That was one of Denver's old downtown dealerships until it moved to the north suburbs five years previously.

The expansion move got heavier than ever last year.

Moreland purchased Colorado Jeep-Eagle in Denver in March; the Mitsubishi line was added to Grand Pontiac in July; and later ▶

Reliability, Service . . . Results.
That's Why I Work With My
Local ServNet Auction.



". . . as a matter of fact, I've come to view my local ServNet Auction as an important player in my business. I have the confidence of knowing that I'll be treated fairly no matter what side of the auction transaction I'm on, and I work with pros who really know the business of buying and selling cars in our local market. The result? When I'm recycling my inventory, I know I'll get market value for the cars I sell, and I'll never pay more than what's fair for the cars I buy."

Fairness . . . reliability . . . service. You can't ask for more — and for my money, that's what a ServNet Auction is all about.

the same month, a Reno, Nev., Chrysler-Plymouth dealership was purchased.

How does he keep up with all those locations? (Headquarters still is the Cherry Creek firm in Aurora.) "I'm on the phone frequently with each of them," Moreland says.

In addition, he visits each store in the Denver metro area at least once a week, and gets to those in Colorado Springs, Fort Collins and Reno at least once a month.

"But we have really good general managers at each of the businesses," he says. "Lots of times when discussing business matters with them by phone, they'll say what I'm thinking before I say it. We're on the same mind track most of the time."

The megadealer moves are expected to continue.

"I would say I probably will broaden my car lines, depending on the opportunities that arise, of course," Moreland says. "This casts no reflection on Chrysler, it's just a matter of broadening the base."

Sales for Cherry Creek Dodge were down about 25 percent in 1990 but, in the perspective of sales nationally, apparently were not all that bad. Cherry Creek had ranked no higher than 12th nationally in sales until reaching the seventh position late last year.

Sales declined slightly at the other locations, except for the Fort Collins auto plaza. Sales at the recently purchased Colorado Jeep-Eagle were ahead of those of the previous operation, Moreland says.

What's the plan for regaining the sales level of 1989?

"For '91, we're going to maintain our inventory and go after a bigger piece of the pie," Moreland says. "We've got the people, the product, the inventory, the advertising budget and the financing sources to make it a very successful year."

The front-drive Caravan minivan, in its seventh year of production, continues to be the big seller for Dodge, and the four-wheel-drive Cherokee remains popular in the Jeep line.

Moreland says the Eagle Talon is making strong sales inroads in early 1991, "but we need a much better inventory of the car."

"Dealin' Doug" television spots have been a trademark for Moreland. His photo is also carried in many of his firms' newspaper advertisements.

"Our television approach has worked really well," Moreland says. "I wouldn't consider dropping it, or even changing it. The exposure lets people know we're very human, it's very down-to-earth.

"With Dealin' Doug, I tell them 'If we can't meet or beat any other deal, we'll give you a car free.'

"We've never had to give away a car.

"We had a survey taken, asking people what they most frequently associated with the words 'Cherry Creek,' and a majority of the respondents identified Dodge."

An ad in a different medium drew attention in December.

"Merry Christmas to the World's Greatest Boss . . . Doug Moreland," signed by 440 employees of the seven dealerships and a used-car center was a full-page ad in the *Denver Post*.

It was an inspirational bonus for Moreland.

"It was a total surprise to me," says Moreland, obviously pleased with the message from his workers.

Depending on opportunities arising, and given a decent sales performance in 1991, Moreland is a good bet to become boss to many more automotive employees in coming years.

Detroit

Meade looks past the bad news to find the positives

By Colleen Belli
SPECIAL CORRESPONDENT

Kenneth Meade is an aggressive megadealer, and his latest venture seems to be in the right place at the right time.

He opened Lakeside Toyota and Lakeside Lexus 18 months ago on what used to be farmland in Detroit's northern suburb of Utica.

Today, the two stores, which stand side-by-side next to state highway M-59, are bustling with activity in an area busy with growth and construction of new homes and businesses. In 1990, the first full year in business, 1,000 Toyota cars and trucks and 700 Lexus cars were delivered.

"I'm very happy with what we've done here; M-59 is just being developed. It's going to be fantastic when it's all done. It's a very healthy place to be for long-term growth," Meade says.

While there are other Toyota dealerships in the Detroit area, Lakeside Lexus is the sole Lexus dea-

Kenneth Meade

Chrysler, Dodge, Lexus, Plymouth, Toyota

lership and serves customer from both the east and west sides of Detroit and beyond. Meade described Lexus — the division, the product, the dealer body and the customers — as a wonderful relationship. The dealership sells every Lexus car it can get. At year end, there were only three in stock.

As chairman of the Meade Group, Meade also owns and operates Champion Chrysler-Plymouth in nearby Mount Clemens, Mich., and Pointe Dodge in Grosse Pointe, Mich., on the east side of Detroit. Both stores reported gains in volume and profits for 1990. Pointe Dodge sold 1,300 new cars in 1990, up 5 percent from 1989. Champion Chrysler-Plymouth delivered 1,100 units, up 2 percent.

"We had a positive 1990. We had some peaks and valleys, but overall it wasn't a bad year. It was good," Meade says.

Being a dealer in the Detroit area has been an advantage during the past six months. He notes that the Northeast and other areas of the country have been harder hit by the recession.

Meade looks to 1991 as a year of hard work with some uncertainties and further expansion. He expects industry sales to be about the same as last year.

"The industry will do exactly ▶

like it did in 1990," he says. "The first six months will be tough but it will rally. I don't think Detroit is going to have as hard a time in this recession as in 1981. The factories are healthier cashwise, and the cutbacks were made earlier."

Car and truck sales in 1991 will depend on the situation in the Middle East. Meade, like all of the American public, is waiting to see what will happen. He looks to the job ahead.

"We just have to work harder and be a good merchandiser and take advantage of all the factory programs that are available to the dealer," he says.

Far too many people are taking the negative headlines too seriously when there are a lot of positive things to look at, Meade says.

"There are a lot of people working and a lot of people with savings accounts. There are a lot of cars out there four or five years old. People are going to need new cars. They're tired of their cars. They want new cars, new technology," he says.

Another positive indication was the drop in the prime rate to 9½ percent at the start of the new year. Meade looks for the prime rate to drop to around 8½ percent by April 1.

Another bright spot for Meade in 1991 is the opening of his fifth store. "We just got a Mitsubishi franchise," he says. "We will open Champion Mitsubishi, adjacent to Champion Chrysler-Plymouth, in March. I think we will do well. Mitsubishi has a great line of cars and trucks."

Meade expects to see more rebates from Chrysler, Plymouth and Dodge when needed on slower-moving models, but if he had his way, there would be no rebates. He prefers the Toyota way of doing business.

"Toyota doesn't offer rebates. They give cash to the dealer and let the dealer make the best deal with the customer," he says.

Meade also chastises the domestic automakers for failing to bring better products to market in a shorter period of time. And he thinks they are missing the boat by not marketing their cars more aggressively overseas. He cites three definite growth markets: Europe, the Pacific Rim and South America.

He explains, "The American automaker has to do better in product, technology and turnaround time. I think the life cycle of a car should not be more than five years. We've got to get rid of old cars and get smaller, better cars with new technology and materials on the road. We've got to get our American cars accepted overseas."

He criticizes the federal government for letting the deficit run wild: "The federal government is constantly trillions of dollars in debt. I think that's unfair to leave to the next generation.

"If we ever got the deficit under control, the prime rate would come down. That gives small businesses and all businesses more capital to invest and gets the economy going. We can't let the federal government continue to print money. They have to run the government like a business."

Honolulu

After humble start, Fukunaga empire moves 10,000 cars

By Lolly Winston
SPECIAL CORRESPONDENT

HONOLULU — Tom Fukunaga's first job was selling newspapers on the streets of Honolulu at age 9. He wanted to shine shoes, a much more lucrative occupation, but his dad wouldn't allow him to, because shoe-shiners worked in the grubby part of town, bustling with sailors on shore leave.

Fukunaga now is president and chief operating officer of Servco Pacific, one of Hawaii's largest locally owned companies and foremost automotive dealers. It employs more than 2,000 people in automotive, marine, general merchandising, financial services, research, planning-development and international service companies.

Servco operates in the Marshall Islands, Guam, Saipan, Japan and the mainland United States as well as in Hawaii.

Among Servco's automotive operations in Hawaii are eight Toyota-Suzuki dealerships, two

Tom Fukunaga

Chevrolet, Hino, Lexus, Suzuki, Toyota

Chevrolet dealerships, a Lexus dealership, a Toyota industrial forklift dealership and a Hino truck and bus distributorship.

Over the years, Fukunaga has worked in just about every area of the car business. He started out as a grease monkey, gas attendant and delivery boy for his father's appliance business, then moved from lot boy, to office clerk, to salesman to lot manager. His first dealership was a used-car operation, which Fukunaga believes is the toughest area of the business.

"If you can sell used cars, you can sell anything new," he says.

In 1990, Servco Pacific sold 10,000 cars and trucks with a dollar volume of more than $200 million.

Servco's 1990 dollar volume was higher than in 1989, but that was due largely to the pricing of cars. Unit sales remained stable. Retail went up, and rental car sales went down because rental sales based on six-month buybacks are too tough to compete with.

According to Fukunaga, the most popular cars recently have been mid-sized and mid-priced — such as the Chevrolet Lumina and the Toyota Camry and Corolla.

Although Toyotas are the bulk of Servco's sales and are very popular ▶

in Hawaii today, Fukunaga remembers the 1960s, when it was almost impossible to sell the Toyopet, which was the name of the earlier Toyota.

"It had no power to climb hills except in first gear at about 5 miles per hour, causing a 'funeral procession' for miles," he says. "But the cars were built super solid, like tanks. Gas mileage was great. The brakes worked well because you heard them a hundred yards away.

"The squealing sure aggravated a lot of owners. The original cars were so bad that when the new, improved models were to be introduced, we recommended that the name Toyopet be changed to the family name, Toyoda, and almost lost our franchise for doing so. The name was finally changed to Toyota, because it sounded better, among other things."

Tom Fukunaga's father, Peter Fukunaga, was born in Hiroshima, Japan, and moved to Hawaii in 1906 at age 16. He started his business in 1919 when he opened a two-car shop for $1,500, with a $25 down payment, on Oahu's North Shore in the now-famous surfer's village of Haleiwa.

In 1926, he obtained Hawaii's first Chevrolet franchise, and in 1958, a year before statehood and two years before his death, he negotiated an exclusive import-distribution franchise for Toyota vehicles, which catalyzed the huge growth of Servco.

Tom Fukunaga says the tricks of the trade his dad taught him are, "Work hard. Sell hard. Take care of your customers. Motivate your sales and service people and have more service outlets than other dealerships. The emphasis was always on service, hence the name of our company, Servco Pacific."

Today, factors contributing to the struggle for Hawaii dealers doing business in already-difficult times are the rise in television advertising rates, health insurance and, most significantly, property rental charges.

"Most of Hawaii's dealers are located on leased land, with rent escalating at a 3 to 30 times rate," Fukunaga says. "Although Servco has a number of leases, we're fortunate because some of our dealerships are on fee properties owned by the company. The lease rent problem hasn't hit us quite as hard.

"But land prices have increased from $50 a square foot to $500 a square foot in Honolulu locations, forcing dealers and many other businesses to more remote parts of the island, which is inconvenient for our customers.

"There may even come a time when we will have to buy a huge car carrier and operate off of it out in the ocean. It may sound funny, but you never know, with our limited land and prices going up with no end in sight."

Labor costs have also gone up tremendously, but in Fukunaga's opinion if they don't, you can't compete for good sales, service and parts people.

There is a shortage of good people because of Hawaii's low unemployment rate. Sometimes, Servco Pacific runs help-wanted ads and receives no response. That is the case for companies throughout the state. Unlike the mainland, there have been no layoffs. "That's the least of our worries," says Fukunaga.

"The upcoming months and years look even tougher," Fukunaga says. "A lot of Hawaii's buying power is tied to military personnel and their families, who have everything on hold now because of the situation in the Middle East.

"Also, the glutted U.S. market has affected Hawaii tremendously, as manufacturers bring cars into our rental market that are eventually bought by our retail customers. This may seem to be good for consumers, but it will squeeze a lot of smaller dealers out, as gross margins decrease while our operating expenses increase."

What does Hawaii have going for it? "The fact that the recession hasn't hit quite as hard as on the mainland, yet, thanks to our strong tourism industry, military expenditures and foreign investment, although that has tapered off recently. And outstanding weather all year round."

As for handling today's industry challenges, Fukunaga says, "It's a time to look very closely at expenses. It's a difficult time for anyone in the industry to relax."

In fact, executives here say real estate and other costs may retard the megadealer trend.

"I think you'll see a decrease in megadealers," said Lynn Kimmel, vice president and daughter of chief executive Freda Lockhart. "I would hate to be in a position to support 15 to 20 franchises."

Added her half-brother, Marc Lockhart, the vice president and general manager:

"We're too hands on. There's always an owner around."

The two spoke in a recent interview because Freda Lockhart was

Freda Lockhart

Cadillac, Saturn

recovering from a back operation. They say the family dealer can survive in the 1990s by being smart and nimble.

During much of the past decade, Lockhart said, "You had a number of good years. Anyone could be successful in the car business."

Now, the executives say, dealers must watch expenditures and rethink marketing approaches.

Lockhart Cadillac is maintaining a conservative inventory, currently around a 45-day supply. That may be increased to about a 60-day supply later in the year, but the dealership watches inventory carefully.

Another expenditure under evaluation is for advertising and marketing.

Lockhart Cadillac is doing less advertising in newspapers. In its place, Lockhart sends direct mail advertisements to customers and would-be buyers.

The dealership avoids prime-time advertising on network affiliated television.

Instead, it buys time on shows that executives feel Cadillac customers are more prone to watch. For instance, Lockhart Cadillac buys local spots on the syndicated "Wall Street Journal Report" as well as local spots on CNN and ESPN.

"You have to be smarter in your advertising dollar," says Kimmel.

Lockhart Cadillac also is using leasing as an alternative to traditional sales.

Kimmel said that option arises from five-year or longer financing programs for car purchases. "Five- and six-year financing has been a killer," she said. As a result, the dealership hopes lease programs bring customers back more often.

Freda Lockhart has owned the Cadillac store since 1973. She had an accounting background and later worked as an executive at dealerships in Indiana and Florida.

She bought the store on North Keystone Avenue in Indianapolis following the death of its owner.

Enthusiasm for the ca

Indianapolis

Smart, nimble family dealerships will survive '90s

By Bill Koenig
SPECIAL CORRESPONDENT

This is supposed to be a time of megadealers, multiple locations and a new era of publicly held dealers.

If that's the case, Lockhart Cadillac Inc. here is an anomaly — a family-owned business with a single location.

That doesn't mean the Lockhart group is standing still. The company last fall opened a Saturn franchise, and two others are planned.

Still, this isn't even close to megadealer status.

spread to her children.

"We're in it by choice, not because we inherited it," Lockhart says.

Family members, in fact, have spread around duties, attempting to play to the individual strengths of each.

Kimmel's main expertise is in financial and administrative matters. Her husband, Charles, is general manager of the new Saturn dealership. Lockhart's primary area is sales; she is the chief executive.

"You cannot let egos and personal feelings get involved in the day-to-day operations," Lockhart said.

Enthusiasm also is helpful for getting through the current downturn in the car market.

The Cadillac store normally sells about 1,000 new cars a year. For 1990, the dealership estimates it sold about 850 units and expects slightly lower sales this year.

"We've been through crises before," Kimmel said.

"We'll probably be there again. We don't feel like we'll be hurt too badly. We have a lot of repeat business."

Like other Saturn dealers, the Lockhart store has been affected a slow supply of cars coming out of the Spring Hill, Tenn., plant.

But the executives say it's something they can cope with. "At least Saturn has kept quality ahead of numbers," Lockhart said.

And they say Saturn was the right move.

"If we were going to diversify, we didn't want to take on a car line where we'd be competing against ourselves," Kimmel said, referring to the Cadillac line.

"They (Saturn) are on the right track. That's what it's going to take."

Looking ahead, Lockhart executives say they need to get younger buyers — as well as import customers — interested in Cadillac.

Kimmel said the dealership wants to attract more buyers in the 35 to 50 age range, especially those who have bought BMW or other imports.

"One of the challenges we have is to reach that buyer who has been with an import to at least consider our product," Kimmel said.

Lockhart said Cadillac's winning the Malcolm Baldrige quality award "is a stepping stone."

Kimmel said she feels good about upcoming Cadillac models. "I'd be more negative about the '90s if we didn't have the product we have," she said.

The executives acknowledge they'll need good models as Japanese automakers accelerate their luxury-car efforts.

"They got a foothold in the late '80s," Lockhart said. "They're going to try to dominate in the '90s."

Indeed, while the Lockhart offerings — Saturn and Cadillac — differ in sizes, Kimmel said they share similar marketing challenges. Saturn is intended by GM to lure back customers from Japanese marques.

Kimmel even sees some benefits from the next 12 months. "A slowdown period makes better dealers out of you," she said. "You get to the basics. You can make a profit."

Kansas City

Service emphasis keeps Thompson's bottom line in tune

By Don Lee
SPECIAL CORRESPONDENT

At 7 p.m. on the second Tuesday of every month, Frank Thompson leads an unusual class at his Jeep-Eagle dealership in Overland Park, Kan., a suburb of Kansas City.

His students are new-car buyers from the previous month and they're there, usually in a group of 30 to 40, to learn about Thompson's service and parts departments and body shop.

"Forty-seven percent who buy cars here attend the Tuesday seminar," Thompson says while flipping through dozens of records. "I've found that as time passes, this group of people turns out to be my most loyal customers after they're out of warranty."

Thompson has been building a solid base of customers for years with such programs that emphasize service. In recent months, that investment has paid big dividends.

"My service, parts and body shop business has been excellent," de-

Frank Thompson

Eagle, Jeep

clares Thompson, who's owned the Overland Park Jeep-Eagle dealership since 1981. "But now that we're in tough times, it's actually carrying my whole business."

Indeed, Thompson says that the back end now pays all the dealership's fixed overhead, well above the 75 percent shop absorption rate for the industry. Along with improved used-car sales, that has enabled him to remain profitable despite a 33 percent decline in new-car sales since last October.

For all of 1990, Thompson says his revenue was $30 million, about $3 million higher than the previous year. He sold about 770 new cars last year, 80 fewer than in 1989, but his used-car sales in 1990 jumped 22 percent to 732.

"For the year totally, it was the best for profits since I've been a dealer," he says. "The reason is my service, body shop and parts."

Thompson, 59, believes his attention to service comes from his background. After graduating from high school in Kansas City, he went to work full-time in the parts department for a new-car dealer.

That job, with a Pontiac dealer in Kansas City, lasted 10 years. "Through those years of experience," he says, "I discovered how important it was to take care of customers after the sale."

The ensuing years saw Thompson slowly work toward his goal of becoming a new-car dealer. After running an independent used-car operation for four years, he spent 10 years with a new-car dealer, managing used-car sales.

In 1973, when what is now Overland Park Jeep-Eagle opened on 4.5 acres along this city's main thoroughfare, Thompson became the dealership's manager. He bought out the owner in 1981 and

Ford Tempo	2,382	Honda Accord	2,848
Chev. Cavalier	2,313	Ford F150	2,846

almost immediately began refining the dealership's service operation.

The progress he has made is evident in the awards he's received. They include recognition by *People* magazine, which has named his store one of the country's top five Jeep-Eagle dealerships for the last four years. Thompson's dealership has also won awards from Chrysler Corp. for achieving the highest customer service index of any volume Jeep-Eagle retailer in the United States.

"For years, we've been told by manufacturers to take care of customers after sales," says Thompson, "but I feel other dealers have neglected the back end."

Thompson, who's also an avid collector of antique cars, attributes his success partly to quick service and competitive prices. For example, an oil change, lube and filter costs $19.95 at his Jeep-Eagle dealership. That's less than some nearby independent auto shops charge, and it can be done just as quickly, Thompson contends.

"I want them coming here for the lube and the tuneup," he says.

Thompson has an experienced staff. The mechanic with the least seniority has been with him for eight years. And among top managers, all those who started in 1981 are still around. "They stay long because my shops are very busy, and they make large paychecks," he says of his mechanics and many of his other staff of 47.

Even with a top-rated service department, Thompson figures to have his hands full this year. He expects sales to remain anemic at least through the early part of 1991. "The last time it was down this much was 1982," he says.

Indeed, many in this area have not done as well as Thompson, as the closing of a dozen Kansas City-area dealerships in the last year attests. That included the demise of a Jeep-Eagle dealership, one of six in Kansas City.

There are about 110 new-car dealer locations in the metropolitan area, making it an extremely competitive market.

Like other dealers, Thompson plans to stock fewer cars during the downturn. His inventory has dropped about 20 percent since sales began slipping in October. He's also cut advertising spending by 40 percent since last fall.

Thompson doesn't blame manufacturers for dealers' troubles, but he thinks automakers can help by giving incentives to dealers in addition to incentives to customers. "The dealer needs an incentive to leverage a car deal," Thompson argues. "I want a little bit of both. That's when it works the best."

Thompson also would like manufacturers to assist dealers in providing better health and welfare benefits for workers.

"As a small businessman, I can't afford to pay for the best hospitalization or retirement," Thompson says. "They could help us by creating benefits that factory people have. We could attract better salespeople if we could offer bigger and better fringe benefits."

Whatever 1991 brings, Thompson says he'll be ready, greeting customers not only on the showroom floor, but in the back.

"Car sales are important, but you can never forget about the back end, taking care of customers," he says. "Most people come for warranty work and then don't come back. But we want them for a long haul."

Los Angeles

Boeckmann sees opportunities in down market

By Jeff Horne
SPECIAL CORRESPONDENT

After 44 years in the car business, Bert Boeckmann figures even a recession has its up side.

"You have unique opportunities in a down market," says the president and owner of Saturn of the Valley and Galpin Ford-Hyundai-Lincoln-Mercury in Sepulveda in the San Fernando Valley.

"Some come (from) buying used cars. Some come (from) working with the factory on a promotion.

Bert Boeckmann

Ford, Hyundai, Lincoln-Mercury, Saturn

You may be able to dominate advertising more easily because others feel they can't afford it," he says.

Liquidity and a "do-as-others-don't" philosophy are Boeckmann's keys to thriving in tough times.

"When I'm talking about being well capitalized, it's not that I've got the dollars to survive by offsetting what we lose; it's that I have the dollars to go out and create activity in a down market where others might not have that opportunity," he says.

"When other dealers are selling used cars because they want to meet payroll, I'm buying used cars. When they're cutting inventory, I'm stabilizing inventory to show strong displays."

In 1990, a year in which most dealerships struggled to simply survive, Galpin Ford's volume rose: 6,734 vehicles sold in 1990, 6,208 in 1989. New car sales were down (from 3,479 in 1989 to 3,033 in 1990), but new truck sales more than picked up the slack, jumping from 2,729 in 1989 to 3,726 in 1990.

But the other Galpin stores felt the effects of the economic slowdown. The Lincoln-Mercury outlet sold 820 new cars in 1990 compared to 1,065 in 1989. Galpin Hyundai sold 1,124 new vehicles in 1990, down from 1,594 in 1989.

"With Hyundai, you had a number of hits," Boeckmann explains. "Typically, they're first-time buyers so the financing is very difficult because you have a higher incidence of collection and repossession cost. Secondly, the J.D. Power reports regarding quality had a negative bearing on the product."

Galpin's Lincoln-Mercury and Hyundai stores were also adversely impacted by the Oct. 25 opening of Boeckmann's new Saturn of the Valley store. He had planned to build a new facility to house the Saturn franchise, but the high cost of Southern California property rendered such a project unfeasible. Instead, the Hyundai and Lincoln-Mercury operations were merged, and Saturn of the Valley took over Hyundai's former site.

LOS ANGELES-LONG BEACH, CALIF.
7-1-88 Population: 8,587,800
REGISTRATIONS, MODEL YEAR

	1990	1989
Cars	342,965	393,434

1990	No.	1989	No.
Honda Accord	25,990	Honda Accord	21,028
Toyota Camry	18,103	Toyota Camry	19,327
Toyota Corolla	15,747	Toyota Corolla	16,902
Honda Civic	14,849	Nissan Sentra	15,135
Toyota s'bed	13,204	Toyota s'bed	14,300

Saturn of the Valley's biggest problem is inventory. In its first two months, it sold 118 cars; every car it had except demos and showroom vehicles. "The product has been coming in very slowly," Boeckmann says. "We're running between 20 and 30 percent of projected production."

Boeckmann thinks 1991 will be much the same as 1990 in the car business.

"If you said to me, 'Do you see something so extreme that dealers should really be fearful?' I'd say, 'No.' If they made money last year, they should be able to make it this year. If they lost money last year, they're going to continue to lose money unless they change their operations."

The recession offers the perfect opportunity for dealers to scrutinize and streamline their operations.

"During periods like this, you have to do more training with your salespeople, have more contact with them, be more upbeat with them and look at programs that stimulate their income so they respond and do a better job for you," he says.

"This is a great time to improve your staff from top to bottom, either through training or replacement. Assess your store and evaluate each person working for you. Ask, 'Is this person doing the job I want him to do or did I hire people that may not reflect what I want to reflect in my store.' "

Exceptional customer service is especially important in this type of market, Boeckmann says. "Customers anticipate more when they buy, both in the way they're treated and in the quality of the car. Instead of asking the customer to come by and sign this, say, 'Let me bring it to you so you're not inconvenienced.' A dealer needs to exceed a customer's expectations."

At a time when many dealers are cutting their marketing budgets, Boeckmann is increasing his advertising. His ads emphasize good buys on a wide selection of vehicles rather than one-of-a-kind offerings.

"We go out with real values," he explains. "I say we have 27 of these to offer them. We let people know that these are not price leaders."

With new-car buyers programmed to expect rebates, Boeckmann has mixed feelings regarding Ford's replacement of most of its customer cash-back programs with dealer incentives.

"Short term, I think it's a profit stimulus to the dealer," he says. "He may not have quite so many people coming in, but he's in a better position to deal with those that do.

"The problem may come when salesmen get more used to it and give away more than they should, or in raising the customer's expectations so that the next time he comes in to buy, he doesn't believe you when you tell him you don't have the margin he's looking for."

Boeckmann suggests blending customer cash-back on selected models with a dealer incentive program. "I would try to stay in that rebate market as long as the others are in there, just to let them know we're still in the ball game."

Whatever happens with rebates, dealer incentives or, for that matter, the economy in general, Boeckmann is optimistic about his company's future. "In every downturn, our penetration of the market has increased," he says.

Louisville

Swope turned down mall idea; his auto park thrives

By T. Anthony Lamb
SPECIAL CORRESPONDENT

Dick Swope keeps his finger on the pulse of the auto industry and looks for new trends. A few years ago, as auto malls came on the scene, he was intrigued by the idea of selling multiple lines under one roof.

Faced with expansion and consolidation of his Swope Automotive Group Inc. dealerships in Louisville, he examined the concept. His expertise is finance, and he immediately saw that an auto mall could reduce construction, utility and manpower costs. He considered all those advantages before rejecting the idea.

Instead, the 41-year-old dealer and his uncle, Sam Swope, developed the Louisville Auto Center two years ago. It is an auto park

Dick Swope

BMW, Cadillac, GMC Truck, Honda, Mitsubishi, Pontiac, Saturn, Volkswagen

that helped the Swopes increase sales in an era of declining revenue for auto dealerships. Today, it is seen as a model for a successful auto park.

Located on 24 acres along one of Louisville's busiest corridors, the Louisville Auto Center is an attractive campus of individual Cadillac, Mitsubishi, Honda and Pontiac stores and satellite offices for GMC Truck, BMW and Volkswagen outlets located in other parts of the city.

The cluster of modern buildings of brick, steel and glass set on well-manicured grounds looks more like a new suburban office complex than a car dealership, more like individual department stores than a mall.

"The mall idea looks good, and we talked with a lot of people about it, including manufacturers," Swope says. "The manufacturers told us that they believed each line needs its own, distinct image, and they were right. We have found that this is the way to maximize both gross and volume.

"We probably don't have a lot more overhead than a mall, but our personnel costs are higher. But each store is fully staffed with people who sell just the lines at that store. They know the products better, and our profit opportunity is higher."

Ford Escort	1,056	Chev. Cavalier	1,098

From the very beginning, customers have liked the concept. The consolidated stores' sales volume rose in the first year and stayed about the same during 1990, a good record in a depressed national auto market.

"The manufacturers were very pleased with our facilities when they first saw them, although a few expressed concern that the buildings were too much for the product," Swope says. "We stopped their fears through gross."

Manufacturers play an important role in Swope's business; that is evident by the number of times he refers to them in conversation. And the manufacturers' arguments against the mall option played a definite role in his decision to build the Louisville Auto Center.

Says Swope, "We have a philosophy here: 'You never win a fight with manufacturers.' We have always had a good relationship with them. Our mutual success relies on our spirit of teamwork and what comes out of it."

It might seem that Swope's respect for the manufacturer/dealer relationship was forged during the four years he worked in the finance department at Ford Motor Co. in Dearborn, Mich. But Swope says the most important management tools garnered from that experience were finance and budgeting techniques that he still uses today.

Swope's respect for the power of teamwork most likely springs from the influence of his family. His father opened a Chrysler-Plymouth dealership in Elizabethtown, Ky., in 1951 and his father's brother, Sam, started Sam Swope Pontiac in Louisville in 1961. Dick's older brother, Carl, now runs the Chrysler-Plymouth dealership.

"I'm probably not that different from other second- and third-generation dealers who grew up living, eating and breathing the business," says Swope, adding that he feels he may have an advantage over some others. "This organization is the result of the vision and strong leadership of Sam Swope. I am the beneficiary of that, and that puts us in a good competitive position."

Having grown up in the business, Swope has seen recessions and knows how to respond to a downturn. But he says sales have not slumped at his dealership or in his market.

"New-car registrations are off only 4 percent from 1988. Louisville has been somewhat insulated, so I would have to say that business has been good here."

But he does acknowledge a change in the marketplace. "Our task as dealers is changing because it is less of a market driven by price advertising," he says. "To distinguish a dealership today means bringing the customer back with better service.

▶

FACE OF THE DEALER, 1991

"And it's no longer an issue of satisfying them; we have to make them enjoy the experience," he continues. "To do that, it takes good people who are trained in hospitality. Employees need to understand that customers want a warm, pleasant experience.

"That is why we adopted a training program used by the hotel industry. It focuses on customer service to help increase the perceived value of their visit."

Currently, Swope's hottest selling new cars are the Honda Accord and Pontiac Grand Am. He has a letter of intent to sell the Infiniti in Louisville, and by next fall Swope Automotive Group will have two Saturn dealerships — one that is already in operation in Orlando, Fla., and a new one in Louisville.

Memphis

New kid in town is doing fine, but it's a tough market

SPECIAL CORRESPONDENT

So far, Russell Gwatney's experience in Memphis has been like that of the rich kid who moves to a tough neighborhood in Brooklyn. The boys are bigger, and they play a little rougher.

But Gwatney, a 39-year-old second-generation dealer, seems to be

Russell Gwatney

Chevrolet, Saturn

standing his ground with his two Chevrolet dealerships and is poised for future growth now that the first of his three Saturn points in Memphis is open.

Gwatney came from Jacksonville, Ark., a suburb of Little Rock,

MEMPHIS, TENN.

Ford F150	1,407	Ford Escort	1,556
Honda Accord	1,383	Toyota Camry	1,524

where his family owns Gwatney Chevrolet, a high-volume operation. The Arkansas dealership has been so dominant that in 1990, a down year for most dealers, it was only five units short of its record for new-car sales.

With 30 years of success in Arkansas, Gwatney and his father decided to enter the Memphis market in 1988 by buying an existing Chevrolet point.

Suddenly, they were outsiders, a small dealership among giants. Competitors included a regionally dominant Chevrolet market leader, one of the nation's largest import dealers and a couple of the country's largest megadealer families.

"We thought that success in Memphis would be as easy for us to attain as it was in Arkansas," recalls Gwatney. "But that is definitely not the case. This is a very competitive market. There are so many good dealers here, larger dealers. They are professional car people, and many have dozens of dealerships.

"Instead of being the largest, I'm the little kid here. It's much harder to make inroads than we imagined."

Despite that tough competition, Gwatney increased his presence in Memphis by purchasing another Chevrolet dealership in 1989. The strategy was to create a synergy between the two dealerships, which are 18 miles apart.

"In the short run, it looks like our strategy has hurt us," says Gwatney. "We seem to be competing a little with ourselves, with one store being up for the year and another being down. I'd say we've about broken even.

"But compared to what the previous owners of the stores did, we are doing all right. But I believe it's just a matter of time. We really haven't given it enough time to work or get all our systems in place."

If Gwatney does not succeed, it won't be because he didn't work hard enough. In each of his three years in Memphis he has opened a dealership; in 1990 he built a Saturn facility.

"The most strenuous work I can remember in the three years is the week we held interviews for Saturn salespersons," he says.

"More than 120 people came in and filled out applications. We followed Saturn's way of hiring people by showing candidates presentations about Saturn. And we reduced the candidate pool to a smaller number. I'll bet we spent a hundred hours in a week just hiring people."

Gwatney believes that working hard combined with working smart is paying off.

"We have a great sales team at Saturn, and I think the Saturn criteria we used for hiring people is right on target," he says. "I wouldn't have believed it, but only three out of the 10 people we hired had ever sold cars before.

"Then, instead of focusing on trade-in values and prices, we spent 25 days teaching the product and the Saturn way to do business, and only two of those days were for talking about price and trade-in value.

"We've been open three months, and our customers have been extraordinarily complimentary about our sales staff. If this works here, we are going to take this training model to our other stores."

Gwatney says that Cavalier, Corsica, Beretta and almost all trucks are selling well in Memphis, and no Chevrolet model is doing unexpectedly poorly.

Miami

Ex-pitcher makes the majors in a tougher game

By Jack Walsh
SPECIAL CORRESPONDENT

Thom Lehman never made it to the major leagues in baseball, although he was only a "pitch" away. But he's made it to the big time in auto retailing, and he's finding that it's as tough or even tougher to compete in the automotive world.

"The car business today is the toughest since I've been in it, more than 20 years," says Lehman, owner and president of Hallett Pontiac-GMC in Miami. "The No. 1 problem is the Middle East. The economy here is weakening, and consumers are leveraged to the hilt — credit cards, high mortgage payments and long-term financing on their cars and trucks.

"But at age 43, I enjoy the challenges," he says. "Competition is getting tougher — major league all the way. Maybe it's my background in sports that makes me determined to stick it out."

Lehman expects new-car sales to continue soft until this summer or fall, but he says light trucks have been selling well and should continue to do well in 1991.

Baseball and the auto business have been in Lehman's blood since his school days in the early 1960s

in the Buffalo (N.Y) area. Ed Hallett, a friend of his father's, operated a Don Allen Chevrolet dealership in Buffalo and hired Lehman to do odd jobs.

"I started working for Ed when I was 13 years old," Lehman recalls. "During high school summer vacations, I worked in the dealership in the daytime and pitched for teams in several leagues at night and on the weekends."

Lehman received a baseball scholarship to the University of Miami in 1965. He also had a standing offer from Hallett: "Anytime you want to get into the car business, I'll provide the training, and you can eventually have your own dealership."

After graduation from Miami with a marketing degree, Lehman was drafted in 1969 by the National League's Houston Astros and pitched in their minor-league system until 1971. "At that time, they sent me a Triple A league contract, and I was expecting one to join the Astros," he says. "They wouldn't trade me or release me, so that ended my baseball career."

Thom Lehman

GMC, Pontiac

Meanwhile, Hallett had purchased Sunshine Pontiac in Miami in 1967, and Lehman had worked in the business office during vacations and after the baseball season.

"After turning down the Astros' contract, I told Hallett I was ready to begin his training program," Lehman says. "My first job was dispatcher in the service control tower. I was a little skeptical after looking at my first paycheck. With my degree in marketing, I thought, what am I doing here?"

During the next six years, he worked about every job in the dealership.

"I moved from dispatcher to car and truck make-ready, assistant business manager and later manager, assistant parts manager, service adviser, new and used-car sales, F&I, accounts payable and receivable and prepared financial statements," he says.

After a month at the General Motors dealers' sons' school in Flint, Mich., late in 1976, Lehman continues, "I was appointed general manager, and I became a partner in the firm and bought my first shares in 1978. Ed told me he wanted to keep 51 percent of the business, and my goal was to get to 49 percent as quickly as possible."

Hallett died unexpectedly at age 59 in 1980. Lehman owned 25 percent of the stock at the time. "Other dealers were interested in acquiring the business," he says. "With my 25 percent interest, I qualified with GM and was awarded the franchise. I completed the buyout in 1986."

Hallett took on the GMC light-truck line after moving to the Dixie Highway location in 1970, but gave up the franchise in 1972. "After Ed's death, I acquired a GMC franchise from Bill Grant, a Miami Ford dealer," Lehman says. "It's been a good addition, especially with the public's growing acceptance of the wide selection of trucks, which have most of a car's comfort and luxury features."

Lehman has no plans to change the dealership's name. "Hallett Pontiac had a good reputation in the community for all-round service," he says. "It's not that important that my name be on the building. Besides, there are other Lehman dealerships in this town." The other Lehman — Bill — handles Buick and some imports, and is no relation to Thom.

Lehman attributes his success to "long hours, hard work and a dedicated work force. I'm here daily, usually at 8 a.m. and often until 8 p.m., and I'm involved in every phase of the business. I have good people running each department. Basically, my job is to oversee, advise and direct."

He blames manufacturers for many of the problems that dealers face in today's fiercely competitive market.

"Rebates and other incentives that vary widely from model to model and the sameness in the vast number of nameplates on the market have thoroughly confused the public," he says. "And high prices have forced too many buyers into long-term financing to keep monthly payments at manageable levels. Most people finance their purchases for five years, and many still owe more than the vehicle is worth after 60 months."

Unit sales of new cars at Hallett Pontiac-GMC last year were the lowest in five years, according to Lehman, and volume was down in most other profit centers. Truck deliveries, on the other hand, were higher in 1990 than in any of the previous four years.

New-car sales last year totaled 503 units, Lehman says, compared with 671 in 1989; 1,041 in 1988; 919 in 1987 and 1,093 in 1986. Deliveries of new trucks in 1990 totaled 238 units, compared with 185 the previous year; 178 in 1988; 149 in 1987, and the former high of 212 in 1986.

Personnel and spending cutbacks have been necessary to offset the decline in revenue.

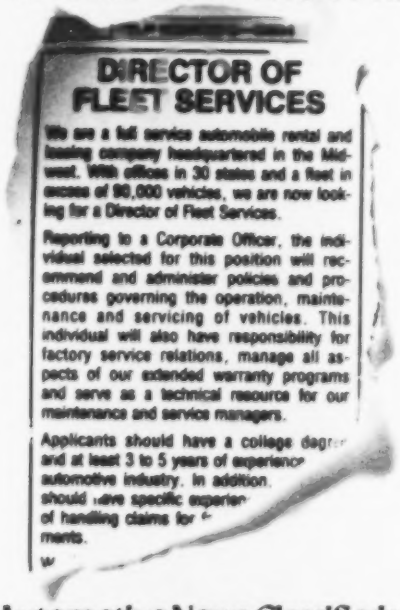
"We've cut back nearly 20 percent of the personnel in some departments without jeopardizing productivity," Lehman notes. "We haven't laid off any mechanics, but a couple of body shop employees have been dropped.

"With floorplan costs going out of sight, we've cut back our new-car inventory to a 45-60-day supply. We trimmed inventory costs by about 10 percent in 1990, and we had cut back in 1989, too. In better times, we normally carry a 90-100-day supply."

Lehman says he's counting on an increase in used-car sales to pick up some of the slack in 1991. "We hired a new, aggressive used-car manager in the fall, and volume picked up in his first 30 days on the job. There's a good market here for used cars and trucks.

"Our parts sales — wholesale and retail — have been strong and should continue this year. And because of our service reputation, we have a lot of good repeat customers. Shop volume should be a big help in offsetting a drop in new-car sales."

52 Qualified People Responded To This Four-Inch Ad



DIRECTOR OF FLEET SERVICES
We are a full service automobile rental and leasing company headquartered in the Midwest. With offices in 30 states and a fleet in excess of 90,000 vehicles, we are now looking for a Director of Fleet Services.
Reporting to a Corporate Officer, the individual selected for this position will recommend and administer policies and procedures governing the operation, maintenance and servicing of vehicles. This individual will also have responsibility for factory service relations, manage all aspects of our extended warranty programs and serve as a technical resource for our maintenance and service managers.
Applicants should have a college degree and at least 3 to 5 years of experience

Boucher upbeat despite business, personal tests

By John McDonnell
SPECIAL CORRESPONDENT

If Gordie Boucher ever writes his autobiography, he might be tempted to call it *Somebody Up There Likes Me.*

Too bad Rocky Graziano beat him to the punch. There has been plenty of justification in the last couple of years for Boucher to use such a bold title.

Boucher (pronounced boo-SHAY) has been in the automobile

Gordie Boucher

Chevrolet, Lincoln-Mercury, Saturn

business 30 years. He acquired his first store 20 years ago and now owns two Chevrolet outlets (in Racine and Waukesha, Wis.) and a pair of Lincoln-Mercury dealerships (in West Allis and Madison).

But Boucher's mini-empire is about to become a great deal larger. He's been appointed the exclusive Saturn dealer for southeastern Wisconsin. In five years, if all goes according to plan, Boucher figures to be selling 2,500 Saturns annually.

MILWAUKEE, WIS.
7-1-88 Population: 1,398,000

REGISTRATIONS, MODEL YEAR

	1990	1989
Cars	58,532	63,062
Light trucks	24,073	24,264

TOP 5 MODELS, MODEL YEAR

1990	No.	1989	No.
Chev. Cavalier	2,481	Ply. Voyager	2,581
Ply. Voyager	2,443	Ford Taurus	2,459
Ford Escort	2,302	Ford Escort	2,316
Ford Taurus	2,256	Chev. Cavalier	2,271
Toyota Camry	1,886	Chev. S10	1,794

Of course, not all has gone according to plan so far. Slow initial production has meant only a trickle of cars into his Saturn of Waukesha, which opened last November. And though that limited number has meant that anxious customers have been willing to pay full sticker to get their hands on the new marque, the volume is not yet anywhere near the initial planning potential of 55 a month.

With an investment of $1.2 million at stake, one might expect to find Boucher running in place on the ceiling in frustration. To the contrary, he is relaxed and smiling.

"I don't get upset over things I have no control over," he says. And he's sure the Saturn folks will do right by him and other dealers who have been shackled by the slow startup in production.

"The whole Saturn concept is based on teamwork — a mutual trust and partnership between the factory, the dealers, our employees and our customers," Boucher says. He thinks the Saturn approach to selling and servicing cars could revolutionize the retail automobile business.

He's already borrowed one Saturn idea for his other dealerships.

"That idea is empowerment — giving your employees more decision-making responsibility," he says. "We used to run a pretty tight ship around here, but now I'm convinced that all wisdom doesn't reside in the dealer or the general manager."

The result has been a marked improvement in employee morale. Customer requests and problems are solved a lot quicker. And when new dealerships are built, Boucher figures those dealers would be wise to adopt Saturn's recommended frugal approach and not put up what too often can become mausoleums.

His Saturn store, for instance, has 14,000 square feet of floor space on a two-acre site. Contrast that with the average 30,000 square feet and eight acres that his Chevrolet and Lincoln-Mercury outlets occupy.

Saturn's top-to-bottom training program for all dealership personnel is another major plus that Boucher believes should be adopted by other makes.

When his Saturn volume reaches its full potential in five years or so, he figures to be operating two full-sized stores and a pair of service locations that will have mini-showrooms. He's already begun negotiating for land for the second store.

Being the only Saturn dealer within hailing distance should make for a firm pricing policy.

Just how firm is open to question. Prospects still have the option of shopping competing makes. If they find Saturn prices firm, but other makes willing to offer discounts, they might go for what appears to be the "better deal."

Years of rebates and other discounting practices have made buyers reluctant to pay full sticker when they figure that a discount is just around the corner. Still, having an exclusive franchise for a particular make, especially if it is well received by the public, is something most dealers can only dream about.

But it's not the prospect of a real-life game of Monopoly that Boucher is most grateful for. A year ago, he didn't know if he'd even be around to see things grow.

Boucher was sitting at his desk one day in January 1990 and noticed that he couldn't hold a pen in his hand. He dismissed it at first, but then his other hand became weak, and he knew something was seriously wrong. By the time he was whisked to the hospital, the symptoms had grown worse. His mouth was starting to sag on one side.

"I figured it was a stroke, but the doctors determined right away that it was something called Guillain-Barre syndrome," he said.

Boucher got worse before he got better. Guillain-Barre is a paralyzing nerve disorder, and soon he was paralyzed from his nose to his toes. Recovery involved two months in the hospital and two more in a wheelchair, plus hundreds of hours of rehabilitation therapy.

Boucher figures he's about 90 percent recovered. His work days are a little shorter, made possible by family members who have helped keep the business going.

When Boucher was hospitalized, his son Frank, who had been running the Chevrolet dealership in Racine, jumped in to oversee operations at the other Chevrolet store and the two Lincoln-Mercury outlets. Daughter Julieanne, who had worked at the Boucher-owned ad agency that handles the dealerships' accounts, went to the National Automobile Dealers Association's school for prospective dealers. She's now running the Saturn store.

New-car volume at the Boucher stores totaled about 5,000 units last year, off slightly from the record sales of 1989. Business at the Lincoln-Mercury stores was off nearly 20 percent, but Chevrolet held about even, Boucher says.

Although the Milwaukee market has never been a volatile peaks-and-valleys one like some other sections of the country, business has been soft. Final registration figures for 1990 are likely to show overall sales in the metro area off more than 10 percent from 1989.

To soften the impact on his own business, Boucher has beefed up his service and parts business (it was up 10 percent at his Lincoln-Mercury outlets) and extended his hours to evenings and Saturdays to lure more customers.

There hasn't been any need to cut back the payroll. Boucher said he doesn't load up on personnel when sales go up, so he doesn't have to eliminate any jobs when sales slacken. He has temporarily reassigned some of the staffers at the Saturn store to his other facilities, but it's only a matter of time before Saturn of Waukesha assumes a dominant role in the mix.

And now that he's licked the illness that felled him last year, time is something that Boucher has plenty of.

Minneapolis

A little fun in ads brings recognition and more sales

By Dave Phelps
SPECIAL CORRESPONDENT

Jim Paul likes to poke fun at car dealers. That wouldn't be unusual if Paul were a stand-up comedian. But he's a dealer himself and has had a fair amount of success with his self-mocking approach at Valley Oldsmobile-Pontiac-GMC in Apple Valley, Minn., a suburb of Minneapolis.

With a series of unique radio ads, Paul has attempted to set him-

Jim Paul

GMC, Oldsmobile, Pontiac

self apart from the dealers who flood the airwaves with gimmicks and dress up their lots with bunting and balloons.

"You know, I signed up to be a car dealer . . . not to join the circus," Paul says in one of his radio commercials. In another, he says: "When I see those guys in Uncle Sam hats shouting at people on TV, I get embarrassed. I really do."

Paul says he gets results with his approach; 1990 was a record year, despite a slowing economy. And he says he has no plans to change in the future.

"I don't know that this business is as complicated as we make it," he says. "You pick up some people skills, you learn that the public's going to have to trust you and get along with you if they're going to buy anything from you. I think when we try to get a lot more scientific than that, we probably get ourselves in trouble."

Paul, 41, grew up in the Minneapolis suburb of Minnetonka. During his last year at the University of Minnesota, he began selling cars at nights and on weekends for Suburban Chevrolet, where his father was service manager. Paul concluded that the business of car and truck sales was preferable to anything else he saw.

"I was nearing graduation and found myself standing in lines with hundreds of other students interviewing with companies that had one or two positions somewhere on the West Coast. I realized that the jobs I was applying for weren't as good as the one I had," he says.

Paul was a salesman for Harold Chevrolet in a Minneapolis suburb before becoming truck sales manager, new-car sales manager and finally general sales manager.

After 12 years at Harold Chevrolet, Paul received a partnership offer from the man who gave him his first job in sales, Bernie Wagnild. In early 1986, they purchased Valley Oldsmobile-Pontiac-GMC.

"The CSI was among the lowest in the region, and that covers three or four states, depending on the division," Paul recalls.

Paul revamped the sales force and the service department during the next eight months to improve customer satisfaction, raise the dealership's profile and increase sales.

He succeeded on all counts. In ▶

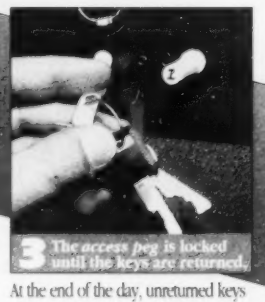
AFFORDABLE KEY TRACKING WITH LOCKED-IN CONTROL

Here's How It Works!

Each salesperson's access peg releases only one set of keys at a time. The access peg remains on the KEYper panel to identify the person who removed the keys; tracking keys is simple. More than one peg can be assigned to salespeople, or multiple pegs to lot managers for efficient lot arrangment. **The Supra KEYper Key Tracking System is simple to understand and operate.**

Keys are displayed on locked pegs on the KEYper panel. They are easily accessible, while protected from unauthorized use. Salespeople and managers can see at a glance which vehicles are being shown.
There is a KEYper model to fit your lot size and key control program. You can store groups of 50 or 100 keys on attractive wall panels, or up to 340 keys on one of our portable units. **The Supra KEYper Key Tracking System lends an organized and professional look to your dealership.**



At the end of the day, unreturned keys can be easily tracked to the salesperson who checked them out. Keys and costs are controlled. No more lost time and lost sales from missing keys. You can have all this accountability without expensive programming, complex codes or computer "crashes". The KEYper is virtually maintenance-free. **The Supra KEYper is the affordable key dispensing and tracking system that keeps you in control.**

Dodge C'van	3,956	Dodge C'van	4,972
Ply. Voyager	3,620	Olds. Cierra	4,843
Chev. Lumina	3,376	Ford E'line	4,581

1986, Valley sold 800 new cars and trucks, 450 used vehicles and did $16 million worth of business. In 1990, Valley sold 1,000 new cars and trucks, 800 used vehicles and sales reached $26 million, up from $24 million in 1989.

"Now, we're way above the average in CSI in all three (GM) divisions," Paul says.

Paul began his unique advertising campaign three years ago, after he felt confident that the dealership had the right people in place to live up to an image campaign. With the help of radio whiz Craig Wiese, who runs a Minneapolis radio production company, Paul concocted a set of spots that quickly set him apart from other dealerships in the area and ultimately won several awards, including a 1988 National Automobile Dealers Association award for best automotive radio campaign.

"We put together a campaign that tells what we are, who we are, what we do, and it sets us apart from most of the clutter, most of the screaming, shouting double rebate type of advertising," Paul says. "It's worked very well for us. It's mentioned frequently by our customers. They say the place operates like we say it operates. Contrary to common opinion, there are a lot of honest car dealers who are good businessmen and who are pillars of the community. But they have a hard time finding an avenue to express that."

Paul said 52 percent of Valley's new-car sales last year were to people who live outside the dealership's principal trade area. Since Valley Olds is located in a suburb in the extreme south end of the Minneapolis-St. Paul metropolitan area, Paul said the draw of customers from as far away as the Twin Cities' northern suburbs has to be because of radio advertising.

A new Valley radio ad is released about every three months, he says. "We've poked fun at the car business and car advertising," he says. "I don't think we've been mean-spirited. Granted, a few dealers have taken offense and think we're doing something that's anti-industry. But I think it's been kind enough, gentle enough, where we shouldn't be offending anybody. If you can't laugh at the kind of advertising in the car business, you don't have a sense of humor."

While sales and volume have grown since Paul and Wagnild took over, the owners have approached business conservatively, especially in terms of inventory. Paul says dealers learned their lesson about controlling floor plan expenses in 1989. In 1990, dealers became more conservative, he says.

"Everybody paid way too much floorplan interest in 1989," he says. "Rather than trying to sell 100 per month while stocking 400, we decided to sell 80 or 90 a month and stock 200 or 250."

Paul says he expects to approach 1991 even more conservatively — especially in light of economic uncertainties at home and the crisis in the Middle East.

He says General Motors dealers are confused about GM's plans for the future and its grand strategy for the marketplace. Dealers want to know if GM intends to regain some of its lost market share or dig in its heels to prevent loss of further market share, he says.

Paul says he no longer can assume that new-car sales will be his main profit source. As a result, the dealership is turning to its service, parts and body shop and used-car department to pick up the slack. He hopes to avoid any layoffs.

"I'm not thrilled with the whole premise of rebates and dealer incentives," Paul says. "There are better ways to market an automobile. Everybody accepts the fact that people walk in and get sticker shock. It would appear that we have a lot money built into that sticker for rebates, and we've created some of the sticker shock."

As a GM dealer, and specifically an Oldsmobile dealer, Paul thinks GM must target its marketing efforts better.

"I think part of Oldsmobile's problem is they were so strong and did so well that when they started to lose market share they didn't perceive it as anything other than a blip in the curve," he says. "They were a little slow reacting to what was really a crisis."

Out on his own, son finds the fun of being a winner

By Marc Lachapelle
SPECIAL CORRESPONDENT

"I hated the car business when I worked in my father's dealership: He put me to work in service and I hated it," recalls Jean-Claude Gravel. "I hated filling out work orders. I hated selling cars. I just hated all of it."

But hate it or not, selling and servicing cars got into his blood. He had been working in father John Gravel's successful Chevrolet-Oldsmobile dealership, part- and full-time, in various capacities since the age of 14. In 1978 he and his brother Roger bought the family business, but four years later he sold back his share.

Soon after, at age 26, Gravel took over a small Pontiac-Buick-

Jean-Claude Gravel

Buick, Cadillac, Chevrolet, Oldsmobile, Pontiac

Cadillac dealership in St. Jean, Quebec, some 25 miles from his father's Saint Lambert dealership, located on Montreal's South Shore.

"At the time, the dealership had 17 employees and it was selling 225 cars a year; I had no comptroller, no sales manager, no used-car manager, no one running the body shop" says Gravel. "With a newborn little girl at home, I had mortgaged the house, sold all the stock I had, and convinced the bank manager to front the rest without any personal guarantees to offer. There were no two ways: I had to make money the first day."

He did, and he was hooked at last ". . . because I was alone and it was my money. I did everything for a while at the dealership, seven days a week. I didn't know a soul in St. Jean, but I found my way into every social event or party in town."

That first year, the young dealer had forecast profits of $20,000 and a salary of $40,000. The business made $185,000 that year, $385,000 the second and more than a half million the two following years. From little more than 200 cars a year, annual sales grew to 600 new and 400 used cars.

Then one day, as Gravel was sailing off Cape Cod: "I told my wife I wasn't happy. I had taken three months vacation that year and rented a super sailboat and yet, I was fed up with my job and fed up with vacations. Here I was, 30-years-old, making $40,000 a month, much more than I managed to spend, but there was no challenge left in it for me."

Soon after, General Motors called up with an offer to take over another South Shore dealership. That prompted brother Roger to offer Jean-Claude a new form of partnership where the two would jointly own both dealerships bearing the name Gravel. "It got me going again," he said. "That's when I decided that I would never again let myself lapse into a comfort zone."

Things have happened quite fast ever since. In 1989, it was older brother Roger's turn to want out, eager to pursue interests in other fields. A deal was struck between the Gravel brothers, making Jean-Claude the majority shareholder. He was gradually on the way to total ownership and sole operator of the two South Shore dealerships.

Then, an opportunity arose to acquire a major dealership located on Ile Des Soeurs, right across Champlain Bridge over the St. Lawrence river from Gravel Chevrolet-Oldsmobile's new Brossard location.

Champlain Pontiac-Buick-Cadillac had once delivered as many as 4,800 cars in a year, but sales had plummeted to 1,000 units since. Gravel met Champlain's former owner on November 23, 1989, and moved in with his troops on December 1. GM required that Gravel sell his dealership in St. Jean. There, young Michel Rondeau took over after working his way up from the parts counter under Gravel's tenure.

The Ile des Soeurs dealership, only a five-minute drive from the heart of Montreal, was turned around in spectacular fashion during the course of 1990, in spite of the economic situation. Gravel is not surprised, even though he says that "99 percent of the people in the industry thought we wouldn't make it. We knew the place had serious problems, but our dealership in Brossard also had a problem with CSI when I took over and it is now ranked second in the Montreal region."

Gravel believes his greatest quality is an ability to create a good working environment. "Our strength is in operations; I could do nothing without my people. Who am I to tell a specialist how to do his job? I just try to provide them with the best tools and conditions possible," he says.

"In Ile des Soeurs, for example, I moved in with five of my 11 directors and we implemented the same methods that had succeeded in Brossard. There, the break-even point in sales went from 98 to 12 vehicles a month and in Ile des Soeurs, we have already brought it down from 125 to 40.

"Low operation costs and customer satisfaction are the secret when you consider that profits on new cars are the same amount as in 1971 — with prices five times higher."

Gravel is adamant about the vital importance of service, added to the two main elements of success in his view: location and reputation. "Just consider that in a market that was down this year by 10 to 25 percent, our sales in Brossard grew by 8 percent, mainly because of our reputation for service. Sales were down by 20 percent in Ile des Soeurs, but I believe it will take two years to rebuild customer confidence in the dealership."

Some may have pessimistic views on the future of the car business in the coming years, but such is not the case with Gravel. "When I sit down with my directors, we are looking ahead over a fifteen year period. That makes you less worried about the short term," he says. "Of course, we expect two or three bad years among these, but this approach gives you the confidence to keep investing and progressing as planned even when the going gets rough and others just think of cutbacks, or worse."

Along these lines, Gravel and his people are working on two or three major projects for the coming year. Some could become major innovations for a Canadian operation. "With the Free Trade Agreement, the business is bound to change drastically in the coming decade," says Gravel. "So, I am always ▶

looking for new trends here and abroad. But at the same time, among other things as president of the Quebec GM Dealers' Marketing Group, I try to help find better ways of reaching the Quebec buyer. We think and do things differently here than in other parts of the country."

What does this 34-year-old father of two (a daughter now 8 and a 5-year-old son) see for himself 15 years ahead? "If all goes according to plan, my directors will own 50 percent of the business at that point; they could buy me out and I could stay on as chairman of the board or as an advisor. I imagine sometimes that I will want to slow down and enjoy life a little more at 50, take more time off and see less of the day-to-day action, but my friends tell me it will never happen."

Newark

Van Duren strikes gold by mining niches

By Stephanie Stokes
SPECIAL CORRESPONDENT

From his youth on a farm in rural northern New Jersey, Raymond Van Duren well knows that big things can grow from small seeds.

His experience as an auto dealer has taught the same lesson: The tiny dealership from which Van Duren sold Chrysler Corp. imports in the 1960s has grown to include 12 franchises in two states — among them, the nation's largest Saab store.

That kind of growth doesn't necessarily succeed unless it's been carefully nurtured.

"We're not expanding out of our control," says Van Duren, whose Ramsey Auto Group stores in New Jersey are located within a four-mile radius in Ramsey — a borough near the New York state border — and neighboring Upper Saddle River, N.J. "I attribute everything to hard work and total control."

Raymond Van Duren

Alfa Romeo, Chrysler, Eagle, Hyundai, Infiniti, Jeep, Mazda, Mitsubishi, Plymouth, Saab, Subaru, Volvo

Despite the current tough selling climate in New Jersey and nationwide, Van Duren is continuing to grow in hopes of better times ahead. In December, Ramsey Auto Group opened an Infiniti store in Ramsey, and two months earlier acquired an existing Mazda store and added a Hyundai franchise.

The Infiniti franchise is Van Duren's second. The first opened in late 1989 on Federal Highway in Lighthouse Point, Fla., where Van Duren in the past four years has established Saab and Alfa Romeo stores.

"Infiniti has been good," Van Duren says. It's a franchise he's proud to have been selected to open. "It's the car of today — a lot of value, low maintenance, lots of customer service. And the manufacturer's helping us to do what had to be done."

Van Duren runs Ramsey Auto Group with a niche strategy, concentrating on selling smaller-market cars. "We've always had a franchise that you have to work on — it's made us stronger," he says.

Van Duren, 49, grew up on a farm in Wyckoff, a once-rural borough just south of Ramsey. His first foray into the car business came during high school, when he worked in the repair shop of a used-car lot in working-class Elmwood Park.

He eventually bought into the business, but when it came time to renegotiate the lease, Van Duren decided he would be better off moving elsewhere. So in 1966 he set up his own shop on state Highway 17, the main thoroughfare in thinly developed Ramsey, repairing used cars during the day and selling them at night.

Since Ramsey wouldn't license used-car dealerships, Van Duren launched his business for $5,000 by acquiring the least-expensive new-car franchises he could find: Chrysler's Rootes Group cars from Britain and Simcas from France.

Every few years, Van Duren added to his stable of offbeat franchises. In 1968, he began selling Subaru, then still a newcomer to the U.S. market and imported by a firm based in South Jersey. Three years later, the Ramsey Auto Group took on Fiat and soon became the nation's largest Fiat dealer — a run that ended when the Italian automaker stopped exporting cars to the United States in 1981.

In 1979, Van Duren added Saab — echoing his Fiat success by becoming the nation's top Saab dealer in 1984 and remaining near that spot since. Other additions include Yugo in 1985 as well as Chrysler-Plymouth (which replaced the Fiat franchise), Jeep-Eagle, Alfa Romeo, Volvo and Mitsubishi.

All the dealerships are at the north end of Route 17, one of North Jersey's most heavily traveled state highways and a key truck, commuter and shopping corridor.

The past two decades have seen a development boom transform the area surrounding Van Duren's business. "We're a hometown dealership, even though we're on the highway," Van Duren says.

The dense circle of dealerships allows Van Duren to keep a close eye on the business, with as many as two or three visits to each outlet each day.

"I'm a hands-on dealer," Van Duren says. That means long hours — 55- and 60-hour work weeks. "Obviously," he adds, "we have to work harder than we have in the last three or four years."

The long hours and hard work have kept Ramsey Auto Group profitable in the past year, even as New Jersey slipped into recession during the summer.

For the 1990 fiscal year, which ended in November, gross revenue from new cars was $66.9 million (excluding projected revenue from the new franchises) with 2,827 new units sold, according to Ramsey Auto Group Vice President Leigh Rzasa.

Revenue was up slightly from 1989, when gross sales from new cars were $66.2 million. Unit sales were off nearly 15 percent from a total of 3,310. In 1988, revenue was $68 million on sales of 3,605 new units.

Throughout the Garden State, new-car and truck sales are down about 10 percent, according to the New Jersey Department of Motor Vehicles and the New Jersey Automobile Dealers Association.

To get through the squeeze, Van Duren is pursuing various money-saving strategies.

"We've had to cut overhead and watch spending," he says. "People have to produce more and are expected to do a little bit more." The auto group currently has about 260 employees in New Jersey — including two of Van Duren's three children.

Van Duren says the auto group works to keep motivation high and turnover low by hiring inexperienced salespersons, training them in-house and giving them the opportunity to work their way up through the ranks.

And despite the nation's grim economic picture, Van Duren is optimistic about the car business. "I think we will have an upswing this spring," he says. "People have to buy cars — their cars are getting old — instead of paying expensive repair bills."

After 25 years, Van Duren hasn't grown tired of selling. He says it's hard to stay away from the showroom floor.

"You have to enjoy this business — it's a tough business," he says. "We make it a fun business: No one calls me 'Mr. Van Duren' — it's 'Ray.'"

New Orleans

Cadillac man added Suzuki line and beat oil bust

By Janet Plume
SPECIAL CORRESPONDENT

M.R. McIlwain may appear a bit old-fashioned in an age that markets sizzle instead of steak. But as far as the veteran Cadillac dealer is concerned, the basic tenets of good business never go out of style. Good service has been McIlwain's trademark since he first opened his Cadillac dealership 20 years ago in the suburb of Kenner.

"Dealers should always be concerned about service," McIlwain explains. "It's what keeps us in business." And staying in business has been foremost on the minds of most car dealers in New Orleans since the oil bust flattened the local economy in the mid-1980s.

The survivors hung on by sweating through some of the toughest streamlining programs they had ever undertaken. Labor was cut to a minimum, marketing shifted, and new lines were added to meet demands of a more austere buyer. In McIlwain's case, he added a Suzuki dealership late in 1989 when property adjoining his went on the market.

M.R. McIlwain

Cadillac, Suzuki

"I had been wanting to add another line for some time," McIlwain said. "But I never had the room." The additional property hiked the land size of his dealership to some five acres. His expansion turned out to be timely, because the only other Suzuki dealership in the city closed in 1990, and overall sales posted their largest gain since the oil bust in 1986.

McIlwain liked the Japanese line because it had just started to expand into sedans and other product lines, diversifying from its personal-sport-utility vehicles, the Sidekick and Samurai.

"The Suzuki line fit in perfectly with what I was looking for: a non-competitive line at the other end of the Cadillac," McIlwain said. "They seem to be popular with the economical buyers, as second cars and for kids for school."

In 1990, McIlwain sold 679 new ▶

cars — of which 70 were Suzukis — and more than 500 used vehicles for a volume increase of some 15 percent over the previous year. "The Suzuki sales were about what I expected the first year," he said. "As far as the Cadillac sales went, I was very pleased. I think it's a real sign this area is beginning to recover."

McIlwain realized that a combination of the market's downturn and the escalating price of cars shut many families out of the new car market. To counter the shift in buying demand, he beefed up his used car inventory.

The West Texas native supplements his used car inventory with units from factory auctions after manufacturers buy back daily rentals and fleet cars.

"We realized people were putting off new car purchases and tending to repair rather than replace," McIlwain said. "Our service department became crucial to the business. And when people did buy, they were more frequently looking for used cars."

Besides the hike in volume, his sales in 1990 failed to reflect the traditional seasonal buying habits, McIlwain said. As far as McIlwain is concerned, the trend is additional proof that the local market is recovering.

"We usually see strong buying patterns in the spring and in October and November after the new cars come out," McIlwain said. "In 1990, every quarter had higher sales than the previous one."

McIlwain expects the trend to continue at least through the first quarter of 1990. But like most businessmen, he hesitates to forecast too far ahead these days.

With new nameplates swamping the market and buyers delaying purchases, dealers face a basic problem.

"Each dealer is looking at taking a much smaller slice of a smaller pie," he said. "I would caution other dealers to watch expenses early in the game; to take a hard look at even fixed costs such as operating overhead." Another tactic McIlwain used to survive the depression involved reducing his inventory from a 90- to 100-day stock down to 60 days.

He slashed his advertising budget. "There's no sense spending money on advertising if people aren't out there in the market," McIlwain said.

While most manufacturers have hinged much of their advertising in recent years on rebates and incentives, McIlwain says his life would be a lot easier without them.

"We don't use the word rebate anymore," he said. "I think the time will come when Cadillac and other manufacturers will get out of the incentive business," McIlwain said. "We will get back into the car marketing business instead of marketing incentives.

"The problem with incentives is that people get hooked on them," he said. "They say, 'If you don't have an incentive now, then I'll wait until you do.' "

The biggest problem that incentives pose is the difficulty they present wnen the dealers tried to decide on the size of his inventory.

"We have a pretty good hand on seasonal demand," McIlwain said. "But when you don't know when the incentive is going to arrive, you can't know what the proper inventory is and you can't plan. Incentives have us out on the sales floor selling pamphlets instead of product," he said.

"But with the public on the hook, how do you get them off it without a tremendous withdrawal period?"

New York

Recession fears keep buyers on sidelines

By John A. Russell
SPECIAL CORRESPONDENT

Recession reared its ugly head in the New York market long before other parts of the nation felt its effects. The stock market crash in 1987 was the beginning of a seemingly continuous downward slide in the New York economy that has touched everyone. No segment has been spared.

Eli Bloom, president of Bloom Pontiac in Queens and a member of the Pontiac National Dealer Council, has seen the car business at its best and its worst. He calls 1990 "the toughest auto market in many years." The reason is simple: Fear.

Throughout 1990, New Yorkers have received a constant barrage of bad news. Major layoffs in several of the area's principal businesses have contributed to the atmosphere of fear permeating the city.

Wall Street has gone through major retrenchments, sending thousands to the unemployment lines. The major banks have announced significant layoffs as they face heavy losses on bad loans. Major retailers have been on the ropes, some forced out of business. And real estate, the crown jewel of the speculative 1980s is tottering on the brink of disaster.

"Even if someone is comfortable," Bloom says, "they don't know how long they will be." He notes that every day, more bad news about the economy from the S&L crisis to the looming banking crisis, contribute to the general trepidation in the market. And the Middle East situation spreads double fear through the marketplace.

"People read every day about the financial problems and the Middle East," he says. "They feel that if they buy a car now, they'd be looked at as crazy.

"People are more budget conscious. They are holding onto their cars longer and would rather spend $600 to $700 servicing their old cars than $15,000 to buy a new car, particularly if their cars are paid off." Consequently, his service business is doing well, Bloom says.

But that is not unusual for Bloom's operation. Over the years,

Eli Bloom
Pontiac

he has stressed service, maintaining that a good service business helps dealers weather the storm, and for a single-franchise dealership like his, it is particularly important to have the back end turn profits in bad times.

Sales at Bloom's dealership are down. His best-selling models, Grand Am, Sunbird and Grand Prix, account for 60 percent of his sales.

And the Grand Am and the Sun- ▶

FACE OF THE DEALER, 1991

bird indicate the psyche of the buyer today, Bloom says. They want lower-priced, nicely designed cars.

"Today, people are buying a car if they need one," he says, and the days of the impulse buyer are over. At least in the New York market.

Used cars also have become important. There is a greater emphasis on good, clean used cars, he says. Customers often decide not to buy a new car when they see the prices, and they look toward the used car, particularly low-mileage cars.

Bloom expects that trend to continue, and he describes the used-car market as stable.

Leasing also has become an important factor in the business. When Pontiac announced a $199-per-month lease program on the Grand Am at the beginning of the year, Bloom says he started getting telephone activity, which was encouraging. Especially because December was his worst month ever.

As a former president of the New York State Automobile Dealers and the Greater New York Auto Dealers Association and as a current member of their boards of directors, Bloom sees a crisis facing dealers in general.

Dealers today are facing terrible cash flow problems, he says. Some are in the worst shape in 10 years, from a cash standpoint. The cash flow problems have spread to import dealers as well as domestics.

Many import dealers are confronting problems that their domestic counterparts have had to deal with for years. Those problems include inventory management and floorplanning expense because of higher inventories.

Of course, during the go-go years of the 1980s, many dealers overbuilt their facilities and overextended themselves. That also will cause a consolidation as dealers retrench.

As for single-line dealers, Bloom says it is more difficult than ever to succeed with one make. He has taken on Saturn and is awaiting its introduction in this market. He is convinced Saturn will be the right car for the marketplace.

Despite all the doom and gloom in the New York market, Bloom says he is confident it will bounce back. The auto business always has, he says.

Yet, for the first time in his career as an auto dealer, he says he does not know when it will recover. Factors beyond the auto industry will influence the recovery. Bloom says his objective is "to be there" when the business does recover.

Norfolk

Kimnach bolstered defenses against recession, war

By Allen S. Roberts
SPECIAL CORRESPONDENT

At first blush, you'd figure Peggy Kimnach has one of the toughest jobs in the country.

Not only does her dealership face the usual trials of a recession, but it also is among those hardest hit by the war in the Middle East. From the Norfolk area, where the Pentagon maintains huge naval bases and airfields, about 35,000 personnel — who tend to buy American — have been called to Operation Desert Storm.

Also, Ford Motor Co.'s Norfolk plant, which builds full-sized

Peggy Kimnach

Ford

trucks and supplies a lot of customers, is suffering more than its share of shutdowns.

"We're hard hit now," Kimnach concedes. "Our area is suffering more than it would under normal recession conditions."

To make matters more complicated, Kimnach, 64, is "a woman in a man's world."

But Kimnach Ford Inc., the second highest-volume Ford dealership in the area after Beach Ford Inc. of Virginia Beach, is not about to buckle under all those pressures.

On the contrary, Kimnach expects to weather the storm better than most.

"I'm probably one of the only dealers in the area who has not laid off employees," Kimnach said. "I have not laid off the first employee and I don't look to. For a store this size, that's just unheard of."

Kimnach Ford learned its lessons the hard way, back in the recession of the early 1980s, and it's not going to make the same mistakes again, even as this recession combines with war to create unprecedented stress.

Long before the recession and the Persian Gulf situation took hold last fall, the firm took several steps to insulate itself:

- The dealership avoided over-hiring in the sales boom of the late 1980s, holding payroll to about 100 by training each employee to handle a wider variety of tasks.
- It strived to retain more of those employees, and thus recover the investment in training them, with financial incentives tied to performance.
- It diversified, stressing parts, repairs and body work, to cut its dependence on new-vehicle sales.
- It reached out to neglected consumers, particularly women, with auto care clinics and other promotions.
- It paid for those programs in cash, while paying off the last of its debts, to build a more recession-resistant balance sheet.

"We're not high rollers and big spenders," Kimnach said. "There's a difference between wants and needs, and I did only what the consumer wanted and what I needed."

Rather than going into debt to finance a fancy new showroom and offices, for example, Kimnach plunked down $2 million cash to restore her 30-year-old facilities. That left her free to invest in a new paint booth for the body shop, which now generates more profit than any other department.

"I'd love to have one of those massive things like the Lexus dealers, but no," Kimnach said. "I don't think the consumer cares whether you have carpet or marble or tile on the floor, as long as it's clean."

Kimnach Ford watched new vehicle sales dwindle 23 percent last year, to 773 cars and 894 trucks from 1,085 cars and 1,075 trucks. Used-vehicle sales also fell 23 percent, to 528 from 690.

But the dealership held the decline in revenue to 18 percent and actually increased profits — by a whopping 56 percent.

Kimnach Ford, which saw sales plunge below $20 million in the last recession, managed to post sales of nearly $34 million last year, down from $40 million in 1989. And while many dealerships slipped from profit to loss because of the free-fall in revenue, Kimnach doubled its after-tax profits to more than $700,000, or 2.1 percent of gross receipts, from about $450,000, or 1.1 percent of gross.

That gave Kimnach a return of almost 33 percent on its investments, nearly twice the average of 17 percent among 72 Ford dealerships in the Washington district.

Kimnach has come a long way since 1963, when she joined the dealership as a file clerk in the service department. She soon became secretary in charge of service and then went to technical school, which propelled her to manager of service.

In 1971, she married the dealership's sole owner, Charles A. Kimnach Jr. She continued to run service until 1984, when her husband was bedridden with illness, leaving her to run the whole show.

She's since served as president of the Tidewater Automobile Dealers Association and now serves as an economic adviser to Virginia Gov. L. Douglas Wilder.

"I ran parts and service for 20 years," Kimnach recalls. "I had to learn what it was to hone cylinder walls, to fit piston rings."

After local sailors began heading for the Middle East last fall, Kimnach reached out to the Navy wives left behind. She staged two car-care clinics at local bases, using actual parts — gummed-up valves, worn piston rings, shot oil filters — to demonstrate the wages of negligence. And it was not some male mechanic, but Kimnach herself, who spoke to the women.

"There are so many military wives left here," Kimnach notes. "A lot of them have no family here, no friends, and they don't know whom to trust."

While running such high-profile promotions, Kimnach also attends to the details behind the scenes, largely by listening to her customers and employees.

The recession and war and the intensive media coverage of events have scared most consumers away from the lots, Kimnach says. Although the reality may not be as bad as the perceptions, she adds, the result cannot be denied.

"I think the news has scared the living hell out of the average American," she says. "We've got doom and gloom, and who is interested in buying an automobile when we're looking at survival?"

Kimnach hopes that automakers will pay more attention to their dealers in the future.

"Some of the ones that had it so good have gone ass-backwards," she notes. "I don't think Ford's going to get fat, dumb and happy."

Meanwhile, Kimnach is going to continue to run her dealership her way — against all the odds.

"I don't think the manufacturer wants a dealer to be but so profitable," she says. "But if you work hard — and you've got to work it — you can be a profitable business."

Oklahoma City

Worst is over; Bolen says growth will continue

By K.L. Davis
SPECIAL CORRESPONDENT

Don Bolen shrugs off national warnings of a recession, banking trauma and real estate collapse.

"Oklahoma City is going to outpace the United States carwise," says the 46-year-old owner of Bolen Oldsmobile-Jeep-Eagle. "Current-model cars have a very good chance of being up 10 percent here this year, at the very least."

From his downtown dealership, Bolen expects to sell more than 1,570 new and used vehicles in 1991, up from 1,200 in 1990. His new-car prediction is about 900 for 1991, up from about 600 last year. He expects his new Jeep-Eagle lines to account for 250 of those sales, and he projects an increase of 5 to 10 percent for Oldsmobile if the war in the Persian Gulf ends in six months or so.

"Our customers aren't paying a bit of attention to this talk of recession," he says. "They take a look at all this talk of a 2 percent or 4

Don Bolen

Eagle, Jeep, Oldsmobile

percent downturn and they think, 'I've been through worse.' And they have. And financially, they're strong enough to survive it."

Bolen has first-hand experience with that. Through three generations, his family has sold cars in downtown Oklahoma City, but no decade brought his clan as much adversity as the 1980s.

In an economy whipped by plunging oil prices, a fallout in agriculture and a rash of bank failures, Bolen's new-car sales fell from an average of 150 a month in 1982, the last of the "oil boom" years, to about 60 a month in 1990.

"I mean, there were some months (in 1987) when I didn't sell 20 cars," he says.

While other dealers folded or merged, Bolen took strong steps to maintain his business.

- He trimmed employment from 120 in 1982 to 58 as sales dwindled. It now is 80.
- He tripled his advertising budget, from less than $100,000 in 1982 to $300,000 in 1990. He foresees increasing that by as much as $50,000 this year.
- He quadrupled his showroom space through the downturn, choosing to renovate a 24,500-square-foot facility rather than build a new location.

"I just thank God I don't have a $4 million to $5 million operation out on the highway," he says.

Bolen swallowed losses for four years through the mid-1980s and saw the value of his downtown real estate fall 50 percent.

"My dad told me this in 1987 — he said, 'Don, it wasn't this bad in the Depression.' And I mean it wasn't. At least then, there were still people willing to make deals."

Oklahoma City's fortunes began to change in 1989. As the Sooner ▶

State economy showed signs of bottoming out, downtown became more accessible with the opening of the Centennial Expressway, which links the district with the metropolitan area's three main thoroughfares.

The dealership has since enjoyed two profitable years, though not close to the boom times. Sales in 1990 rose about 10 percent, which Bolen attributes in part to the expressway.

"It's like my favorite saying — 'You can't fall out of a basement window.' What else can happen around here? I've been saying that about five years, and it's certainly held true."

Bolen expects Jeep-Eagle to bring a 40 percent increase in his dealership's $7 million volume of new and used-car sales this year. With overhead rising only 15 percent, he projects that Jeep-Eagle will "translate to at least a 50-70 percent increase in profits."

The Chrysler Corp. franchises, acquired in September, hold three advantages, according to Bolen:

- A new, younger buyer.
- Additional service business.
- The potential of the Eagle line.

"The people that buy a Jeep are younger, family oriented, more recreational types than the people who buy an Olds," he says.

"Most Olds buyers are in their 50s. They've had it with the lake, camping. But the Jeep buyers are their 30s. They spend more time with their families, camping, boating, skiing."

Drawing new and younger buyers is crucial to Bolen, who considers a strong commitment to customer service a basis of future growth. "We have a CSI (customer satisfaction index) of 95," he notes. "About 20 percent of our buyers have bought five or more cars from us."

Maintaining his service business, meanwhile, is the central strategy for his downtown dealership. During his 1987 lean year, when auto sales dipped 60 percent from 1982, service department revenue was down only 30 percent.

"Service is the backbone of the business," he says. "If you're downtown, you're near where they work."

He expects Jeep to bring additional shop business.

"From what we've seen so far, Jeep people tend to put a higher premium on maintaining their cars than our traditional customer does," he says. "The average ticket on labor sold per Jeep is running 30-40 percent higher than it is on an Olds."

The other Chrysler advantage, the room for growth in the Eagle line, reflects Oldsmobile's lack of product growth and differentiation through most of the 1980s.

"Olds at one time really believed it would go out and get the younger buyer," Bolen said. But the efforts failed, and Oldsmobile sales soured nationwide.

Additional Oldsmobile models and his Jeep-Eagle lines could raise his floorplan expenses from $250,000 a year to as much as $350,000 in 1991, he says.

Despite an average inventory of 125 Oldsmobiles, 50 Jeeps, 25 Eagles and 100 used vehicles, "I simply cannot afford to stock all the cars that I believe the customers want now because there are too many choices," he says.

In Bolen's eyes, the biggest problem facing the factories is how to treat program cars — the low-mileage current-year cars formerly used by rental-car companies or manufacturer/dealer executives.

He has stocked low-mileage "brass-hat" cars since the early 1980s. His new-car volume consists of about 65 percent new and 35 percent program cars. He believes the percentage of program cars could grow.

Bolen sees the program cars as "a win for dealers" over the rental-car companies, a beneficial "third choice" for customers and a boon to cash flow.

"Selling a program car is in many cases up to $2,000 better immediately than selling a new car," he says. "I'm not waiting for the holdback, and I'm not funding the rebate."

Dealer's choice: Courtroom loses to showroom

By Laura Loro
SPECIAL CORRESPONDENT

A third-generation automobile dealer, Henry Faulkner III grew up around the car business, but he once considered a different career.

After graduating from Penn State University, Faulkner attended Dickinson School of Law in Carlisle, Pa.

In 1974, his final year of law school, Faulkner was given the choice between practicing law and taking over the family's Philadelphia Oldsmobile dealership during the energy crisis. He chose the dealership. "That says a lot for law, I guess," he quips now. He loves the car business and wouldn't have it any other way.

Henry Faulkner III

Acura, BMW, Buick, Cadillac, GMC Truck, Honda, Hyundai, Isuzu, Mazda, Mitsubishi, Nissan, Oldsmobile, Pontiac, Saturn, Subaru, Suzuki, Toyota

His grandfather started the family's original Oldsmobile dealership in 1932, and his father developed the business into 16 dealerships in Philadelphia, Lancaster, Harrisburg, Bethlehem and Lower Bucks County in Pennsylvania and in New Castle, Del. His death a year and a half ago has left the third-generation Faulkners — Henry and his siblings Joe, John and Judy — in charge.

The family now sells 16 lines and in April will open a Saturn dealership. Henry runs 10 of the 16 dealerships, yet he says the other Faulkner children are equally in charge.

The Faulkner Organization's sales volume in 1990 was $372 million, down 1.2 percent from 1989. New-car sales were way off, but used car sales were up.

Faulkner had projected that 1990 would be about even with 1989. He attributes the decrease in sales to the general slowdown in the economy in Philadelphia and the whole Northeast.

"The decrease in the new-car market is directly proportional to the decrease in consumer confidence, and that is directly proportional to the downturn in the economy," he says.

Used-car sales have profited from program cars, the cars that come back from the daily rental companies. "That's an emerging business," he says. "They are fully depreciated. They are excellent values for consumers who don't want to pay full price."

Pont. GrndAm	5,348	Ford E'line	6,123

Faulkner says used-car business would have been flat without the program cars.

The Faulkner Organization is performing extremely well despite the hard times. Collectively, the dealerships are making money. "The net profit increase was substantial. It's so high, no one would believe the figure," Faulkner says, declining to give it.

The profit increase is due to the increase in the used-car business, a tremendous increase in the profitability of fixed operations (parts, service and body shop) and general reduction of expenses, he says.

Parts, service and body shop "have always been important to us. We can't make money selling new cars anymore," he says.

Dealers can't make money selling new cars today, he says, because "the gross margin is the same as it was 10 years ago — maybe a 10 percent increase. But in 10 years, our expenses have increased so much."

Faulkner has cut costs to try to ride out the tough times. "We reduced advertising about 30 percent in 1990, compared to 1989," he says. "There's been a reduction in inventory as well. We strive to carry a 30-day supply but we're rarely successful. We end up with a 60-day supply. In better times, we've carried as much as 90 days."

Also, personnel cuts have been made, mostly through attrition and mostly in areas impacted by new-car sales.

Faulkner is concerned about some factory policies. "In the long run, it is not healthy for dealers not to be profitable selling new cars," he says. "Programs that don't enhance a dealer's gross profit don't serve the dealer very well."

Faulkner says multiple-level dealer rebate programs tend to encourage lower gross profits. But consumer incentives have their place. "This is a major market with substantial competition, so you can't ignore consumer incentives. But you need to have a balance between consumer incentives and fair dealer incentives," he says.

The outlook for the first quarter of 1991 is grim. "It will be very, very difficult," he says. "It will probably be the most challenging quarter I've ever gone through."

He projects that first-quarter new and used-car sales will decline 20 percent from 1990. Fixed operations will be off 10 percent. Even a former bright spot, the truck market, has softened — sales are down. "I'm not sure why. Maybe the small businessman is delaying the purchase of a new truck," he says.

Faulkner projects that second-quarter sales will be about even with 1990. And for the second half, he expects "a very mild upturn."

"Overall in 1991, the expense reduction measures we've taken will allow us to have a reasonable year," he says.

He says that as the industry becomes more competitive, it will become more user-friendly. "On the manufacturers' side, there will be an expansion of user-friendly concepts, such as give-back privileges (allowing consumers to exchange a car) and extension and scope of warranties."

Marketing tools, such as manufacturers offering to show the car by bringing it to the prospect's home or office, "will become more common. It's important that all manufacturers do things like that."

Faulkner looks forward to the April 4 opening of his Saturn dealership in Philadelphia. "Any location where Saturn has opened, the retailer has met with a real enthusiastic market," he says. "Reception is five to 10 times the magnitude anyone expected. The bad news is that the product is not readily available."

Getting the Saturn dealership was "an incredibly strenuous process. Saturn demanded financial information, customer satisfaction information and sales performance data. They interviewed our employees to measure their level of satisfaction. The screening process was very rigorous."

Saturn will be profitable from day one, Faulkner predicts.

Faulkner was a 1986 nominee for the Time Magazine Quality Dealer Award in Pennsylvania. He was president of the Philadelphia Automobile Dealers Association in 1985, is in his ninth year as president of the Pontiac Pacesetters Advertising Association and is a past president of the Cadillac Advertising Association.

Are there fourth-generation Faulkners primed to take over one day? "Our children are quite young, but it would be terrific if they did decide (to join the family business) and terrific if they didn't," he says. Spoken very much like a lawyer.

Phoenix

From the pits, Brock built a $47 million chain

By Steve Bergsman
SPECIAL CORRESPONDENT

The world looked wonderful to Linda Brock in 1969. She and her husband had decided to become financial backers for a friend who wanted to open a Volkswagen dealership in Scottsdale, Ariz.

Brock was looking forward to the move, taking her family, which then numbered four small children, from Oklahoma to the warm weather of Arizona. Unfortunately, the move didn't turn out as she expected. Soon after they arrived in Arizona, Brock's husband ran off with another woman.

Linda Brock

BMW, Eagle, Jeep, Oldsmobile, Volkswagen

"Here I was with four preschoolers," Brock says, "and I was thinking, 'What do I do now?' The only thing I did know for certain was I was not going back to Oklahoma."

The fellow who had the Volkswagen dealership solved that problem. He asked Brock if she would like to come in as a 50/50 partner. With no other opportunities in sight, she said yes, and in Jan- ▶

uary 1970 they opened the dealership on Scottsdale Road, the main thoroughfare through the growing, wealthy suburb of Phoenix. That was at the height of the Beetle craze, and in some months the dealership moved as many as 200 of the Bugs.

The partnership prospered. Brock, who had a bachelor's degree in business administration and had worked toward a master's degree in finance before cutting off her studies to get married, crunched numbers in the office while her partner worked up front selling automobiles.

The partnership lasted nine years, until Brock's partner retired because of ill health; Brock bought his share of the business.

Today, the number of women auto dealers has risen to about 200, but when Brock started 21 years ago, they were few and far between.

"The resistance isn't there like it once was," Brock says. "The manufacturers are much more willing. Years ago, there was terrible resistance. The industry flat didn't know how to treat a woman. They were such macho men, they didn't know how to treat a woman as a peer."

They have learned. If nothing else, business success breeds admiration and Brock has been eminently successful. In 1972, her company added a BMW dealership; in 1986, she took on Oldsmobile; and three years, later Jeep-Eagle.

In 1987, Brock built what she calls an auto mall on 12 acres of land, also in Scottsdale, a couple miles from her first location. Today, her company is called Linda Brock Automotive Plaza. In 1990, it racked up $47 million in gross sales, moving 1,005 cars and 441 Jeeps.

While things look good, gross sales have puttered along in recent years. In 1988, Brock sold 1,139 cars and grossed $44 million. In 1989, she handed out the keys to 1,062 cars and 143 trucks (the new Jeep dealership), but gross sales slipped slightly to $43 million.

The recession hit Arizona in 1988. In 1989, the banking, savings and loan and real estate industries in the state all but rolled over and played dead, taking down thousands of workers. "That year was the worst for Arizona," Brock says, "and it was for me."

As the red ink began to mount, Brock made significant changes in the organizational structure of her company, including laying off workers and coming back herself as an on-line manager.

Her automotive plaza is now divided into three separate businesses in three separate buildings: Volkswagen-BMW, Oldsmobile and Jeep. Brock is general manager of all three.

Underneath her on the organizational chart is a sales manager, then a manager for each store. Each line has its own sales staff, but Brock has consolidated all the other operations from computerization to accounting. At peak, she employed 200 people; now, it's 130 to 135.

A lot of that employment reduction has been achieved by attrition. "The sales department balances itself out," Brock says. "You can't keep too many salespeople unless you put them on salary, because they just can't make a living. If there aren't enough people coming in, salespeople will go away and get another job. The same for technicians. Their compensation is based on the amount of work they do."

But reorganizing and trimming staff aren't enough. As Brock notes, to sell cars in the 1990s, the dealer just has to work smarter: A large dealership has to be computerized, customer satisfaction is extremely important; and advertising dollars have to be monitored closely.

"It's a tough business right now," Brock says. "It's trying to hold down costs below income when income is really thin."

She adds, "As the business has gotten more competitive, we've got more nameplates out there, and consumers have more choices. It gets incredibly more difficult to attract people to the showroom in the first place."

Brock has focused her advertising dollars much more intensely than ever before. If advertising isn't expected to bring an immediate response, she doesn't use it. Currently, she concentrates on the daily newspaper, particularly the Saturday edition.

She uses television periodically, but how she does it involved some tough decisions. As a woman dealer, she felt she could not come across as a dingbat or airhead and do the silly commercials common to local dealerships. Instead, she opted to stress her professionalism.

"Our message is the lines we carry, the location and that we care about you," Brock says. "That, in fact, has become Brock Automotive's slogan, 'We care and it shows.' "

Brock has a particular dislike for the advertising approach of some manufacturers. "It takes some of my money and mixes it up with my arch competitor's," she says. "They won't let us say anything, and you end up with a mushy, nothing message that skims off the dollars that I would use to differentiate myself in the market."

Last year was a tough but improved year for Brock Automotive, and Brock doesn't expect much change in 1991. For the industry in general, she predicts another six months of "tough sledding." In the local market, Brock says that with a little luck, Arizona can pull out of the recession earlier than the rest of the nation. She's planning for a 5 percent increase in sales and expects 1992 to be even stronger.

"People aren't buying cars. Not mine, not anyone else's," she observes. "We should experience pent-up demand and when that releases, people will be back in the showrooms again."

Pittsburgh

Cochran aims at 20-30% of the metro market

By Chet Wade
SPECIAL CORRESPONDENT

R.E. Cochran, executive vice president of No. 1 Cochran Inc. in suburban Pittsburgh, doesn't find it lonely at the top. He'd rather put even more distance between his family's string of auto dealerships and the competition.

With sales last year reported at more than $200 million on some 10,000 cars and trucks plus parts and service, Cochran is by far the

R.E. Cochran

Buick, Cadillac, GMC Truck, Infiniti, Isuzu, Lincoln, Mazda, Mercedes-Benz, Mercury, Nissan, Oldsmobile, Pontiac, Saturn

largest dealer in southwestern Pennsylvania. Those numbers would give it roughly 10 percent of the new-car market in the region, with the closest competitor perhaps only half that size.

But Cochran, known as "Rob" to family and friends, said the goal is to become the true market leader.

"If you look at other industries, the market leader has 20 or 25 or 30 percent of the market," he said. "I think that opportunity exists here for an automotive dealer."

Cochran sees the dealership's commitment to customer service, the ability to spread overhead over a large operation and the judicious selection of its three sales locations as some of the keys to the firm's growth. In a market where sales are expected to be flat to lower for the fifth consecutive year and where at least 10 dealers went out of business last year, every edge is important, he said.

"I would look at 1990 as a year that was our most satisfying," he said. "That's not because of unit sales. Certainly, the market out there is competitive.

"But from a company and a corporate standpoint, we have expanded a whole lot in this market in the last two or three years. . . . When I look back one year ago, I could not have forecasted such quick progress."

Cochran's father, R.W. Cochran, started the business 25 years ago with a Pontiac dealership in North Braddock, Pa. The community is one of dozens that line the Monongahela River valley to the south and east of Pittsburgh, a region that was once the heart of the nation's steel-making industry.

That dealership, since moved to the eastern suburb of Monroeville, Pa., on a 16-acre site that formerly held a department store, still forms the core of the business. In 1989

Cochran Pontiac was the largest retail Pontiac dealer among the 10 biggest overall; he sold 3,065 retail units and grossed $110.5 million overall.

But Cochran has added a long list of other truck and car lines.

The Monroeville complex also includes Cadillac, Oldsmobile, GMC Truck, Isuzu, Infiniti and — its latest addition — one of two Saturn dealerships to open in the Pittsburgh area.

The second site, about 20 miles north of the city, has Mercedes-Benz, Mazda, Lincoln, Mercury and Nissan. It was originally operated by another dealer with Cochran as an investor, but Cochran took over when the operator decided to leave.

The third, on 21 acres 10 miles west of downtown Pittsburgh, opened in late 1989. It has Buick, Pontiac and GMC Truck.

Total employment at the three sites tops 400.

Cochran would like to add a fourth location, to fill in the final point of the compass, but that may have to wait until the auto market improves.

Pittsburgh's population fell by more than 10 percent in the 1980s, as many of its younger people moved out after the collapse of the steel industry. That, along with a 15 percent growth in the number of new- and used-car dealerships in the region, has made competition extremely tough.

Cochran said the war in Iraq is keeping many people out of auto showrooms. The war situation will have a lot to do with how business goes in the first half of 1991, he said.

"I think it all hinges on how long this thing takes," Cochran said. "If this thing keeps proceeding favorably . . . and is able to be wrapped up in a short time, I think you'll see a pretty decent-sized upturn in sales immediately.

"It's not going to be a record year by any means. It's not going to be an about-face. But it's going to be a lot better than the last five or six months."

Some dealers in the region have trimmed expenses by limiting inventory and cutting back on advertising and personnel. Cochran said he believes that running a tight ship is important to a strong bottom line.

But that has not kept his company from pushing hard to achieve its goal of market dominance. It spends heavily on television, radio and newspapers. Surveys have shown near-100 percent recognition for the Cochran name, he said.

If there has been a problem with the campaign, it is that many people still don't realize the breadth of the firm's offerings. Many still connect it only with Pontiac and some other GM lines.

"The awareness of our products is not quite as strong as we'd like it to be," Cochran said. "Do we promote Cochran or do we promote line XYZ?"

The region's topography — four river valleys and endless hills —

FACE OF THE DEALER, 1991

and the lack of a highway "belt" around the city have had a strong hand in shaping the dealership.

"The road pattern (in the Pittsburgh area) is the reason we need several different locations," Cochran said. "If it were in a different city, we could probably service the market with one location. But it's just such a hassle to get from one part of town to the other."

None of the three Cochran locations sits in an "auto row" or in the middle of business districts. Instead, the strategy was to pick spots where people could get in and out easily on the few highways that exist, even if it meant traveling greater distances. For example, the home store is at the end of a suburban business district, within 100 yards of an exit of the Pennsylvania Turnpike and the region's main commuter line, the Parkway East.

"I think a lot depends on the ease of traveling, not just the time," Cochran said. "A lot of people would rather drive an hour on the highway than half an hour in stop-and-go traffic."

Portland

While some moan, Thomason reaches sales, profit peaks

By Brian Cour
SPECIAL CORRESPONDENT

Recession. Slump. Unprofitable. Those words are being tossed about liberally in the auto industry these days.

But in suburban southeast Portland, Ore., Scott Thomason has banished them from his vocabulary.

"Business is good, and as long as the press doesn't talk the Northwest into a recession, I think it'll

Scott Thomason

Ford, Honda, Nissan, Subaru, Toyota

stay that way," says Thomason, a bespectacled 35-year-old who is a second-generation dealer.

Thomason says 1990 was a record year for sales and profits at his five stores, four of which are clustered within two blocks of each other along Southeast McLoughlin Boulevard, a traditional "auto row" in the suburb of Gladstone.

"We did about $170 million in sales last year, which was a record for the company," Thomason says.

Profits?

"Well, let's just say they set (company) record too," he adds with a cat-ate-the-rat smile.

Thomason's franchises — Ford, Toyota, Honda, Nissan and Subaru — are modest, single-point operations that, at a glance, would not appear to be capable of grinding out the sales volume that they do.

The Ford dealership, for example, formerly was a small Lincoln-Mercury store that went out of business in the industry shakeout of the early 1980s. Last year, it was the top-selling dealership in Ford's Seattle sales district, which includes the Portland metro market. It pumped out 3,600 units.

Thomason's Toyota store, located in Milwaukie, Ore., six miles north of his other four dealerships, was selling about 1,200 cars and trucks a year when Thomason acquired it in January 1988 from longtime import dealer Irv Leopold.

Toyota Camry	2,602	Ford Taurus	2,436
Ford Ranger	2,528	Ford Escort	2,003
Ford Taurus	2,496	Honda Civic	1,922

Last year, it matched Thomason's Ford store selling about 3,600 new Toyota cars and trucks.

His Honda dealership, which he acquired from multi-franchise Oklahoma dealer Don Carlton in November 1989, sold 1,600 new cars in 1990. But Thomason says sales were limited by product availability in a market where imports account for about 40 percent of all new car and truck sales and Honda is the top-selling car.

He acquired his Subaru and Nissan franchises late in 1990, so they figured only marginally in the company's overall sales.

Thomason says his secret is no secret at all. A strong market presence and consistent market-setting prices are an unbeatable combination, he says.

"Advertising is a key element for us," he says. "We spend what it takes to maintain a strong market presence, and we never back off" — not even when sales taper off and market conditions might dictate it.

"We're dominant in the media" in the Portland market, he says, "and we'll stay dominant. We'll spend more money on advertising in 1991 than we did in '90."

Thomason appears in all print and television ads for his dealerships, and he delivers his well-worn pitch — "If you don't come see me today, I can't save you any money" — in his radio spots.

"My goal is to have each and every potential car buyer in the Portland market think 'Thomason' whenever he or she decides it's time to buy a new car," he says.

Price is the other key element in Thomason's equation for success.

"We don't turn too many people away, that's for sure," he says. "If there's a way to sell a car, we're gonna sell it. But while price certainly is a key factor in our customers' decision to buy from us, it's not the whole picture. We're out there (advertising) all the time, which gives us an edge when a buyer decides to shop."

Like most second-generation dealers, Thomason cut his teeth in the business at an early age — washing cars at the tiny Dee Thomason Ford dealership in the affluent suburb of Lake Oswego. His father had operated the dealership since 1955.

Still, while he was attending the University of Oregon in the mid-1970s, Thomason was "not convinced" the new-car business was his destiny.

"I really didn't make the decision to get into the business until I finished school," he recalls.

The family's Ford store operated in Lake Oswego until January 1983, when Scott Thomason recognized the need for a larger facility and moved the dealership into a vacant, former Lincoln-Mercury store on the east side of the Willamette River.

"The Ford store in Oregon City (a stone's throw south of Gladstone) had gone out of business, too, so the point was open, which worked nicely for us," Thomason recalls. He bought the dealership from his father in 1986.

About the same time as the Ford store was moved, Thomason acquired a majority interest in a small Toyota dealership in McMinnville, Ore., which only whetted his appetite for expansion.

"I held onto it until 1986, when I had a good offer for it and sold out," he says. "I wanted to concentrate on the Portland market, and my goal then was to acquire a Toyota store in the metro area."

That opportunity came in 1988, when he bought the small Irv Leopold Toyota dealership in Milwaukie. Within a few months, it became the top-selling Toyota point in Toyota's Portland region, which includes the larger and more dynamic Seattle metro market.

The other acquisitions were "opportunities I couldn't pass up," Thomason notes, and he continues to be expansion-minded, "although it would take an awfully good deal" to make him step up again.

In Thomason's view, the Portland market remains strong "because, for once, we have a lot of growth — new people moving into the state — and a stronger employment picture than the rest of the nation."

While he sees some slowdown in sales in the first quarter of 1991, he believes his company can match last year's sales and profits.

He has made contingency plans in case of a slowdown.

"We're going to watch the inventory a little closer, and we're looking hard at unprofitable departments and the personnel count, too," he says "We have about 375 employees, which is quite manageable in the current market.

"But overall, I'm not contemplating any major cutbacks, and we're going to advertise a little more and try to move the market to us."

Providence

Kaplan proves 'Jake's Way' is THE way

By Ken Parker
SPECIAL CORRESPONDENT

containing Jaguars and Range Rovers, his current franchises, plus an occasional Ferrari or Lamborghini. And Kaplan's initials in the Italian granite floor just inside the door.

Especially, it's his office — the sanctum — replete with the accouterments of success: cherry desk, leather swivel throne, big brass and glass mantel clock, wet bar and mirrored wall behind him.

The future? Kaplan raises his arms and grins. There's the mortgage on what observers call the Taj Mahal of Rhode Island auto dealerships. This is sweetened some, though, by a 50 percent tax abatement for the next five years, probably voted by the Providence City Council in expectation of the boost the tony business may have on the somewhat seedy surrounding neighborhood.

Kaplan could have built elsewhere, but he's done business at the same corner since 1946. "It's my home," he says.

Kaplan even bought a side street from the city for several thousand dollars and named it Jake's Way. It separates his used-car lot from his new-car lot, which is beside his immaculate, high-tech service department and cushy waiting rooms.

"I'm not sorry; I love it. If things get rough, you work harder - never lay down. Business is 20 percent off normal, but I'm happy with what I'm doing. Besides, the luxury car business is different from the rest of it. Your customers are loyal; they come back."

Kaplan also is involved in the Port of Providence, where Mitsubishis, Saabs and Volkswagens, arriving by ship, are processed and delivered to East Coast dealerships from Maine to Maryland.

His first enterprise, while still in his teens, was buying bald tires from a neighbor and regrooving

Jake Kaplan

Jaguar, Range Rover

them in his home on a side street nearby, then selling the tires for a meager profit.

"Then I got into cars," he says. "I was selling cars for $50 or $100 before I went in the Army (World War II). When I got out of the Army in 1946 I had $2,500 saved up, so I started here on a vacant lot, selling used cars. If the upholstery needed replacing, I did it myself. I polished the cars. I was the whole agency."

It wasn't long before there was a saying on "automobile row" — "If you want a Caddy, see Jake."

He seemed to be able to get them although Cadillacs were in short supply, not having been produced during the war. Recently, he said his sources were out-of-state dealers, including one as far as Wisconsin.

"A guy I knew in the Army. I sold Lincolns and Packards, too. The state police came down once to check if a Packard was a stolen car," he recalled.

Kaplan went into foreign cars in 1950, when "I fell in love with the first Jaguar I saw." Early franchises included VW and Mercedes.

Building a showroom and service facilities, he also sold obscure and mildly exotic cars including Sunbeam Alpine roadsters like the one Grace Kelly drove on the French Riviera in "To Catch A Thief."

How do you grow from regrooving tires to selling $50,000 saloons and sports utilities?

"It's a lot of work. You can't sit on your ass and count nickels. I was on the road at five in the morning going to pick up cars. And in particular, it's taking care of your customers.

"Whether I sold a guy a car for $20 or $5,000, if something went wrong with it six months later, I'd take care of it for free. That makes word of mouth advertising — the best there is. Success is built on good will," he said.

About 15 years ago, Rover invited Kaplan to England for three days to teach its dealers how to sell cars. They kept him there, making the rounds, for a week and a half.

Facing a combination of slow sales, inflation and the new 10 percent luxury tax, dealers might have to "drop the price and throw it (the tax) in," Kaplan suggests.

And to all dealers, regardless of the level of their franchise, this patriarch (he admits to 70 years) of Rhode Island car dealers says, "You got to make your customers feel that your agency is home for taking care of their car. And whenever you can afford it, you've got to give them a break."

St. Louis

Be on the lookout for market trends, Bommarito says

By Jack Bernstein
SPECIAL CORRESPONDENT

To achieve success and profits during lean and fat times, Frank Bommarito, chairman of the Bommarito Automotive Group, believes that a dealer should devote time to long-range planning and be able to spot trends in the market as they develop. Like adding imports and cellular phones.

Reading the demand provides a dealer with extra ammunition to fight the car and truck wars, especially during such challenging conditions as the present.

Although he is a megadealer, Bommarito tries to remain close to his flagship dealership and resist

Honda Accord	4,022	Ford F150	3,474

temptations and offers to wander far away in other states. He has concentrated four "major franchises" on 18 acres in Ellisville, a suburb of St. Louis. But he has others.

"From an expense standpoint, it makes sense and dollars to have one general manager, one general service manager and one general office for the four lines here," he says. "This cuts expense."

His philosophy is simple: "If you can walk to your dealerships, it's easy to run them. If you have to drive or fly, they run you."

Frank Bommarito

Chrysler, GMC Truck, Hyundai, Infiniti, Mazda, Nissan, Oldsmobile, Plymouth

The Big Four in Ellisville are Bommarito Oldsmobile, his first dealership; Bommarito Mazda; Bommarito GMC Truck and Van Center and Bommarito Infiniti. Annual sales are about 12,000 cars and 2,000 trucks.

Ellisville enjoyed "an excellent year" in 1990, Bommarito says. His Nissan dealership in Dellwood "is holding its own" but the Chrysler point in South St. Louis "had a fairly rough year, mainly because of its South Kingshighway location rather than its product."

The Hyundai dealership in south St. Louis County "has just begun to pick up after a fairly poor spring and summer. The pickup is due to new products and a new advertising approach."

Generally, the car business has suffered since the crisis in the Persian Gulf began last August. Sales are down about 15 percent and have been slow in every month except October, which showed a small gain.

Bommarito looks for a quick resurgence in car and truck sales when peace is restored, perhaps to an annual market of 16 million cars and trucks. "But there's no guarantee, even then," he says.

"There will be more players and if you are not doing everything right, you won't benefit. The secret is putting the right people in the right job with the emphasis on loyalty, honesty and a passion to totally satisfy the customer.

"The dealer must find some way to retain people for long periods of time. Turnover kills the business."

Bommarito is 55 and is in the business he has loved since boyhood. He says he has "made a good living in good and bad times. Tough people stay and make money in any business climate, but you have to be durable and have staying power."

His love affair with cars began at the age of 10 when he enjoyed hanging around a gas station in South St. Louis. His first chore, he recalls, was washing and cleaning parts. He worked in the used-car ▶

u think are reading a newspaper?

to the radio and only 39 minutes reading the paper, radio makes even more sense. If you'd like to reach people who don't have time to read the newspaper, call us at 1-800-252-RADIO. RADIO ADVERTISING BUREAU

FACE OF THE DEALER, 1991

operation at the old McMahon Pontiac and later climbed the ladder from sales to management at Vincel Pontiac. In 1971, he opened his Oldsmobile dealership.

The key to survival in this recession, he says, is to watch expenses closely in all departments, especially in inventory control and advertising.

Other business hints: "Work with the minimum in each department. Trim some slightly. But above all, don't waste. Eliminate waste by effective cutting."

During difficult times, many dealers debate whether they should cut or increase advertising. Bommarito achieves the most with daily newspaper advertising. He uses "some radio" but avoids television because he feels it hasn't been as effective since the arrival of cable. And besides, he notes, it's expensive.

"Service and parts business are excellent," Bommarito says. "A dealer should know how to fix a car. I have a good body shop and a service department with 115 bays in Ellisville. I made a major commitment years ago by making a big investment in service facilities, especially the body shop."

But you have to be good in all departments, not just service. He referred to new cars, used cars, finance and insurance.

Bommarito says he doubts that incentives can help the current market because "the factory-to-customer rebate has lost its impetus. The customer no longer responds. All factories must give the dealers total cash rebates because they stimulate the market."

As long as the factory gives $1,500 to $2,500 to the leasing company, the dealer needs that same type of cash to keep the customer even in the marketplace, Bommarito believes. The new-car market for dealers is diluted, he adds.

"The customer's equity is hurt by the fleet," he notes.

Bommarito says he has noticed an improvement in relations with the factory, terming them "better now than they have ever been. The factory has moved the power base closer to the zones and regions. They are listening more and responding to front-line people."

"As a matter of fact," he adds, "they are listening to suggestions that will solve problems."

Another indication of Bommarito's farsighted, long-range view was the establishment of Bommarito Cellular Telephone Co., a division of his auto group.

The Bommarito dealerships give away a cellular phone with each car. The phone enterprise is in its third year and is selling 4,000 to 6,000 phones a month.

Salt Lake City

Miller rides high with 15 stores and the Utah Jazz

By Thomas R. Dowell
SPECIAL CORRESPONDENT

It's hard to tell which will hold more cars, the 15 dealerships in the four-state Larry H. Miller Group or the parking lot that will surround the new Salt Lake City sports arena for the Utah Jazz basketball team, all of which Larry H. Miller owns.

Miller, a portly 45-year-old with thinning hair and a penchant for Jazz purple polo shirts over a suit and tie, also bought the local International Hockey League Triple A franchise last year and sponsors a fast-pitch softball team.

SALT LAKE CITY-OGDEN, UTAH

1990	No.	1989	No.
Honda Accord	1,485	Ford Taurus	2,050
Ford F250	1,443	Honda Accord	1,377
Ford Taurus	1,342	Ford F250	1,310
Jeep Cherokee	1,068	Jeep Cherokee	1,290
Honda Civic	969	Hyundai Excel	1,175

He was thrust into the limelight when he became sole owner of the Jazz in June 1986, rescuing the National Basketball Association team from being sold out of state by the financially strapped owners who had moved the team from New Orleans several years earlier.

When Miller bought the Jazz, the Intermountain Area was going into an economic recession, which is just now being felt in other parts of the country. "When I hear talk about a recession, I feel like saying, 'Tell me something new.' " he says.

Besides playing in one of the smallest markets in the NBA, the Jazz play in the smallest arena. So it took a real commitment when Miller announced he was building an $86 million, 21,000-seat facility

Larry H. Miller

BMW, Chrysler, Chevrolet, Dodge, Hyundai, Lexus, Mercedes-Benz, Plymouth, Subaru, Toyota

that will replace the 12,600-seat, county-owned stadium the Jazz now play in. It will also host concerts and ice shows and will be the home of the Salt Lake Golden Eagles hockey team.

Financing is being handled through Sumitomo Trust of Tokyo, which isn't too surprising, considering the success Miller has had working with the Japanese.

Five of his stores are Toyota dealerships. He is quick to defend local banks, which support his car business, noting that banking laws precluded them from financing the stadium project.

When car sales fell off, Miller focused on expense control and customer relations. He notes that two-thirds of car dealers' expenses are in three categories — personnel, advertising and floorplanning.

"The good news is, all three are controllable expenses to a large degree. We have focused on those," he says. "Overall inventory levels have been cut, and we are being cautious about advertising expenditures and are sticking closer to previously established guidelines."

Using that belt-tightening strategy, Miller has cut $400,000 to $500,000 per month from the total operating costs. "Focusing on the control side is not as much fun as focusing on the operating side, but I think that's what's necessary and has been necessary for us the past couple of years," he says.

Even before auto sales in the region started to pick up, he managed to expand, adding a Lexus dealership last year and building a new Chevrolet dealership/automobile operations headquarters.

"Last October was the first time in 26 months that we sold more cars than in the same period a year earlier," he said.

The sales gains continued with November sales up 101 percent and December sales up 113 percent over the year before.

Miller had expected his Lexus and Mercedes-Benz sales to rise in December as luxury car buyers moved to avoid the new federal tax. But he was surprised by the volume of medium-priced cars.

That indicates his market area is picking up, he says. "Are we making money? Yes, but not what we would like to be making," he says. "It's certain that if this is the worst that has ever happened to us, we sure couldn't complain."

In 1990, the Miller Group sold more than 11,200 new cars and trucks and 7,925 used cars and trucks. Total annual volume was $337 million, up from $325 million the previous year. Miller expects 1991 to substantially mirror 1990.

"While the rest of the country sees a 3 to 5 percent decline, we think we'll be up 3 to 5 percent" he says. "So we feel fairly optimistic about where we're going and what we're doing. And even though we can't say business is great, overall we feel it's good."

Even though he has branched out to professional sports, he still enjoys the automobile business. "I think the car business has its frustrations and challenges, which I'm sure any other business does," he says. "But I believe it is still the best place for a person to utilize the free enterprise system. It allows a person to test himself, to see what he can accomplish through the use of financial and human resources.

"Despite the changes and the ups and downs, it's still the best place to be. I had a lot of jobs between high school and when I got into the car business, and what most of them taught me was what I didn't want to do for the rest of my life."

Before he bought the Jazz, Miller was more a fan of fast pitch softball, which he used to play, than pro basketball.

Miller entered the car business in the Salt Lake area in 1968 as a parts manager with a group that included a Toyota franchise. When he left for Denver in November 1970, it was as much to play for a national-caliber softball team as for the job opportunity.

He spent 23 "enjoyable" seasons pitching on world-class, fast-pitch softball teams before "time caught up with me" and he retired about five years ago. What was expected to be a short stay in Denver lasted 8½ years.

"Things went well both job-wise and softball-wise," he says. "We went there with two kids and came back with five. And in the late 1970s, we thought we would be there forever."

In 1979, Miller got an unexpected opportunity to return to the Salt Lake area with his own Toyota franchise. Expansion was the farthest thing from his mind. "If you had asked me in the first six weeks or three or four months after coming back here when we would be getting another store, I'd have looked at you real funny because it hadn't crossed my mind," he says. "As it turned out, we got a Toyota store in Spokane, Wash., in September of that year."

A year later he bought a Toyota store in Phoenix, Ariz., and six months later another Toyota store in Moscow, Idaho. His first departure from Toyota was in October 1981, with Subaru in Salt Lake.

"At that time, I bought out my partner, Reid Horne, which took all our capital resources, and we went on a two-year 'buying' sabbatical," he says. It wasn't until September 1983 that we bought Gordon Wilson Chevrolet, which was our first domestic.

"Since then, we have sold the stores in the Northwest and have grown to 15 stores in four states — Utah, Colorado, New Mexico and Arizona."

Miller hopes that by offering a quality product, both his dealerships and his arena parking areas will be filled.

San Antonio

Competitor Ancira finds opportunities in difficult times

By Tom Wolfgang
SPECIAL CORRESPONDENT

Operating effectively and profitably in the automobile business these days demands more skills than ever before.

It just doesn't seem to be enough to know the car business: The successful dealers are those who see the big picture and translate what they see to day-to-day dealership operations.

Ernesto Ancira Jr., owner and president of Ancira Enterprises in San Antonio has learned the hard way that you have to know how to translate the information into profits.

Ancira sometimes gets a high view of the business, when he is soaring high above San Antonio in a plane or helicopter. He is a licensed pilot with both commercial

Ernesto Ancira Jr.

Chevrolet, Eagle, GMC Truck, Jeep

pilot and helicopter ratings.

And sometimes he sees cars as part of a bigger economic picture, when he is acting in his position as commissioner for the state's Strategic Planning Commission and as a commissioner for the Texas Department of Commerce.

Always, Ancira has learned, when you look at the whole picture, you make better decisions.

"The rest of the country is beginning to go through some tough times economically with the downturn in business we've seen in recent months," Ancira says.

"And dealers who are experiencing the contractions of falling sales and profits for the first time will undoubtedly go through many of the fat-cutting experiences we have been going through for the last several years here in Texas."

The national downturn has seemed to slow down the recovery of business in Texas. While San Antonio is still behind Houston and Dallas in the recovery process, dealers here generally had a little better year in 1990 than they did in 1989.

"Profits were up for us, and we had about $30 million more in sales." Ancira says.

"The key, I feel, is that when the market is down, you have to be aggressive.

"You can cut out all the fat and trim expenses to the bone, but if you let that cost-saving fever carry over to your advertising, you're cutting your own throat."

In terms and illustrations that would delight his college econom- ▶

FACE OF THE DEALER, 1991

ics professor, Ancira continues with his lesson:

"When consumer confidence is low, as it has been for the last few months, potential buyers delay major purchase decisions. They hold on to that car or truck a little longer.

"It gets a lot harder to get them to make that long-term commitment with so much uncertainty surrounding them."

The point Ancira makes is that in a down market, the only way to improve your position is to increase your share of the market and "get some of your competitor's sales."

It wasn't economics that brought that realization home to Ancira, the competitor. Active in many sports, he thrives on competition.

"I really get into competitive sports," he says, "but I began to notice that more often than not, the matches I would lose were the ones where I had been ahead 8-to-1 or so.

"I figured out that when things are going well and you get ahead, there is a natural tendency to let down, and it seemed to work the same in business.

"When business is good, you tend to drop your guard and the fat comes creeping right back in, in the form of extra people and equipment."

Racing enthusiasm drives prospects to dealer-racer

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

Richard "Rug" Cunningham is a car guy's car dealer.

The San Diego area BMW dealer has been racing cars for 25 years, 10 years longer than he's been selling them.

He started working in and around his Dad's Ford dealership when he was 11. But it was six years earlier, when he was five, that he went to his first race and fell in love with racing.

"Cars are my life's passion. Racing is a way to indulge my passion," says Cunningham. "I've driven stock cars, hot rods and Indy cars. I'll drive anything that's safe."

Richard Cunningham
BMW

Cunningham insists that his love of racing is not an idle passion. It's a way to differentiate himself as a dealer. And he says motorsports are the key to the success of his 15-year-old BMW franchise.

Cunningham BMW has been the largest volume BMW dealer in the greater San Diego area for the last six years. That's despite the store's far-flung location in El Cajon, about 30 miles northeast of downtown San Diego.

Not only is the dealership off the beaten track, but El Cajon is a primarily blue-collar community and its demographics don't match BMW's typical customer profile. So Cunningham uses racing to get his name in front of the right audience.

"The people who buy my cars don't necessarily live around here and drive by the showroom everyday. We have to take the cars, and our enthusiasm, to where they are," Cunningham says.

He says 94 percent of his customers live or work closer to one of the other five dealers in San Diego county.

"We have a reputation for racing and for being enthusiasts, and that means people will drive out of their way to do business with us.

"It still amazes me that what we're doing here — using racing as a marketing tool — is unique. Thirty, thirty-five years ago, if you were selling a foreign car you had to race. That was the battlefield," he remembers.

Cunningham sold 252 new and 188 used BMWs last year for $15 million in sales. During BMW's heyday in 1986, he sold 464 new and 300 used BMWs for $26 million in sales. "We're black, but we're not big-time black, he says.

As sales and profits fall, so does Cunningham's racing activity. "Our racing budget is part of our advertising budget. When sales decline the money in the till for both of those declines too," he says.

BMW of North America helps offset some of Cunningham's racing costs. Cunningham BMW is the only BMW dealer in the country getting money from the distributor for racing. He got $26,000 for that purpose last year, an amount he calls "not nearly enough."

He and his dealership staff participated in four races last year and spent $100,000 on those efforts.

Cunningham says he'd like to do at least six races a year. During stronger sales years, he's spent more than $125,000 on motorsports promotions. If he could get more money out of BMW, he says he'd race a lot more.

In March 1990, Cunningham and his general sales manager, Jeff Gerken, raced an M5 and M6 on a 115-mile open road race in the Mexican desert of Baja California. Gerken finished second, behind a Ferrari Testarossa.

To highlight the race and the cars, Gerken and Cunningham shot a video during the race from inside the cars. They shot it for fun, but it has turned into a promotional tool and they have sold 9,000 copies.

Last fall, the pair finished first and second in the BMW Cup at the Vintage Fall Festival at Lime Rock Park. Each was driving one of Cunningham's pride-and-joy 2002ti racers. The two 1968 models are the heart of Cunningham's dealership-based racing program.

The Lime Rock victory was featured as the cover story for the November issue of Roundel, the monthly magazine of the BMW Car Club of America. That was the third cover for Cunningham in 1990.

"The kind of press we're getting and the success we've had racing makes it clear that racing heritage should be the focus of BMW's marketing and image-building in the United States," Cunningham insists.

To that end, he has appeared before a number of BMW of North America executives in recent months to request more money for his efforts and to talk about integrating racing into a national marketing program.

He says it is what BMW needs to effectively market in the 1990s.

"During the mid- to late 1980s, a whole lot of people bought BMWs to improve their love life. They wanted the cars to convey wealth and social status," he recalls. "Now the theme for the '90s is: Simpler is better. Cars don't change love lives. And BMW needs a new strategy to give the cars new appeal."

The center of that new strategy should be racing, he insists.

He says that racing is a fundamental part of BMW's heritage, and that "heritage is all that distinguishes BMW and other Europeans from the Japanese."

Cunningham says Lexus and Infiniti have hurt his business, especially sales of the high-end 7-series. He's taken two Infiniti Q45 sedans in trade. He says both customers complained that the car "was too high-tech.

"The cars were too much like their VCRs — too much technology and gimmickry that they didn't need or know how to use," he says.

Cunningham is confident that ▶

FACE OF THE DEALER, 1991

BMW can ride out the current slump. BMW's U.S. sales were down 1.9 percent last year.

He says that while the weak economic climate will make things tougher, BMW can survive if it reminds prospects that its cars are drivers' cars, not strictly luxury cars.

"In the old days of BMW in the U.S., back in the 1970s, people bought BMWs instead of Mercedes as a rebellion against old money. Then, in the 1980s, we put them in front of country clubs and polo matches and competed with Mercedes," he recalls.

"Now we need to go back and stress what makes BMW so different from Mercedes, from the Japanese."

San Francisco

Quakes or slumps, Brooks still enjoys the car business

By Tom Lankard
SPECIAL CORRESPONDENT

The Loma Prieta earthquake that rattled the Bay Area on Oct. 17, 1989, and its economic aftershocks haven't shaken the satisfaction Marie Brooks gets from selling new cars in San Francisco.

"We had a 20 percent drop in business," says Brooks, president of Ellis Brooks Chevrolet-Nissan-Geo, the oldest dealership on auto row along Van Ness Avenue.

But she doesn't blame all of that drop on the effects of the earthquake on the area's economy. Her dealership's two-story-tall plate-glass windows were the earthquake's only victims along auto row, and she guesses that the boarded-up windows led some shoppers to believe the dealership was temporarily closed.

Despite that setback, Brooks still gets a kick out of being a new-car dealer. "If I were just looking to build an estate for my children," she says, "I would have sold the property at least 12 years ago. But the car business is exciting and challenging."

Marie Brooks

Chevrolet, Geo, Nissan

Brooks' dealership has been on Van Ness Avenue since 1940. That was the year her husband, Ellis, incorporated Ellis Brooks Motors, a Studebaker outlet. In the early 1950s, for obvious reasons, he went searching for a new nameplate, and in 1955 signed with Chevrolet.

Marie Brooks started running the dealership in 1963, when her husband became ill. He lived until 1972, but she became the operator of record in 1970.

Asked the secret of her dealership's longevity, she answers, "Until 10 years ago, it had a great deal to do with Chevrolet." But imports took bigger and bigger bites out of domestic sales, especially in California. Today, she says, half the new cars bought in the state are imports; in San Francisco, imports have 70 percent of the market.

That is why Brooks acquired a Nissan franchise two years ago. A smart move, too, because in 1990 Nissan provided 60 percent of Ellis Brooks Chevrolet's estimated 900 new-car sales. On the "domestic" side, Geo and Chevrolet split the remaining 40 percent evenly.

When trucks are included, the sales graph sheds some of its uniquely California look: About 300 of the nearly 400 new trucks Brooks sold in 1990 wore a bow tie. Counting cars and trucks together, the Chevrolet-Geo share was 51 percent.

Despite the recession and soft new-car market, Brooks is cautiously optimistic that 1991 will be another $27 million year.

As for the local economy, she is not terribly concerned. "The city has adjusted to living without a lot of outside commuters," she says.

She explains that during the few months when closed bridges and freeways severely limited travel, suburban residents discovered they didn't need the city to satisfy their entertainment and shopping needs.

In the ensuing shakeout — evidenced by the closing of a number of smaller restaurants, a few big-name eateries no longer opening for lunch and an occasional automobile dealership bankruptcy — "the economy has found a new level."

Brooks is not passively waiting for whatever may happen. To hold or increase her market share, she's planning additional advertising. She intends mainly to tie in with "manufacturer-driven" television advertising. For Chevrolet, she prefers institutional ads over price ads.

On the import side, she'll go the other way. "Nissan price ads get more response than Chevrolet price ads," she says, surmising that "the foreign car shopper doesn't have the brand loyalty that the Chevrolet buyer or the Ford buyer has."

She's still trying to figure out Geo buyers. "They don't want to buy foreign," she says, but she adds that she still makes sure they're told Chevrolet doesn't make the cars, "except for the, um, Prizm, I think it's called."

Brooks is no fan of factory incentives, rebates and special purchase programs. "I'd like to see the manufacturers cut prices across the board, sell the cars to dealers and let the dealers sell to the buyers," she says. "The manufacturers are dictating what we have to sell the car for. . . . They're making us an outlet to service their programs with a big dollar investment and very little return on it."

Even worse, Brooks says she has to allocate the equivalent of a full-time position to make sure her dealership collects all the money the manufacturers owe it.

Parts and service almost always increase in uncertain economic times when people hold on to their cars longer, and they are already picking up for Brooks. "Last year was the best parts and service year we've ever had," she says. From $340,000 a month in 1988, the volume of the parts and service department increased to $500,000 a month in 1990. To keep pace with the growing volume, Brooks has purchased additional shop equipment and hired a wholesale parts person and a full-time delivery driver.

In customer service, Ellis Brooks Chevrolet offers several courtesy programs. One, and by no means a Brooks exclusive, is a downtown shuttle for owners having their cars serviced.

Another, and growing in popularity, is 24-hour road service. Although limited to one year and to the Bay Area, Brooks' Auto Night offers everything auto clubs do except towing. During the five years the dealership has offered Auto Night, an average of 10 to 15 customers have used it each month.

The dealership also has a unique program that reflects its owner's singular status in the city's automotive circles. And one she talks about only when prodded. Called "Under the Hood," it is a three-hour seminar designed specifically for women and conducted for about 20 attendees on a half-dozen Saturdays during the year.

"It has nothing to do with buying a car," Brooks says. "It's a maintenance seminar . . . on how to touch the hoses and tell if they need to be replaced" and things like that.

"Twelve years ago," she muses, "I was too young to hang up the shingle. I didn't want to go someplace and start a new identity, and I didn't want to stay home and clip coupons. So I stayed in the car business on Van Ness, as foolish as it may seem."

Brooks doesn't sound as if she's any closer to hanging up the shingle today than she was a dozen years ago.

Seattle

Cloudy year ended in storm; time to cut staff

Ashly A. Knapp and Jean Swenson
SPECIAL CORRESPONDENTS

William E. McIntosh, Jr. might be selling computers for Big Blue instead of cars for Chrysler. Why did he pick cars?

McIntosh, owner and president of North-Seattle Chrysler Plymouth, figures, "It's just the mystique about automobiles. I've always liked automobiles. I drove a Corvette through my time at the University of Minnesota."

William E. McIntosh, Jr.

Alfa Romeo, Chrysler, Maserati, Plymouth

After completing grad school there he chose the Chrysler Corp. over IBM and Ford to begin a sales career.

McIntosh worked his way through half a dozen jobs at Chrysler; his last post was as staff executive to E.T. Pappert, vice-president for North American auto sales. He was hired by Joe Shady, who is now director of dealer enterprises for the Chrysler dealer body, and followed him for eight years through his career.

"Shady was an infectious leader," he says. "Lots of managers came through his school." Given the chance to go with another auto maker years later, he again stuck with Chrysler this time because of another great leader, Lee Iacocca. "Because of Iacocca I stayed. He keeps us competitive." He also thinks Iacocca's staying with the corporation now is good for Chrysler.

When he left the corporate offices in 1985 he invested in his own dealership because he enjoys selling cars. McIntosh stands behind the product he sells and the corporation he represents.

SEATTLE, WASH.
7-1-88 Population: 1,861,700

REGISTRATIONS, MODEL YEAR

	1990	1989
Cars	78,124	73,183
Light trucks	45,522	37,894

Chev. S10	3,327	Chev. S10	2,960
Ford Ranger	2,933	Ford Ranger	2,536

But 1990 wasn't the stellar year he'd hoped for, and it ended on a sour note when the biggest snow storm of Seattle's history paralyzed the city. He had trouble keeping staff motivated and traffic through the store. The snowstorm played havoc with one of the most lucrative economic events in the Seattle business year; the Boeing bonus given on Dec. 15. Totaling $183 million for 1990, it usually accounts for an upsurge in sales at the end of the year.

But this year, the mayor of Seattle asked people to stay home. "I didn't get my first Boeing deal until Dec. 27, which was a Chrysler Maserati, and then I only did five more deals after that and I think it was due to the weather.

"From the 26th to the 31st we will usually do 50 cars and it just didn't happen this year."

Weather aside, 1990 was a year where the typical car buyer began hedging and slowing down. "My profits compared to 1989 will probably be down about 30 percent," he said.

In 1989 he delivered 1,600 new cars, and he finished 1990 with 1,200 units. "I'm wondering where my other 400 cars are. Figuring on a monthly basis we normally sell 150 new cars and 50 used vehicles or 200 per month, right now we're only selling 150 both new and used."

To cope, McIntosh plans to trim his staff of 64 employees to 58. "The store has got to stay healthy," he says. "The best way to get expenses out of the store is you walk 'em out."

McIntosh says buyers are having a harder time getting financing, and banks want more money down. "The reason we're not seeing real good buyers is that things are out of sync." He feels the C and D buyers he's seeing are a testament to uneasy times. "That real good buyer reacts to what's going on around him, he's worldly and when there's something out of sync he sits on his hands."

The Middle East situation and recession have good buyers waiting. "Once these things are resolved then the A and B buyer will be back. I think pent-up demand is building up right now."

McIntosh goes on, "Its a consumer market out here, it's a very competitive market, there's eight Chrysler-Plymouth dealers in the Seattle/Tacoma area and we all pay Chrysler the same amount of money for cars . . . the difference is me, how I handle that particular customer."

His philosophy at sales meetings is very clear:

"Three things sell a car and price is third. The No. 1 item that sells a car at North Seattle Chrysler-Plymouth is how that customer perceives us as a dealer. No. 2 is the rapport. We have a policy if you're not building rapport turn them ▶

FACE OF THE DEALER, 1991

over. And third is price. We do not give the lowest price over the phone because we want to get people out here to see the dealership.

"There's a chemistry you build between people," McIntosh says. "We've got a female salesperson in each of our three crews. They have a lot of patience and they are very successful here. The female market right now is probably making 60 to 70 percent of the buying decisions on cars."

Car sales may be down but in parts of the dealership things are looking up. McIntosh attributes his success in service to his hands-on customer service. "My service has been excellent. I will have had the best year I've ever had in service and parts."

He's also renovating the service and parts area of this Chrysler-owned property to handle an even greater volume.

But still he wonders where all the new car buyers are hiding. His typical ad campaign of $50,000 a month just doesn't seem to have the same pull it used to. He claims the buyer is not responding to radio, television and newspapers.

"When I was at my height," he recalls, "I was on four television stations, seven radio and 12 newspapers and Ackerley billboards. I can't shotgun anymore. I've got to start pinpointing."

He's putting more energy into direct mail pieces and mailing lists. Direct mail campaigns to higher income neighborhoods as well as Boeing employees has worked. As a consequence he'll pull back on typical ad campaigns in larger media.

McIntosh also believes in "idea sessions" with his managers. "I've got to sit down now and develop a new strategy, a new game plan and new business plan. If I want to continue at the height and level that I am, then I need to come up with a new idea."

Could Chrysler help him on the road to more sales? "The only thing we really got for this year was the Sundance America and the all-wheel-drive Voyager." He feels new product is needed in his division, something on the order of the Dodge Stealth, to pick up foot traffic in the store.

He's definitely been happy about Maserati. "We're the No. 1 Maserati dealer for Chrysler in the country. We have delivered 94." He has not had similar success with Chrysler's other Italian import, the Alfa-Romeo. "I just haven't been able to reach the Alfa market."

Tampa

Downturn prompts Dimmitt to shed franchises, costs

By Patricia A. Kelsey
SPECIAL CORRESPONDENT

It's been a tough go for the auto industry, but it's not half as bad in Florida as in other markets like the Northeast "where there's barely a pulse of activity," says Lawrence H. Dimmitt III, president of Dimmitt Chevrolet.

That's not to say that stores like Dimmitt's have not had to make adjustments in big-ticket items to better reflect current market conditions.

"The trick," says Dimmitt, "is not to cut back so severely that you end up cutting business."

Dimmitt Chevrolet is one leg of the Dimmitt Affiliated Dealerships network that once included about 10 outlets.

It is now focusing on its two mainstay GM stores — Chevrolet and Cadillac in Clearwater — along with the Toyota franchise in nearby Inverness, Fla.

TAMPA-ST. PETERSBURG CLEARWATER, FLA.

Linc. T'car	2,961	Dodge C'van	2,981
Chev. Lumina	2,811	Chev. S10	2,939

"In the 1985-86-87 time span, people were buying cars like mad. It didn't matter what nameplate you carried. At this time, it's better to focus on the franchises you feel offer the best opportunities," Dimmitt says.

On the selling block went Hyundai, Subaru, Volkswagen and Nissan points, four former occupants of the Dimmitt Auto Mall established two years ago for the Tampa Bay area.

"The mall never achieved the necessary sales volume to make it fly," Dimmitt notes, "nor had we anticipated the current sales drop when the mall concept was put in place."

Lawrence H. Dimmitt III

Cadillac, Chevrolet, Toyota

Other victims were the BMW and Jeep-Eagle stores.

The next order of business was to address major expenses like personnel, advertising and floorplanning.

Personnel was rearranged, but only in small ways, Dimmitt says.

For instance, a drop in sales calls meant that telephone calls no longer had to be routed from a central receptionist to a sales force operator. Calls now go direct to the sales department, which reduced to one the number of telephone operators.

Direct-dial long-distance telephones now are restricted to five throughout the dealership. That cut Dimmitt's $6,200 monthly phone bill to $4,200. Most long-distance cars now are placed by the operator.

Cutbacks in advertising have occurred, but Dimmitt would not specify the degree. Promotional efforts have been beefed up in some areas, however, as part of an effort to bring in more bucks into the body shop and the service and parts departments.

Inventory is being tightened to maintain a 60- to 90-day supply.

The dealership took a hard look at outside services like trash collection and plant watering, which were taking as much as $9,000 a month out of Dimmitt's coffers. Trash costs were reduced by shopping around, and Dimmitt personnel now water the plants.

Dimmitt declines to disclose unit sales or dollar volume, but he admits that sales "were off a bit in 1990."

There has been a domino effect from other industries, he says. The buying public's disposable income is down, restricting their car-buying plans.

As 1991 rolls along, he anticipates more downward pressure. "As more businesses cut down, there will be less money floating around. It's a multiplier effect," Dimmitt says.

While Dimmitt wants to stay within a 60- to 90-day inventory, he admits that it's difficult because of multiple model lines. "You always have high-demand vehicles and others with virtually no demand. It's an ongoing balancing act," he says.

Another cloudy issue is rebates. Manufacturers tend to alter rebates continually, running them up and down like a yo-yo, Dimmitt says.

"You may have a $1,500 rebate on one vehicle and when the sun comes up the next day, it's changed to $500. This drastically affects the demand for that vehicle," he says.

The worth of incentives shows up most significantly when the rebates are biggies, Dimmitt says. People react favorably, and those vehicles move out the door at a faster pace.

He believes 1991 will bring a trend of more cash-to-dealer incentives and fewer customer rebates.

"These would be paid out according to your achievement of certain pre-established sales goals," Dimmitt says. "If you hit, say, 25 percent of a sales goal, the cashback would be $100 or $200; 50 percent would double that, and so on."

Best-moving models are also affected by the rebate programs.

"Last year, our best mover was the Camaro with a rebate high of $1,500," Dimmitt says. "That makes a big difference in a $10,000 to $12,000 price range."

Camaro is now falling off and Caprice is picking up steam, he says, again due to a generous rebate.

The Geo line is showing greater promise this year, helped by its gas-mileage capabilities in a higher-than-normal gas price period brought on by the Persian Gulf situation.

The new luxury tax on the portion of a car's price that exceeds $30,000 has not affected Dimmitt in any measurable way.

Sales of Corvettes in the $35,000 to $40,000 range are not being deterred by the tax because "such buyers can always find an extra $500 in their mattress to handle the excess tax of 10 percent above the $30,000 mark," he says.

The tax may, in fact, help Corvette sales and sales of some of his other lines, Dimmitt says, because of the effect on European imports. Those prospects "may rethink to the Caprice and Cadillac lines," he says.

Toronto

Menzel sells cars, but he's in the 'people business'

By Alex Law
STAFF CORRESPONDENT

When Peter Menzel says, "I'm not really in the car business," it's something of a shock, since he's been a Volkswagen-Audi dealer in Toronto for 15 years and recently served as president of the Federation of Automobile Dealer Associations of Canada.

The remark makes more sense when he adds: "I'm in the people business. It's just coincidental that I'm in the car business."

That is Menzel's first response when he's asked why he's been so successful as dealer-principal of Agincourt Autohaus in Toronto's northeast corner. In terms of unit sales, his store is in Canada's top five for VW and Audi. But more important to Menzel, it's the No. 1 metropolitan operation in terms of customer satisfaction in VW's Canadian empire.

Menzel's other criteria for success include:

- Base your marketing effort on word-of-mouth, rather than advertising. Put more effort into satisfying customers. In a dispute, always give them the benefit of the doubt.
- Anybody who trusts a dealer enough to do business with him should be shown the same level of trust.
- Strive for a quality product, including service.

Peter Menzel

Audi, Volkswagen

Menzel admits that those things are "no big deal. No big secret. Just fundamentals."

But he maintains that not every dealer practices those principles, even though they should at all times and especially now. He describes business in early January "as if it was cut off. New business was half of what it was."

That is contrary to expectations, since the lower car prices (about 4 percent) caused by a new federal tax structure were supposed to boost sales, which were sluggish in December.

Menzel's explanation: "The public didn't believe the government or the automobile industry" that prices were going to fall. He thinks some of January's sales actually took place in 1990.

Also, early-1991 sales were not helped by concern over the Persian Gulf and the future price of gasoline, Menzel notes.

Despite the early sales slump, Menzel predicts that his dealership will move about 600 units in 1991, down slightly from 617 in 1990 but still way up from 408 in 1989.

Even with such strong sales, Menzel says it's unlikely that his dealership will make money this year, and he doesn't seem to take any comfort from the fact that he's not alone. "As far as the new-car department goes, I don't know a single dealer who actually makes money now," he says.

Menzel maintains that the biggest problem for Canadian dealers is the adoption of American marketing policies by the Canadian companies, particularly the domestics and the Japanese. He says those policies are designed to presell a manufacturer's product before the customer gets to the dealership, which is likely to have ▶

other car lines in the United States.

Canadian law, however, pretty well forces a store to be an exclusive point, Menzel says, so the costs to the dealers of supporting the American-style marketing effort are unnecessary.

VW does not use such tactics, and Menzel feels the other companies will have to change their marketing strategies or the dealers will have to ask the federal government to change the Competition Act to permit more dualing.

Aside from a change in exclusivity or marketing tactics, Menzel says, "The other thing is for dealers to put a genuine marketing effort into the service and parts aspect of their business.

He says that when he left VW Canada to take over the dealership in 1976, "I was not affected by the 'retail practices' of the automobile business, so my brain was uncluttered with preconceived ideas or practices. I could develop a business plan based strictly on dollar turnover and gross profit retention and totally divorce the dealership from unit sales."

In light of that, he quickly reasoned that "the most direct influence I had — and the most profitable one — was in the service and parts area. In the new-car department I had maybe 20 percent influence because I was not designing the cars, I was not building them, and I was not pricing them. So, as an entrepreneur, I had no input on 80 percent of the whole."

On service, however, Menzel calculated that "I at least had 60 to 70 percent influence because 30 percent still depended on the factory — whether or not they built a good car."

To get the customer satisfaction that generates good word-of-mouth (which Menzel says has "unbelievably tremendous strength"), a dealer has to practice "marketing through association, which is essentially the information processing of customers when they look at things and set up associations."

For example, Menzel says, "If they see a clean shop floor, they associate that with well-managed. This reduces risk perception. If they see clean-cut mechanics, they associate that with expertise and integrity, reducing risk perception.

If parking and service processing are made easy for them, it's a sign of good management. If they have a complaint — justified or not, it doesn't matter — settle the complaint."

Menzel says a dealership that wants to succeed in the profitable service and parts business has to have "a structural approach to service." That structure has to define the product, recognize the risk-reduction process and pay homage to the power of word-of-mouth.

In addition, he says, is the need to "instill in everyone in your service department that anyone who comes in is your customer. He's not the factory's customer, he is *your* customer."

He maintains that Agincourt Autohaus has eliminated the two classifications, "He bought from us" and "he didn't buy from us."

Menzel believes that today's dealers "are too immersed and too occupied with tactical matters without thinking about the broader strategic concepts of a business." He says that "a business cannot be run on tactics, you have to have a strategy."

The auto business is tough these days, but it never crosses Menzel's mind to sell his valuable Toronto property and go into another line of work.

Vancouver

Pattison group will be prepared if slump comes

By Steve Mertl
SPECIAL CORRESPONDENT

Don Connors thinks a sustained economic downturn will produce a severe shakeout among both auto manufacturers and dealers.

But he's sure the Jim Pattison Automotive Group in Vancouver, British Columbia, will survive, even prosper.

"It's an opportunity for us," says Connors, group president. "We love tough times. We've been getting ready for it for the last three years."

It sounds like bravado but one glance around group headquarters tells a visitor that Jim Pattison, founder of the group, hasn't spent his treasure building monuments to his success.

From a suite of nondescript offices above Pattison Pontiac-Buick-Cadillac, Connors, 45, controls seven British Columbia dealerships (four Toyota and two General Motors stores and a newly acquired multi-brand import outlet), two leasing firms and a cellular phone operation. The company also owns a dealership in the Seattle-Tacoma area in Washington.

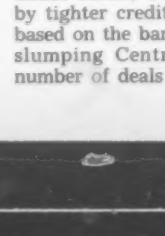
Toyota Corolla	2,746	Toyota Corolla	2,463
Chev. Cavalier	2,486	Ford Tempo	2,271
Dodge C'van	2,187	Toyota Tercel	2,262

Last year, the group sold 17,000 new and used cars and trucks, up about 2,000 from 1989.

Pattison, who opened his first dealership in Vancouver in 1961, no longer personally directs the automotive group's fortunes. It's a core business in his empire that ranges from a supermarket chain to fish packing to outdoor advertising to periodical distribution, even a New York-based investment and arbitrage firm.

With $1 billion (Canadian) in assets and $2.2 billion in gross revenue in 1989, it's the fourth largest privately held company in Canada.

The Saskatchewan-born Connors, who joined Pattison in 1968 after college, has headed the auto-



Don Connors

BMW, Buick, Cadillac, Chevrolet, GMC Truck, Jaguar, Nissan, Oldsmobile, Pontiac, Subaru, Suzuki, Toyota, Volvo

motive group since 1982, stepping over from Pattison's RV-manufacturing operation and, before that, catalogue merchandising.

Canada has been in a recession since last spring, but despite layoffs in the forestry industry, British Columbia hasn't been hit hard, so far.

Auto sales last year in this province of more than two million people (about three-quarters of them clustered in Vancouver and its suburbs) at least matched 1989, slipping slightly in December.

The recession psychology scaring the Rockies from hard-hit Central Canada, but the outlook remains fairly optimistic. Barring the unforeseen, dealers here expect any dip to be short-lived, with the vehicle market buoyant again by the end of the year.

Connors believes that any slump should hit in earnest by this spring. "I just don't know how deep it will be," he says.

Deep and long might spell trouble for greater Vancouver's dealer-saturated market, he says.

"The Lower Mainland is probably the most over-dealered in North America," he says. "And this is the beachhead for the Japanese."

One out of two vehicles sold here is an import, compared to about one in three in the rest of Canada, compounding competition and cutting profits.

"We sell more cars for much less money," Connors says.

He says the volume approach has chopped profits on new vehicles to as little as 8 percent.

Displaying a Western Canadian's antipathy for Toronto-based national banks, Connors is angered by tighter credit on auto buyers, based on the banks' experience in slumping Central Canada. The number of deals that fall through because of loan rejections has more than doubled since fall. If this keeps up, Connors says Pattison may try to shift more deals to open-end leases financed by its own leasing operation.

He sees pressure on dealers caused by the approaching parity between the quality of imported and domestically produced vehicles, which will put even more emphasis on value and after-sale service, while transplants will put even more production into the pipeline.

Something has to give, and Connors wants the Pattison group to be ready when it does.

The group last year extended its performance enhancement program to lower levels of dealership management and the parts and service staff. The program trains staff and managers in inventory control, asset management and customer satisfaction.

The group has also concentrated on hiring and training business people in management instead of promoting sales personnel. The strategy improved the quality of group managers, Connors says, and, aided by incentive programs, it has reduced the turnover rate — now near zero for managers, compared with about 90 percent annually for the sales staff.

More recently, Connors dropped three dealerships, Nissan and Suzuki stores in Vancouver and a Hyundai dealership in the Vancouver Island logging town of Duncan.

Pattison also acquired Park Valley Motors in Kelowna, which sells BMW, Jaguar, Volvo, Subaru and Suzuki. Kelowna is the heart of the fruit-growing and tourist-oriented Okanagan Valley 175 miles east of Vancouver. It is a growing retirement haven, and a new freeway puts it in easier reach of Vancouver. Connors thinks that will help turn Kelowna into the second-largest city in the province.

Pattison is also moving south to counter the impact of the Canada-U.S. Free Trade Agreement, which will phase out import restrictions on used cars by 1993 and will open the border to cheaper low-mileage vehicles from U.S. dealers.

Connors recently closed a deal to buy Nissan-Suzuki of Tacoma in the Seattle-Tacoma area and is eyeing a couple more. They will add new-car volume and give Pattison a pipeline for used cars that could be sold in Canada.

The Pattison group has less control over its dealings with automakers, and the frustration is evident. Connors mirrors the widespread unhappiness with manufacturer-controlled advertising associations, consumer rebates and automakers' side deals with daily rental companies that put nearly new cars onto the market at bargain prices.

A sustained slump might spur dealers to stop ordering new cars altogether, he says.

"We'll go stand in line at the auction and buy the cars 30 to 40 percent cheaper," he says. "There's going to be some blood spilled."

However, Gary Cowell, first vice president of the Federation of Automobile Dealers Associations of Canada, calls such a boycott unrealistic. Cowell of Cowell Volkswagen in Richmond, British Columbia, doubts that enough dealers would join for it to be effective.

Connors wants to re-establish the arms-length relationship between dealers and automakers.

"Give us the best car you can at the best possible price, then get out of our hair," he says.

FACE OF THE DEALER, 1991

Washington

Pohanka wears the mantle of dealer statesman

By Jayne O'Donnell
SPECIAL CORRESPONDENT

He has the statesmanlike stature of an aging ambassador or the senior senator from South Carolina — a tall, lean, graying eminence who would seem more at home waxing eloquent on the wrongs of war than the right way to treat a car customer.

But in a city where everyone from junior congressional aides to political talk-show hosts have a part in running the country, John J. Pohanka has resisted the pull of power and decided to stick to what he does best — selling cars.

In the 42 years he's been in the business, however, he has come

John J. Pohanka

Acura, Chevrolet, GMC, Honda, Hyundai, Oldsmobile, Saturn, Suzuki

close to succumbing to the Potomac fever that has stricken even the most far-away of farmers.

Big-wheel Washington customers frequently mention the possibility of foreign service to Pohanka. When President Reagan took office, Pohanka's name was even being bandied about for a top post at the Transportation Department. But a position never materialized, and Pohanka now says with believable conviction that it's just as well.

"I graduated from Princeton and traveled in circles with people who did a lot more than sell cars," says the 63-year-old chairman of the Pohanka Automotive Group in Marlow Heights, Md. The group has eight franchises and seven stores.

"I knew there had to be a lot more to life than making money, but I thought I could do more good working for dealers than trying the solve the world's problems."

Pohanka has done his part to help the dealer community. In 1976, he served as president of the National Automobile Dealers Association, and he continues to be active in the association's Project 2000. He also helped found the National Institute for Automotive Service Excellence and was the first chairman of the National Automotive Technicians Education Foundation.

WASHINGTON, D.C.
7-1-88 Population: 3,734,200
REGISTRATIONS, MODEL YEAR

	1990	1989
Cars	208,608	229,553
Light trucks	71,026	76,670
TOTAL	279,634	306,223

TOP 5 MODELS, MODEL YEAR

1990	No.	1989	No.
Honda Accord	13,697	Honda Accord	11,923
Toyota Camry	9,813	Toyota Camry	8,416
Honda Civic	9,623	Honda Civic	8,301
Ford Taurus	7,804	Ford Taurus	7,873
Toyota Corolla	6,643	Ford Escort	7,819

Among Pohanka's principal areas of concern in business are the shortage of qualified technicians and the much-maligned image of the automobile dealer. Improvements in dealer image, he notes, "are not going to be achieved through public relations." Dealers must make a concerted effort to do business in a professional manner, he says.

Pohanka has a rather novel solution for dealing with another of his business worries — the highs and lows of income for sales personnel. He laments that his employees, unlike his business, were not prepared when lean times arrived.

So, he says, "the next time a boom time comes around, I'm going to offer — on a volunteer basis — a delayed compensation program. I wish I had thought of this four years ago."

During his years of industry politicking, Pohanka was careful to keep strict controls on expenses and management. His efforts have served him well during these rough recessionary times. He says he's always tried to run a "tight ship," although he seems to place more importance on promoting from within.

His son, Geoff, has risen through the company to become the fixed operations manager for all the dealerships, as well as the dealer-principal at four stores. He will be the Saturn dealer when that outlet opens. Pohanka also has three nephews working in management in the automotive group.

Pohanka's rewards are evident in his results. New-car sales for 1990 were up 5 percent over 1989, and increased import sales compensated for a downturn in domestic deliveries. Net profits increased 25 percent.

Pohanka has Oldsmobile, Honda, Hyundai, Chevrolet, Acura, Suzuki, GMC and soon-to-be Saturn franchises.

His in-house customer satisfaction index department contacts every car and service customer, and each employee is ranked and rewarded based on those findings. "Taking care of the customer has always been our No. 1 job," says Pohanka.

He has not allowed what he calls "non-productive personnel numbers" to get out of control. As a result, he has not had the high numbers of layoffs that many of his dealer colleagues have had. Like most Washington-area dealers, the Pohanka Automotive Group has reduced advertising expenses and car inventories.

"There's an old saying that overhead walked in on two feet and out on two feet," says Pohanka, whose grandfather started the business in 1919.

Still, he sees some trying times ahead.

Gerry Murphy, president of the Automotive Trade Association, National Capital Area, is not given to hype — but he's also almost always the optimist. Not so in these tough times in the dealership industry, which supports the association his grandfather founded.

"The car business in Washington is not good, and it hasn't been for at least a year and a half," says Murphy. "Washington was always about 5 percent better than the rest of the country until 1989, and then the Washington economy wasn't as sound as the nation's."

Murphy notes that only one Washington-area dealership, Anton Motors, has filed for bankruptcy in the last year, and he says that had little to do with outside economic influences.

Says Pohanka, "The seeds of failure are sown when times are good, and dealers who have allowed expenses to get out of hand or who have failed to develop all their profit centers will have a tough time of it." He adds that single-line dealers and others who have expanded without the needed depth of financial and people resources will be hard-pressed to make it in the business.

But as Pohanka's emphasis on CSI shows, there is far more to making it in the Washington-area dealership business than financial acumen. The personable Pohanka, who as a 33-year-old nearly got out of the business and sold his valuable chunk of real estate, now drives one of his neighbors' cars for the 32-mile commute to his dealership properties in Marlow Heights about two days a week for service.

"I sleep with the classes and do business with the masses," he says.

HOW DO YOU TRAIN A SALES MANAGER?

On the job training of a Manager can cost a Dealership a fortune. The biggest problem with a Manager learning by experience is that they never live long enough to graduate!

Wichita

Not the biggest, not the richest, but Lesline is content

By Bob Cox
SPECIAL CORRESPONDENT

Walt Lesline is not the largest automobile dealer in Wichita, Kan., and, he claims, certainly not the richest.

Indeed, he says his "only claim to fame is I survived for 16 years."

WICHITA, KAN.
7-1-88 Population: 483,100
REGISTRATIONS, MODEL YEAR

	1990	1989
Cars	13,421	14,206
Light trucks	8,701	8,837
TOTAL	22,122	23,043

TOP 5 MODELS, MODEL YEAR

1990	No.	1989	No.
Chev. C1500	631	Ford Escort	711
Honda Accord	617	Chev. S10	704
Ford Escort	610	Ford F150	696
Chev. S10	606	Ford Taurus	661
Ford F150	589	Pont. GrndAm	632

As 1991 began, Lesline, 61, was taking steps to make sure he'll survive for a few more years.

Just last summer, Lesline, owner and president of Plaza Buick Inc., opened a $2.5 million dealership and showroom on Wichita's east side. Like many another dealers, he was following the traffic out of downtown to the faster growing suburbs.

Initially, he planned to maintain his facilities near downtown Wichita. But in December, he decided to throw in the towel on the downtown operation.

"It was just eating us up," he says. "You asked me why I decided to expand. Well, now, I realize I probably shouldn't have."

Two events made Lesline reconsider his decision to maintain two sales outlets. The first was Iraq's invasion of Kuwait, and the resulting run up in gasoline prices; the

Walt Lesline

Buick

second is the existing economic uncertainties that were made worse by the crisis in the Persian Gulf.

Lesline embarked on the expansion two years ago, after years of watching the business dwindle downtown.

In the late 1970s, he sold as many as 1,800 new cars a year, compared to 550-600 in recent years. In 1978, what was then Robinson-Lesline Buick was one of the top 60 Buick dealerships in the nation.

But the 1980s brought one economic crisis after another to the Wichita area, compounding the typical urban problems of suburbanization and a declining downtown area. So a few years back Lesline began to give serious consideration to following the people out of downtown.

"A lot of businesses that employed a lot of people have left downtown," he says. "There's nothing downtown to draw traffic at night."

In the seven months since the new location opened, it has shown a gradual increase in business.

"That's when I began to see that we were our own biggest competitor," Lesline says, adding that the five or six miles between the two outlets was not enough for both to prosper.

And as the months went by, the accounting began to tell the true tale. There was only a marginal improvement in total revenue, from both sales and service, over the downtown location alone.

With a new showroom and service facility, there was no question about what to do.

"You have to go where the traffic is," Lesline says. "My only error was that I probably waited five years too long."

Lesline's gross sales, which have been as high as $30 million a year, topped $25 million in 1990.

Business was slower in the second half of 1990 than he anticipated, largely because of uncertainties brought about by the Persian Gulf crisis and political wrangling over the federal budget. But he looks for improvement in 1991.

"I think it's going to start off a little slow, but I think it will end up all right," he says.

The outlook for the Wichita and south-central Kansas economy is generally upbeat, local economists say, barring a deep and prolonged national recession or worse.

The city's business aircraft manufacturers are, for the most part, enjoying steady to expanding business, and they predict that they will be adding to their work forces in 1991. Demand for airliners continues to buoy the local operations of Boeing Co., and local oil producers are enjoying the price fallout from events in the Middle East.

Lesline has 40 years' experience in the automobile business. He started as a salesman in Yates Center, Kan., in 1950.

Yates Center was so small that "if someone walked into the showroom and I didn't know their name, I knew they were from out of town," he says.

In 1965, he moved to Wichita as a salesman for Ben Robinson Buick. He became used-car sales manager and finally general manager. He became a partner in the dealership in 1974 and sole owner in the early 1980s.

The years and the business have been good to Lesline.

"I haven't made a lot of money, and I haven't any desire to make a lot of money," he says.

"I want to be the most honest car dealer in Wichita, not the biggest. I want somebody to know that if I look them in the eye and tell them something, that's the way it is."

His goal is to create customer satisfaction and loyalty. "I can't make every customer happy, but I try."

Lesline said his surveys of customers have shown that 90 to 94 percent have been satisfied with the service and attention they have received.

"When you're in a service industry, you should strive for more, but it's good to get 94 percent," he says.

The automobile business will continue to get more competitive, he says, with thin profit margins on sales of new cars. That means paying more attention to used-car sales and, especially, the service business.

"I think that the dealer who survives is going to do it on customer satisfaction."

A pilot for more than 40 years, Lesline owns his own single-engine Beechcraft Bonanza — a product of Wichita's biggest industry — and flies to many meetings and car auctions. He says there are parallels between the aircraft business and automobiles.

"We see a lot of airplanes that are 20 and 30 years old because they're well maintained," he says. "We're going to see that in the future in the car business."

If his health holds, he hopes to be greeting potential customers 10 years from now. A diabetic, Lesline watches his diet and walks three to five miles a day, except when the fickle Kansas weather coats the streets and sidewalks with ice.

"The farthest thing from my mind is wanting to retire," he says.

FORD: *Company leads industry with 245 black dealers, but progress gets tougher as business declines*

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. acknowledged its need to help minorities in business in 1967, after Detroit was ravaged by a race riot. Henry Ford II led the company to establish affirmative action directives, including appointing minority dealers.

Now, Ford is the clear leader in minority dealer development. With 245 black dealers at the end of 1990, it had more than General Motors and Chrysler Corp. combined.

The company began a minority dealer placement program in 1968 and a training program in 1971.

But black dealers were usually placed in inner-city stores that white dealers didn't want, according to Ford officials and black Ford dealers. The turnover was high, and by the late 1970s, Ford was forced to find other locations.

Ford's black dealers were hit hard by the Iran oil embargo in the late 1970s. In 1980, Ford's 19 surviving black dealers formed the Black Ford Lincoln Mercury Dealers Association.

Ford's black dealer body was not growing as fast as the association wished, and it brought in civil rights activist Jesse Jackson in 1982 to meet with Ford brass.

Ford agreed to increase the number of black employees, suppliers and dealers. Within the year, Ford nearly doubled its black dealer total to 56.

In 1984, Philip E. Benton Jr., now Ford president and then vice president of Sales Operations, set a goal of 320 black Ford and L-M dealers by the end of 1989.

Bernard "Rusty" Restuccia, head of Ford's dealer development program, said Ford prefers to have candidates with auto-related business experience, although other business/entrepreneurial experience helps.

Secondly, dealers must have access to $100,000 in unencumbered cash. Ford must also determine that the individual has what Restuccia calls "street smarts," or entrepreneurial skills.

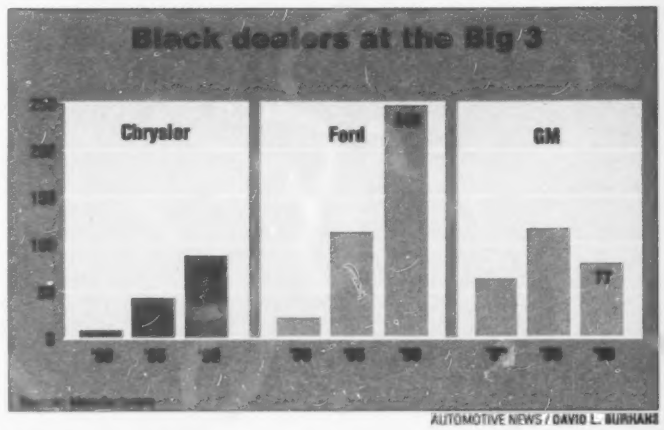
In the current minority dealer training class, Ford accepted 20 people from among 125 applicants.

The training runs for 24 to 36 months. Ford pays each trainee $3,500 per month.

After a two-week introduction, the participant is sent to a "mentor" dealership, usually a successful minority dealership, to train in parts, service, new vehicles, used vehicles, business office and general management. The trainee receives classroom training in Dearborn and takes tests after each stint in the dealership.

But not everyone gets a dealership. Until 1989, Ford placed 97 percent of its candidates. The other 3 percent either dropped out, decided to work as dealership managers or pursue other careers.

Out of a most recent class of 26 dealer candidates, only 14 purchased stores. Ford is attempting to help the other 12 graduates find dealership management positions.



AUTOMOTIVE NEWS / DAVID L. BURHANS

When a candidate has selected a store, Ford suggests that he or she put up 20 percent of the purchase price, though Restuccia said Ford may allow dealers to go as low as 12.5 percent. Ford acquires the store from the old owner and sets up an investment partnership.

Take a store sold for $500,000. The dealer candidate puts in 20 percent, or $100,000, which goes into common stock. Ford pays the remaining $400,000, half as a loan and half as preferred stock.

"That individual will retire our preferred stock with the profits," Restuccia says.

Restuccia says the typical buyout in good times is six to seven years. In the current downturn, Ford expects the buyout period to take "substantially" longer.

Minority dealer total falls; GM plans 40% increase by '93

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

General Motors is revamping its minority dealer program in an effort to increase its number of minority dealers by 40 percent by the end of 1993.

Unlike Ford Motor Co. and Chrysler Corp., GM's black dealer total has shrunk — from 114 in 1986 to 77 now. Most of GM's 176 minority dealers are not black.

Joseph Vasquez, general director of GM's Minority Dealer Development Department, blames the economy and a competitive marketplace, which he says makes it harder for minority dealers.

Many minority dealers, however, say red tape and lack of communication with GM make it almost impossible to address unique problems that minorities face during the current sales downturn.

The new GM Minority Dealer Steering Committee, comprising GM officials and two minority dealers, will study the types of candidates that GM trains at its Dealer Development Academy and the viability of locations that GM offers to minorities.

GM will not convene a new class at the academy in Troy, Mich., until the committee's work is done later this year.

In 1988, GM began a "Fast Start" program that allows minority dealers to get into a store for up to a year and leave with their investment intact if the dealer feels he cannot survive at that location. GM spokesman Harold Jackson said some dealers have abandoned dealerships after the year-long period; he declined to say how many.

GM started its minority training program in 1972. Since the program commenced, 223 candidates have been accepted.

Class sizes generally range from 15 to 18 and run for 12 months. Candidates receive a $3,000 monthly stipend, use of a car, all meals and lodging plus medical care. Instruction alternates three-week periods of classroom training and on-the-job training with dealers across the country.

Since the program began, the academy has graduated 223 students; 112 of them have been appointed dealers, and 47 of the 112 had stores at the end of 1990.

Candidates need $85,000 in unencumbered cash to qualify. Vasquez says most of of the candidates have an average of $115,000 to invest.

GM doesn't own any dealerships, so when a candidate is appointed a dealer, the company generally finds a store for sale and goes into partnership with the minority dealer, who generally needs 15 percent of the purchase price.

There are complaints that many minority-owned GM dealerships fail because of the sites they are offered. They say the stores often are in depressed, urban areas.

Vasquez acknowledges that minority dealers may not get the best locations but says it's partly due to their lack of finances.

"We're not stupid," Vasquez said, stressing that GM would not put its money into property that the company thought would fail. He also admits that GM needs a better plan needs to ensure success of the company's minority dealers.

The company has agreed to begin a pilot program in Houston, Detroit and Chicago to determine how urban stores can be better marketed.

Charles Harrell, president of the GM Minority Dealers Association, has presented the company with a list of suggestions to enhance the profitability of minority dealers.

They include:

- Audits of all existing minority dealerships by an outside concern to ascertain their viability.
- A subsidized rent program when rent is out of line with rent per unit of planning volume.
- More dualing opportunities, since the majority of the minority dealers have single points.
- More minority employees in strategic positions within the dealer development department.

CHRYSLER: *Recruiters look at entrepreneurs, and black dealers increase 10-fold*

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Early in the 1980s, Chrysler Corp. stepped up its recruiting of black dealers, and in a decade increased its numbers more than ten-fold.

In 1980 only seven black people owned Chrysler dealerships. When 1990 ended, Chrysler had 86 black dealers.

Chrysler believes the catalyst for the increase is its Chrysler Corp. Dealer Development Program.

Established in 1983, the program trains minorities and women to become automobile dealers. Cecil M. Ward, manager of Chrysler's retail dealer development program, is charged with recruiting minority dealer-candidates.

About 15 percent of the training is classroom study at Chrysler's Marketing Institute in Highland Park, Mich., says Ward. The rest is training at a Chrysler dealership.

The program covers every aspect of dealership operation, says Ward — "from the lot boy to actually running a dealership."

Chrysler recruiters canvass functions sponsored by such organizations as the National Association for the Advancement of Colored People and the Urban League. Ward says ideal candidates have strong retail management or dealership management experience, plus some capital.

In 1989, Chrysler signed a "fair share" agreement with the NAACP, meaning that Chrysler has accepted a corporate social responsibility to include black employees, suppliers and dealers within its operation.

Candidates must have $65,000 in unencumbered capital or at least 12½ percent of the total investment. The program allows dealers to buy out Chrysler, usually over five years.

The program has been a learning experience for Chrysler as well as its dealers. In the beginning, Chrysler tapped black people from the corporate sector for its dealer training program. But many of those, who had been used to a guaranteed salary, had trouble coping with the uncertainties of owning a business.

Chrysler now sets its sights on more entrepreneurial types.

Ed Fitzpatrick, 48, is a risk-taker. After a short stint as a school teacher and a career with Chrysler, he became owner of Puget Sound Chrysler-Plymouth-Alfa Romeo in Renton, Wash., a suburb of Seattle.

That was five years ago. He said he's been through the ups and downs of owning a business. But fortunately, the ups have outweighed the downs. He expects to buy out Chrysler this year.

"After a year I wondered why I got into this," he said jokingly. "My store is a good store. I knew Seattle had a good climate. This is my foundation. It is a springboard for my sons."

At one time, Chrysler and other manufacturers usually placed black dealers in points in "black neighborhoods" — often economically depressed.

Neighbors typically lacked the means to buy a car, and people who lived elsewhere did not journey into depressed areas to buy.

Consequently, many of those dealerships withered and died.

Now Chrysler will not put any dealer, black or not, in a store where a he or she cannot sell at least 500 units annually.

SALES

FROM PAGE 3

tack on Iraq certainly had an impact on sales. He said foreign makes were hurt by Big 3 discounting, and Japanese and German makes suffered because of their "lackluster support for the Persian Gulf war."

Domestic new-car sales table, Page 132

Infiniti and Isuzu were the only Japanese imports to report sales increases; none of the German makes performed better than they did during January last year.

Ford Motor really took a tumble. Every nameplate nosedived, and its domestic-car sales fell 33.18 percent.

Chevrolet Division outsold Ford Division by 5,599 units to top the car sales chart for the month. Chevrolet sold 82,286 cars in January, compared to Ford's 76,687. In January 1990, Ford led Chevrolet by 1,620 deliveries.

Ford Division continued as the leader in total vehicle sales, delivering 153,220 cars and light trucks, 551 more than Chevrolet. In January last year, Ford was 12,248 vehicles ahead of Chevrolet.

General Motors didn't get much performance from any of its car divisions; sales fell 21.84 percent. Each GM division reported lower sales, led by Pontiac with a 35.6 percent decrease. For the month, Pontiac was the No. 6 car seller, down from No. 4 last January. Pontiac lost its No. 4 ranking to its sister division Buick.

Chrysler Corp.'s total car sales were down 15.33 percent, and Chrysler was the only Big 3 maker to get a sales increase from one of its divisions. Led by higher sales of its Monaco, Spirit and Dynasty lines, Dodge was up 0.5 percent.

In combined sales of cars and light trucks — import and domestic — the Toyota nameplate outsold Dodge by 89 units, and Toyota was third behind Ford and Chevrolet in total vehicles sold for the month. Last January, Dodge was third and was 17,048 cars and trucks ahead of Toyota.

Transplants American Honda Motor Co. Inc. and Toyota Motor Sales U.S.A. Inc. also took a plunge. Honda's sales of U.S. cars dwindled 30.4 percent, and Toyota's fell 25.7 percent. Their sales of imported cars also dipped; Honda was down 13 percent, and Toyota was off 7.5 percent.

Excalibur charged with fraud

By Sally Garbo Wedde
SPECIAL CORRESPONDENT

MILWAUKEE — The district attorney's office filed two criminal charges against Excalibur Automobile Corp. for allegedly putting used seat tracks and motors in a 1989 Excalibur, changing the car's vehicle identification number to make it appear to be a 1990 model and selling it to a New Jersey dealership.

The charges of theft by fraud and fraudulently altering a vehicle identification number carry potential maximum fines of $30,000 for both Excalibur and its marketing arm, Excalibur Marketing Inc.

Production ended last June because of the neoclassic luxury car maker's financial problems.

The charges follow an investigation by the Department of Transportation that started Aug. 8 after it seized company records based on statements by former employees that the company put used parts in new cars and altered odometers.

The state is still investigating the company's conduct for possible licensing action, according to Eric Szatkowski, Department of Transportation investigator. The most extreme action the state could take would be to revoke current licenses or deny new ones.

Meanwhile, Judge James Shapiro in federal Bankruptcy Court in Milwaukee ordered the company's officers to sell the company by Feb. 19 to satisfy a debt of more than $2 million to First Wisconsin National Bank of Sheboygan, according to the judge's law clerk, Michael Hayes. After that date, the company would be liquidated under Chapter 7.

The company has been bankrupt under Chapter 11 reorganization since Sept. 25. At that time, Scott Dennison, who was then president but is no longer with the firm, said Excalibur had $4.7 million in assets and $3.9 million in debts.

Sale negotiations with J.E. Liss and Co. Inc., a Milwaukee financial consulting firm, have since fallen through, according to a spokeswoman for Excalibur Chairman Henry Warner. Warner owns 58 percent of the company.

The spokeswoman said talks with potential buyers continue.

GM CUTS

FROM PAGE 3

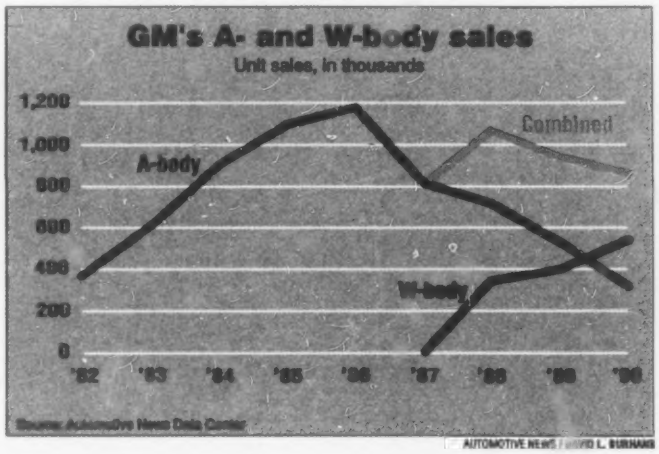
was scheduled to lose the A-body cars anyway because it is scheduled to get the F-body replacements — Pontiac Firebird and Chevrolet Camaro — when those cars are redesigned.

The Mexico City plant builds the A-body cars alongside the J-body Chevrolet Cavalier. No other products have been scheduled for Oklahoma City or Mexico City.

Neither Oklahoma City nor Mexico City were among those GM considered when it took a third-quarter 1990 writeoff of $2 billion for facilities that have been closed or are likely to be closed.

Stempel said last week that "planned capital spending is being reduced by approximately $500 million per year to about $7 billion annually over the 1991-1994 period." But that figure actually is $500 million higher than the figure GM estimated in its 1989 annual report that it would spend in 1990.

Two weeks ago, a GM spokesman said GM's actual capital spending was about $7.5 billion in 1990, when Saturn Corp. finally came on-line, and that $7 billion per year was needed through 1994 to "make sure all the major programs continue in place." The A-body platform redesign is not considered a major program, sources said.



The 1991 to 1994 capital spending figure compares with $7.5 billion in 1989 and $5.6 billion in 1988. During the 1980s, GM spent $77 billion on worldwide capital projects, including eight new assembly plants and the modernization of 19 others. The height of the spending spree was in 1985 through 1987.

The GM board's decision to cut the dividend on its common stock from 75 cents per share to 40 cents per share signaled that the company intends for all of its constituencies to join in its cost restructuring, industry analysts said.

Some analysts said the dividend cut showed GM was accepting a worst-case economic scenario: that the Persian Gulf war and the recession at home would cause a long, deep downturn. GM did invoke the war and recession as partial reasons for the dividend cut, but not all analysts took the bait.

"The issue of the war is face-saving to General Motors," said Philip K. Fricke of Prudential-Bache Securities. "It allows them to do (without much debate) a thing they probably were going to do all along. So seize the moment, because in May the war may be over and recovery may be beginning. If they cut the dividend then, people might wonder why."

Other analysts said the announcement had nothing to do with the war or recession. They said the dividend cut and a long list of cost-saving measures announced by Stempel were long-term strategies for saving GM's North American operations, which have been losing money for years despite a host of new products.

But some pieces of Stempel's plan, including capital spending cuts and efforts to obtain price reductions from suppliers, have been in place for weeks and months, and some had been announced by other GM officials previously.

Financial analysts reacted positively to the GM board's dividend cutting, the first since 1980, and to Stempel's announcement that GM had taken fundamental steps to cut costs. But they admitted they were surprised the board didn't wait until the second quarter to cut the dividend.

Meanwhile, the board raised the dividend on GM's Class E stock — based on the performance of the EDS subsidiary — from 14 cents per share to 16 cents per share.

The board left intact the 18 cents per share dividend on Class H stock, based on the performance of Hughes.

David Healy, an auto industry analyst with Barclays de Zoete Wedd Research, said there wouldn't be much fallout from the common-stock dividend cut.

"I don't honestly think that car buyers read the dividend columns in the *Wall Street Journal*," he said. "Are white-haired ladies going to go out and sell their GM stock? I doubt it."

Maryann Keller, an analyst with Furman Selz Inc., said all the cuts taken as a whole "suggested a company that has recognized the complex nature of its non-competitive costs."

"The company made this announcement because the company is fundamentally unprofitable in North America," she said. "General Motors' problems are going to take a long, long time to cure, and that's what this press release was all about."

Feb. 27 — Nashville Auto Auction, Nashville, Tenn.

Oct. imports up as exports fall

WASHINGTON — The value of automotive imports increased 12.3 percent in October, while U.S. exports dropped 1.6 percent. As a result, the U.S. automotive trade deficit was 16.0 percent higher in October than in October 1989.

Every major automobile-producing country except Japan boosted exports of U.S.-bound cars at the start of the traditional U.S. model year, according to the latest trade statistics released by the U.S. International Trade Commission.

Canada — the largest exporter — increased its car shipments 24.8 percent. The value of car imports from Germany were up 23.5 percent, while South Korea's shipments were worth 29.4 percent more than in October 1989.

The value of car imports was up 416.1 percent from Mexico, where Ford Motor Co. builds the Escort and Tracer in a plant that was not in operation a year ago. Brazil, which shipped no cars to the United States in October 1989, sent $6.6 million worth in October 1990.

In Europe, car imports were up 63.6 percent from the United Kingdom and 176.5 percent from Italy. France increased the value of its car shipments from less than $185,000 a year ago to more than $3 million in October.

advanced that change from the normal date of March 1."

He praised other GM enhanced policies to benefit dealers, and cited quickened dealer reimbursement through electronic transfers and the GM-dealer open account system. Stempel also reiterated GM's commitment to the franchise system and said "we plan to continue to market our products exclusively through our dealers."

Worries about additional regulations and restrictions on vehicles also were prevalent in Stempel's speech. He listed the Clean Air Act of 1990, new emissions standards, chlorofluorocarbon elimination and corporate average fuel economy standards as challenges for the future.

"We manufacturers need you dealers to help us sell our commitment to safety, fuel economy and environmental compatibility to the American public," Stempel said. "We have to think about those things every day, but it's also important to plan for the future — to look for the opportunities that will be out there in the 1990s and figure out how we — dealer and manufacturers, working as a team — can climb aboard that trip to a better future."

Stempel concluded by reminding the audience of his three key messages: "sell, sell, sell."

the year for all 65 recipients of the Time Magazine Quality Dealer Award.

The winners were selected by the University of Michigan Graduate School of Business Administration. Judges selected winners for "exceptional performance in their dealerships combined with distinguished community service." The award is sponsored by *Time* magazine in cooperation with the National Automobile Dealers Association.

Krenzen began his automotive career in 1952 as a salesman for Suburban Chevrolet in Hopkins, Minn. He was named new-car manager five years later and general manager in 1960.

In 1968, he became director of Gelco Corp., a holding company for five dealerships, and took over the operations of Prestige Lincoln-Mercury in Minneapolis in 1970. Krenzen purchased the former Duluth Motors in 1971 and renamed it Krenzen Cadillac-Pontiac.

Krenzen is the immediate past president of the Duluth Automobile Dealers Association. He has been honored by the American Cancer Society, of which he is a board member and a past president.

He is also a member of the Duluth Convention and Tourism Bureau, the Duluth Chamber of Commerce, the Economic Development Board, the United Jewish Appeal and the Jewish Community Center. He is active in several charities and sponsors youth teams.

Krenzen is married and has three sons.

Other finalists for the award were:

Charles H. Betts Jr., president of Betts Cadillac Inc. in Des Moines, Iowa.

Donald S. Beyer Jr., vice president of Don Beyer Motors Inc. (Volvo) in Falls Church, Va.

Robert Frazier Brown, president of Bob Brown Motors (Oldsmobile-Cadillac-GMC-Buick-Pontiac) in Lamesa, Texas.

Frank DiChristofano, president of Broadway Volvo Inc. in Tucson, Ariz.

Peter James Eversole, president of Eversole Motors Inc. (Chrysler-Plymouth-Dodge-Toyota-Suzuki) in La Crosse, Wis.

Joseph H. Machens, president of Joe Machens Ford Inc. in Columbia, Mo.; president of Joe Machens Import Center (BMW-Porsche-Volkswagen-Audi-Isuzu) in Columbia, Mo.; president of Joe Machens Toyota in Columbia, Mo.; and president of Joe Machens Honda in Jefferson City, Mo.

Dennis C. McNamara Sr., president and owner of McNamara Pontiac Inc. in Orlando, Fla.

Park Price III, president of Park Price Motor Co. (Oldsmobile-Buick-Nissan-Mercedes) in Pocatello, Idaho.

John Prince, president of Prince Chevrolet-Oldsmobile Inc. (Chevrolet-Oldsmobile-Toyota) in Tifton, Ga.

Car output climbs 26% for January

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. auto production in January was 450,235, up 26.22 percent over January 1990 and 33.75 percent above December 1990.

Truckmakers assembled 234,237 units in January, 4.35 percent below the prior month and 36.80 percent above last year. It was the lowest production total for January since 1983 when 131,210 trucks were built.

U.S. makers estimated last week's car production at 109,209 units, 7.91 percent below the prior week and 1.98 percent above the same week last year.

Year-to-date, 579,872 cars have been assembled, 13.91 percent above last year.

U.S. truckmakers estimated last week's output at 37,327 units, 34.58 percent below the prior week and 50.93 percent below the same week in 1990.

So far this year, 282,070 trucks have been assembled, 18.15 percent below last year.

Four General Motors car plants are scheduled to be idle this week: Wilmington, Del.; Arlington, Texas; Kansas City, Kan.; and Van Nuys, Calif. GM truck facilities scheduled to be down this week are Fort Wayne, Ind.; Pontiac, Mich. (West); and Tarrytown, N.Y.

GM scheduled daily overtime last week at the Lordstown, Ohio, car facility. The postal vehicle line at the Moraine, Ohio, truck plant also worked overtime.

Ford Motor Co. announced that four truck plants will be idle this week: Wayne, Mich.; Norfolk, Va.; St. Louis; and St. Paul, Minn. The company has also closed the Atlanta; Dearborn, Mich.; Lorain, Ohio; and Wayne, Mich., car plants. Both the car and truck lines at the Kansas City, Mo., facility will be down this week.

All Chrysler Corp. car plants in the United States and one truck plant are closed this week. The Belvidere, Ill., and St. Louis (No. 1) car plants and the Toledo, Ohio, truck plant are expected to resume production Feb. 18. The Newark, Del., and Sterling Heights, Mich., car plants are scheduled to reopen Feb. 25.

Cars in Canada make 38% gain

Canadian auto production in January was 80,813, an increase of 38.73 percent over the year-ago month and 36.67 percent above December.

Truckmakers assembled 60,007 units in January, 4.67 percent below the year-ago month and 16.23 percent above December.

4 imports, Corvette play incentive game

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Five automakers announced or extended incentive programs last week.

Toyota Motor Sales U.S.A. Inc.'s new dealer incentive program, which runs through April 3, applies to 1989 to 1991 cars and trucks and is based on performance against sales quotas.

Dealers receive payments ranging from $200 to $1,000 on 1989 to 1991 Camrys and Corollas, $700 to $1,500 on 1990 and 1991 Celicas without the Extra Value Package and $200 to $1,000 on the 1991 Celica.

The program also pays dealers $200 to $600 on 1989 to 1991 two-wheel-drive and four-wheel-drive non-base pickups and $600 to $1,000 on the base models.

American Suzuki Motor Corp.'s dealer program pays rebates of $400 to $2,000 on 1990 and 1991 Swifts and Sidekicks. The dealer can keep the cash or pass it along to the customer.

The program runs through April 3. Payments on 1990 models are: Swift three-door GA/GL, $400; Swift four-door GA/GL/GS/GLX, $500; Swift GT, $1,000; Sidekick two-door 2wd, $2,000; Sidekick four-door 4wd hardtop, $1,500.

The payments to dealers on 1991 models are: Swift three-door GA, $400; Swift four-door GA/GS, $500, Swift GT, $1,000; Sidekick two-door 2wd, $1,500; and Sidekick two-door 4wd, $1,000.

Dealer rebates announced by Audi of America on 1990 models are: $1,500 on the 80 Quattro, 90 Quattro and Coupe Quattro all-wheel-drive models; $2,300 on the 80 and 90 front-wheel-drive models; $3,000 on the 100 and 200 Class C models; and $4,000 on the V8. The program runs through Feb. 28.

Peugeot Motors of America Inc. announced a dealer rebate of $2,000 on all 1990 models. The program runs indefinitely.

Chevrolet extended its dealer/consumer incentive program on 1990 and 1991 Corvettes through April 7.

The dealer cashbacks, based on sales, range from $1,000 to $3,000. The consumer phase pays $3,000 rebates to General Motors employees and those making product evaluation purchases.

MALMO

FROM PAGE 1

ing sales in the United States. Half of Saab's net loss, or about $425 million, will have to be accounted for in GM's earnings statement.

GM paid $600 million for 50 percent of the former Saab Car in late 1989, forming Saab Automobile AB as a joint venture with Sweden's Saab-Scania AB.

Saab Automobile officials blamed the staggering loss on low sales and under-utilization of capacity. In addition, the company said the falling dollar cost the company 300 million kronor ($55 million) in revenue.

Production fell to 89,000 units last year from 103,000 in 1989 as Saab's key markets — Sweden, Britain and the United States — weakened sharply. U.S. sales fell 16 percent last year, to 26,397, and skidded 47.9 percent in January.

Without elaborating, Saab Automobile also announced that it is "in the process of reviewing its capital structure." The review will be completed in the "near term," it said.

"The shareholders will then review appropriate measures to support Saab Automobile and the aggressive capital spending program planned," the company said in a statement. President David Herman declined to elaborate.

> "This is the best formula for sustained profitability at Saab Automobile."
>
> **David Herman**
> Saab Automobile president

Saab Automobile's board said there is no prospect of assigning other production to the Malmo plant, which opened to great fanfare in the summer of 1988. The modern, ultra-automated plant features a non-conventional manufacturing system in which worker teams assemble one complete car at a time rather than follow traditional production-line routines.

A GM spokesman said he could not conceive of utilizing Malmo, even though GM remains capacity-constrained in Europe.

Saab said that by concentrating production at the company's Trollhattan facilities, better efficiencies can be obtained.

"We are confident that increased volumes of Saab vehicles can be made at our Trollhattan plant," said Herman. "This is the best formula for sustained profitability at Saab Automobile."

The action "was the most obvious thing to do to get some overhead out of the business," said analyst Peter DuPont, a Swedish specialist at UBS Phillips & Drew in London. "And the GM management did not appear too impressed with the operation, even if they could get utilization up."

Saab Automobile's next measure, DuPont reckoned, might be to link its U.S. sales organization with GM in the way it has joined with GM in Canada. But Saab officials have insisted they will not take the same approach in the United States.

Saab-Scania phased out a smaller plant in Arlov, Sweden, as the new Malmo plant came on stream. But the opening of Malmo, which was intended to reach a capacity of 60,000 units within 2-3 years, increased the company's potential capacity from 140,000 to 180,000 units at a time when sales were already starting to slide.

Only about 10,000 cars were built there last year.

EARNINGS

FROM PAGE 2

company did not incur all of the expenses related to the one-time $577 million restructuring charge posted in 1989. The credit was the result of Chrysler's decision to delay the planned closing of its St. Louis No. 1 plant and to retain additional UAW employees needed to implement increased production at the St. Louis No. 2 plant.

But Chrysler has no hope of emerging unscathed in the first quarter of 1991.

"The year ahead is even more uncertain than 1990," Iacocca said. "In my lifetime I have been through 10 recessions, the Great Depression and this makes my fourth war. In all that time, I have never been through a war and a recession at the same time. We are really into some unchartered waters here."

Iacocca said company executives would meet with bankers within two weeks to review available credit that might be needed in the event of a severe downturn.

Asked if Chrysler might follow General Motors, which last week reduced its common stock dividend, Iacocca appeared to retreat from his earlier position that Chrysler's dividend would be maintained "short of nuclear war."

Iacocca said the Chrysler board will hold its quarterly meeting to discuss the dividend next month and will assess the impact and expected longevity of the Gulf war and the recession.

"I would hope we could muddle through, but maybe we can't," Iacocca said.

He also did not rule out another round of personnel layoffs at the company and said Chrysler must further reduce its layers of management.

Miller said Chrysler is drawing on cash reserves to pay suppliers because the company is not building the number of vehicles anticipated when parts were ordered. Chrysler is operating at 50 percent production capacity, he said. But the cash erosion is expected to be stemmed by the second quarter, according to Miller.

Chrysler had $3 billion in cash reserves at year end. "At some point dealers have to stop destocking," he said. "There are 400,000 units in the field today versus 650,000 units one year ago."

Iacocca said: "If you look at first quarter schedules for Ford, GM and us, we are spilling off billions in cash. You are going to see huge operating losses. And then you throw in these aggressive forward model programs and you start to run out of money."

Iacocca said Chrysler's product program remains untouched. But Miller suggested that the entire industry would be facing product deferrals if an economic recovery is not underway in 1992.

Last week, Chrysler also said in the first quarter it will post a one-time $257 million charge against earnings due to an accounting change. Chrysler will now record incentive charges at the time a vehicle is shipped, rather than when it is retailed.

Incentives costs are now averaging about $900 per unit, down from about $1,200 per unit during most of 1990, York said. Chrysler said it spent in excess of $2 billion on incentives in 1990.

Chrysler had worldwide sales and revenues of $30.6 billion in 1990, down from $35.2 billion in 1989. In the fourth quarter, worldwide sales and revenues were $7.6 billion, down from $8.0 billion a year earlier.

Worldwide factory unit sales in 1990 were 1,984,333 cars and trucks, down 16.7 percent from 1989.

The East: Its promise is reshaping automaking

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — The promise of Eastern Europe has dramatically reshaped investment patterns and survival strategies among Western Europe's automakers.

Europe's ground rules have changed and the targets have shifted since the fall of Communism. And Western automakers have moved much faster to establish themselves in Eastern Europe than virtually anyone predicted a year ago — swiftly staking industrial claims and setting up distribution networks.

"I think it is a hell of an opportunity," Ford of Europe Chairman Lindsey Halstead said in a recent interview. "It provides a growth opportunity over the long haul that simply did not exist before. So it makes Europe — when you add in Eastern Europe — a very big automotive market."

But the region's economic potential is unlikely to be realized quickly. Each country in the old East Bloc is undergoing what promises to be a long and painful development period.

"There will be a period of three to four years where there will be some kind of depression in these countries," says Sanjay Dabysing of DRI Europe. "But once their economies improve, the markets will increase very fast."

But for the foreseeable future, each country is barely muddling through as they make the painful transition from centrally planned to free-market economies. The United Nations Economic Commission for Europe estimates that total industrial production in Eastern Europe plunged 18 percent during the first nine months of 1990.

Even the former East Germany, the strongest of the former East Bloc countries and now underpinned economically by Bonn, is on the brink of collapse. Unemployment has been rising at a monthly rate of 200,000 — reaching 2.6 million — as inefficient, former state-run industries shut down.

According to PlanEcon Inc., a

Toyota's entry means war in big-pickup field

It's Big 3 profit stronghold

By Joseph Bohn
and Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTERS

The last important all-American segment will be integrated when Toyota Motor Sales U.S.A. Inc. brings a full-sized pickup truck to market, probably by the mid-1990s.

"There's no question we're planning a large truck; it's just a question of when," said Al Wagner, Toyota senior vice president, after a session with Toyota dealers at the the National Automobile Dealers Association convention in Atlanta.

The revelation to dealers sets the stage for a major battle with the Big 3, who depend on the profits of full-sized pickup trucks.

The big trucks have generated big sales, large profits and strong owner loyalty for the Detroit-based manufacturers. The segment was the last one free of import competition.

"To the extent many people have said Chrysler has only one or two profitable product lines, right now I would say the same thing about Ford Motor," says analyst Maryann Keller of Furman Selz Inc. in New York.

"The full-sized pickup is probably the single most important vehicle in GM's and Ford's product lines," she added.

Saturn hopes its seat problem becomes a case study on recalls

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Saturn Corp. officials hope to take another page from the Japanese book of customer satisfaction — this time, in how to recall a much-publicized new car.

Saturn lived up to its advertising slogan — "A different kind of company" — in the way it notified its car buyers about its first-ever recall. The company last week recalled 1,210 base-level SL and SL1 sedans to correct a defect with front seat-back recliner mechanisms. Another 270 affected cars are either at the Saturn plant in Spring Hill, Tenn., or in dealer hands.

The problem could cause the seat back to slip backward a notch or more. Since the problem was not a safety defect, the government was not involved.

The company sent overnight letters at $9 each to every affected owner. But it also sent letters to all

Dealers seek sales fix at workshops

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

ATLANTA — Bus Goode is a Rupert, Idaho, Ford-Lincoln-Mercury dealer who likes a good time.

Normally, Goode attends National Automobile Dealers Association conventions to go to parties. He avoids workshops and other more serious matters in favor of the various receptions, then later buys the workshop tapes that interest him.

Not this year.

"Even I went to a workshop," said Goode, who wanted to learn more about financing used cars on his own, a topic that was discussed in a seminar called "Buy Here-Pay Here."

Goode said up to 30 percent of the general public cannot get financing to buy vehicles, a market he would like to tap.

Goode's more business-like approach was a common thread weaved through a fabric of both optimism and pessimism at this year's NADA convention. Some 15,000 dealers and related industry professionals attended,down from 22,000 in Las Vegas last year.

Bill Jenkins, a Ford dealer in Fuquay Varina, N.C., said it costs an average $2,500 for each dealer to attend the convention,

GM posts only Big 3 loss in '90

By Phil Frame and Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTERS

Despite General Motors' market share gain in 1990 and all the talk of impending doom at Ford Motor Co. and Chrysler Corp., GM turned out to be the only Big 3 auto company to post a loss last year.

GM last week announced a 1990 loss of $2 billion, compared to a profit of $4.2 billion in 1989. Ford reported a profit of $860 million for 1990, down 77 percent from $3.8 billion the previous year.

Chrysler surprised most analysts by reporting a 1990 profit of $68 million two weeks ago.

GM would have earned $102 million for 1990 had it not taken a $2.1 billion writeoff in the third quarter to close four idle assembly plants and to close or consolidate at least five other plants over the next several years.

After losing U.S. market share in cars and light trucks combined during most of the 1980s, GM reversed the trend in 1990, capturing 35.5 percent of the light-vehicle business, compared to 35.1 percent in 1989.

GM lost $1.6 billion in the fourth quarter, when the Gulf crisis and economic woes killed consumer buying confidence.

The fourth-quarter loss, which compared with a $700 million profit in the same quarter of 1989, nearly offset the $1.7 billion GM earned — not including the big writeoff — in the first three quarters combined.

The company's fourth-quarter loss was a result of not being able to reduce costs fast enough as sales volume spiraled downward, said Chairman Robert Stempel.

Prospects for earnings in the first quarter of 1991 look poor as well, Stempel said in response to a question at the National Automobile Dealers Association convention in Atlanta.

GM's North American automotive operations lost money in 1990, with analysts estimating that Saturn Corp. was at least a $600 million to $700 million drain, while overseas automotiveoperations earned $2.4 billion. Its three major subsidiaries — General Motors Acceptance Corp., Electronic Data Systems Corp. and GM Hughes Electronics Corp. — reported record or near-record earnings.

As Ford reported its 1990 woes, the company said that prospects for the first quarter look dim. David McCammon, Ford vice president of finance and treasurer, said the company expects to report a substantial loss for the first three months of 1991.

Ford's biggest tumble came in the fourth quarter, when it lost $519 million. The other three quarters were profitable.

Vehicle sales were down inside and outside the United States.

For the year, Ford sold 5.9 million vehicles worldwide, compared to 6.4 million in 1989. Its U.S. automotiveoperations lost $17 million last year, compared to earnings of $1.1 billion in 1989. Ford earned $116 million on its non-U.S. automotiveoperations, down $2 billion from 1989.

The only bright spot in Ford's financial picture was its Financial Services Operations, which earned $761 million last year, compared to $660 million the previous year.

Program-car plan slapped

Ford dealers oppose stand-alone sales outlets

By Kathy Jackson
AUTOMOTIVE NEWS STAFFREPORTER

ATLANTA — The Ford Division make meeting erupted into a 45-minute debate on the merits of the used-car franchise Ford Motor Co. is developing to sell so-called program cars. Virtually all of the 100 Ford dealers present were opposed to the plan.

L-M dealers also blast Ford plan, Page 50

It was clearly what concerned holders of Ford franchises most at the National Automobile Dealers Association convention here last week.

At a 75-minute private meeting, at least 45 minutes were devoted to Ford Motor Co.'s proposal to set up free-standing used-car franchises to sell program cars — cars that Ford buys back from daily-rental fleet purchasers.

"That was the major issue," said Bill Jenkins of Don Jenkins & Son Ford in Fuquay Varina, N.C. "Ford doesn't have any idea of what they're doing with this program or why they're doing it."

Ford plans to select five major cities to test the program. Profitable, successful Ford and Lincoln-Mercury dealers will be selected to run the stores that will sell the used cars, which generally have a maximum of 10,000 miles. Ford says it will test the program first to determine whether it will have a serious impact on new-car sales. The test is slated to begin this spring.

Now, all Ford Motor dealers can buy program cars at auctions restricted to Ford Motor dealers. That will not change.

Dealers say that sales of the nearly new cars have already trimmed new-car sales by at least 25 percent, and they fear the figure could go higher if free-standing stores are set up. They are also concerned because not all of them will be allowed to hold the franchises, and they say the new stores could hurt the sales of dealers who already sell program cars.

A Ford executive, who did not want to be named, confirmed that only about 100 such franchises will be set up if the program is rolled out nationally.

"The dealers can already sell these cars off their lots," Jenkins said. "So why set up additional retail outlets when there are no additional retail customers?"

And the vote was unanimous among the 100 or so dealers at the meeting that they don't want Ford to proceed with the plan.

Timothy Loudon, president of A.J. Loudon Co., a Ford dealership in Salem, Ohio, agreed with Jenkins that program cars were the No. 1 concern of the dealer body at the meeting.

"Ford is looking for alternatives, but there is also concern with plant closings and production levels" if new-car sales fall off dramatically due to competition from the program cars, Loudon said.

"It's the sign of the times," said a Ford official who did not want to be named. "The dealers must realize that what's good for the company ultimately will be good for them."

Cash flow was another area of keen interest to the Ford dealers.

The dealers were told that Ford Motor Credit Co. has agreed to work with any of them who have immediate cash flow problems and that a new program can save dealers about 35 percent on their long-distance telephone charges.

The majority of the dealers said they favored consumer rebates over dealer incentives.

Dealers also complained about the quality of Ford cars. "I still feel it's behind the perceived leaders — Honda and Toyota," said a dealer who asked not to be identified. "It's Toyota and Honda that Ford needs to be chasing as far as quality is concerned, not GM and Chrysler."

Bush's dual-fuel plan spells CAFE relief

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — The Bush administration energy plan, due to be sent to Congress this week, contains a bonanza for the auto industry while imposing only one burden.

The plan would allow automakers to claim huge gains in their corporate average fuel economy by producing cars capable of running on both gasoline and alternative fuels. And those gains would come even if, in practice, the cars run on gasoline.

The Energy Department is expected to propose elimination of the limitations on benefits that flow to a company's CAFE rating from the sale of flexible-fuel vehicles. The department also will oppose giving incentives to the oil industry to produce alternative fuels.

Approval is by no means certain in Congress, which is now considering higher fuel efficiency standards and possibly higher taxes on inefficient vehicles.

Under the 1988 Rockefeller-Sharp Act, automakers can claim no more than a 1.2 mpg improvement of their CAFE from using flexible-fuel vehicles. These vehicles can run on gasoline and another fuel, such as methanol or ethanol, or a mixture of two fuels.

Without the cap, manufacturers could earn enormous CAFE credits by using flexible-fueled vehicles. That's because CAFE is calculated on gasoline efficiency.

For example, a car running on M85 (15 percent gasoline and 85 percent methanol) with a 15-gallon fuel tank would hold mostly methanol and just 2.25 gallons of gasoline. If the car gets 20 mpg, it would have a driving range of 300 miles. In the eyes of CAFE rules, each gallon of gasoline powers the car an equivalent of 133 miles.

The removal of the ceiling could greatly benefit companies worried about meeting the current 27.5 mpg CAFE standard and would be especially helpful if Congress enacts higher CAFE demands.

Under the 1990 Clean Air Act, automakers are forced to begin building alternative-fuel vehicles, which could include flexible-fuel vehicles. Automakers have complained the law forces them to sell something for which no demand yet exists.

By elimination of the ceiling on CAFE benefits, automakers would be encouraged to make and sell flexible-fuel vehicles, even if they never run on alternative fuels. This is even more important because the Energy Department has no plan to increase the production and import of non-petroleum fuels, which could seriously dampen demand.

The extra demand on the auto companies in the Energy Department's proposal concerns urban fleet provisions for alternative-fuel vehicles. The provisions go further than those in the 1990 Clean Air Act, and they require single-fuel vehicles using electricity, natural gas, ethanol or methanol.

Starting in 1995, when owners of fleets of vehicles such as delivery vans and taxis buy new vehicles, 10 percent must be made for non-petroleum fuels. By 2000, 90 percent of such purchases would have to be alternative-fuel vehicles.

These rules would cover fleets of 10 or more vehicles in urban areas with problems in meeting national air quality goals and fleets of 20 or more in all metropolitan areas. Rental cars are not affected, but urban buses and city vehicles such as garbage trucks would be.

The only other strategy directly affecting automakers is to encourage getting rid of gas guzzlers. Urban areas heavily impacted by pollution would get credits by buying and junking old cars. The auto industry would benefit from the increased sales opportunity.

Federal fleets get flexible-fuel cars

WASHINGTON — The federal government has purchased its first alternative-fuel vehicles under the Alternate Motor Fuel Act of 1988.

Twenty-five flexible-fuel Chevrolet Lumina sedans are being added to the federal fleet and 40 Ford Taurus models will arrive soon, according to Richard G. Austin of the U.S. General Services Administration. These 1991 models, which can run on methanol or gasoline, are part of a Department of Energy-General Services Administration evaluation of alternative-fuel vehicles.

Eight Chevrolets will go to federal agencies in Washington, 12 to California and five to Detroit.

The distribution of the Fords will follow the same pattern: 15 to agencies in Washington, 15 to Detroit, five to Los Angeles and five to San Diego.

The act encourages the use of alternative fuels by promoting government fleet purchases.

— Helen Kahn

NHTSA fears widespread RV seat belt failures

By Joseph Bohn
TRUCK EDITOR

Several van converters failed to meet federal safety standards governing the strength of their seat and/or seat belt attachments in the first government tests in five years on conversion units.

The vehicles' failure to meet Federal Motor Vehicle Safety Standards 210 and/or 207 signals a potentially widespread and serious problem for the industry, since many manufacturers use a common method of anchoring rear seats and/or belts in their vans.

Robert Hellmuth, director of the office of Vehicle Safety Compliance at the National Highway Traffic Safety Administration, said the van conversions that failed will be subject to recall and the agency will continue testing other brands.

"We have found a problem that appears to be widespread, and we are asking the industry to help clean itself up," Hellmuth said. "We hope they make the corrections before we have to jump all over them with both feet."

Helmuth acknowledged that some van converters "have done a terrific job of meeting all the standards."

Mark III Industries of Ocala, Fla., and Custom Craft Vehicles of Milwaukee, for example, have been heavily involved in safety design and testing.

Mark III uses a seven-point safety program to meet or exceed federal standards, and Custom Craft spent $800,000 last year to meet 1992 standards a year early.

Neither NHTSA nor the converters involved in its recent tests has publicly issued recall notices.

The companies that will be recalling vehicles include Starcraft Corp. of Topeka, Ind.; Explorer Van Co. of Warsaw, Ind.; and Van Craft Corp. of Marietta, Ga.

Their products were randomly selected for the NHTSA tests.

Van Craft was tested simply because it had built a special price-leader model for one particular customer in the Washington, D.C., area, and "we just happened to buy that model," said Harry Thompson, chief of the Vehicle Division, office of Vehicle Safety Compliance at NHTSA.

It is difficult to determine how many vans will be recalled or when because tests on additional models are still being made, and then companies have to come up with a satisfactory fix for them and ship parts to dealers, Thompson said.

NHTSA just tested one Explorer model, for example, built on a Chevrolet chassis. Explorer is now having test work done on its other chassis.

"We're still waiting for data from people like Explorer. They're having tests done by reputable independent test labs," Thompson said.

Robert H. Kesler, president and chairman of Explorer Van Co., said in NHTSA's test the heavy 3/16-inch steel plate anchoring one side of a rear seat belt cut through the steel flooring of the vehicle.

He expressed surprise that the steel floor was "not as strong as our anchoring."

He added that all the captain's chairs in the NHTSA test van did meet the seat belt safety standard.

He said Explorer is now working on a retrofit plan for rear seating seat belt anchorages in its vehicles now on the road. It also plans a new front seating system, even though there were no problems with that seat belt system.

Federal Motor Vehicle Safety Standard 210, which went into effect for vans in 1971, requires that a combination seat and shoulder belt system that is all one unit be able to withstand 6,000 pounds of force.

Many converters have been using a seat belt attachment bar for their rear bench-type seats and sofa seats that can pull right through the van's floor, according to industry officials. That's because the gas tank is in the back where the seat is located, and it is difficult to attach the seat belts to the floor.

So, converters often attach the seat belts to a bar that is mounted to the floor at the outboard edges of the vehicle. Frequently, it has only those two attachment points to take a 15,000-pound load. Bench seats typically have three lap-and-shoulder belt systems, each required to have a 5,000-pound force capacity.

"Anyone using a seat belt attachment bar for a bench-type seat or sofa seat is susceptible" to failing the standards, said Thompson.

While Standard 210 involves belts that are not attached to the seats, Standard 207 comes into play if the seat belts are attached to the seat. That is more common with front driver and passenger seats.

Jerome C. Loftus, general counsel for the Recreation Vehicle Industry Association, said he was invited to view NHTSA's van conversion seat tests on Jan. 11, 1991.

"Two of the vans tested used seat belt bars to anchor three seat belts in the rear bench-type seat. In each instance, the seat belt bar pulled completely through the floor when the test force was applied," Loftus said.

One bar was backed with what appeared to be two-inch fender washers with one bolt per side; the other used a steel rectangular backer plate with two bolts per side, Loftus said.

The mid seats of one van failed when the pedestals broke in two, causing the test to be aborted before the full load could be applied, he said. It was determined that a faulty weld on the pedestal caused the breakage.

In testing other pedestal seats in the vans, it was noted that, while the seats did not break loose, they nevertheless bent all the way forward so as to possibly endanger the occupants when coming into contact with rigid parts of the vehicle, Loftus said.

Converters' tests may be flawed

By Joseph Bohn
TRUCK EDITOR

National Highway Traffic Safety Administration and Recreation Vehicle Industry Association officials expressed concern about the way some converters test their vans.

Robert Hellmuth, director of the office of Vehicle Safety Compliance at NHTSA, said often van converters use individual component manufacturers' test data to meet requirements such as Federal Motor Vehicle Safety Standard 210 rather than test the seat system as one unit.

One supplier may make the pedestals, another the seat. "The van converter bolts them together, puts them in a van and hopes they comply with the federal requirement," Hellmuth said.

Such tests also may involve bolting a seat, slide, pedestal and/or belts to a hard surface outside the van where it holds up fine. But the same component may rip through the much thinner-gauge sheet metal floor of a van.

NHTSA said seat belt angles change with the interchange of occupants, and angles for all combinations are not being documented. NHTSA has evidence of seat belt angles of 90 degrees, which exceed the 75-degree requirement in standards 207 and 210.

The agency noted that because of the excursion of the pedestal seats under a load, occupants of these seats may be endangered during a crash because the occupants and the seats will rotate forward, or rearward, and come in contact with rigid parts of the vehicle.

Jerome C. Loftus, general counsel for the Recreation Vehicle Industry Association, said NHTSA's concerns "appear to be valid."

"Any manufacturers who mix components in their vehicle seating systems have an added responsibility to ascertain the validity of the individual component certifications as regards the final seating system," Loftus said.

"Further, a supplier's certification that its individual components can withstand specific forces may mean little or nothing if the manner in which they are installed and/or the vehicle structure into which they are attached cannot withstand the required force when applied to the total seating system." Responsibility for determining and certifying compliance lies with van converters.

Coachmen's Vision

Coachmen Vans of Elkhart, Ind., has introduced a new full-sized van, the Vision 2000. Standard are custom four-color graphics and color TV with VCR. It carries a $30,000 sticker price and is available on Ford, Dodge and Chevrolet chassis.

Ford adding converters to van pool

By Joseph Bohn
TRUCK EDITOR

Ford Motor Co. has renewed its efforts to qualify and sign new pool accounts, according to Jerome Mittman, Ford Division RV sales manager.

Mittman said the company wasn't very active in adding new accounts during the second half of last year, but it renewed its efforts in January.

A pool account is a converter or second-stage manufacturer that has passed engineering and financial reviews by a manufacturer like Ford and qualifies to receive chassis under special agreements with the manufacturer.

Pool accounts qualify for a reduced 90-day interest rate of one to four percentage points, depending on their volume, on the chassis they buy from Ford. After 90 days, they pay the same prime rate plus 1 percent that dealers pay on units in inventory.

The purpose of a pool account is to provide quality aftermarket products to dealers and retail customers on a timely basis, Mittman said.

Ford has had a significant increase in the number of van chassis going through its pool system, as a result of tighter chassis controls.

Two years ago, only about 40 percent of its vans were being converted by pool accounts. Now, it's about 70 percent.

Ford plans to add 30 companies to its pool system and have them convert about 90 percent of its chassis by fall.

Ford, like Chevrolet, GMC and Dodge, still has to contend with industry attrition caused by the weak market.

Bivouac Industries of Vandalia, Mich., Ford's No. 2 pool account last year, is gone, Mittman confirmed. Its plant and assets are for sale.

Bivouac's abrupt departure highlights the rapidly changing ranks of high-volume converters.

Starcraft Corp. of Topeka, Ind., ranking seventh with Ford at the end of December, has also dropped from the the top 10, as has Ger-Win Vans Inc. of Bristol, Ind., which ranked eighth in volume.

Ford's top eight pool accounts are: Glaval Inc. of Elkhart, Ind.; Mark III Industries of Ocala, Fla.; Waldoch Crafts Inc. of Forest Lake, Minn.; Sherrod Vans of Jacksonville, Fla.; Tiara Motor Coach of Nappanee, Ind,; Royal Vans of Texas of Round Rock, Texas; Kentron Inc. of Elkhart; and Winnebago Industries of Forest City, Iowa.

The introduction of the restyled 1992 Econoline should give converters a shot in the arm this fall.

Glaval, by virtue of being Ford's top account, received the assignment to convert a 1992 model Econoline, which was displayed at the Chicago auto show.

Mittman feels the new Econoline will provide "significant opportunities to van converters and other modifiers to revise their styling to take advantage of a new look for a totally new product."

"It's a key opportunity for converters, we hope to stimulate Ford dealer enthusiasm and more retail enthusiasm," he added.

Mittman said the improved Club Wagon will not affect sales of Econoline conversions because Ford will not offer the unique features provided by converters.

PICKUPS

FROM PAGE 1

U.S. sales of full-sized pickups were 1,238,624 in calendar year 1990, down 6.71 percent from 1989.

Even with the drop, they stayed in the 1.2 million to 1.3 million yearly range they've been in since the end of the last recession in 1982.

Sales reached a decade-long high of 1,327,759 units in calendar 1989.

During the last decade, full-sized pickups have typically accounted for more than 25 percent of all light-truck sales.

Ford's F-series pickups have been the industry's top-selling vehicle line for the last nine years and Ford's best-selling line for the last 18 years, says Joel Pitcoff, Ford research and analysis manager.

Dealer dependence

Full-sized pickups are even more important to some dealers than they are to the factories.

The trucks account for about one of every five vehicles sold by a Ford or Chevrolet dealer.

According to private studies conducted for truck manufacturers by Maritz Marketing Research Inc. of Toledo, Ohio, buyers of 1990 models paid an average transaction price of $16,200 for full-sized pickups.

The average transaction price was $15,400 for a Ford F-series pickup, $16,200 for a Dodge Ram pickup and $16,600 for a Chevrolet C/K and GMC Sierra.

The F series sold for less because of a higher percentage of manual transmission models, which typically have less optional equipment.

Joseph Philippi, an analyst with Shearson Lehman Brothers in New York, estimated that GM and Ford realize a profit of at least $4,000 to $5,000 per vehicle on their big pickups.

That would translate into a contribution to the corporation of $2.1 billion to $2.6 billion annually for Ford and $2.5 billion to $3.2 billion for GM, at a time when the companies are not earning profits on overall North American vehicle sales.

"If you look at the vehicle relative to the amount of content that goes into it — either metal, hours of manufacturing or assembly — and life cycles, which are quite long, you quickly recognize that profits, relative to the selling price, are substantial," Phillippi says.

While auto companies don't supply precise figures, "they basically admit that the only place they make money in North America is in their light-truck operations," he says.

Full-sized pickups tend to be among the most profitable light trucks, he adds.

"There may be sheet metal changes; but the platform, the basic vehicle principals, change only once a generation," he says. That allows tooling investments to be amortized over long periods.

- GM's 1988 C/K and Sierra models introduced the company's first new platform for full-sized pickups in 17 years.
- Ford still is using the same basic F-series platform that it introduced in 1980. It restyled the F series in 1987 and plans to revise 1992 models, still using the same platform.
- Dodge has used the same Ram pickup platform, with minor sheet metal changes, for 20 years. It plans all-new models in 1993.

Ford and GM have battled each other in that market for decades, trying to steal customers who are among the most brand-loyal in the industry.

Market share battles

The war of words began to heat up in the 1950s, with the use of registration data to lay claim to industry leadership.

In the past two years, Chevrolet and GMC have regained some of the ground they lost to Ford in 1988 during the introduction of their restyled C/Ks and Sierras.

Ford outsold Chevrolet by 34,526 full-sized pickups in calendar 1990.

Ford's share of the U.S. full-sized pickup market dropped from 44.15 percent in calendar 1988 to 42.15 percent in calendar 1990.

Meanwhile, Chevrolet inched up to a 39.36 percent market share in 1990 from 38.97 percent in 1988. And GMC gained slightly with an 11.39 percent share in calendar 1990 compared to 10.68 percent in calendar 1988.

Dodge bounces back

The big gainer, though, has been Dodge Division, which was beginning to look like an endangered species in the pickup market until it came up with the idea of offering a Cummins diesel engine in its Ram pickups in the 1990 model year.

They now account for half of Dodge's big pickup sales, even though they're not available in high-volume half-ton models. Dodge offers them only in three-quarter-ton D-250 and one-ton D-350 units.

Dodge went from 6.20 percent of the market in 1988 to 7.10 percent last year.

Buyers of full-sized pickups are typically married males who have slightly less education and are slightly more likely to work in blue-collar jobs than the average car buyer.

They also tend more frequently to live in rural areas and farming communities.

FULL-SIZED PICKUP PROFILE, 1990

Make & Model	Platform introduced	Transaction price*	Unit sales	Unit profit †	Contribution to corporation
Ford F series	1980	$15,400	522,034	$4,000	$2.09 billion
Chevrolet C/K	1988	16,600	487,508	4,000	2.51 billion
GMC Sierra	1988	16,600	141,104	4,000	
Dodge Ram	1971	16,200	87,978	4,000	0.35 billion

Buyer satisfaction up in Canada

By Alex Law
STAFF CORRESPONDENT

Canadians are more satisfied than ever with their new cars, says a Canadian Automobile Association survey.

A survey of 20,000 association members shows that 74.2 percent said they were very satisfied with their new cars, up from 73.0 percent in 1990 and 72.0 percent the year before.

This year's study again shows that Canadians who own Asian cars are the happiest. But the percentage of Asian car owners who are very satisfied slipped a little, while European and North American cars gained.

In the 1989 survey, 67.1 percent of owners of North American cars said they were very satisfied. That number is now 70.0 percent. The scores of owners of European makes have increased from 75.8 percent two years ago to 80.2 percent this year.

Among owners of Asian cars, 82.3 percent were very satisfied in 1989. That number is now 81.9 percent.

The 10 most-loved cars are all imports. Ninety-three percent of Mercedes-Benz owners said they were very satisfied. Mercedes was followed by Honda-Acura (87.8), BMW (87.0), Jaguar (85.7), Volvo (85.5), Toyota (85.2), Mazda (82.1), Volkswagen (79.1), Saab (78.9) and Nissan (76.7).

On the domestic side, GM scored 71.6, Chrysler 69.0 and Ford 68.3.

The biggest single increase in very satisfied customers went to BMW, which rose 22.5 percentage points over last year. The only Japanese firm to post an increase was Nissan, which scored a 0.6 percentage point gain.

HAPPY BUYERS

Percentage of Canadian owners who say they are very satisfied with their new cars, by continent of car origin

	1989	1990	1991
North American	67.1	67.7	70.0
European	75.8	78.2	80.2
Asian	82.3	82.9	81.9
Total	72.0	73.0	74.2

SOURCE: Canadian Automobile Association

The survey also found:

- Brand loyalty is declining for domestics as well as the Asian importers. Only 47.7 percent of domestic owners said they would buy the same car again. Ford had the highest figure (50.3), followed by GM (49.0) and Chrysler (44.5).

The Asian numbers fell from 60.3 to 59.6, with Toyota and Suzuki registering the largest drops.

Exactly 58.0 percent of European car buyers said they would buy the same brand again, up from last year's 54.3 percent.

- The Big 3 all registered minor gains in customer satisfaction with dealer service.

Sixty-four percent of the Asian owners said they were satisfied with dealer service in 1991, down a one-half percentage point from 1990. But the Asian score is still 13.4 points ahead of the domestics and 3.9 points ahead of the Europeans, who dropped by about that much.

- When the time comes to buy a new car, the most likely choice will be the Honda Accord. The next most-likely purchases are Toyota Camry, Toyota Corolla, Chrysler's minivans, Ford Taurus/Mercury Sable, Honda Civic, Ford Crown Victoria/Mercury Grand Marquis, Volkswagen Jetta, Chevrolet Caprice and Ford Tempo/Mercury Topaz.
- The 1987 to 1989 Nissan Sentra gained the association's Used Car Performance Award for a second straight year. The award is based on the level of owner satisfaction with cars built from 1987 to 1989, on mechanical reliability and cost of repairs, and on the number of owners who would choose the same car again.

The Sentra was followed by Accord, Camry, Crown Victoria/Grand Marquis, Caprice, Civic, Corolla, Buick LeSabre, Chrysler New Yorker and Mazda 626.

- Nearly 49 percent of survey respondents want their next vehicle to have air bags, up from 32 percent in 1990. More than half want anti-lock brakes next time, up from 44.3 percent.
- Nearly 55 percent of the owners listed reliability as their chief reason for buying; 51.4 percent listed price. No other factor was named by more than 29 percent of respondents.

OBITUARIES

George J. Augustaitis

ANN ARBOR, Mich. — George J. Augustaitis, founder and owner of Apollo Lincoln-Mercury in Ann Arbor, died Feb. 3. He was 63.

Robert Berkey

PLEASANTON, Calif. — Robert Berkey, owner of Berkey Porsche in Pleasanton and 1990 chairman of the Porsche Dealer Advisory Council, died Feb. 3. He was 44.

Texas Instruments has helped put more than half of America's automotive dealerships in the driver's seat.

What an automotive dealership needs is one computer solution for Sales, Service, Parts and the Business Office. One computer system with the power and flexibility to give each department what it needs most: Control.

That's exactly what a dealership system running on a Texas Instruments 1500 Computer gives you – and it's what you might expect from a company that's been in the automotive business for almost two decades.

So we know what it takes to put you in the driver's seat – and keep you there. It's why more than 10,000 dealerships nationwide now count on computing products from TI.

Because the 1500 Computer is versatile, it can be programmed for one department in your dealership or all of them. Plus, it's renowned for its proven performance and dependability. After all, the 1500 Computer has outperformed comparable models from competitors in benchmark tests* and is backed by the industry's first and only lifetime parts warranty.

No matter what size dealership you run, the 1500 Computer can support software customized for your needs. You can also rely on the high level of service and support you deserve and expect. That makes TI more than a computer supplier – it makes us the smart choice.

So before you invest in a dealership computer system, get the whole story about TI's 1500 Computer. It's the automotive dealership's answer to today's high-performance business challenges.

Put yourself in the driver's seat. Call us toll-free at 1-800-527-3500.

TEXAS INSTRUMENTS

Contamination alert: Don't buy a dirty deal

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

ATLANTA — Federal and state laws to protect the environment mean dealers should literally look below the surface of any property they might want to buy.

The laws involve underground fuel storage tanks; asbestos; hazardous waste and used-oil disposal; and clean air, said Douglas Greenhaus, National Automobile Dealers Association attorney, at the NADA convention workshop on environmental concerns.

Dealers are liable for cleaning up pollution on the dealership site, even if the property is sold, Greenhaus said.

Underground tanks

Underground storage tanks, except for heating oil, are regulated by the federal government, which requires that dealers tell the EPA what each tank contains. Some states also levy annual fees.

The EPA requires that new tanks detect when a substance is released accidentally. The agency also sets construction standards and installation procedures.

Existing tanks are covered by standards being phased in, Greenhaus said. Currently, tanks that are 10 years or older must have a system that detects leaks. But small tanks can be tested manually by comparing the level on Friday afternoon and Monday morning, Greenhaus said.

Dealers will be financially responsible for pollution from their tanks. Beginning in October, dealers must carry insurance of $500,000 to $1 million to cover potential cleanups, Greenhaus said.

Faced with an annual premium of several thousand dollars, dealers may decide to put it out of use.

Clean air

Beginning next Jan. 1, dealers will be required to purchase machines that recycle Freon during servicing. Freon is a chlorofluorocarbon that causes ozone. Some states already require the machines.

The sale of Freon in 12- and 14-ounce cans will be banned, so do-it-yourselfers will not be able to work on their air conditioners.

CFCs will be banned completely at the turn of the century and replaced by non-ozone-causing substitutes that will soon be on the market. (See related story, Page 68.) Dealers will not be able to use the $6,000-plus machines to recycle the CFC substitutes, Greenhaus said.

To comply with the 1990 Clean Air Law, the EPA is phasing in limitations on solvents such as paint thinners and parts cleaners.

In regions that do not meet federal clean-air standards, such as Los Angeles, paint booths may have to be equipped with scrubbers and higher-efficiency guns.

To meet new limits on airborne asbestos, technicians will no longer be able to blow the dust off asbestos-lined brakes with an air hose or dry brush but must use a wet method.

Beginning in 1994, no asbestos can be used in new vehicles. Asbestos will be banned in aftermarket parts beginning in 1996.

Hazardous waste

Under the new Clean Air Law, common products such as used oil filters and rags, batteries and antifreeze may be considered hazardous waste. Antifreeze, because it contains benzene, may have to be sent off-site for disposal.

Oil filters tinged with chemicals and substances now classified as toxic, such as lead, may also have to be handled as a hazardous waste by a licensed hauler.

Greenhaus recommended that hazardous waste be put into containers, not in underground tanks. Thirty drums can be stored, and a container can be kept up to 180 days before shipping.

The federal government can penalize a dealer if waste from the dealership is disposed of improperly, even by an outside disposer, Greenhaus said.

A dealer should get an environmental assessment of any property about to be bought or sold. Contamination from a leaking fuel tank, used solvent or lead batteries can destroy the value of a dealership, said Vance Hughes, a Washington attorney specializing in environmental law. A site can't be sold until it is cleaned up, and some cleanups cost millions.

COMING EVENTS

General

Feb. 18-21 — Composites Institute Conference and Expo, Society of the Plastics Industry, Convention Center, Washington, (212) 351-5410

Feb. 24-26 — ASA Cars/Transmeet Convention, Automotive Service Association, Holiday Inn Mart Plaza, Chicago, (317) 747-7988

Feb. 25-March 1 — SAE International Conference & Exposition, SAE, Cobo Center, Detroit, (412) 776-4841

Feb. 26-28 — International Automotive Aftermarket Show, McCormick Place East, Chicago, (317) 747-7988

Feb. 28-March 1 — Buyouts Symposium, Venture Economics Inc., New York Marriott Marquis Hotel, New York, (617) 449-2100

March 3-8 — Strategy: Formulation and implementation seminar, The Michigan Business School, University of Michigan Executive Education Center, Ann Arbor, Mich., (313) 763-1000

March 8-9 — Auto Trim & Accessories Show, Dallas/Fort Worth Arlington Convention Center, Arlington, Texas, (215) 644-6400

March 10-14 — American Car Rental Association Convention, Walt Disney World Dolphin, Orlando, Fla., (202) 789-2240

March 18-19 — Doing Business in Eastern Europe, University of Wisconsin-Madison Department of Engineering Professional Development, University of Wisconsin-Madison, (800) 462-0876

March 19-21 — East/West Interfreight Conference & Exposition, Cargo Systems International and Hungarian Ministry of Transport's Institute for Transport Sciences, Vigado Concert Hall, Budapest, Hungary, 44 81 330 3911

March 20-22 — Managing International Joint Ventures, Michigan Business School, University of Michigan, Ann Arbor, Mich., (313) 763-1000

March 30-April 2 — North American Material Handling Show and Forum, Material Handling Industry of America, Cobo Center, Detroit, (800) 345-1815

April 3-5 — Interagency Motor Equipment Advisory Committee of the Southeast conference, General Services Administration, Hyatt Regency, Louisville, Ky., (404) 331-0918

April 8-11 — IPC '91 Programmable Controllers Conference and Exposition, Engineering Society of Detroit, Cobo Center, Detroit, (313) 665-0014

April 10-11 — Developing relationships with Japanese automobile manufacturers, U.S. Department of Commerce, Bismarck Hotel, Chicago, (202) 377-5479 or (202) 377-1418

April 10-12 — Intermodal Transportation conference, International Transportatin Association, Hyatt Regency Hotel, Baltimore, (301) 864-4163

April 14-17 — Raw Materials Seminar, Adhesive and Sealant Council Inc., Adams Mark Hotel, St. Louis, (202) 452-1500

Luxury imports off, as expected

By David Versical
NATIONAL EDITOR

Late last year, conventional wisdom said that sales of luxury cars would surge in December then tail off in January after the new luxury tax took effect.

It happened.

While overall U.S. car sales fell 25.42 percent in January, sales of high-line imported cars fared much worse.

Mercedes-Benz came close to the industry, with a 27.42 percent drop from January 1990. But Volvo fell 40.50 percent; Saab, 47.89 percent; BMW, 48.20 percent; Porsche, 65.18 percent; and Jaguar, 66.45 percent.

The effect of raising taxes in January shows up plainly.

For example, in December, Porsche sold 437 of its 911 Carerra 4 models. Now the $72,000 car carries a $4,200 luxury tax. Sales were 113 in January.Sales of Mercedes' $89,300 500SL dropped from 1,146 in December to 455 a month later.

Despite an increase in January sales of its ES250 model, which is not subject to the tax, Lexus saw a year-to-year sales decline for the first time in its short history.

For the most part, makes that increased sales were helped by new models. Infiniti's sales were up 73.86 percent compared with January 1990, solely on the strength of the new G20. Alfa Romeo more than doubled its sales from the previous January, thanks to its new 164. Isuzu, which has renewed its car lineup within the last year, saw sales rise 118.75 percent.

Some individual models also bucked the trend. Honda's Prelude, which will be replaced in the 1992 model year, was up 32.79 percent. Mazda's Protege increased 43.42 percent.

The Mercedes 190, Nissan Stanza, Pontiac LeMans, Subaru Loyale, Toyota Cressida and Volkswagen Corrado were also among those that sold better last month than in January 1990.

Overall sales of imported cars fell 30.68 percent for the month.

HYMAN

FROM PAGE 3

are pumped up about Buick's upcoming line, including a Jaguar-ish looking 1992 LeSabre and a soon-to-be introduced Buick Roadmaster sedan, a full-sized, rear-wheel-drive car apparently targeted at Ford's Lincoln Continental.

"Of all the GM divisions, I think Buick's got the most going for it right now," Hyman says. "New designs. New models coming out. Market share's increasing. Buick doesn't have much to complain about."

10:30 a.m. — Hyman and Cates attend their first seminar, "What Is the Role of Today's Sales Manager." Speaker Jay Crennins of Key-Royal Automotive Co. advises the packed audience of about 200 to use more caution in handing out monthly sales bonuses. Structure sales contests to begin and end during the slowest periods, he suggests. Or give out bonuses that are more lasting, like expensive silk ties.

"He's got some really good points," Hyman tells Cates. "There are so many things we just forget to do."

11:30 a.m. — On entering the convention floor for the first time, Hyman immediately encounters his father, Haywood Hyman, owner of Hyman Brothers Pontiac in Richmond and a dealer since 1946. With him are: Huddy's younger brother Clarke Hyman, owner of William-Clarke Jeep-Eagle-Hyundai-Audi in Charleston, S.C., who is considering adding another Big 3 franchise; Ernie Simopoulos, general manager of Hyman Brothers; and James Ould, a long-time financial consultant to the family.

Huddy Hyman: I'm not just saying this because I sell GM, but I think Buick's going to go somewhere.

Clarke: Yeah? Why?

Huddy: A lot of reasons. We just saw the new Roadmaster. It's really hot.

Clarke: But Roadmaster? Who knows what that is?

Huddy: Yeah. But I mean, all of GM is changing. It's getting leaner, with the management cuts and all. I think Saturn's going to be a blueprint for the whole company.

Clarke: I don't know. Name recognition is still so important.

Huddy: Yeah. I don't know. Hell, I'm so confused.

Haywood: Just cover the basics.

Huddy: Right. Cover the basics.

Haywood: Just cover the basics and you can't go wrong. Believe me.

2:30 p.m. — Hyman, Cates, Ould and Simopoulos file into the NADA opening session with about 2,000 conventioneers. By the time keynote speaker GM Chairman Bob Stempel reaches the podium to speak — two hours into the ceremony — a small trail of exiting attendees is already visible.

7:00 p.m. — Hyman opts to stay in his hotel room to recuperate from lingering flu symptoms. Cates ventures out with Ould to a string of parties.

Sunday, 11:30 a.m. — Hyman, his father and Oulds attend a seminar: "A Forum: Dealership Operations in the United States."

During the forum, Harry Land Jr. of Family Auto Group in Durham, N.C., boasts of making an average $1,100-per-retail transaction on finance and insurance charges.

1:02 p.m. — Outside the meeting room, the group discusses the forum for 20 minutes. They are skeptical of Land's $1,100-per-transaction claim.

Huddy: If he's averaging that, he's really putting the screws in some people. You can't do that to people.

Haywood: He's talking about laying people away, trying to make all of his money on a few customers. You can't do it that way or people are going to stop coming back.

Huddy: That customer's going to get home and see he's paying 16, 17 percent interest and he'll pay off the loan and the dealership won't make anything. That just doesn't work.

1:33 p.m. — In the exhibit hall, the Hymans stop by the Prevent-A-Theft booth, where a $1-million Batmobile replica is on display. Hyman waits to have his picture taken at the Batmobile for his three kids, but the the photographer is late coming back from lunch. The group strolls away.

1:55 p.m. — The Hymans return to the Batmobile; the attendant says the camera is now broken.

2:00 p.m. — Hyman, his father and Cates attend a business meeting for Saturn Corp. where Bob Stempel assures dealers that the carmaker's new $1.9-billion factory will have all the wrinkles out within the next 60 days.

3:30 p.m. — In a reception afterwards, Hyman and Cates — Haywood Hyman left before Stempel arrived — talk briefly with the GM chairman. Cates casually asks whether GM stands to make any money off of the Persian Gulf war.

"We make bullets and bombs," Stempel informs him.

8:00 p.m. — The Hyman group enters the annual Pontiac reception, where about 1,400 people are rocking to Beach Boys music, played at high decibel by Phil Dirt and the Dozers. The group and several friends have amassed, cocktails in hand, near an hors d'oeuvre table in the back of the ballroom. All are in high spirits.

8:18 p.m. — An old friend stops Hyman on the far side of the ballroom and introduces him to Lynn Thompson, a Pontiac dealer from Springfield, Mo., who has just signed on with Saturn. As the band moves through a medley of Four Seasons hits, Hyman tries to tell him how confident he is in the Saturn concept.

"I really think it's the way of the future," he says, straining his voice above the music. "I think all of GM is going to be doing things the Saturn way in the future."

Thompson, who has misunderstood Hyman's introduction and thinks he's a Saturn factory representative, tells Hyman there's no need to sell him on Saturn.

Hyman: No, I'm a dealer. I've got Saturn of Richmond.

AUTOMOTIVE NEWS/JOE WILKENS

Huddy Hyman, who owns Saturn and Buick dealerships, talks with General Motors Chairman Robert Stempel at reception preceding the Saturn Corp. business meeting at the NADA convention.

Thompson: Oh, oh. Well, how are sales?

Hyman: They're OK. You know. Not great yet, but I think they're going to pick up.

9:25 p.m. — A couple of mini-skirted young women have mingled through the Pontiac reception casually asking guests if they know where the Snap-On Tools party is. As a result, a rumor sweeps through the room: a near-by Snap-On party, full of gorgeous models, is the place to be. Dozens of people pour out of the ballroom in search of the Snap-On party.

On a lark, the entire Hyman group heads up a flight of stairs to Snap-On.

9:30 p.m. — Entering the brightly lit Snap-On party, the group is greeted by the sleepy sounds of banjo music. The same two mini-skirted women are seated together at a large table. The rest of the room is largely filled with older couples, dancing to banjo music.

Hyman and Cates look at each other.

"I think we made a mistake," Hyman says to his manager — his friend since junior high school.

9:34 p.m. — Hyman and Cates hurry back downstairs to Pontiac, losing most of the rest of the group during the move. Hyman says he regrets leaving the Pontiac party.

10:28 p.m. — Phil Dirt and the Dozers have stopped playing after an encore. The bright lights are on and hotel staffers are shaking tablecloths and moving tables. Hyman and Cates are standing at the center of the room in an energetic conversation about Customer Satisfaction Index ratings and the future of the industry.

10:45 p.m. — They adjourn to a hotel bar where their discussion continues. A nearby group of boisterous conventioneers is singing the Mickey Mouse theme song.

"I hate to keep harping on this, Johnny," Hyman says, "but I just think Saturn's going to be the way of the future. Retailers have to give customers a real, solid price and stop playing games with people. People are getting tired of that."

11:48 p.m. — The two finish their cocktails and walk to the door as the conventioneers are wailing "The Star Spangled Banner."

Monday, 12:50 p.m. — Cates and Hyman attend a seminar by industry analyst Maryann Keller. Hyman's father, believing Keller to be a relentless critic of GM, refuses to attend.

During her presentation to a standing-room-only audience, Keller is largely positive about GM's progress and future. She confirms Hyman's attitudes by remarking that Saturn's retail concepts will spread through the industry during the 1990s.

2:15 p.m. — Hyman and Cates encounter John Clements, an acquaintance from Petersburg, Va.

Clements: Do you get the idea that GM's trying to sell some program cars right now?

Cates: Yeah, but I don't know how I feel about it. One day I think I ought to take some, and the next day I don't want to touch them. You're not going to get incremental sales with them. All you're doing is taking a new-car buyer and putting him into a used car.

2:55 p.m. — Back on the exhibit floor, Hyman finally has his picture made at the Batmobile, then stops by the General Motors booth. A touch-screen computer system with a talking-head video presentation guides Hyman through several steps that will give him a color print-out of his Buick CSI performance.

As the print-out slowly appears, GM dealer representative Jim Herwalt steps up to assist Hyman. Herwalt peruses Hyman's CSI ratings, which indicate that he scores consistently in the company's highest percentiles. Hyman's overall dealership CSI weighs in at 94 percent — 100 being perfection.

Herwalt: These numbers look real good. How large is your dealership.

Hyman: We sell about 1,200 a year.

Herwalt (raising his eyebrows): Well. That kind of CSI is very commendable. It's hard to attain that level, and hard to maintain it. We need about 2,944 more Buick dealers just like you.

Herwalt pins a "World Class" lapel button on Hyman and gives him a second one to take home for an employee.

"When we took over that dealership in 1987," Hyman explains as he leaves the booth, "we were one of the 20 worst Buick stores in the country in CSI. We're now in the top 20."

7:50 p.m. — During the final evening in Atlanta, Hyman sums up his impression of NADA over dinner at the Pleasant Pheasant. "To me, this whole convention confirmed that the industry's really going through a change right now," he tells his parents and the managers. "To succeed now, you've got to get away from that hard-sell stuff. You can't hammer people to get them to buy. I don't think I would have said that a couple of years ago."

8:05 p.m. — Hyman raises his wine glass with a toast: "Let's never have another December 1990," he says.

Pontiac gives rebates a new look

Dealers get $1,000 extra on '90s if they give up '91 payments

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Pontiac, Subaru and Saab announced dealer and consumer incentives last week.

To help clear dealer inventories of 1990 models, Pontiac announced a program in which dealers can receive higher cash rebates on 1990 models if they forego rebates on 1991s.

The program pays $400 on 1991 Sunbird and Trans Sport, $400 on 1990 Trans Sport and 6000 and $1,000 on 1990 Bonneville and Grand Prix. If the dealer gives up the rebate on the 1991 models, he receives $1,400 on 1990 Trans Sport and 6000 and $2,000 on 1990 Grand Prix and Bonneville.

Subaru of America Inc. adopted new per-unit incentive programs for both dealers and customers on 1990 and 1991 models.

Dealer rebates on the 1991 base Legacy L are: $500 on the four-wheel-drive model, $750 on the front-wheel-drive model, $900 on the 4wd model with value package, and $1,500 on the fwd model with value package.

The Legacy LS 4wd model pays dealers $1,200, and Legacy fwd models pay $1,700. Dealers also receive an additional $1,000 for sales of 1990 Legacys.

Rebates on 1990 Loyale models are $1,500 on the fwd sedan and fwd and 4wd wagons. Rebates on all other 1990 Loyales are $800.

Sales of all 1990 and 1991 XT models pay dealers $2,000 in a move to clear dealer inventory for the debut of the 1992 Subaru SVX sport coupe in August.

The consumer cash rebate on all 1990 and 1991 Justy models with the electronic continuously variable transmission is $500. The Justy program runs through May 2.

Rebates on the 1991 Loyale are $500 on the fwd sedan with five-speed manual transmission and $1,050 on the automatic model, $300 on all 4wd wagons and $500 on the all fwd versions. After that consumer program expires March 5, rebates on selected Loyale models will be $500 through May 2.

Saab-Scania of America Inc. is offering consumer finance rates of 2.15 percent on the 900 series and 4.35 percent on the 9000 series on contracts of 24, 36 or 48 months. The offer ends March 31.

CONVENTION

FROM PAGE 1

money that many of them could not afford. "The story at the convention is not who is here, but who is not here," Jenkins said. "The dealers here are not as pessimistic as the dealers who didn't show up."

About 823 people who had registered to attend the convention canceled by Jan. 10. NADA refunded more than $33,000 to those people.

The cancellations included 208 dealers, 144 dealership managers, 30 people from allied industries, 243 dealer relatives and 198 people from companies that were exhibitors. The biggest block of cancellations came from the General Group, a service contract company that filed for bankruptcy last fall.

But Robert Arnold, a long time Pontiac-GMC dealer in Houston, Pa., said he can recall worse times.

"I remember 1958 when you couldn't give a car away," Arnold said. "Then in 1973 and 1981 when you couldn't put gas in them."

Dealers seemed to take this convention a lot more seriously than some in the past.

Instead of sitting at the bar, playing golf or just plain carousing, some were more intent on attending workshops to learn more about the trends of the business.

Dealers most content seemed to be those affiliated with Mitsubishi Motor Sales of America Inc. Mitsubishi is growing and is introducing a new luxury car in April.

"Excellent product helps, and we're getting that," said Ramsay Gillman, chairman of the Mitsubishi dealer council.

Luxury carmakers such as BMW and Mercedes-Benz complained about the new luxury tax and discussed ways to help head off sales declines.

Japanese giants Honda and Toyota canceled parties due to the war in the Persian Gulf. Toyota contributed the $500,000 it had budgeted for its NADA party to the Armed Forces YMCA, but dealers wanted a party.

"We're all here; they could have shown us some appreciation," said a Toyota dealer who did not want to be identified.

Even spouses took note of the more somber convention.

Mary Ann Cummins, wife of a Pittsburgh Volvo dealer, said she was disappointed at the general downbeat mood in Atlanta.

"I come to socialize," Cummins said. She observed at most parties "they cut down on the champagne, and people are not as bubbly and upbeat."

Toyota backs troops with $500,000

Dealers handling Japanese and German vehicles are worried about a consumer backlash because Germany and Japan have not sent troops to support the U.S.-led war effort in the Persian Gulf, but at least one importer is not patiently waiting for criticism.

Toyota Motor Sales U.S.A. Inc. last week made a gesture of support for U.S. forces in the Persian Gulf, donating $500,000 to the Armed Forces YMCA, an arm of the YMCA that supports U.S. military families around the world.

Part of the money was what Toyota and Lexus saved by not hosting receptions at Atlanta hotels during last week's National Automobile Dealers Association convention. Like Honda and Acura, Toyota said it believed it was inappropriate to have a big party when the nation is at war.

— Kristine Stiven Breese

The General Motors divisions thrilled people the most. At Pontiac's party, you couldn't find room on the dance floor; Pontiac definitely built excitement.

Oldsmobile provided a carnival theme, and GMC had a fortune teller on hand.

"Here it is a war and a recession, and you wouldn't even know it," said a smiling guest at the Oldsmobile party.

But there is a recession and dealers came to learn how to sell more cars.

They heard from outgoing NADA President Ray Green, who predicted that 1991 could bring a record 15 million-unit year for used vehicles and a 10 to 11 percent growth in service and parts business.

> "I remember 1958 when you couldn't give a car away. Then in 1973 and 1981 when you couldn't put gas in them."
>
> **Robert Arnold**
> Houston, Pa., dealer

They heard from GM Chairman Robert Stempel, who told them teamwork between the factories and dealers is the key to success.

GM President Lloyd Reuss told minority dealers that "winners do not think about the opposite of success."

Concluded NADA President Anderson: "I think it will boil down to those dealers who have a good relationship with the customer."

GMC dealers air no major gripes at make session

ATLANTA — GMC Truck dealers had little to complain about at their make meeting at the National Automobile Dealers Association convention. Warranty administration and floorplanning were major topics.

Most of the dealers indicated support for an increase in floorplanning aid from 1.3 percent of invoice to 1.8 percent, with the added half point placed on invoice price rather than on the sticker.

Although that would reduce dealer margins on the vehicles, it would improve cash flow and would present the possibility of making more money when the vehicle is sold quickly.

General Manager John Rock said the positive response would be discussed with corporate officials who make those decisions.

GMC officials also said they will consider changing the way warranty claims are handled. Now, dealers are required to list every part needed for a repair, and if an error is made in one part number, the whole claim is returned to the dealer for correction.

GMC officials said they will look at allowing payments for everything except the part on which the error was made. The dealer would then correct the error and resubmit the claim for payment for that part.

Dealers said they would like a 5 percent allowance on 1991-model buildout vehicles, regardless of when they are sold. In 1990, General Motors paid the 5 percent on sales through Dec. 31 and rebates of only $150 for sales after [illegible]

SATURN

FROM PAGE 1

3,000 non-affected owners to let them know they didn't have to worry, said Bruce MacDonald, vice president of communications.

The bill for postage: more than $36,000.

"Notifying non-affected owners, to my knowledge, has never been done before," said Donald Hudler, Saturn's vice president of sales, service and marketing.

Although the problem was detected and corrected in manufacturing in November, the decision to recall wasn't made until about two weeks ago, when reports of failures began to mount.

MacDonald said no injuries or accidents occurred as a result of the problem, and Saturn knows of only 19 failures of the part.

Hudler said Saturn asked dealers to do whatever is necessary to eliminate customer inconvenience, including offering free loaner cars, picking up affected vehicles at homes or offices, or making repairs where the owners live or work. Saturn will cover the cost of repairs, but dealers may pay for the cost of some of the goodwill gestures such as washing a car or topping off a gas tank, said spokesman Mark Tanner. Tanner said he didn't know if Saturn or the dealers would pay for loaners.

Tanner said he didn't know how much the recall might cost or whether the supplier of the faulty seat mechanism might be asked to pay anything toward the fix. Labor rates for repairs vary greatly across the country, from $40 to $60 per hour. Saturn estimated that it will take 1½ hours to correct the problem, but Hudler said it may take less than an hour.

In a briefing with all 58 dealerships over the General Motors Pulsat satellite network, Saturn President Richard G. LeFauve and other top officials told the dealers how the problem occurred, how to correct it and how to respond to customers.

"Things like this test how good you are," Hudler said in an interview. "It may plant a seed of doubt, but people will be hearing how consistently they're treated and how well. I'm sure some of the critics and pundits will have some fun with it, though."

Hudler said Saturn will do anything necessary to avoid inconveniencing its buyers.

"To err is human, and how you respond to it is far more important," Hudler said. "We studied Lexus. They turned a negative into a positive."

In November 1989, Lexus Division of Toyota Motor Sales U.S.A. Inc. was forced to recall 8,000 of its $35,000 flagship LS400 models to correct safety defects. The cars had been on sale only a few months.

Lexus's skillful handling of the recall actually enhanced the Lexus reputation for quality and service.

Saturn's quest for quality has led the company to halt production to assure quality in the General Motors subsidiary's first half-year of production.

Hudler said the two biggest problems with most recalls — Saturn calls this a "customer satisfaction campaign" — are getting information to customers and dealers, and a lack of parts.

The overnight letters and satellite feed took care of the information, and all the needed repair parts were to be at dealerships by last Friday, Hudler said.

The message to dealers was to make customers happy.

"We said the cars ought to be fully cleaned, interior and exterior; they should have a full tank of gas," Hudler said. "If they bring their car in clean with a full tank of gas, we'll find something nice to do for them like a free lube job or oil change.

"We're asking dealers to exercise good judgment, but do what is right for the owner."

Tom Delke, vice president of Saturn North in Clarkston, Mich., said he personally contacted all five of his affected customers.

"We're making appointments for them — the first one is Monday (today). If they want us to pick up the cars, we're doing that. We will provide them alternate transportation, wash their car and everything, and I'll top off their gas tank," he said.

Hudler said Saturn views the recall "as an opportunity to demonstrate our commitment to customer satisfaction. Of course, we would have preferred to have this not happen."

The problem resulted when Johnson Controls Inc., maker of the recliner mechanism, changed a process in the manufacture of a gear-lock cam, a Johnson spokeswoman said.

Saturn's MacDonald said the problem was discovered in November, and Saturn began tracing the cause. Although the problem was corrected within 10 days, it got into about 13 percent of Saturn's production volume up to Feb. 12.

Chrysler out; car output drops 21%

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

With all Chrysler Corp. domestic car plants idle, U.S. automakers expected to build 85,527 cars last week, down 21.83 percent from the prior week and 30.64 percent below last year.

Year-to-date, 665,607 cars have been assembled, 5.70 percent ahead of 1990.

Estimated truck production was 48,282, up 29.66 percent over the prior week and down 42.81 percent from the 1990 week.

So far this year, 330,261 trucks have been produced, 24.24 percent behind 1990's production.

GM Lordstown, Ohio, car plant worked last Saturday.

Car production rises in Canada

Canadian automakers' scheduled output was 16,276 units last week, 16.72 percent above the prior week and 30.49 percent below the year-ago week.

Year-to-date, 115,152 cars have been produced, 6.87 percent above 1990.

The truckmakers' targeted build was 14,650 units last week, 4.60 percent below the prior week and 21.18 percent below 1990.

Ford's Oakville, Ontario, truck plant will be idle this week.

U.S. energy plan gives industry a breather

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON -- The Bush administration has delivered an energy plan to Congress that conspicuously lacks a fuel-economy program and boosts research and credits for alternative-fueled cars.

Bryan tries to corner makers, Page 2

Most of the plan is just what the industry has been asking for. But makers aren't applauding too loudly. It quickly became clear that the impending dog fight in Congress on how to implement a new national energy strategy could be as vicious as last year's battle over a new clean air bill. But this debate has the backdrop of a Persian Gulf war that many believe is being fought over oil.

Powerful Democratic senators declared last Thursday, a day after President Bush unveiled the plan, that the 214-page National Energy Strategy doesn't stand chance of becoming law. They warned that there will be no oil exploration in the pristine Arctic National Wildlife Refuge — a key element of the strategy — without more conservation programs, including higher fuel economy standards.

"The deficiency in this whole plan is the refusal to have more mandates -- if we hadn't passed CAFE in the mid-70s, the U.S. auto industry would really be in bad shape," said Sen. Dale Bumpers, D-Ark. He suggested a 2 mpg increase in corporate average fuel economy standards would save more oil than what's contained in the northern slope of Alaska.

Bush's plan does not propose to boost CAFE above the current 27.5 mpg, despite bills in the Senate and House of Representatives that seek drastic increases.

But at a Senate hearing the day after the plan's introduction, the administration said it might be willing to negotiate. "I am not against some kind of fuel efficiency increase," Energy Secretary James Watkins told the Senate Energy

LINCOLN

'80s were great; CSI is theme until new lines for '93

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The Lincoln brand boomed in the 1980s, despite average quality and capacity constraints. Now, Ford Motor Co. is hoping new engines and a new push toward quality at the dealership will help the division keep its momentum until the redesigned 1993 Continental sedan and Mark VIII sport coupe arrive.

Styling has been critical to Lincoln's success, and the Mark VIII will be another bold stroke. Managers hope its European flavor and handling will be as big a success as the 1988 Continental and 1990 Lincoln Town Car.

In the meantime, Lincoln will have a tough time trying to extend its three-year record of beating the previous year's sales. War and recession are obvious villains in the 34.4 percent sales decline Lincoln suffered between Jan. 1 and Feb. 10, but that doesn't quite explain why Cadillac, with similar products, was down only 13.2 percent in the same period.

A Lincoln spokesman suggested it may be based in fleet orders.

see LINCOLN, page 35

AUTOMOTIVE NEWS/JOE WILSDENS

"We are not targeting Cadillac as an objective, we're targeting our own numbers," says Ross Roberts, the general manager of Lincoln-Mercury.

In smog fight as in style, automakers follow Coast

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — The air may be murky, but the mandate is clear: Companies selling vehicles in California must clean up their act.

The toughest clean-air rules in the land were adopted in California last September by the state's Air Resources Board. The regulations, which mandate cleaner cars burning cleaner fuels, have automakers and the fuel industry jumping.

They face huge questions about cost, consumer acceptance and the readiness of technology. Regardless, the agency is mandating that cleaner vehicles be built — and sold.

Automakers have little choice but to comply. If they don't, they'll be left out of the market that accounted for about one of every seven cars and trucks sold in the United States last year. And just as California has set the tone for U.S. trends in design, it is now leading the way on controlling emissions.

The state's curbs on carbon monoxide, nitrogen oxide and hydrocarbon emissions — already the strictest in the land — will become even more stringent. Beginning in the 1994 model year, when the first "transitional low-emission vehicles" are mandated, they will get progressively tighter and involve more vehicles.

By 2003, companies that sell 3,000 cars and light trucks annually in California will have to meet demands for a range of "low-emission," "ultra-low-emission" and "zero-emission" vehicles.

The mandates have helped spur a multibillion-dollar race among automakers to bring alternative fuel and electric vehicles to the

CALIFORNIA DRIVEN

market. U.S. manufacturers and those in Europe and Asia have engineers studying the California laws and are taking steps to meet the new standards. Indeed, California's air rules will be among the topics addressed this week at the SAE meeting in Detroit.

For the most part, manufacturers argue that the new regulations are too stringent and that meeting them will make vehicles prohibitively expensive.

Current estimates put the cost per vehicle at $70 to $170 for low-emission vehicles running on ultra-clean gasoline; $200 to $1,500 for conversions to methanol; $2,000 to $2,200 for propane; $2,500 to $3,500 for compressed natural gas; and $6,000 to $20,000 for electric.

Europe ignores U.S. cars, despite a weak dollar

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

RUSSELSHEIM, Germany — Several years after launching what was billed as a "major" export drive on the engineering and styling bastions of Europe, the U.S. Big 3 still have not broken out of their tiny, niche beachhead into the open markets beyond.

Despite the windfall advantages of the weakest dollar in history — a factor that reduces the relative price of American products abroad — the U.S. automakers last year sold only 58,950 U.S.-built cars and light trucks in Europe, a barely measurable 0.44 percent of a total market of 13.4 million.

Of the 58,950, only 14,493 were passenger cars.

To be sure, the companies face formidable obstacles in Europe — a lack of distributors and dealers, expensive modification and certification procedures and the need to market in a dozen languages. And not the least of their problems is the snobbish attitude of Europeans themselves toward the quality of the *arriviste* American products.

"When I go to America, I'm amazed at the lack of styling and the poor quality of cars there," says Bob Barber, an automotive industry analyst at James Capel & Co. Ltd. in London. "You couldn't sell them in Europe."

Of the Buick Park Avenue, a car slated to debut in Europe and whose "European" styling and engineering have been widely lauded in the U.S. press, Barber says:

"In European eyes, it is ugly. I

Tough times at Chrysler

As it struggles to reduce its payroll, Chrysler Corp. is exploring the possibility of offering special early retirement to UAW hourly employees.
Story on Page 2.

Bryan tries to corner makers on CAFE gains

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Senate's leading advocate for stricter fuel economy rules challenged six auto companies to name the gains they could make in the 1990s.

Two gave answers, and the other four refused.

The mixed responses came as the industry testified before a Senate subcommittee headed by Sen. Richard Bryan, D-Nev. Last week's hearing marked the first formal action on Bryan's new bill to raise CAFE levels 20 percent by model year 1996 and 40 percent by 2001.

Bryan's and other CAFE measures died last year while Congress tried, without success, to get the industry to say what is a reasonable increase. Last week, Ford Motor Co., General Motors, Nissan Motor Manufacturing Corp. U.S.A. and Toyota Motor Sales U.S.A. Inc. refused to make predictions.

But Chrysler Corp. and American Honda Motor Co. Inc. complied with Bryan's request.

Ronald Boltz, vice president of product strategy and regulatory affairs for Chrysler, said the company could increase CAFE 6.5 percent by the mid-1990s and 10 percent to 15 percent by 2001. Current standard for cars is 27.5 mpg.

> "If it does not improve energy security and environmental quality, I see no need for it."
>
> **George Eads**
> GM vice president

And Honda could improve 6 percent by the 1996 model year using current technology, said Thomas G. Elliott, Honda's executive vice president of auto operations. "To go further than that, Honda has to re-evaluate its sales strategy in the U.S. market," he said.

Still, the industry executives repeatedly told Bryan's Commerce, Science and Transportation subcommittee that his bill is too stringent and not based on scientific data. They urged him to wait until the National Academy of Sciences issues a study on what levels of CAFE are technically and economically feasible.

The first phase of the study could be out by late June.

Bryan used a barrage of questions to pry some estimates from the automakers. "I don't like to sign a blank check," said James Olson, vice president of external affairs for Toyota.

A frustrated Bryan compared his questioning to a dentist trying to extract a tooth. "The industry says, 'Stop, do not pass Go,' but it seems to me unreasonable for an industry to say we cannot do this . . . and not say what it could achieve."

Bryan was supported by environmentalists and conservationists, who testified for the last hour of a five-hour session. By then, most auto industry lobbyists and executives who packed the hearing room had left. And Bryan pleaded, to no avail, to the UAW for help with projections and estimates.

As they did in last year's debate, Honda, Toyota and Nissan said they not only support a CAFE policy but could meet a reasonable increase. But they continue to object to a percentage increase because it would force automakers with the best CAFE scores — like the Japanese — to make the biggest improvements.

Ford and Chrysler, whose executives recently called for tighter restraints on Japanese vehicles in this country, said they prefer the percentage increases opposed by the Japanese. Both companies also endorsed CAFE.

General Motors took a different view. George Eads, vice president for product planning and economics, said GM will be hard-pressed to maintain its current CAFE once cars conform to new safety and clean air regulations. And he called CAFE bad public policy.

"If it does not improve energy security and environmental quality, I see no need for it," Eads said.

Honda's Elliott said a new "ultra-high" fuel economy model is in the research and development stages as a replacement for the CRX HF.

But the car would likely cost more, and "there would be tradeoffs in performance and size. If Honda sells at least 50,000 of these new models, CAFE could improve another 4 or 5 percent," he said.

"To go past that you have to seriously re-evaluate our whole model roundup, we would have to consider downsizing, radical changes, model elimination, things that frankly would put Honda back in the position of being a small subcompact manufacturer," Elliott said.

"Frankly, we are not desirous of doing that."

Chrysler mulls early-out plans

Salaried workers get offer; UAW hourly workers may, too

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — As it struggles to reduce its payroll, Chrysler Corp. is exploring the possibility of offering special early retirement to UAW hourly employees, according to company and union sources.

The move would be fairly unusual. Traditionally, early retirement incentives are offered to salaried personnel.

UAW Vice President Stan Marshall, head of the union's Chrysler department, was unavailable for comment.

Chrysler and union sources said the company is considering making the offer to some hourly workers. The company already has decided to offer buyouts to salaried employees represented by the UAW.

"There are no plans to offer special early retirement to hourly employees at this time, but we couldn't rule out the possibility of exploratory talks with the UAW at some future date on this issue," said a Chrysler spokesman.

> The *Chrysler Times* article also said that workers will be offered "a choice from several Chrysler vehicles," which will be given to them outright as part of the buyout.

UAW spokesman Bob Barbee said a buyout offer would not require reopening the national agreement. The current agreement has provisions that permit Chrysler to offer the program, Barbee said.

An article published last week in *Chrysler Times*, a company-sponsored newsletter, suggested that Anthony St. John, Chrysler vice president of employee relations, has approached the UAW about offering retirement incentives to some hourly workers.

The moves are part of Chrysler's effort to trim personnel as the company struggles to complete by June 30 a $3 billion cost-cutting program that began 18 months ago.

The *Chrysler Times* article outlined some of the programs being used to induce an additional 3,000 white-collar workers to leave the company. Chrysler had 27,500 salaried workers at the end of 1990.

By April 1, Chrysler is expected to offer employees special early retirement or voluntary termination incentives. Employees must make a decision by April 30.

The special early retirement program will be offered to employees who are at least 53 years old and have at least 10 years of service.

Chrysler has not provided ad-

Engineers spared from staff cuts

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. will spare engineers when it begins paring 3,000 salaried workers from its payroll beginning in April.

In a quest to meet its future product schedule, Chrysler will cut staff positions and thin its management ranks but will not chop engineers.

The company said the latest round of white-collar cuts is part of its campaign to reduce fixed costs by $3 billion by June 30. Chrysler had 27,500 salaried employees at the end of December 1990.

Chrysler also has 2,800 contract temporary employees not included in the year-end total, and the 3,000 jobs to be eliminated can come out of either salaried employees or contract employees.

Chrysler's market share and sales have shrunk in the face of recession and the Persian Gulf war. Its assembly plants are running at half capacity, and calendar 1991 sales through Feb. 10 are off an estimated 31.6 percent from the same period last year.

Chrysler will achieve the personnel cuts by attrition, special early retirement programs, voluntary termination incentive programs and, possibly, layoffs.

The latest round of white-collar cuts is the third since Chrysler began its cost-cutting program in July 1989, although

Caprice gets split rating in NHTSA 35-mph crash

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The new Chevrolet Caprice, one of the biggest and heaviest passenger cars on the road, scored poorly for protecting the passenger's head in the government's 35 mph crash test.

The four-door Caprice had a score of 1,101 for the passenger, a level the National Highway Traffic Safety Administration said could result in serious-to-fatal injuries.

The driver-side score of the airbag equipped Caprice was 533, indicating no injury is likely.

Five other 1991 cars and one sport-utility were tested in the agency's first round of 1991 crash tests.

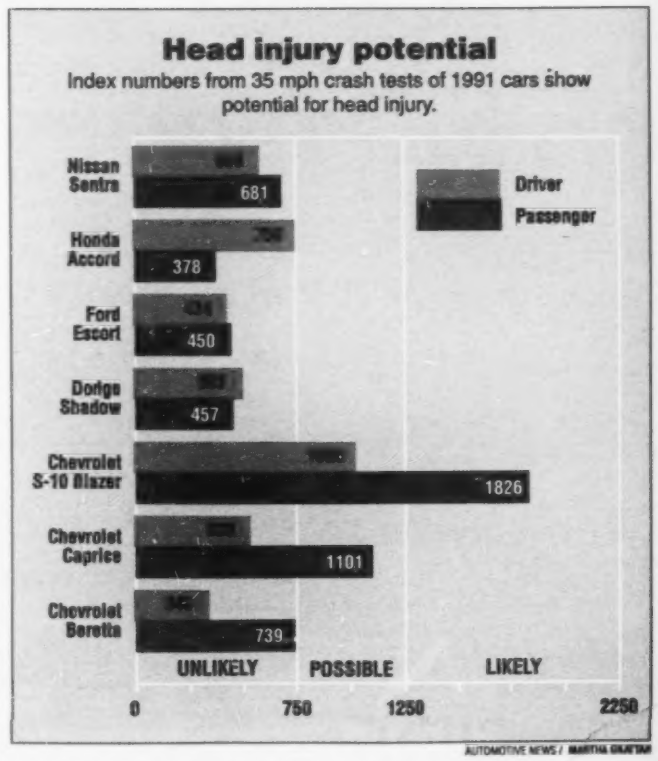
A total of 34 vehicles will be tested during the model year.

The Nissan Sentra, Honda Accord, Ford Escort, Dodge Shadow and Chevrolet Beretta all had scores indicating "unlikely" injury to driver and front passenger. Of those vehicles, only the Beretta had a driver-side air bag.

The Chevrolet S-10 4×4 Blazer, with manual lap and shoulder belts, was the only sport-utility crashed.

It scored very poorly on the driver side, registering 1,826, and was almost as bad as the Caprice on the passenger side, scoring 1,026.

The S-10 Blazer score is within the result range of the eight 1990 sport-utilities crashed at 35 mpg by NHTSA.



The agency says comparisons should be made only between vehicles of similar size and weight.

European new-car sales skid stretches into sixth month

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — New-car sales in Europe fell for the sixth consecutive month in January, and only the soaring German market blocked a much steeper decline.

According to unofficial estimates compiled by *Automotive News*, sales in 17 Western European countries dropped 4 percent last month, to 1,273,100 units.

January sales in Germany jumped an estimated 57.1 percent from a year earlier, to 335,000 units. The big gain is compared to a weak market last year.

Excluding Germany, sales in the other Western European markets declined 16 percent in January as the United Kingdom, France and Spain were battered.

John Lawson of Nomura Securities Ltd. in London says he expects 1991 sales in Germany to be about the same as last year's 3.25 million. Without the five new states of the former East Germany, sales edged above 3 million for the first time ever.

"The push from the five new states has a limited time frame," said Lawson. "Demand was fueled by savings, and the currency union (between East and West Germany) was several months ago."

Lawson predicts that sales for all of Europe will fall 8 or 9 percent this year as Europe's recession intensifies and interest rates rise. Last year, sales fell only fractionally, to 13,382,000, from the record of 13,400,800 in 1989.

Lawson said the powerful German central bank's recent interest-rate hike of half a percentage point will dampen demand across Europe because it "will turn out to be a rise in European interest rates."

For starters, he said, the rate hike eliminates any short-term hope that 14 percent interest rates now undercutting the British economy will fall soon.

British sales last month were down 20.8 percent from 1990, while sales plunged 23.1 percent in France and 28.6 percent in Spain.

Lawson suggested that car sales in Europe are not as deeply affected by the Persian Gulf war as U.S. sales, even though several European automakers have pinned much of the blame for the current slowdown on the war.

"I think the companies are kind of using the Gulf war," he said.

"The impact is being played up by companies to an undue extreme. What you are getting is a Gulf war grafted onto a recession. This is dangerous because the market could be expected to bounce right back when the war is over, and it won't."

Volkswagen AG, Europe's sales leader for six years in a row, rode the January crest in Germany to grab the early lead in 1991 with a 15.6 percent market share. That consisted of 10.9 percent for the VW brand, 2.6 percent for Audi and 2.1 percent for Seat, VW's Spanish unit.

Following the VW Group in the January rankings were Italy's Fiat Group, at 14.6 percent; Ford of Europe, 12.4 percent; General Motors Europe, 12.3 percent; France's Peugeot Group, 11.6 percent; and Renault S.A., 10.2 percent.

Peugeot has held third place in European sales in recent years, but slipped to fifth in January because of the weak French market.

Combined Japanese sales in Europe rose 4.8 percent in January, to 128,400, equal to 10.6 percent of the market.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	January 1991	Pct. change vs. 1990
Germany	335,000	+57.1

Acquisitions sap earnings of Ford, GM in Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — Losses at their recently acquired Saab and Jaguar units sapped the European earnings of General Motors and Ford Motor Co. last year, although GM Europe still mailed record profits home to its parent.

Ford's European profits plunged 88 percent, however.

GM and Ford have relied heavily on their European units in recent years. But with the market slipping here, analysts note, they may pull less from European operations in 1991 than at any time since the mid-1980s.

GM earned a record $1.91 billion from European operations last year, up from $1.83 billion in 1989. The results contrasted with a loss of $1.99 billion for the corporation.

European earnings would have been $2.34 billion, however, without the drain of a 4.65 billion kronor (about $852 million) pretax loss at Saab Automobile AB, the embattled Swedish carmaker that is 50 percent owned by GM. GM's share of the loss equaled an indicated $426 million.

Meanwhile, Ford's European profit plunged to $145 million from $1.19 billion a year earlier. The slide jolted many analysts, who had expected earnings of between $400 million and $600 million.

Analysts estimate that Ford's Jaguar unit lost about £100 million (about $195 million) last year, indicating that Ford itself suffered around $800 million in operating losses on its core business.

Analysts expect that the downturn in European sales will mean still weaker results for GM and Ford this year. But in the longer term the embattled U.S. companies may have no choice but to increase their reliance on Europe.

"My view is that the situation in the U.S. is pretty bleak," said analyst Bob Barber of James Capel & Co. in London.

"The U.S. market is not growing, and U.S. companies are losing market share to the Japanese transplants," he said. "The European operations could actually become more important because, while there is a cyclical downturn in Europe, there is a secular downturn in the United States."

The two European subsidiaries took divergent paths in 1990. GM's market share improved, and the automaker edged past Ford into the No. 4 European sales slot for the first time in history.

Ford's biggest European market, the United Kingdom, fell sharply last year, while Germany, where GM's Adam Opel unit does best, set a new sales record last year.

"Ford depends heavily on the U.K. market, which is depressed, and Opel depends heavily on Germany, which is a strong market," said Barber.

Some analysts charge that Ford also may have shot itself in the foot by pricing its cars too aggressively in Britain and Italy, where it expanded its market share from 4.9 percent to 7.7 percent.

On the other hand, "The whole U.K. market is extremely competitive in price and was for all of 1990," said Barber. British sales were off 13 percent for the year, and fell 28 percent in December.

Besides a sharp industry downturn in its best market, Ford's problems last year included labor strife and a troubled launch of its largest-volume model, the Escort/Orion. Last month, Ford cut production at five European plants.

"Another factor is the huge cost of buying Jaguar," said Barber. "If you take the financing costs on £1.4 billion (about $2.73 billion) and add the loss of £100 million, you are talking about a quarter of a billion pounds, which is serious money."

Fiat takes aim at niches

Fiat S.p.A. is preparing two limited-production cars. The first is a 2+2 coupe, above, based on the Tipo platform, which was designed and will be produced by Pininfarina. A September 1993 introduction is planned. Fiat also has plans for a Bertone-designed convertible based on the Uno, due in 1994.

Korea automakers turn to incentives to spark sales

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — This country's automakers, their January sales battered by economic uncertainty and the imposition of higher vehicle taxes, have unfurled a full slate of incentives in a bid to spark consumer enthusiasm.

January sales fell 16 percent from a strong December to 77,476 units. Koreans rushed to showrooms in December to beat a Jan. 1 increase in new-car registration taxes, magnifying the December-to-January sales decline.

But analysts say the primary reason for the early-year decline is sagging consumer confidence.

"The main reason is the Gulf crisis," said Kim Soo-Mi, an automotive industry analyst with the Seoul office of Hoare Govett Ltd. "People are worried about the economy and higher gas prices."

Another industry analyst pointed out that Korean consumers are especially sensitive to developments overseas.

"This is an export-driven economy, and consumer confidence rests to a large degree on how well exports are going," said the analyst, an American who asked that his name not be used. "When things are unsettled overseas, Korean consumers get nervous."

To woo customers back into showrooms, automakers introduced incentive schemes this month that range from cash discounts to extended interest-free payment plans.

Hyundai Motor Co., for example, is offering cash buyers 400,000 won ($500) off the price of a Sonata. It also has stretched installment payments for the Sonata to up to 30 months, and to 15 months on the Excel and Scoupe.

Kia Motors Corp. is offering a 3 percent discount for cash purchases, and has extended interest-free payments on the Pride, sold as the Ford Festiva in the United States, to 20 months from 12.

Daewoo Motor Co. is offering 10-month, interest-free installment payments on its recently introduced Espero model.

The incentives appear to be working — preliminary figures show that average daily sales for February to date have risen some 30 percent over January.

Hyundai's average daily sales rate has risen 26 percent, to 1,426 units. Kia's average daily sales have risen a third, to 720 units.

Meanwhile, the industry reported that exports plunged 71 percent in January, to 15,158 units, although the comparison is to an especially strong December.

On a year-to-year basis, January exports were up 29 percent, although U.S. shipments were off 13.5 percent, to 5,462.

Mercedes Mexico gears up

Free-trade prospect spurs Freightliner pact

By Joseph Bohn
TRUCK EDITOR

Daimler-Benz AG's Mexican subsidiary has begun producing Freightliner trucks and will produce medium-duty Mercedes-Benz models. The intent is to strengthen its presence in the Mexican market and to position itself for a possible free-trade pact that would boom Mexico's trucking business.

Daimler's Mexican subsidiary, formerly known as Fabrica de Autotransportes Mexicana S.A., or FAMSA, adopted the new name of Mercedes-Benz Mexico, S.A. de C.V. in late January. At the same time, it began producing trucks under the Freightliner and Mercedes-Benz nameplates.

The company said it replaced its entire line of trucks manufactured by FAMSA and Daimler-Benz under a licensing agreement with Navistar International with a new line of Freightliner FLD 120 highway tractors. It also plans to add assembly of a modern line of medium-duty Mercedes-Benz commercial vehicles, bus chassis and OM366 diesel engines later this year.

Freightliner President Dieter Zetsche predicted that "trucking in the 1990s is going to be border to border."

The United States already has a free trade pact with Canada, and both Mexico's President Carlos Salinas de Gortari and U.S. President George Bush are seeking a similar pact between Mexico and the United States by 1993, Zetsche said.

There is still no certainty that such an agreement, opposed by organized labor groups and others, will come about; but Zetsche said "as transportation integrates, we can expect to see vehicles in Mexico rapidly shifting toward a higher level of technology in order to be competitive with U.S. carriers."

The new Mexican operation positions Freightliner with manufacturing capacity in the United States, Canada and Mexico. It also will have parts and service support networks in each country to provide coverage for fleets hauling freight throughout the increasingly integrated marekt, Zetsche said.

For the Mexican market, Freightliner is exporting Long Conventionals with both 48-inch sleeper cab and non-sleeper configurations.

They are equipped with Cummins NTC Big Cam 111 engines in 350- and 400-horsepower ratings, Spicer 16-speed transmissions and Rockwell axles. The components are designed to offer easy maintenance and widepsread available of spare parts in Mexico.

FAMSA produced and sold 6,000 medium and heavy trucks in 1990, accounting for 43 percent of the market.

Mercedes-Benz Mexico officials expect market demand to increase to 19,000 units in 1991 and for their own share to increase significantly over the next two years.

Mexico's overall population is expected to grow to over 100 million people by the end of the decade from 85 million at the end of the 1990.

Volvo GM offers dealers wider line

By Joseph Bohn
TRUCK EDITOR

Volvo GM Heavy Truck has lost some dealers, though Giorgio Maggio, executive vice president of Commercial Operations, described the dealer network as "remarkably stable."

Volvo GM had 189 dealers at the end of 1990, down from about 200 a year earlier.

Some 119 are exclusives, meaning they handle only WhiteGMC and Volvo trucks in a location.

Thage Berggren, Volvo GM president and chief executive officer, says his company is "working closely with GM to have our dealerships handle Class 6 and 7 GMC trucks as well as Class 7 Volvo and Class 8 WhiteGMC trucks."

"Our philosophy — and GM's — is that a wider product line will attract more business to these dealerships and produce a more stable dealership network," Berggren says.

But Ray Rota, GMC general sales manager, says such linkups have been made only with a great deal of care.

"When a medium-duty dealership becomes available and happens to be in a town with a Volvo GM dealer and everything is right, we possibly may go with the Volvo GM dealer, provided he meets our criteria," Rota says.

"It's a matter of natural evolution and timing. We have no objective of terminating any of our medium-duty franchise agreements or of pushing any dealers into Volvo GM products."

Of the 697 Chevrolet and GMC dealers that sell medium-duty trucks, 128 also sell Volvo GM products.

Rota notes that 98 of those dealers carried GMC's heavy-duty line before those operations were merged with Volvo so that, in the past two years, only 30 Volvo GM dealers have picked up GM's medium-duty franchise.

"Where a GMC dealer decided to sell his franchise or give it up or we had an open point, we dualed up," Rota says.

Some 119 Volvo GM dealers are exclusives, handling only WhiteGMC and Volvo trucks in a location. The truckmaker lost 11 dealers in 1990.

As part of its sales strategy, Volvo GM has begun heavier targeting of people who buy only a few trucks a year.

Maggio notes that major fleets, which comprise 2 percent of all heavy-truck buyers, typically buy 50 percent of all Class 8s.

Smaller fleets, which comprise 15 percent of buyers, averaging about seven truck purchases a year, account for another quarter of all sales.

Some 83 percent of buyers who purchase only two or three trucks a year account for the remaining quarter of heavy-truck sales.

Maggio says the two smaller groups tend to be local, rather than regional or national, in their operations, giving dealers their best chance at increasing market share in their particular operating areas.

He says that market also offers higher profit margins than fleet sales and provides more balance and consistency to a dealer's business, helping to minimize swings in the business cycle.

Volvo GM hopes to hike sales among smaller-quantity buyers, many of whom are owner-operators, with the new Tall Integral Sleeper Aero Es tractor it has just put into commercial production.

The company has 11.8 percent of the small fleet market and 10.2 percent of the two- to three-unit buyer markets. Last year Volvo GM sold 14,767 Class 8 trucks, 12.2 percent of the Class 8 market's 121,324 sales in calendar 1990.

Volvo GM narrowly edged out Kenworth Truck for third place in Class 8 sales last year. Kenworth had 12.1 percent of the market, based on 14,620 retail sales. Its share was down the 0.2 percent that Volvo GM's increased.

Class 8 sales last year were off from 145,068 in 1989, and analysts such as Frank Prezelski of Rothschild Inc. expect another drop to 110,000 or less this year.

BRIEFS

Order rebound expected

NEW YORK — Net new heavy-truck orders continued to strengthen in January, though they still trailed the year-earlier period by a wide margin.

The net order intake for Class 8 trucks totaled 7,368 in January 1991, up slightly from 7,266 in December 1990 and 4,933 in November, according to Rothschild Inc. of New York.

But January orders were still 36.63 percent below the 11,627 of a year ago.

Frank Prezelski, an analyst with Rothschild, sees order rates continuing to strengthen in February and March. He feels they will begin topping year-earlier levels in April.

"We believe the cyclical bottom for orders was probably established in November. Although order rates will be somewhat anemic for the next couple of months, they should fluctuate around the 7,000-unit level," Prezelski said.

Isuzu brake device bows

TOKYO — Isuzu Motor Ltd. has introduced a compact permanent-magnet retarder to make braking easier on its 10-ton trucks.

At 107 pounds and 12-inch diameter, the system is about one-sixth the weight and size of systems already on the market, according to Isuzu.

The company says the system easily can be added to current models. A retarder is intended to assist drivers in braking, to improve driving comfort and to relieve fatigue on long hauls.

The compact retarder, which was developed jointly with Sumitomo Metal Industries Ltd., costs 9,140 yen (about $69) and is available on all of Isuzu's 10-ton trucks.

Isuzu hopes to eventually offer a range for other size trucks as well.

PACCAR posts profit

BELLEVUE, Wash. — PACCAR Inc.'s ability to make money under adverse conditions, well-documented in the early 1980s, continues during the latest recession.

Despite the slump in heavy-truck sales, PACCAR managed a $5.8 million net profit for the fourth quarter of fiscal 1990, ended Dec. 31, and a full fiscal-year profit of $63.7 million. Still, its profit was off sharply from $241.9 million in fiscal 1989.

Detroit Diesel facility

REDFORD, Mich. — Detroit Diesel Corp. opened a new 42,000-square-foot training center, with classrooms, laboratories, teardown rooms and other capabilities.

Built through a joint investment of $5 million by Detroit Diesel and UAW Local 163, the center will be used for the training needs of company customers, distributors and employees, according to Roger Penske, chairman of Detroit Diesel.

Fruehauf relocates

SOUTHFIELD, Mich. — Fruehauf Trailer Corp. moved its world headquarters from its 70-year location on Detroit's east side to nearby Southfield.

Fruehauf occupies 34,000 square feet of specially designed office space on the top two floors of a three-story building in the City Center Office Park complex.

Over the past year, Fruehauf reduced its debt load through refinancing, built a new manufacturing plant for refrigerated vans and installed a new computer system for its coast-to-coast sales and service branches, according to Arthur E. Rowe, Fruehauf president and chief executive officer.

It has 310 sales and service outlets and 325 different van and trailer models.

GM touts fuel economy gains to ward off CAFE boost

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Politicians, the media — and importantly — buyers don't know about General Motors' fuel efficiency. So GM has a team on the road talking about the No. 1 automaker's fuel-economy leadership.

Ronald H. Haas, vice president of current engineering and manufacturing staff, and David Brown, general director, worldwide powertrain and North American vehicle-capacity planning for GM's product planning and economics staff, visited *Automotive News* last week. The purpose of the meeting was to provide evidence of GM's fuel-economy leadership with specific comparisons to competitors' vehicles and explain the corporation's position on current and future corporate average fuel economy standards.

GM builds some of the most fuel-efficient cars and light trucks in the world, according to Haas, who used EPA fuel-economy numbers to make his point.

In the cited EPA examples, GM vehicles frequently had higher fuel economy than the Japanese vehicles that competed in the same EPA size classifications.

Carmakers are concerned about new CAFE legislation in the Senate that threatens to raise car and light-truck fuel economy for each maker by 20 percent in the 1996 model year and 20 percent more in 2001. This threat has domestic, European and Asian makers loudly questioning the technical, social and political reasons for tougher fuel-economy standards.

Haas said the public's confusion about GM's fuel-economy leadership is understandable. Haas admits that for several years the corporation's CAFE has fallen. In 1988, it was 27.6 mpg. In 1990, the company posted a 27.1 mpg CAFE number — tying Chrysler Corp. The 1990 model year was the first that GM failed to meet the government's 27.5 mpg CAFE.

Haas said low-cost gasoline and buyers' desires for larger, higher-performing cars might make meeting CAFE even more difficult in the future.

"While they (GM engineers) can boost the mileage of a particular product, they can't guarantee that consumers will select that automobile over some other offering," said Haas.

Print ads and television commercials for some GM divisions already tout the fuel-sipping quality of the company's vehicles relative to competitors.

Haas also pointed out that Ford Motor Co., which like GM offers a wide range of vehicles, managed only a 26.4 mpg CAFE for 1990.

Critics of the company note that almost all of GM's new-model introductions have been for powerful, luxurious models that generally weigh more than the models they replace. And finally, the company has come under considerable fire recently from environmentalists and politicians in Washington because it not only doesn't support any increase in the current CAFE standard, it vigorously opposes CAFE-type regulations in general.

> "While they (GM engineers) can boost the mileage of a particular product, they can't guarantee that consumers will select that automobile over some other offering."
>
> **Ronald Haas**
> GM vice president

During a question and answer session, Haas attempted to avoid debate about the pros and cons of fuel-economy regulations, emissions benefits from increased fuel economy or about what the company considers a "reasonable" increase in the current standard.

Instead, Haas focused on the progress made since the first energy crisis in the early 1970s. In 1974, the GM fleet fuel economy was 12.0 mpg — compared to 1990's 27.1 mpg. Haas said the investments to effect this change were enormous.

"We've invested billions of dollars to implement and perfect a long list of advanced technologies," said Haas.

Haas outlined the move from carburetors to fuel injection, from rear-wheel drive to front-wheel drive and from heavy body-on-frame to unibody construction. Haas said that in 1981, GM started to use microprocessors to more precisely manage fuel and spark control for lower emissions and better economy.

Haas said some "small-car" makers have consistently achieved higher CAFE numbers than GM. But he noted that none offered as wide a range of vehicles as GM or sold as many vehicles.

Canada sales fall 7.41% in January

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Sales of cars and trucks fell 7.41 percent in Canada last month, as car sales rose and truck sales dropped sharply.

Total sales of imported and North American-built cars were up 2.26 percent from January 1990, while imported and North American trucks declined 24.02 percent.

Industry officials viewed the car increase as an anomaly caused by a rush of fleet and daily rental business in January. Purchases had been put off until after Jan. 1, when a change in tax laws triggered a drop in vehicle prices.

But the officials said the real picture is reflected in the slumping sales numbers for light trucks. Though interest rates in Canada are falling, the decline has been overshadowed by uncertainty over the Persian Gulf war and recession.

Chrysler reported a strong 31.05 percent increase in North American-built cars. Ford rose 16.02 percent, and General Motors was up less than one percent.

Imported car sales dipped 8.39 percent. Companies boasting increases in imports were: GM, 36.42 percent; Volkswagen, 31.57 percent; Volvo, 12.36 percent; Hyundai, 10.71 percent; and Subaru, 2.17 percent.

Sales of North American-produced trucks were off 23.52 percent. Chrysler's sales dropped 34.82 percent; Ford was down 20.05 percent; and GM declined 15.41 percent.

Imported truck sales fell 27.07 percent. Only two truck importers reported gains in January: Volkswagen increased 53.33 percent and Suzuki 16.52 percent.

Staff Correspondent Alex Law in Toronto contributed to this report.

Missouri jury awards $1.2 million in Chrysler odometer fraud case

ST. LOUIS — A St. Louis County man and his daughter have won a $1.2 million award against Chrysler Corp. over alleged odometer fraud.

Brian Carpenter, 43, was awarded the money by a St. Louis County Circuit Court jury.

The bulk of the award was $1.1 million in punitive damages against Chrysler for its "overnight evaluation program," permitting company executives to drive cars with disconnected odometers before the cars were shipped to dealers.

James Kenyon, a Chrysler spokesman, said the company would appeal.

CALIFORNIA DRIVEN

Looking at the pros and cons of alternative fuels

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

The world's automakers are running a multibillion-dollar race to bring alternative-fueled and electric vehicles to market.

The new clean-air standards for California are helping push the change. But alternative-fueled vehicles are bound to have broader use as U.S. rules mandate clean fuels in other states and as countries around the world become more environmentally conscious.

As a result, some vehicles powered by such fuels as methanol, compressed natural gas, ethanol, liquid propane gas, hydrogen or electricity are sure to reach showrooms by the end of the decade.

Here's a fuel-by-fuel rundown of their strengths and weaknesses:

Methanol

Methanol is currently the top choice for alternative-fueled vehicles for several reasons.

First, experts say it is even cleaner than such "environmentally friendly" fuels as reformulated gasoline. And second, the most likely feedstock would be inexpensive natural gas.

Advocates claim that at remote oil wells, that gas is currently burned off or simply vented. If methanol became a popular fuel, the gas could be captured and converted to methanol at the well site. That would provide not only a cheap "new" source of energy, it would also eliminate the burning and venting that is a substantial source of greenhouse gasses.

But the long-range hope is that methanol could be made from high-sulfur coal. And America has lots of it.

But coal-derived methanol using present processes would not be cost effective unless crude oil sold for more than $40 a barrel. The current price is about $20. In addition, significant amounts of carbon dioxide, a gas that contributes to global warming, are produced using the present processes.

Other problems with methanol are its low energy density relative to gasoline and the lack of a supply infrastructure. Fuel tanks might have to be twice as large for a methanol vehicle to have ranges equivalent to gasoline-powered vehicles. The federal government estimates the cost of a methanol infrastructure at about $4.5 billion. But petroleum interests say the cost would be closer to $12 billion.

Other minor technical hurdles are methanol's high toxicity, its poor cold-start character, the lack of a visible flame when it burns and its corrosive nature, which would require premium fuel-system components.

Ethanol

Like methanol, ethanol — or grain alcohol — has good energy density and would require only minimal changes to existing powerplants. But it is currently thought to be too expensive. EPA estimates of its "gasoline-equivalent" cost range from $1.47 to $2.07 per gallon.

As for an emissions benefit, preliminary calculations by Ford Motor Co. suggest ethanol and methanol have comparable benefits in curtailing smog.

Although just a handful of vehicles in the United States operate on pure ethanol, the nation produced 840 million gallons in 1988 for use as a motor fuel blend. Ethanol is splash-blended with with gasoline at 10 percent concentration to form gasohol. As such, it is currently the highest volume alternative non-petroleum motor fuel.

Natural gas

The American Gas Association estimates that more than 30,000 natural gas vehicles are operating in the United States. Worldwide, the association reports that more than 500,000 operate in such countries as Canada, Italy and New Zealand.

Compressed natural gas must be kept under high pressure in large heavy tanks to provide sufficient range. But on the positive side, the supply infrastructure is already in place and is expected to get larger.

The emissions benefit would be significant. Reactive hydrocarbons and carbon monoxide emissions are reduced by about 90 percent from present gasoline-powered vehicles. Evaporative emissions — such as the hydrocarbons that escape during refueling — are eliminated. Nitrogen oxide emissions are also reduced.

General Motors has a large compressed natural gas program for three-quarter-ton GMC pickups. The vehicles, engineered by PAS Inc. of Troy, Mich., will be sold through GMC dealers to utilities in Colorado, California and Texas.

Liquid petroleum gas vehicles are already playing a part in the market. But experts at car companies say they will not become a large part of the alternative-vehicles fleet because they provide only marginally better emissions performance, and propane supply is limited.

Hydrogen

Hydrogen is one of the lowest emissions alternative fuels. It is also one of the most abundant elements on Earth. And although they need significant modification, conventional engines can be designed to run on the fuel. Ideally, hydrogen engines would be designed around the fuel.

Unfortunately, the technology to allow on-board hydrogen storage is immature. And vehicles that use hydrogen have poor range. The economics of hydrogen balance on the availability of cheap electricity. Where electricity is inexpensive, the production of hydrogen could be quite economical.

Mercedes-Benz and BMW have research projects on hydrogen-powered vehicles. BMW is experimenting with two hydrogen-powered 735i sedans that use centrifugal supercharger systems. But driveability and range are poor. In addition, the company fuels the vehicles with dangerously cold (-423 degrees Fahrenheit) cryogenic hydrogen that would present a significant safety problem during refueling.

Mercedes has also demonstrated a sedan that runs on hydrogen. It has a 2.3-liter four-cylinder engine with a 9:1 compression ratio. Output is pegged at 105 horsepower, and top speed is 105 mph. But the hydrogen stored has the energy equivalency of only 3.7 gallons of gasoline. And the storage tank weighs almost 800 pounds. That provides a driving range of only 75 miles in urban traffic.

Electric

Electric-vehicle development has been given a strong push by the zero-emissions legislation in California and heavy government and electric-utility funding and lobbying.

But it is important to point out that if the additional electrical energy is produced by burning fossil fuels, the electric vehicle's tailpipe is simply the stack on the generating plant. Power could come from a nuclear plant, but nuclear energy has its own problems in terms of waste disposal. Of course, if the energy were produced by hydroelectric, solar or wind sources, it would be non-polluting.

Advocates of electric power say that vehicles would probably be charged at night when demand is lower and electric rates are cheaper.

The Big 3 have large projects to bring electric vehicles to market soon. Prototypes built with electric-vehicle contractors are currently making the rounds at technical sessions and political power-gathering meetings.

In Europe, Peugeot and Fiat have already sold small numbers of electric vehicles to interested utilities and government agencies.

Electric vehicles still suffer from relatively poor acceleration, extremely limited range relative to other fossil-fuel vehicles and high cost. Fiat's Panda Elettra, which carries two people and has a cruise range of 75 miles, costs $20,000.

In the United States, the domestic makers and the federal government have formed a consortium to seek lighter batteries with higher power densities to increase range.

WORLDWIDE ALTERNATIVE-FUEL FLEETS

Table lists automakers' vehicles using alternate fuels or electric power as reported by individual manufacturers. Most are in internal research programs or with various state and federal agencies.

CALIFORNIA

FROM PAGE 1

But those costs are likely to fall as makers gain experience with the technology and as increased production brings economies of scale.

Toyota Motor Sales U.S.A. Inc., for example, sold about 232,720 cars and trucks in California in 1990. If sales stayed at that level, the company would have to sell 23,272 low-emission vehicles in 1994 and twice that many two years later. By the 1998 model year, Toyota would have to sell 4,654 zero-emission vehicles.

California's auto mandates are part of a set of sweeping rules that will attempt to curb pollution by putting limits on everything from bakery emissions to charcoal barbecues. On the transportation side, there are already visible signs of change.

State tests vehicles

Twenty-three California gas stations are now equipped to pump methanol. Drivers will be able to fill 'er up with the alternative fuel in about 70 locations by the end of 1992.

> "We're going to let the market decide which fuel, or fuels, will be the best."
>
> **Jananne Sharpless**
> Calif. Air Resources Board

Major oil refiners have formed cooperative research groups to give reformulated gasoline a chance to meet some of the clean-fuel requirements. They're also doing extensive proprietary research on their own.

Many fleets operating in the state have already converted all or part of their fleets to alternative-fueled vehicles. Organizations ranging from the Garden Grove Unified School District (methanol) to the Claremont Police Department (propane) are using vehicles that run on clean-burning fuel.

Eight manufacturers have sold or donated 435 vehicles to the California Energy Commission, which is running clean-fuel demonstration programs throughout the state. Another 5,246 vehicles have been promised by 1994.

The programs are important because they offer a controlled setting in which consumer reaction to alternative-fueled vehicles can be monitored.

J. Ferron, a partner at J.D. Power and Associates in Agoura Hills, Calif., says that sooner or later, those types of vehicles will have to be sold to consumers on Main Streets around the country. And automakers will have to design them to do more than just meet the rules.

"If manufacturers meet the regulations and miss the market — I mean cars that don't appeal to consumers — then the market could go away," Ferron says.

Fleets are first

Initially, fleet sales will provide automakers a ready market to sell low-emission vehicles. But eventually, those vehicles will have to survive on their own in the marketplace, Ferron says.

"Fleets can't eat up all these cars. At some point, they're going to have to go to buyers like you and me," he says. "This is going to take a lot of coordination and cooperation between regulators, manufacturers and refiners."

Jerry Martin, a spokesman for the Air Resources Board, admits that there are no guarantees that consumers will embrace alternative-fueled vehicles. But he says that many of the regulations can be met with current technology. "Until we get to electrics, gasoline will probably still be the primary fuel, so the cars will look and feel the same, and there won't be any big adjustment for consumers," he says.

Martin adds that automakers, oil companies and state agencies are studying "market incentives," like tax breaks and price cuts, to help spur sales of clean cars.

But Greg Dana, vice president and technical director of the Association of International Automobile Manufacturers, says, "The question of consumer acceptance is a big one. We sell what customers buy. So any situation where a car is degraded in terms of performance, handling, range is a threat to sales.

"We think that electric cars are the worst case. We just don't think that people will buy them."

As it is, the California rules don't spell out what fuels will be used. But the Air Resources Board requires oil companies to provide enough to supply the fleet of vehicles it's asking manufacturers to build and sell.

Jananne Sharpless, chairwoman of the Air Resources Board, says she's glad no one fuel or vehicle-type has grabbed the spotlight yet.

"When we started this, a lot of people thought it would be best to look at all the pros and cons of various fuels and pick the best one," she says. "What we're doing instead is establishing a performance standard and letting all the fuels compete. We're going to let the market decide which fuel, or fuels, will be the best. And what vehicles are needed to run on those fuels."

Methanol wins support

She admits that there will be "winners and losers," but says she can envision a fueling station of the future where a number of fuels are offered side-by-side.

The board's rules require that a clean fuel be available when 10,000 vehicles that run on the fuel are expected to be put into operation in Southern California, or 20,000 statewide.

For the initial stages, only "major fuel companies" — those that have refining capacity of 50,000 barrels a day and 25 service stations — would have to provide the necessary fuels.

So far, methanol appears to be the fuel of choice, at least as judged by the number of manufacturers responding to the California Energy Commission clean-fuel demonstration program and the number of cars involved.

It's unclear whether methanol is clean enough to meet the more stringent standards, but because of its compatibility with gasoline in both delivery and use, many manufacturers want to test its limits.

"We've been very pleased with methanol thus far," says John Schutz, director in charge of emissions and powertrains for Nissan Research and Design in Gardena, Calif. "The best things about it are its performance characteristics and the fact that the modifications you have to make to the automobile are virtually invisible to the consumer."

Another plus for methanol: Federal corporate average fuel economy legislation gives some breaks to manufacturers operating alternative-fueled vehicles. Because many manufacturers are struggling to meet CAFE requirements and it's relatively easy to make a regular car methanol-compatible, many are jumping to methanol first.

Ford Motor Co., which is the largest participant in the California Energy Commission's methanol-vehicle program, is actually doing even more work with reformulated gasoline. "Our approach is to see just how far we can expand our capabilities with reformulated gasoline and with current vehicle types," says Mike Schwarz, Ford's manager of emission control analysis. "We want to see how low can we go, how clean can we get."

> Fleets can't eat up all these cars. At some point, they're going to have to go to buyers like you and me.
>
> **J. Ferron**
> J.D. Power and Associates

Schwarz says reformulated gasoline may be able to meet every low-emission standard short of the 1998 zero-emission requirement.

Several fuels studied

Ford has joined with General Motors, Chrysler Corp. and 14 oil companies to study the potential of reformulated gasoline and to compare it to alternative fuels.

"We didn't end up with gasoline by accident," says Schwarz. There are a number of properties it has, and it has alone."

Arco spokesman Douglas Elmets says his company is currently studying several reformulated gasoline "recipes" that are as clean or cleaner than M85, the mixture of 85 percent methanol and 15 percent gasoline that is held up as an industry standard for burning clean and offering optimum performance. Most automakers are studying compressed natural gas, propane, ethanol and electricity and other energy sources as well as methanol and reformulated gas. Most of them are currently operating various vehicle types in their internal test fleets. (See chart on Page 32.)

The vehicles that have been donated to the California Energy Commission are fuel-flexible, meaning they can run on combinations of conventional gasoline and methanol, or exclusively on either fuel.

The commission gives the vehicles to other agencies and private companies to use in order to gather information about how the low-emitting cars and trucks perform.

Manufacturers that donate vehicles get credits that can be used toward satisfying CAFE standards. They also get access to research data that compares their products to others being tested, and they get the "public relations benefit" of being in the program, according to a commission spokesman.

Ford and GM have provided 410 of the 435 vehicles so far. Volkswagen, Nissan, Chrysler, Toyota, Mitsubishi and Mazda have also participated. The Energy Commission currently has commitments for another 5,246 vehicles to be delivered by 1994. Volvo, Mercedes-Benz, Porsche, Suzuki and Honda have also "expressed interest" in the program.

CALIFORNIA CLEAN AIR REQUIREMENTS

California's new rules require an increasing percentage of an automaker's fleet to meet progressively tighter emissions standards. For example, by 2003, 75 percent of sales must have low emissions, 15 percent ultra-low emissions and 10 percent zero emissions.

Model year	0.39 HC 7.0 CO 0.4 NOx	To 50,000 miles 0.25HC, 3.4CO, 0.4NOx To 100,000 miles .31HC, 4.2CO, 0.4NOx	Transitional low-emission vehicles 0.125HC, 3.4CO, 0.4NOx	Low-emission vehicles 0.075HC, 3.4CO, 0.2NOx	Ultra-low emission vehicles 0.040HC, 1.7CO,0.2NOx	Zero-emission vehicles 0 OHC, 0 OCO, 0 ONOx
2003				75	15	10

How California rules will work

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

California's new clean air laws create four different categories of clean cars and a timetable for introducing them.

The vehicles are called "transitional low-emission vehicles," "low-emission vehicles," "ultra-low emission vehicles," and "zero-emission vehicles." They will appear in stages between the 1994 and 1998 model years.

The rules will supersede national emission standards mandated under last year's Clean Air Act.

By 1996, for example, the federal Clean Air Act says U.S. cars must reduce hydrocarbon emissions from 0.41 gpm to 0.25 gpm. California already has a 0.39 gpm standard; it will fall to 0.25 gpm for 80 percent of a maker's car and light-truck fleet by 1996. And the remaining 20 percent will have to meet a more-stringent "transitional low-emission vehicle" standard of 0.125 gpm.

By 2003 in California, 75 percent of a maker's cars and light trucks will have to meet even tougher 0.075 gpm "low-emission vehicle" standard. For the balance, the California rules will become more stringent again, including 10 percent with "zero" emissions. Those most likely will be electric vehicles.

Similarly, carbon monoxide and nitrogen oxide emissions will become progressively stricter in California, while elsewhere in the nation they remain level at current California standards until model year 2003. If the EPA says it is necessary, national standards would become stricter then.

Several states, including New York and Massachusetts, have taken steps to adopt California air standards. Federal rules allow such a move as long as states give two years notice. In New York, the plan has been challenged by the Motor Vehicle Manufacturers Association and the Association of International Automobile Manufacturers.

California regulations also include more stringent "in-use" requirements, new on-board diagnostic standards and tougher evaporative emission standards.

Beginning in 1993, 40 percent of the new car and light-truck fleet in California will have to meet emission standards for 100,000 miles, instead of 50,000 miles. Heavier trucks will have a 120,000-mile requirement. Similar rules for the 50,000-to-100,000-mile period will also take effect nationally between 1994 and 1996.

By 1996, all cars sold in California will have to have diagnostic equipment on board which will be able to monitor and locate emissions from 17 different sources, such as the engine block and radiator. Only three sources are monitored currently.

The Air Resources Board is also tightening evaporative standards. Non-tailpipe emissions are currently measured when the car is idling at 67 degrees. By 1998, all vehicles will have to pass in a 105-degree environment.

EXPORT

FROM PAGE 1

don't think it will ever sell many copies here."

But even considering such constraints, the Big 3 seem to be falling far short of what common sense says a dedicated export push should be yielding.

Despite individual successes, neither General Motors nor Chrysler Corp. — by far the export leader — managed to attain even the modest sales targets they had set for 1990. And Ford Motor Co.'s export efforts were so piecemeal and disjointed that company executives could not say with any accuracy what their 1990 sales were.

- GM's European export sales totalled 14,290 units in 1990. That was up 9.5 percent from 13,045 in 1989 and 35.7 percent from 10,528 in 1988, but it was far short of the modest 27,000 target for 1990.
- Chrysler's sales rose 5 percent last year, to 41,038 cars, minivans and Jeeps, far below its projection of 55,000. Chairman Lee Iacocca has said European sales will reach 100,000 a year by the mid-1990s.
- Ford, reflecting its fainthearted commitment to exports, reported sales of only 1,815 cars and 1,806 trucks through September; company officials said they did not know full-year sales. In 1989, Ford sold 2,083 American Ford cars and 2,185 trucks in Europe.

Credibility problem

All three companies continue to insist that better days lie ahead as more dealers are added and as European perceptions of U.S. quality and engineering change.

GM, which sold a record 35,000 U.S.-built cars in Europe in 1979, revived its export ambitions four years ago, after the dollar weakened against local currencies. But Gary Meteer, who arrived in January 1989 as executive director for European activities, has had to convince dealers across Europe that GM won't retreat again if exchange rates fluctuate.

"They've seen a lot of Gary Meteers over here," he says. "We spent about 15 months redeveloping credibility."

Although sales have increased, GM is still far below target. Meteer cites tax law changes in Sweden and Finland that cut into healthy sales of large vans and the slow process of getting several key models certified for all markets.

GM will add the Pontiac Trans Sport SE; four-door Grand Prix, Bonneville, Park Avenue and Corsica; four-door Blazer; and several Cadillac models to its Europe-wide lineup this year after winning type certifications from the European Community. Some of the models were sold last year under specific single-country exemptions.

Prices are high

About 1,800 Trans Sports were sold on that basis last year, principally in Austria, Switzerland and Germany. With EC-wide certification, Meteer projects about 4,000 sales this year.

But the Trans Sport has been knocked in some European comparison tests for substandard fit and finish, dated technology in the form of a three-speed automatic and hefty price.

Price could be a major disincentive. The minivan sells for 53,000 marks (about $36,500) in Germany, nearly double its U.S. base price of $18,889 and about $8,000 more than a similarly equipped Renault Espace ($28,600) and a comparable Toyota Previa ($28,900).

Similarly, the high-end Park Avenue, which carries a 1991 base price of $27,420 at home, will be tagged at 70,000 marks, or about $48,200, in Germany. That pits the Buick against the BMW 7 series and the Mercedes 300 series.

One analyst says the U.S. carmakers are pricing their cars on the wrong basis for Europe.

"Typically, these cars are priced for the U.S., and sales in Europe have every possible add-on, such as homologation, amortized onto a small number of vehicles," said Karl Ludvigsen, a former Ford of Europe executive who now heads his own research firm in London.

"That isn't what the big players do. They don't price on a cost basis, they price on a market basis. You've got to price for the local market."

Meteer, saying that GM is locked-in on prices because of the limited number of options it can offer on its cars in Europe, predicts that sales will rise to about 25,000 vehicles this year — despite the general downturn in Europe.

"We're entering France, Italy and Spain, and we will have the benefit of a substantially expanded dealer organization in Germany," he says. "It is still not as large as we'd like it, but we'll have 52 dealers active for 12 months. Last year we had 27."

GM had previously set a target of 60,000 units by 1993, and Meteer said that remains his objective.

Why Chrysler missed

Meanwhile, Chrysler Corp. says it failed to meet its target last year because of extraordinary factors, such as dealer uncertainty over the company's talks with Italy's Fiat Group, but expects to get back on track in 1991.

"We didn't do as well in Germany as we might have done," said Michael O'Mara, sales manager for Chrysler in Europe.

Sales in Germany fell 2 percent, to 10,396, last year — even as the dealer network was being expanded and the overall German market was soaring to a record.

Severe product critiques in the influential German motoring press also have hurt.

Sales of Chrysler's best-selling model in Europe, the Jeep Cherokee, fell 13 percent last year, to 16,392. The second-best seller, the Voyager, rose 53 percent, to 11,943.

O'Mara blamed lower Cherokee sales on reduced diesel demand, but he said the 4-liter Jeep Wrangler is proving more popular than expected.

Wrangler sales last year totaled 4,183 units, followed by Saratoga (LeBaron sedan), 2,274; LeBaron convertible, 2,201; and LeBaron, 1,345.

After Germany, Chrysler's next biggest market is France, where Jeep is distributed by Renault. Combined Jeep and Chrysler sales last year totaled 9,849. Switzerland was next at 4,863, followed by Belgium, 3,094; Holland, 2,962; and Austria, 2,121.

Chrysler's dealer network throughout Europe is continuing to expand, up to 1,021 from 801 at the end of 1989.

Ford bets on Probe

Ford takes a much less strategic approach to sales of American cars in Europe — its national sales organizations have traditionally set up their own import agreements.

But the big test will come this year in Germany, where Ford of Germany is pitting the Ford Probe in its mainstream lineup against GM's home-grown Opel Calibra. Plans call for selling about 6,000 Probes in Germany, almost three times the number of American cars Ford sold in all of Europe last year.

The Probe, Taurus and Mercury Sable are Ford's main American sellers in Europe. The Aerostar is its best-selling U.S. commercial vehicle in Europe.

Southfield's Best Hotel Value For Smooth Running Meetings.

If you want a smooth running meeting in the Detroit area, you can count on the Sheraton Southfield Hotel.

We've got one of the largest, and newest, hotel meeting facilities in the Motor City, with 15,000 sq. ft. of available space.

Regardless of whether you're planning a large high performance meeting, or a small executive gathering, the Sheraton Southfield has the facilities and experienced meeting coordinators to help you fine tune your meeting and assure its success.

For information, contact our Sales and Catering Offices at (313) 559-6500. 16400 J.L. Hudson Drive, Southfield, MI 48075. FAX: (313) 559-3625.

Honda is top-selling U.S. import in Japan

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

More aggressive marketing by the Big 3 and increased shipments from Japanese transplants boosted sales of U.S. auto exports in Japan 50 percent last year.

Combined sales of U.S. exports totaled 28,602 units in 1990, up from 19,084 in 1989 and 14,511 in 1988. Last year's volume was the highest ever. But the gain still left U.S. automakers with less than one-half of 1 percent of Japan's new-car market.

Before 1989, the highest export volume to Japan was 16,739 in 1979. Throughout most of the 1980s, the number averaged about 4,500 cars a year.

Ironically, the best-selling U.S.-made car in Japan last year was the Honda Accord, built by Honda of America Manufacturing Inc. in Ohio. It was the third consecutive year that the Accord has been tops in sales. The company shipped 7,534 Accord coupes to Japan last year, up from 4,697 in 1989.

Another Japanese transplant vehicle, the Illinois-built Mitsubishi Eclipse, chalked up 2,886 sales in Japan last year, making Mitsubishi the fourth largest exporter of U.S. cars to the country.

Ford Motor Co. sold 6,030 units. More than one-third of them were Ford Probes, built by Mazda Motor Manufacturing (U.S.A.) Corp. in Flat Rock, Mich.

General Motors' combined exports to Japan were 8,513, up 17.7 percent from 1989's volume of 7,231. The top-selling GM makes were Chevrolet, with 3,637, and Pontiac, with 2,745. Big sellers for GM in Japan included the Chevrolet Camaro, Pontiac Grand Am and Cadillac Fleetwood.

Chrysler Corp. experienced its highest Japanese-export volume in history, with 1,432 sales last year. In 1990, Chrysler arranged for some 700 Japanese Honda dealers to begin stocking Chrysler's Jeep products. Among Chrysler cars, the LeBaron convertible and Imperial were the best sellers.

The recent appreciation of the yen could create still more opportunity for U.S. exporters, said Kazuhiko Morisaki, director of automotive affairs with the Japan External Trade Organization in New York. The yen's rise of nearly 20 percent against the dollar during the past year should allow Japanese distributors to soften prices.

At the same time, the appreciation of the German mark against the yen will swing some Japanese import-buyers away from German cars in favor of U.S. products, he predicted. German makes outsold U.S. competitors in Japan by more than 5 to 1 last year. But sales of German cars in Japan declined 12 percent, to 6,659, in January 1991, compared with January 1990. Sales of U.S. vehicles rose nearly 80 percent to 1,308 in January, according to the Japan Automobile Importers Association.

The association counts cars and some sport-utilities in its totals.

U.S. plants are increasingly targeting the booming Japanese market, which saw a 68 percent increase in large-car sales last year.

Saturn Corp. announced that it will export to Japan, although no firm date has been given.

Honda is preparing its new Ohio-made Accord station wagon for export to Japan, with plans to sell about 5,000 there this year. The company expects total Accord exports to exceed 10,000 for the year.

Toyota Motor Manufacturing U.S.A. Inc. has said it will export about 2,000 U.S.-made Camrys to Japan this year.

MADE FOR JAPAN

Top-selling U.S.-built vehicles in Japan, by company, in 1990.

CUTS

FROM PAGE 2

the company has confirmed only two of those reductions. Chrysler had 31,200 salaried workers when it began the most recent cost-cutting crusade.

Chrysler is by no means alone. General Motors plans to cut its white-collar employment by 15 percent to 85,000 as part of its broad cost-cutting plan announced earlier this month.

David McCammon, Ford Motor Co. vice president and treasurer, said earlier this month that Ford, too, has a program to reduce its salaried workforce. He said attrition will account for a 4 to 5 percent reduction and special early retirements a similar amount. McCammon said there probably will be salaried layoffs on top of that.

During a press conference last month, Chrysler Chairman Lee Iacocca made it clear that further personnel cuts were likely, but he stressed that engineers will not be on the chopping block.

He indicated that the company is closely monitoring its 6,000-member engineering department to assure that specialized employees are not defecting to other companies.

"We certainly aren't hitting the engineering fraternity," Iacocca said. "You can't ask them to keep all these all-new product programs on schedule and then say, 'Do it with half the engineers.' "

Chrysler is in the midst of a $15.6 billion five-year capital spending program.

To achieve the personnel cuts, Iacocca said, the company is attacking staff and management ranks.

"We knocked the hell out of staffs to be honest with you," Iacocca said. "And I still think we have too many layers of management. The hierarchy is still too strong. We will attack that one more time."

Chrysler has been trying to downsize its management ranks and to reduce management layers since 1988.

Chrysler also spent the latter part of the 1980s trying to shake off the effect of acquiring American Motors Corp. in August 1987. Personnel cuts have been a way of life at Chrysler since that time.

Iacocca said then it was unclear if layoffs could be avoided in this round of white-collar cuts.

"You hope you can do this the painless way, through attrition or some early buyouts and early retirements," he said. "But it could be that in the condition we're in now, we may have to lay off some people. But I don't think it will be a helluva lot of people."

CHRYSLER

FROM PAGE 2

ditional details, but sources within the company said workers are being given a three-year sweetener. For example, a 53-year old worker would retire with the benefits of a 56-year old worker.

The voluntary termination incentive program includes cash based on years of service and up to six months of health care coverage. The *Chrysler Times* article also said that workers will be offered "a choice from several Chrysler vehicles," which will be given to them outright as part of the buyout.

John Miller, president of UAW Local 412, an amalgamated local that includes 21 units of salaried Chrysler employees, said his local has been notified of Chrysler's intent to offer UAW salaried workers special early retirement and voluntary termination incentives.

"This is not a reopening of negotiations," Miller said. "It is activation of part of the national agreement."

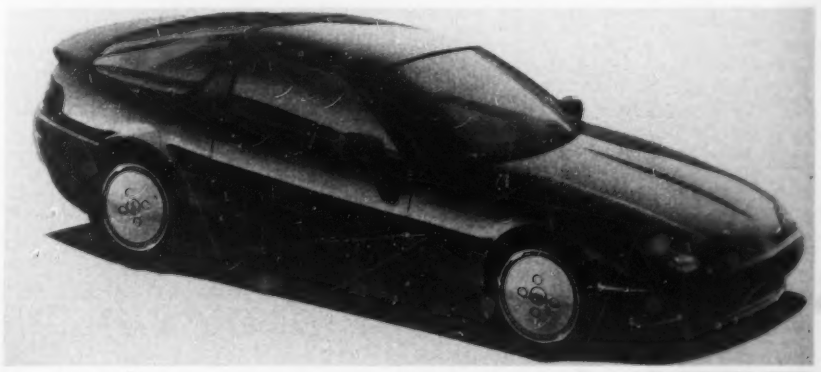
Miller said he expects the 21 salaried Chrysler units, which include about 2,000 workers — designers, engineers and technical staff at various Chrysler facilities — to be little affected by Chrysler's move. Miller said his units already have been reduced in size, and few additional employees are likely to leave voluntarily. "My best guesstimate is we're down about one-third since 1988," he said. "I don't expect an impact at all."

Like UAW hourly workers, members of the salaried UAW units are covered by a Salaried Workers Employment Security System mandated by the national Chrysler/UAW agreement. That system prohibits worker layoffs. Instead, employees are transferred to a job bank and receive a new assignment.

It will not be clear how many non-union salaried Chrysler workers will be laid off until the April 30 deadline for voluntary departures.

"Just how many will depend on the success of the voluntary programs and normal attrition," St. John said in the *Chrysler Times* article.

"The bottom line is that, with our plants running at about 50 percent capacity, we're left with no choice but to bring program and people costs in line with what the business can support."



Mazda will unveil its new MX-3 sports coupe, bound for the U.S. market as the Galaxy.

GENEVA

FROM PAGE 3

cut drag coefficient to 0.32 from 0.34, a modified interior and a V-6 engine from the Renault 25.

The Espace has long been Europe's best-selling minivan, with sales rising from 18,173 in 1986 to 46,257 last year.

Renault also will show a restyled Alpine A610 Turbo sports car, with output from the 3.0-liter V-6 increased to 250 hp.

Ford Motor Co.'s Jaguar unit will show a restyled XJ-S coupe and convertible with an updated front and rear appearance.

Alfa Romeo will present a 164-based coupe prototype that some reviewers have likened to the Batmobile. Alfa also will introduce a new version of the 33 subcompact with permanent all-wheel-drive.

Two Volkswagen show cars are expected — a two-seat proposal in beach buggy mode with cutaway doors from the Wolfsburg central design department and a sporty compact from the Art Center design school in Vevey, Switzerland.

Both models, based on the Golf, reflect a way of thinking recently described by VW Chairman Carl Hahn in a German television profile as "short and fun. . .and not too fast."

No decision has been made on whether to build the cars.

The most important introductions of 1991 will be the replacements for Europe's two best-selling cars — the Golf and General Motors' Opel Kadett/Vauxhall Astra. Although neither will debut until the Frankfurt show in September, GM almost certainly will flash photos of its new car, to be called the Astra throughout Europe, during its Geneva press conference.

GM's Adam Opel unit will show the Frontera, an awd sport-utility based on the Isuzu Rodeo that is built by Isuzu-Bedford Co. in England. When it goes on sale in Europe this fall, the Frontera will be available in two body styles, a two-door sport version with a shorter wheelbase and a four-door.

From Japan, Mazda Motor Corp. will unveil the MX-3, a small front-wheel-drive coupe powered by a 1.8-liter V-6 engine, to be sold in the United States as the Galaxy.

Mitsubishi Motors Corp. will roll out its new Pajero off-road vehicle, widely believed to be the basis for the next-generation Mercedes Gelaendewagen.

No-shows this year include the 500-hp, twin-supercharged Aston Martin Virage Vantage, the ultra-performance version of the Virage hardtop coupe. Aston, saying the car won't be ready, has promised another Geneva surprise.

In addition, the new Seat Toledo sedan apparently won't bow until the Barcelona show in May.

For Americans who have not been to Europe since last fall's Paris show, Geneva also will provide the first glimpse of such newcomers as the BMW 3 series, Audi 100 and the Citroen ZX.

Major proposals in energy plan

Here are the major automotive-related proposals in President Bush's energy plan:

- Eliminate the 1.2-mpg cap on corporate average fuel economy credits for vehicles that run on gasoline or alternative fuels.
- Require the use of alternative-fueled vehicles in commercial fleets.
- Remove 2 million "old and inefficient" cars from the road by 2000 by offering a "bounty" to the private sector and to state and local governments. "Early retirement of these gas-guzzling vehicles could lead to savings of 10,000 to 15,000 barrels of oil a day" and reduce smog-causing emissions by 1 to 2 percent, the plan said.
- Invest $150 million between 1992 and 1996 in research programs with the auto industry to accelerate electric vehicle development.
- Increase federal purchases of alternative-fueled cars. The federal government buys 44,000 light-duty vehicles each year and operates 200,000 cars and light trucks. Specific numbers were not recommended.
- Promote research with the intent of installing intelligent vehicle and highway systems. The systems are expected to save fuel by reducing traffic jams.
- Accelerate research to develop transportation fuels from materials such as grains.
- Institute broad-scale reform of natural gas regulations to permit clean burning natural gas to replace oil as a transportation fuel.
- Expand the use of "high-occupancy vehicle" lanes, ridesharing and mass transit to reduce energy use and emissions.

— Diana T. Kurylko

ENERGY

FROM PAGE 1

Committee. But Watkins held to the administration's position that the issue of safety and technical feasibility must first be studied. He voiced opposition to Sen. Richard Bryan's, D-Nev., CAFE bill, calling it the "highway death act of 1991." The administration believes cars would have to become smaller — and less safe — to meet Bryan's call for a 40 percent increase in CAFE by model year 2001.

Taking a position automakers echoed in CAFE hearings the same day, Watkins recommended the issue be decided after the National Academy of Sciences issues a report on CAFE in late June.

"Higher CAFE encourages people to drive farther. Unless you restrict the miles they drive, CAFE won't make a difference," Watkins said, disputing Senate committee claims that fuel economy laws could save as much as 2.8 million barrels of oil a day.

The president's plan not only ignores CAFE but offers tantalizing relief from the current standard by eliminating a cap on credits for alternative-fueled cars.

The plan also opens the door for future consideration of "providing credit trading and averaging among manufacturers, eliminating distinctions between import and domestic vehicles that can adversely affect full-line manufacturers, revising noncompliance penalties and establishing alternative forms of CAFE standards."

The administration said standards could be based on vehicle size to improve fuel economy "without compromising highway safety" — an argument widely used by the auto industry to combat CAFE bills.

The energy plan isn't all good news for the industry. It renews an alternative fuels proposal similar to one in Bush's clean air bill that the industry successfully lobbied against last year.

The energy strategy proposes requiring centrally fueled fleets to purchase vehicles capable of using alternative fuels, such as compressed natural gas, ethanol and methanol. No numbers have been set, but the industry is already worried. The provisions would be stricter than those already mandated by the 1990 Clean Air Act.

General Motors said it hoped to work with the administration on developing the alternative-fuels program. Ford Motor Co. said it opposes requiring alternative-fuel initiatives by law "or a directive that fails to take into consideration the forces of the marketplace."

Outlook dims after upturn

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. manufacturers expect to idle 17 plants and one car line in the United States and Canada this week, resulting in an estimated loss of 56,985 cars and trucks.

Last week's U.S. estimated vehicle production was the highest since Dec. 15, 1990.

Makers slated 120,856 cars last week, 48.36 above the prior week but 12.48 percent below 1990.

Year-to-date U.S. auto production is up 2.0 percent over 1990.

Truckmakers planned to build 69,122 units last week, 44.63 percent above the prior week but 15.94 percent below 1990.

So far this year, truck production trails 1990 by 23.02 percent.

General Motors began producing the Buick Roadmaster wagon at the Willow Run, Mich., facility. GM does not report vehicle production until the line is at full speed, therefore the figures reflected in the table are estimated.

A snowstorm forced Honda of America Manufacturing Inc. to idle its two Ohio plants Ohio Feb. 15.

Ford Motor Co. has reduced the Edison, N.J., truck plant and the truck line of the Lorain, Ohio, facility to single shifts this week.

CANADA: Total vehicle production in Canada was estimated at 23,822 units last week, 18.36 below the prior week and 45.45 percent below the year-ago week.

U.S.-built Accords pile up in storage lots

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Slow sales are catching up with the usually robust Japanese transplants.

At least three of them — Honda of America Manufacturing Inc., Toyota Motor Manufacturing U.S.A. Inc. and Subaru-Isuzu Automotive Inc. — filled their factory shipping yards with unsold cars in February.

While the situation has eased at Toyota, Honda and Subaru-Isuzu have had to lease extra lots to hold spillover production. Honda and Isuzu have taken the unprecedented step of cutting back production. Parent companies of Honda, Toyota, Nissan and Mazda are trimming exports to the United States.

The steps come as the industry-wide winter slowdown is giving most members of the group their first taste of bad times in the United States. So far, the cease-fire in the Persian Gulf war has only brought hope for some relief.

In the meantime, more than 2,000 Accords — America's best-selling car — are sitting behind an old U.S. Army depot in Marion, Ohio.

Honda is using the site for overflow storage space for Accords that continue coming off the Marysville, Ohio, assembly line at the rate of 1,400 a day.

Honda's domestic car sales dropped 26 percent in the first 10 days of February, followed by a 10.9 percent gain in the second 10 days. But the factory will not be asked to reduce production beyond a previously announced cut of 5,000 units for the first quarter, said Kurt Antonius, a spokesman for American Honda Motor Co. Inc.

"We have quite a bit of space in Marion until this thing is over," Antonius said. "The last thing we want to do is disrupt production at

Engineers brace for new demands of legislators

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Despite the industry's best efforts on emissions, nonpolluting manufacturing methods, fuel economy and safety, the automobile remains a prime target of legislators and environmental and safety groups.

As a result, many technical sessions at last week's SAE International Congress & Exposition concentrated on technologies for recycling, environmental protection, vehicle emissions, fuel economy and crash safety.

According to Mene Asensio, SAE staff organizer of paper presenters, 28 speakers cancelled presentations because of company restrictions on international travel. Replacements were found to deliver 21 of the papers.

"The difficulty was anticipated, predicted and planned for and the companies responded beautifully. They made every effort to give us a qualified speaker," Asension said.

Exhibiting suppliers touted the recyclability of their materials. Test-equipment makers pushed the

Makers cross fingers as war ends

Industry hopes for upturn; mid-February bad, but not awful

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Early victory in Kuwait, merely bad sales in mid-February, and a slight uptick in consumer confidence had some optimists talking about an early end to the recession last week.

However, without more solid indications that the economy will improve, automakers stuck to reduced production schedules to avoid adding to a glut of cars.

"We may get a little boost out of the end of the war, but not enough to catapult us out of the recession," said consumer researcher Fabian Linden.

Some U.S. plants will do better than average as Kuwait rebuilds its car and truck fleets. (Story on Page 35.) General Motors planned

Japan, U.S. eye sales to Kuwait, Page 35

to increase production of Suburbans and Chevrolet Caprices.

From Feb. 11 to 20, the daily sales rate for cars and light trucks fell 15.2 percent. Sales of domestic and imported cars and trucks were 315,465, down 4.6 percent from 330,727 last year, but there were nine selling days this year and eight last year.

Cars and trucks were down about the same. Big 3 brands were down 14.3 percent while import brands were down 17.7 percent.

In January, the whole market was off 27.7 percent.

"Business is getting better," said Mark W. Hutchins, general sales manager of Lincoln-Mercury Division. Hutchins said last week that the auto industry may outperform predictions by Ford economists that the recession could end by mid-1991.

"Personally, I think it may be a little quicker," he said.

A study by DRI released just before the war ended predicted that the U.S. economy will rebound by late spring or early summer. After the cease-fire, DRI added 200,000 units to its prediction for 1991, and now expects total U.S. sales of 12.7 million to 12.8 million. That is at least 1 million below last year.

Big 3 chairmen seek relief from White House

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The chairmen of the Big 3 quietly held high-level talks with Bush administration officials last week, painting a dismal picture of the industry's woes and pleading for regulatory relief and lower interest rates.

In a day-long visit, General Motors Chairman Robert Stempel, Ford Motor Co. Chairman Harold "Red" Poling and Chrysler Corp. Chairman Lee Iacocca visited key cabinet members, leading Republican senators and Federal Reserve Board Chairman Alan Greenspan.

Sources said the auto chairmen timed their visit to have maximum influence on pending legislation and policies. They include the national energy strategy, corporate average fuel economy standards, trade talks with Japan, and a pending second wave of safety regulations on cars and light trucks.

Washington offices for the automakers were unusually reluctant to confirm the agendas of their chairman and refused to discuss more than the general nature of the visits. A Big 3 source said the manufacturers feared that news of the industry's visit could be negatively characterized and cause serious repercussions in economic markets.

Stempel, Poling and Iacocca reportedly painted a frank but dismal picture of the

Automakers that produce safer, cleaner cars will excel in the marketplace, Center fpr Auto Safety chief Clarence Ditlow believes.

Ditlow to stress responsibility in talk to Chrysler directors

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Consumer advocate Clarence Ditlow will make his first appearance before one of the Big 3's board of directors this week.

Chrysler Corp. has invited Ditlow, executive director of the Center for Auto Safety, to speak to its board at its monthly meeting scheduled for Thursday in New York City.

Ditlow said his message to the board will stress the auto industry's social responsibility.

"The theme is really clear," Ditlow said. "That is their social responsibility, fuel economy and safety. I will stress that if they are a more socially responsible corporation and produce cars consumers want, they will excel in the marketplace.

"There is a mutuality of interest," said Ditlow, who heads the 20-year-old safety group founded by consumer activist Ralph Nader. "We may be on the opposite side of the fence but the ultimate goal is similar. We're going to try to show them the sales advantage of safety, reliability and fuel economy."

Ditlow said he had not yet prepared his remarks for the board because he was uncertain how much time he would be allocated.

The Center for Auto Safety in December asked Chrysler to recall 500,000 1989 and 1990 model cars and minivans equipped with the company's A604 four-speed automatic transmission alleging reliability problems. But Ditlow said his remarks are likely to address wider issues and not focus on the A604.

"We will look at the overall process and consumer issues over time, how companies respond and what a company's social responsibility is," Ditlow said. He added that he may point out consumer-related areas where Chrysler could gain market leadership.

Ditlow outlined his agency's agenda in January during the Automotive News World Congress and his remarks are likely to reflect those priorities.

At that time, he said the auto industry in the 1990s should place safety, reliability, quality and consumer protection at the top of its list and take action before the federal government does.

Ditlow's agenda includes full-front-seat air bags by 1993, rather than 1994 when mandates for driver-side bags take effect; improved side-impact protection for head and body; mandatory anti-lock brakes; exterior designs that reduce injury to pedestrians; better stability to reduce rollover; and a return to bumpers that withstand crashes of 5 mph without damage.

Ditlow's outside voice is not the first heard by the Chrysler board. Chrysler invited outspoken NADA President Ron Tonkin to speak to the board when he headed the dealer organization in 1989.

Lutz to plead Chrysler's case at summit with Consumer Reports

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. President Robert Lutz will meet Wednesday with representatives of *Consumer Reports*, the magazine that branded Chrysler's A604 four-speed automatic transmission "a lemon."

A spokesman for Consumers Union, which publishes the magazine, confirmed the Wednesday meeting.

Chrysler Corp. Chairman Lee Iacocca in February said Lutz would head a team of company engineering and marketing representatives meeting with the magazine's staff.

In its February issue, *Consumer Reports* told consumers to avoid buying Chrysler vehicles equipped with the A604 transaxle. The 1.4 million vehicles equipped with the 2½-year-old transmission include most Chrysler minivans.

"*Consumer Reports* has agreed — and they don't usually do this — to meet with us to exchange some data on both transmissions and minivans and maybe we can get this thing cleared up," Iacocca said in February.

It is expected that Lutz will tell *Consumer Reports* that transmission reliability problems cited by the magazine have been corrected.

Chrysler maintains that the most widespread problems occurred during the transaxle's introduction in the 1989 model year and that corrective modifications have been made.

The company has said it replaced 19,000 A604 units in the 1989 and 1990 model years, about 3.78 percent of A604 units installed in the 1989 model year and 0.78 percent of the units installed in the 1990 model year. Chrysler said its internal data indicates the replacement rate continues to decline in the 1991 model year and is now within the industry norm.

In addition, Chrysler may claim in the meeting this week that the company was in essence a victim of bad luck because a 1991 model tested by *Consumer Reports* was one of a small number of units produced with a separate A604 problem. Chrysler has confirmed that a "very small batch" of A604 units were produced in the early 1991 model year with a bad surface finish on the reaction shafts, damaging the reaction shaft bushing. That problem has been corrected but one of the defective units was purchased by the magazine for its testing.

> "Consumer Reports has agreed — and they don't usually do this — to meet with us to exchange some data on both transmissions and minivans and maybe we can get this thing cleared up."
>
> **Lee Iacocca**
> Chrysler chairman

In its February issue, *Consumer Reports* cited a high incidence of transmission problems based on repair histories of more than 800,000 1989 and 1990 models owned by the magazine's subscribers.

Consumer Reports says 20 percent of owners of 1989 Dodge Grand Caravans and 19 percent of the owners of 1989 Plymouth Grand Voyagers reported problems with the A604. The magazine said more than 14 percent of all Chrysler vehicles with the transaxle had transmission problems in the first year of ownership. That compares to an average rate of 3 percent incidents of trouble with automatic transmissions for all 1989 models from all manufacturers in the survey.

Six months into the 1990 model year, the automatic transmission problem rate was 10 percent for the 1990 Dodge Grand Caravan and 9 percent for the Plymouth Grand Voyager, *Consumer Reports* said. The average for 1990 models was 2 percent.

Consumer Reports said the survey reflects repair experiences between April 1989 and March 1990, the time period in which Chrysler claims it was correcting a design defect in the transmission.

"This is old news," Iacocca said of the magazine's report. "It is a consumer magazine. They are interested in taking care of consumers. We should be getting accolades for our program to take care of consumers."

Chrysler has begun a massive customer satisfaction program to reach A604 owners. All owners are being telephoned to resolve any lingering problems. Deductibles are being waived and free loaner vehicles offered.

Ford searches for more cost cuts

Poling says only half of $3 billion target found; layoffs loom

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Certain Ford Motor Co. employees must decide this month if they will take an early retirement buyout package as part of the company's $3 billion cost-cutting program.

In a statement to employees via closed-circuit television last week, Chairman Harold Poling said half of the $3 billion savings has been achieved, leaving $1.5 billion to be trimmed from the budget by year's end. Most of the cuts will come within the company's white-collar ranks.

Highlights of a plan to reach the company's goal include:

- Offering early retirement to employes aged 55 to 62 with at least 10 years of service.
- Suspending merit increases for the company's top officers through the first quarter of 1992.
- Reducing the merit fund by 25 percent for all other employees through the first quarter of 1992.
- Temporarily suspending the matching contribution for employees that participate in the company's savings and stock investment plan.

During 1989, the most recent year for which figures are available, the company paid $214,157,-903 to employees in supplemental compensation; another $109,678,-015 was given to the stock plan.

Poling said the company wants to avoid layoffs by offering the special early retirements, but a company source, who did not want to be identified, said layoffs probably will be inevitable.

The source said Ford hopes to reduce its 53,000-member white-collar staff by about 10 percent by the end of the year. The company projects that half the cuts will come via attrition, but the source estimates that early retirements at best will make up 3 percent of the reduction. That would leave about 1,060 white-collar employees facing layoff notices.

Ford had a net loss of $518 million in the fourth quarter of 1990, and company treasurer David McCammon projects a loss in the first quarter that ends March 31.

For all of 1990, the company had net earnings of $860 million, down from $3.8 billion in 1989. Its share of the U.S. light-vehicle market fell from 24.6 percent in 1989 to 23.9 percent in 1990.

The company's Financial Services Operations, which includes Ford Motor Credit Co., had net earnings of $761 million, up 15 percent from 1989. Even financial services "may not be immune from some of the cost cutting," said company spokesman Dick Routh.

Ford also eliminated the $1,000 annual Flexible Compensation Account for senior executives and revoked plans to increase the account by $600 for all other employees. That is an account that employees can draw on at their discretion.

Vacation time will be curtailed for top executives, and first-class travel has been eliminated.

Securities analyst Ronald Glantz of Dean Witter Reynolds Inc. said he believes the company won't stop with the white-collar cuts. Glantz predicts the company will reduce its annual dividend from $3 to $1 per common share at its board meeting April 11.

Benton recovering from heart surgery

Allan Gilmour, Ford Motor Co. executive vice president, has temporarily taken over the duties of company President Philip Benton Jr., who is recovering from coronary bypass surgery.

Benton

Ford spokesman Dick Routh said that Gilmour will also continue with his duties as president of the Ford Automotive Group.

Routh said Benton is recovering nicely, but he said he did not know when Benton will return to work.

Supercar projects at full throttle

Europeans not slowing despite economic, safety potholes

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — The combination of Gulf war, economic downturn and growing safety and environmental sensitivity in Europe has done little damage to the plans and dreams of several companies to bring various 500-plus-horsepower supercars to market.

Indeed, many projects are gaining momentum.

Bugatti Automobili S.p.A. has just released first photos of its Project 110 supercar that will be unveiled later this year; the Grand Prix team of McLaren Cars has announced it will use a BMW V-12 engine in its planned road car; a design prototype that ItalDesign S.p.A. is showing at this week's Geneva auto show is widely conjectured to be BMW's future entry in the field and analysts say Mercedes-Benz is almost certain to show a high-tech testbed at the Frankfurt show in September.

Also, several independent projects are underway.

BMW Motorsport GmbH will supply a 6-liter, all-aluminum V-12 for the rear-drive, mid-engine McLaren that is set to debut in 1993. Performance figures for the car, expected to debut at the 1992 Geneva show with the name "F1," have not been disclosed.

McLaren's car project leader, Gordon Murray, and BMW engine development chieftain Paul Rosche once worked together on the Brabham-BMW Formula One team.

McLaren, which began developing its new vehicle in 1989, is expected to build about 50 units a year, with the price exceeding $1 million per copy. Murray reportedly is aiming at a 0-62 mph time of 3.2 seconds and a top speed of 217 mph.

The drag co-efficient is expected to be a stunningly sleek 0.18. Lotus Elan designer Peter Stevens is the stylist.

BMW is known to be considering its own car, and many think it could be based on the BMW-powered prototype that ItalDesign will show at Geneva. However, industry executives say BMW is unlikely to move into the supercar arena until arch-rival Mercedes-Benz does.

Mercedes, meanwhile, is expected to show its much-discussed C112 project car at Frankfurt in

see SUPERCARS, page 33

Bugatti plans to roll out the Marcello Gandini-designed 110T supercar, powered by a 12-cylinder twin-turbo engine that develops 550 hp, on Sept. 15 to commemorate the 110th birthday of Ettore Bugatti.

CHINA: *Carmaking again on track, but experts scoff at goals*

By Stephen Vines
STAFF CORRESPONDENT

HONG KONG — On Feb. 9, in a program laced with pomp and import, Chinese state television aired ground-breaking ceremonies for Volkswagen AG's new joint-venture plant in Changchun, where the carmaker is scheduled to be producing 150,000 Golfs and Jettas a year by the middle of the decade.

In the tea-leaf world of China's state-controlled media, where what is aired is of official concern precisely because it is aired, the news announcement had the weight of a policy statement. The message: after consigning joint venture proposals to the deep-freeze during the 1989 crackdown on the democracy movement, China's leadership has put the task of building a world-class car industry back on the fast track.

By any accounting, the ambition is on the scale of one of Mao's Great Leaps: from a manufacturing base that produced just 30,000 cars last year, China's leaders propose to build an industry capable of shipping 700,000 world-quality cars a year to domestic and global markets by the latter part of the decade.

To be sure, the great leap is there on paper. Agreements signed for three new projects account for 600,000 vehicles of the projected total, while existing facilities are expected to boost annual production to around 100,000 units within the next four years.

The projections are universally dismissed by foreign automotive executives working in the country and by outside industry experts knowledgeable in the region.

They point out that planning for the unprecedented expansion of

DOUBLE-EDGED SWORD

Japanese transplants being pushed to add more local content, but 'Americanization' of vehicles adds risk of CAFE penalties

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Japanese transplant automakers are finding the search for North American content is getting harder, despite strong gains last year.

Half of the 16 different cars and trucks currently built at North American transplant factories increased their domestic content levels last year. Of those that did, the average gain was 11.4 percent.

The increase was small comfort for some U.S. parts makers, who say the Japanese are dragging their feet in buying U.S. parts for transplants and for use back in Japan. American critics point out that a gaping $10.5 billion parts-trade imbalance still exists between the two nations.

But while the Japanese scurry to speed up their efforts under intensifying political pressures, they continue to face a double obstacle in their efforts:

- U.S. parts makers continue to fall below the quality standards that the Japanese say they are accustomed to, some claim.
- By increasing their domestic content above the 75 percent level, some transplants could create, in the eyes of the U.S. government, a new class of vehicles that could throw them into non-compliance with corporate average fuel economy rules.

Toyota Motor Corp. last year provided Congress with an internal study indicating that the average defect rate of parts from its U.S. suppliers is 100 times greater than those coming from Toyota's Japanese suppliers.

While Toyota's Japanese suppliers averaged 10 defects per 1 million parts delivered, U.S. suppliers averaged 1,000 defects per million, the study said.

A spokesman for Toyota Motor Manufacturing U.S.A. Inc. in Georgetown, Ky., said while the plant does not conduct quality studies based on suppliers' national origin, the numbers were "generally the case" for the U.S. operation.

"All of our suppliers are high-quality, but some of the U.S. suppliers we use have experienced problems with consistently high quality," said spokesman Jim Wiseman. "One problem may be that some U.S. suppliers are overly reliant on that 100 percent final inspection. Toyota looks for built-in quality. That is, we really don't rely on quality-control inspectors to catch problems at the end of the line."

The argument over Japanese supplier standards has divided the U.S. parts industry for a decade. Many American firms who have cracked the market say that selling

Mitsubishi establishing captive finance company

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Mitsubishi Motor Sales of America Inc. is opening a captive finance company, Mitsubishi Motors Credit of America.

Mitsubishi will acquire the automobile, light-truck and commercial-truck assets of Mitsubishi Acceptance Corp., a subsidiary of Mitsubishi Corp. in Japan. Mitsubishi Acceptance provides financing for Mitsubishi's vehicle and heavy-equipment operations in the United States.

"A captive finance company is essential to any distributor or manufacturer with significant sales in the U.S.," said Richard Recchia, executive vice president of Mitsubishi Motor Sales. "It's getting even more critical because banks seem to be withdrawing from the retail end of the finance business."

Mitsubishi Motors Credit should begin operations April 1.

The finance arm will be headed by Chuck Tredway, executive vice president and general manager. He was with Marine Midland Auto Finance Corp.

Mitsubishi executives shared details of the plan in meetings with dealers last week and acknowledged that dealers have not had the most pleasant experiences with Mitsubishi Acceptance.

According to a Mitsubishi source, Mitsubishi Acceptance had the floorplan business for about 10 percent of the company's 500 dealers. And about 50 percent of the dealers used Mitsubishi Acceptance for at least some of their retail loans, but the source said most dealers used it sparingly.

Mitsubishi Motors Credit is expected to eventually handle retail business for 75 to 80 percent of Mitsubishi dealers and floorplanning for at least 25 percent.

Mitsubishi says it will model its programs after those of General Motors Acceptance Corp.

Mitsubishi will join the growing list of importers that have established finance subsidiaries to provide their dealers with competitive wholesale and retail financing.

It could take as long as three months before the new business is operating nationwide.

Sentra, Sonata post largest gains in 1990

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Domestic content of two transplant vehicles increased more than 20 percent for the 1991 model year. They are among the eight Asian-badged products whose domestic content increased.

The Nissan Sentra, produced in Smyrna, Tenn., jumped more than 21 percent to 74.6 percent domestic content for the current model year, after a model changeover.

The Hyundai Sonata, produced in Bromont, Quebec, rose nearly 30 percent in North American content, from 27 percent to 35 percent. That change was partially due to the addition of stamping presses at the assembly plant, which allowed Hyundai Canada Inc. to begin using North American steel.

Models built in the United States by Honda, Toyota, Isuzu and Subaru also boosted domestic content for the 1991 model year.

The levels are determined by a complex formula that includes not only parts but factors as diverse as labor costs, plant investment and insurance expenses.

Although no change occurred at one of the biggest-volume transplants — Toyota's Camry facility in Georgetown, Ky. — that car is expected to increase more than 15 percent later this year when a new model is introduced.

The change will help boost Toyota's total U.S. parts purchases to $1.2 billion a year — up from $700 million this year and $70 million in 1988.

The Mazda MX-6 and 626, built by Mazda in Flat Rock, Mich., will increase into the 70 to 75 percent range in the 1992 model year, when a model change occurs there. It is 65 to 70 percent now.

Nissan took another large step toward increasing domestic content in January when it announced plans to build a $600 million engine plant in Decherd, Tenn.

Diamond-Star Motors Corp., the Chrysler Corp.-Mitsubishi Motors Corp. joint venture in Normal, Ill., also projects some gain from using Chrysler-built engines in some of its products after 1993.

*Average of three cars built at Flat Rock. Some Probe models carry six-cylinder engines made by Ford Motor Co.
**Estimate. CAMI officials decline to specify North American content levels, saying, "We feel we are meeting the requirements of the U.S.-Canadian Free Trade Pact." That agreement requires exported vehicles to have at least 50 percent North American content. The U.S. government has questioned CAMI's method of counting.

Basing a CAFE increase on percentages would force Japanese automakers to make the biggest gains in fuel economy, argues Nissan Motor Manufacturing President Jerry Benefield.

Nissan executive says CAFE bill would penalize the fuel-efficient

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

At least one transplant executive has come out swinging against new corporate average fuel economy proposals.

Jerry Benefield, president and chief executive officer of Nissan Motor Manufacturing Corp. U.S.A., complained to the Senate Consumer Subcommittee last month that a Senate bill that would require carmakers to improve fleet efficiencies is "anti-competitive" and "self-defeating."

The bill, sponsored by Sen. Richard Bryan, D-Nev., would dictate company-by-company increases in CAFE on a percentage basis. Benefield said the result would penalize carmakers with high CAFE scores because they would have to make the biggest gains while it would reward those with lower averages.

CAFE standards may affect the transplants' efforts to increase their North American content. As Japanese carmakers shift more production to U.S. plants and raise the products' domestic content, they will create domestic "fleets" that must meet the same standards but are counted separately from "import" fleets.

Benefield proposed instead that different standards be established for every class of car. He suggested offering "market-based incentives to induce consumers to buy fuel-efficient vehicles."

In criticizing Bryan's bill, Benefield pointed out that Nissan's 1988 CAFE rating of 30.8 mpg would require Nissan to meet a new standard of 37 mpg in 1996. But another carmaker, with a rating of 23 mpg, would be required to improve only to 27.6 mpg, he said.

> "Nissan would be fined if its CAFE were 36 mpg in 1996, and the other manufacturer would receive credits for achieving a fuel economy of 28 mpg."
> **Jerry Benefield**
> Nissan executive

"Nissan would be fined if its CAFE were 36 mpg in 1996, and the other manufacturer would receive credits for achieving a fuel economy of 28 mpg," he told the subcommittee. Companies that exceed the CAFE standards build up credits that can be applied to their scores in other years.

Historically, Japanese carmakers such as Nissan have had little difficulty meeting CAFE requirements, largely because of the high volume of small, fuel-efficient cars in their fleets.

A number of Japanese producers, including Nissan, Toyota Motor Corp. and Honda Motor Co., have added larger, less-efficient cars to their mix in recent years, such as Nissan's V-8-powered Infiniti Q45.

The three are also building more of their fuel-efficient cars in the United States, which could have long-term CAFE effects on their Japanese fleets.

CHINA

FROM PAGE 3

the motor industry comes just a year after a major slump in worldwide demand, and at a time when the more developed markets of Eastern Europe and Thailand have emerged as strong competitors for automotive investment.

"It seems," says Bruno Grundeler, the general manager of Guangzhou Peugeot Automobile CY Ltd., "that if all these projects get through at the same time, a very high rate of market growth would be required."

Output claims doubted

One long-time observer of China's industry, in Detroit to attend the Society of Automotive Engineers convention, was less circumspect, however:

"There's not a snowball's chance in hell of China attaining that kind of production in this decade," the executive, who insisted on anonymity, said. "Someday, certainly. But not anytime soon."

Executives with experience in the region point out that problems of producing in China range from unskilled and unmotivated workers, to unreliable infrastructure and communications systems, to the lack of universal standards of quality. Materials and parts are in perpetual short supply and, when they arrive, often fail to meet engineering and quality specifications.

Even the size of the country works against efficient production, experts point out. The engineering and proving ground for the First Automobile Works, the huge truck and carmaking complex in Changchun, in the north, is 2,500 miles away on Hainan Island, in the south. The journey takes 10 days for trucks to complete.

Beyond such operational difficulties, these executives say, is the far more serious one of China's chronic shortage of hard currency.

Under existing joint-venture agreements, Western carmakers "sell" most of their output to the state in exchange for allocations of enough hard currency to import more parts. But in practice, Beijing has been so crimped for foreign exchange that it often has had to allocate it to other industries.

This has left Western automakers short of enough parts to maintain scheduled production.

Quality problems linger

The currency problem is supposed to be eased as the joint-ventures increasingly turn to Chinese suppliers — in some proposals to as high as 90 percent local content — while shipping increased numbers of cars abroad, where they would earn hard currency. But industry executives point to a central flaw in the planners' scenario: China's inability to quickly come up to world-class standards of automotive quality.

"They can't export the cars they make now because of quality, and they're produced with parts imported from the West," observed Nigel Wemyss, a director of PRS Consulting Group in London. "It's absurd to think that the problem will be solved with higher local content, at least in the foreseeable future. It can't be done."

Still, there is evidence that the expansion of the car industry has been given unqualified backing at the highest levels of the Communist Party, a vitally important factor in marshalling priority claims on resources in China's centrally-planned economy.

China's commitment

China's State Council first outlined its automotive program in 1987, when it decided to concentrate car production at what it called three "big" units, in Changchun, Wuhan and Shanghai. The three big complexes would be complemented by three "small" units, in Beijing, Tianjin and Guangzhou.

At the same time, the council decreed that the country's emphasis on truck production was to give way to a greater concentration on carmaking. It also was decided to initiate an export drive.

That program, which rests on the core premise that domestic demand will rise from virtually zero now to 800,000 cars a year by about 1997, is now more or less in place.

The first, and most financially tenuous, of the new projects was signed into effect only days after the June 4, 1989, massacre of pro-democracy protesters in Beijing's Tiananmen Square. Under negotiation well before China's leadership launched its pro-democracy crackdown, it involves the construction by Panda Motor Corp. of a greenfields plant to produce 300,000 cars a year by the mid-1990s.

Unlike every other foreign carmaking venture in China, Panda is 100-percent foreign owned and, as such, exists outside the parameters of central planning. It is required to export its entire output and remain self-funding for components and other imports. The venture is controlled and bankrolled by Korean Reverend Sun Myung Moon's Unification Church.

The company claims to have invested $250 million to date in the project, and has a partly completed plant in Dan Shun, near the border with Hong Kong, to show for it.

Panda says it will produce a prototype car before the end of the year, and proceed to assembly of 1.6-liter sedans and minivans from kits in 1992. Although the company has yet to say what car it intends to produce, analysts say that both the Yugo and a modified Lada are under consideration.

Industry experts are almost universally skeptical of Panda's ability to pull off the grandiose project, even though the company demonstrated considerable political clout last year in winning a visit to the plant site by Premier Li Peng.

"Where will they find an export market on that scale in today's quality-driven world car market?" the Detroit visitor, who has studied the Panda project, asked. "It's more than unlikely, it's highly improbable."

VW, Citroen production

Meanwhile, the agreement between Volkswagen and First Automobile Works to build an $800 million car plant in the northeastern city of Changchun, signed last November, rests on more solid ground. The production of Golfs and Jettas from kits is scheduled to begin by 1994, and VW is committed to exporting 15 percent.

Volkswagen eventually could invest some $980 million in the project, although less is being committed at this stage. It also has agreed to take 100,000 Chinese-made engines for its own use outside China and to buy about $33.5 million worth of components a year locally.

VW already is China's largest carmaker through its stake in the Shanghai Volkswagen venture, which produces Santana sedans. It produced some 19,000 vehicles there last year, and plans to produce 25,000 this year. It will mount its first export drive this year, and hopes to sell as many as 1,000 cars in less-developed markets like Vietnam and North Korea.

The third leg of the expansion program comes from France's Automobiles Citroen, a unit of the Peugeot Group, which recently signed an agreement with the Second Automobile Works in Wuhan.

Planners envision that the plant will be turning out 300,000 mid-range "FX" sedans a year by the end of the decade. Chen Qingtai, director of the Second Automobile Works, was quoted in the official China Daily newspaper recently as saying that the plant will open in 1994 with a production capacity of 150,000 cars a year.

Citroen has a 30 percent stake in the venture, which will cost an estimated $865 million. The French government has heavily supported the project by underwriting loans for some 50 percent of the total investment.

The joint-venture agreement, which runs for 35 years, stipulates that 30 percent of the plant's output will be exported.

Like VW, Citroen already has a stake in China through Peugeot, which produces pickups and 505 station wagons and sedans in the southern city of Guangzhou.

Although Peugeot had earlier been given government approval to produce 8,500 units last year, the venture turned out fewer than 6,000 — or about 30 percent fewer than quota. Industry executives familiar with the venture scoff at Peugeot's explanation that a French dock strike caused the shortfall by interfering with deliveries to the plant.

"Pure and simple, they couldn't get foreign-exchange authorization from the bureaucrats to import the parts to keep the plant going," said one. "There isn't enough hard currency to go around, and they decided to spend it somewhere else."

Peugeot hopes to boost Guangzhou output to 10,000 units this year and 30,000 units a year by the end of 1992.

Beijing Jeep

The other existing major joint vehicle producer, Beijing Jeep, seems to have emerged from a troubled year in better shape. China's pioneering automotive joint venture, in which Chrysler Corp. holds a 31.4 percent stake, made 7,500 Cherokee Jeeps in 1990, up from 6,300 in 1989. In October, it opened an engine factory that will make it self-sufficient in engine supplies.

Meanwhile, production of the aging Russian-designed 202N general purpose vehicle has fallen from 35,000 in 1989 to around 32,000 units last year.

Not surprisingly, every major carmaker in the world has examined the possibility of gaining a toehold in the vast Chinese market. With 1.1 billion consumers, and the world's third lowest rate of car ownership at 0.27 per thousand, China's potential has drawn marketers like moths to a flame.

"Every one of them is looking at the 'billion pair of shoes market' in China, but it simply isn't there," says Don St. Pierre, former head of the U.S. side of Beijing Jeep.

He also is skeptical about export prospects: "I still have my one big question," he says. "Where are they going to go?"

With additional reporting and writing by International Editor James R. Crate in Detroit.

SUPERCARS

FROM PAGE 3

September. According to some recent reports, the car probably will not be produced in series, although Mercedes insiders say no final decision has been made.

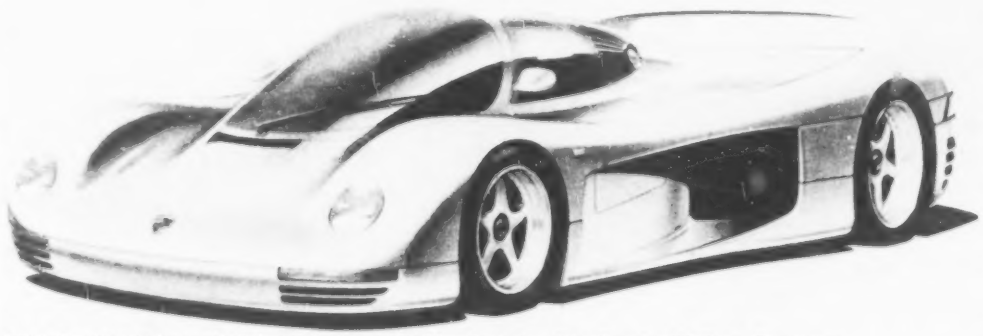
Meanwhile, Bugatti Automobili has just released pictures of its Marcello Gandini-designed 110T, a 12-cylinder twin-turbo model developing 550 hp.

Bugatti has denied persistent speculation that it is in financial trouble and won't meet its announced goal of rolling out the car on Sept. 15, the 110th birthday of Ettore Bugatti. Bugatti officials have announced that the program, to be held in Paris, will be carried out on schedule and that deliveries will begin in mid-1992.

Elsewhere, Jaguar's 220-mph XJ220, first shown as a styling model at the 1988 Birmingham Show, is scheduled to go into production late this year, according to a company spokesman. Deliveries of the first of 350 units to be produced probably will begin in about one year, he said.

The price, including taxes, was set at £367,000 (about $700,000) in December 1989, but price on delivery will be adjusted for inflation.

So far, three prototypes have been built. The XJ220 has changed considerably since it was shown 2½ years ago. Instead of using a V-12, it is powered by a 3.5-liter twin-turbo V-6 mounted amidship.



British firm Vern Schuppan Ltd. is developing a street-legal version of the Porsche 962 Group C race car.

Maserati S.p.A. may enter the supercar category with the Gandini-designed Chubasco that was shown as a model at the company's annual December press conference. If Maserati goes ahead with the project, the Chubasco would be powered by a 430-hp, twin-turbo 3.2-liter 32-valve V-8.

Perhaps the granddaddy of the current generation of supercars, the Ferrari F40, will be succeeded in the mid-1990s by a limited-edition model with a normally aspirated 12-cylinder engine. The F40 uses a twin-turbo V-8.

The Aston Martin Virage Vantage, the ultra-performance version of the new fixed-head Virage coupe, was expected to be previewed this week at Geneva. But company officials have decided to hold off showing the supercar.

The 190-mph, twin-turbocharged, 500-horsepower Vantage will be the third version of the Virage that debuted at the 1988 Birmingham Show. The convertible version was unveiled at Birmingham last fall, and the Vantage now is expected at the 1992 Birmingham exhibition.

Michael Kimberley, chairman of Group Lotus, said his company's M300 supercar project remains on course — even though project leader Graham Atkins recently left the company. The M300 was reconfigured last year, and is now expected to be a lightweight hybrid model incorporating an electric motor for city driving.

"I believe the next high-performance supercar we do has to be ecologically correct," said Kimberley. "So we re-cast the project and are pushing the envelope."

But Kimberley declined to forecast when the M300 might enter production.

Porsche AG last year decided against building a street-legal version of its 962 Group C race car. But a British firm, Vern Schuppan Ltd., is attempting to develop one, to be called the Schuppan Porsche 962CR.

Schuppan, an ex-race driver, reportedly will build a modified 962 with changes in front and rear, a new monocoque chassis and carbon composite body. It will take the same 3.3-liter, twin-turbo six-cylinder engine used in the Porsche race car.

Porsche's original plan called for a series of no more than 100 units priced at well over 1 million marks (about $660,000) apiece. But according to sources, company executives felt the intensive re-engineering effort that would have been required to remake the 962 into a street-legal machine could not be justified.

Porsche's limited edition 959 supercar project in the mid-1980s was a major image success and led to engineering breakthroughs, but the company never recouped development costs.

Another firm apparently interested in joining the ranks of supercar manufacturers is the British racing-engine builder, BRM. The company reportedly plans to offer a $400,000 road car powered by a 60-valve V-12 beginning in late 1992. Initial plans call for 50 units a year to be produced, although no prototype yet exists.

New desert battle: Car sales to Kuwait, Iraq

The sales battle to repopulate Kuwait with cars will pit Japanese makers against Americans.

Before Iraq's Aug. 2 invasion of Kuwait, Japanese reliability had won 60 to 75 percent of the Middle East market, but the allies who sent soldiers expect to cash in on political and emotional chips to increase their share.

General Motors is the dominant Big 3 player there, and Kuwaiti car dealers were in Detroit Thursday ordering at least 1,000 units, some of them program cars coming back from daily rental fleets.

Kuwait's government ordered at least $10 million in vehicles from GM, Ford Motor Co. and Chrysler Corp., said Ibrahim al-Shaheen, an architect who heads Kuwait's Emergency Recovery Program.

GM will supply 500 vehicles, including 300 Chevrolet Caprices that will be used as police cars, a GM spokesman said. Most others are light trucks, many being Suburban-based ambulances.

GM's two Kuwaiti vehicle dealers, K.Y. Alghanim and Mohammed Behbehani, were in Detroit last week ordering the vehicles that were most popular before the war: Chevrolet Caprices, Suburbans, Corsicas and Berettas, said GM President Lloyd Reuss, who sat in on part of the order meetings.

Spokesman John Pekarek said the program cars included in the dealer order "will have to be properly homologated, but that requires some very slight changes. For that market, very little has to be done."

Jack Smith, GM's vice chairman for international operations, said last week he expects Kuwait to buy well over 100,000 cars in its first year of rebuilding. GM hopes to expand its one-third share of the Kuwait market at the expense of Japanese makers, who had 45 percent.

THE ASSOCIATED PRESS

The scorched remains of military and civilian vehicles litter the main highway leading from Kuwait City to Basra and Baghdad. The vehicles were destroyed in allied bombing raids against the retreating Iraqi army.

Chrysler and Ford confirmed last week they were negotiating with Kuwait, but neither would discuss the contracts described by al-Shaheen.

Chrysler was just getting ready to resume doing business in the Middle East last summer when the invasion occurred. It sold no cars in Kuwait in 1990, and less than 600 in 1989.

When Ford ceased delivery of vehicles to Kuwait in July, the company had sold over 1,000 vehicles to Kuwait and had delivered 781. In 1989, Ford sold 1,209 vehicles to Kuwait.

The Japanese, who sold 23,000 cars in Kuwait in 1989, were cautious in their comments from Tokyo, but in the Middle East, distributors of Japanese brands said they would thrive in the coming months.

"In the next few months we expect a miniboom," said Maher Nabawi, product planning manager for Abdul Latif Jameel, the Toyota distributor in Saudi Arabia.

"There will be heavy demand for commercial vehicles to aid in the reconstruction of Kuwait and Iraq. Vehicles will go from Saudi Arabia. Toyota will do very well because of our reputation, our market share."

In Kuwait, a spokesman for Al Nasser Sayer & Sons, Toyota's distributors, said, "The Kuwait motor market will have a huge potential, and we are preparing ourselves to meet it."

In Tokyo, Toyota said "it will take time to resume business."

Low prices propelled the Japanese share of the Middle East car market beginning in the mid 1970s, but price advantages have moved to U.S. cars as the dollar weakens.

"It's going to be great," said Terry Indge, who directs GM sales in the Middle East from offices in Dubai. "Look at the dollar-yen rate. It's most competitive."

Besides Saudi Arabia and Kuwait, GM also sees a potential customer in a defeated enemy. "Iraq is the big new potential market," said Indge.

The emotional leftovers of war could have as much influence on the market as price or quality. Last December, as the allies built up their invasion forces, GM's Indge predicted that the redesigned Chevrolet Caprice would sell well because of "a good reputation of getting people out of Kuwait. It turned out to be a good cross-dessert vehicle. Iraqi troops in off-road vehicles couldn't keep up with them."

EC LOBBY

FROM PAGE 4

impatient," said an ACEA official last week.

Still, French and Italian government officials are said to have come around, isolating Calvet.

Fiat Auto Managing Director Giorgio Garuzzo met recently in Brussels with Bangemann, according to a Fiat Auto spokesman. EC officials have termed it a positive meeting.

"There is now a new organization and the great opposer is out," said a Fiat executive. "We think these problems with the Japanese should be solved in a European scale. We are definitely less sharply opposed than what Calvet is."

But Calvet is expected to remain a vocal force even as his influence has waned.

"Calvet can still paddle his canoe, but he is not in a position to veto," said Rhys.

The Fiat spokesman said the Bangemann position is closer to the former position of the German carmakers, although "now, the Germans are less liberal."

The spokesman called for a "slight and progressive opening" of the market, with Japanese share not rising much higher than the present level — "certainly not rising by 2 or 3 percent a year."

But while an agreement on the length of the transition period is considered likely, the trick may be to align all sides on how Japanese transplants should be treated.

The Fiat spokesman said Japan's transplant production in Europe should probably be counted toward any quota ceiling.

"What worries us is that some Europeans want to count our transplants," said Moriharu Shizume, head of the Paris office of the Japan Automobile Manufacturers Association. "We are against that and MITI (Japan's Ministry of International Trade and Industry) is against that."

Shizume said MITI has agreed to a six-year temporary period of restrictions on direct imports. But he said MITI will not concur with limits on transplant output.

Rhys advocates letting the Japanese carmakers seek their own balance between direct imports and local production.

"It is best to let them work it out themselves, as they have in the United States," where they command a 24 percent share of the car and light-truck market, he said. "They should let it be an unspoken trade-off and not push too much on it."

SALES

FROM PAGE 1

in 10-day sales. At 83,598, its combined car and truck sales, domestic and imported, rose 3.2 percent, but the extra selling day this year was responsible.

Ford noted "some improvement" in dealer orders in February, but not enough to change its production schedules, said Joel Pitcoff, research and analysis manager.

"When we say we base production on dealer orders, that's not some kind of euphemism," Pitcoff said. "That means how many orders we have in our fists. We don't build cars for practice."

He said that for the first 50 days of 1991, the seasonally adjusted annual selling rate for cars and trucks, including heavy trucks, was 11.5 million units. That compares with 1990 sales of 14.2 million.

GM sold 109,963 vehicles, down from 120,240 last year. *Automotive News* estimated that Chrysler Corp. sales declined 2.4 percent to 39,428 cars and trucks. Chrysler refuses to disclose 10-day sales.

Even before the cease-fire, consumer confidence rose in February, according to the Consumer Confidence Index compiled by The Conference Board, based on a survey of 5,000 households. Linden is executive director of the board's Consumer Research Center.

About 7.2 percent of the survey respondents said they plan to buy an automobile in the next six months, the highest such response since September and about equal to the year-ago month.

Overall, the February index was 57.7 compared to 55.1 in January, but the index was 106.7 in February 1990. The index uses 1985 as a 100-point baseline.

Automotive News Editor Peter Brown and Special Correspondent Colleen McDonald contributed to this report.

Japan's cuts hold

TOKYO — Cutbacks in production and exports to the United States announced last month will continue despite the end to the Gulf War.

Toyota Motor Corp., which is reducing production this month by 10,000 units, says it may adjust April production after studying February sales.

Honda Motor Co., which is cutting back by 25,000 through March, says it may cut even more units in April "because the basic fundamentals of the U.S. market do not appear to be recovering."

West may export clean air

By Greg Bowens
SPECIAL CORRESPONDENT

Western car manufacturers can make great strides in the Eastern Europe automotive market if they can supply countries with the vehicle pollution control technology they so desperately need.

M.P. Walsh, an industry consultant, told an SAE technical session about the rise in automotive-related pollution in Eastern Europe and Europe's move toward establishing continent-wide pollution control standards.

Walsh documented the pollution problems of Hungary, a country with a small automobile industry, to show the health and environmental effects that a little fleet of cars not equipped with pollution control technology can have on a nation. "Eastern Europe has a very serious and documented pollution problem," he said.

The number of registered vehicles in Hungary has grown from a 1970s average of 240,000 to more than 2 million today. During that time, the incidence of bronchitis among adults doubled, two-thirds of the country's rainfall has become acidified, and pollution-caused corrosion continues to cost the nation billions.

"Unless modern vehicle controls are implemented, a vehicle growth of 5, 6 or 7 percent will cause skyrocketing pollution," said Walsh.

He said the Hungarian government is taking measures to control the problem but will prove to be insignificant unless pollution control is added to cars now.

He said that refitting two-stroke engines with catalytic converters or replacing them calls for a large service industry and "that's a tall order in light of the economic problems these countries have."

A visitor inspects a methanol-powered engine designed by AVL North America Inc. at the SAE show in Detroit.

Reformulated gas won't end metropolitan air problems

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Reformulated gasolines alone will never provide the emissions cleanup of the best alternative fuels.

But there is no question that government and the vehicle industry expect gasolines with altered chemistry to play an important role in cleaning up the air in metropolitan areas.

At the SAE International Congress last week, Gary A. Schoonveld, a senior research engineer for Phillips 66 Co., presented a paper on the beneficial effect of reformulated gasoline on vehicle emissions.

"Gasolines will never be as clean as something like natural gas that provides up to 60 percent hydrocarbon emissions reduction," said Schoonveld. "We're looking for more like 20 to 30 percent reductions from gasolines. But that means we'll still be playing an important part in clean-air requirements."

Schoonveld told *Automotive News* several gasoline supply companies have already introduced their versions of reformulated gasolines to gain experience in making, transporting and marketing them.

The Clean Air Act amendments of 1990 require reformulated fuels use in nine metropolitan areas in 1995. In addition, any metropolitan area that does not meet national air-quality standards may choose to adopt the regulation and require reformulated fuels.

Phillips' test program in the St. Louis area has shown significant reductions of carbon monoxide, total hydrocarbons, oxides of nitrogen and benzene. The program conducted tests on eight vehicles ranging in model years from 1973 to 1989.

Older vehicles (pre-1980) also showed significant reductions of evaporative hydrocarbon emissions, carbon monoxide, oxides of nitrogen and benzene — but increases in hot-soak hydrocarbon emissions. The study also found that all the cars produced higher formaldehyde emissions.

An exact recipe for reformulated gasoline has not been established. For that reason, the price of the fuel and the cost of reconfiguring refinery equipment is still up in the air. But on Nov. 15, the EPA will release its rule on gasoline reformulation. It will likely be a performance standard that will measure the new fuel's ability to provide some percentage of emissions cleanup against a baseline fuel.

Schoonveld said American Petroleum Institute estimates indicate that the chemical changes to gasoline would cost consumers approximately 10 to 15 cents per gallon. The cost of refinery changes for individual companies could be measured in billions of dollars.

Other gasoline suppliers offering reformulated fuels are ARCO, Diamond Shamrock, Conoco, Marathon, Shell, Exxon and Chevron. The first reformulated gasoline on the market was EC-1 from ARCO. It was marketed in California. The fuels also are marketed in Denver, Detroit and St. Louis.

Optimism charges talks on electric cars

By William R. Diem
ASSISTANT MANAGING EDITOR

DETROIT — In Los Angeles and Zurich, citizens concerned with the environment do what the marketplace never did: Create a demand for electrically powered vehicles.

And inside a windowless room at the SAE International Congress and Exposition last week, 120 engineers talked about how they would build them.

The engineers were as cautious as Gen. Colin Powell in mid-January, or Coach Bobby Knight in mid-March. They face a host of difficulties, and they gathered to go over them. Behind their words was confidence in victory.

"Hopefully, we'll be able to meet California standards," said an Italian. "We are getting close to having something people are going to like," said an American. "We will have electric cars for California," said a German.

The meeting could have been more global. Their companies forbade three authors of papers from flying here because they fear terrorism, so stand-ins spoke for Karl-Nikolaus Regar of BMW AG, G. Brusaglino of Fiat S.p.A. and A. Kalberlah of Volkswagen AG. No Big 3 engineers delivered papers, but they swelled the audience to hear their research partners.

The papers spoke for themselves.

Right now, American vans and minivans get 70 miles per charge on lead-acid or nickel-iron batteries and "provide suitable performance on urban routes."

Right now, BMW's Elektro-Antrieb concept car ranges about 94 miles on its experimental sodium-sulfur battery pack. Considering the pollution from a power plant used to charge it up, the car accounts for one-tenth the nitrogen oxide, one-thirtieth the hydrocarbons and one-hundredth the carbon monoxide produced by a standard BMW 3-series car.

Right now, VW is building 20 hybrid-drive Golfs for testing in Zurich, Switzerland, this summer. The Golfs use batteries or a diesel engine, depending on driving need. Sacrificing no performance, they consume only a third as much diesel fuel as a regular Golf.

Right now, Fiat is selling electric vehicles to the public. The Panda Elettra, introduced a year ago at the Geneva auto show, went on sale last summer for $20,000. The company built 200 in 1990 and expects to build 1,000 this year.

If the success so far is tangible, so are the challenges.

The 10 papers in the Electric Vehicle Development session and the people who talked about them afterward raised obstacles to be surmounted before 1998, when California requires zero-emission or ultra-low emission vehicles.

It is generally agreed that customers will demand performance akin to what they get from their internal combustion cars, said Scott Keller, a senior test engineer at Electrotek Concepts Inc. in Chattanooga, Tenn. The central problem is that no battery can yet provide it.

Current choices are heavy lead-acid and expensive nickel-cadmium. There are laboratory hopes for nickel-iron, sodium-sulfur and solid-state capacitor-like devices such as the one Isuzu Motor Co. announced to the delight of the Japanese stock market last April.

Southern California Edison and Dreisbach ElectroMotive Inc. of Santa Barbara, Calif., presented a paper describing Dreisbach's zinc-air battery. They said it would give a two-seat sports car a range of 300 miles and cost less to operate over five years than a fuel-burner, even with gasoline at $1 a gallon.

Even if a power choice were obvious, inventors do not agree about the rest.

Both alternating current and direct current are used in motors. A Chrysler Corp. minivan modified by Eaton Corp. and BMW's sodium-sulfur car used AC; the Fiat Elettra and a General Motors van modified by Vehma International, a subsidiary of Magna International, went DC. Ultimately, said Andy Burke of the Idaho National Engineering Laboratory, the choice will be made on cost, not performance.

Transmissions are even more diverse. Because electric motors pull about as hard at one speed as another, a transmission isn't even needed, as on the absent GM Impact, America's most famous electric car.

One truism of SAE expositions is the absence of something could be a sign the product has moved out of the blue-sky stage and into commercial development. GM has said it is going ahead with plans to produce the quick and quiet two-seater it introduced at the 1990 auto show in Los Angeles.

Vehma used what amounts to a one-speed transmission to reduce driveshaft speed on its van. BMW's concept car uses a two-speed manual, and Fiat's Elettra has four speeds. Engineers from Epilogics Inc. of Los Gatos, Calif., introduced a continuously variable transmission that they say reduces power drain during acceleration and improves energy recovery during braking by 58 percent.

There is no design argument over one small point: All the vehicles recharge batteries during braking by turning the motor into a generator, getting 4 to 15 percent of the energy back.

Bill Anderson of Unique Mobility Inc. in Englewood, Colo., introduced his company's DC electric motor that has a transmission-like feature. The driver throws a switch to change it from a high-torque series mode for acceleration to a high-speed parallel mode for cruising.

"The feeling is similar to that one would get in shifting from second gear to fourth or fifth gear in a conventional vehicle," he said. The motor was used on 18 of 32 solar-powered cars in the race sponsored by GM last summer.

Even in the electric atmosphere of the day-long session, there was a fair amount of sentiment for keeping internal combustion engines alive as part of hybrid or dual drive systems.

Fiat defines hybrid drives as two power sources working together, as in a test bus design by Unique Mobility and Ontario Bus Industries of Mississauga, Ontario, that runs on batteries, which it charges with a generator powered by natural gas. Dual drive is defined as switching between one power source and another, as in the Audi Duo concept car in which the driver chooses between using the front-wheel-drive standard engine or the rear-wheel-drive electric motor.

But then there is the Volkswagen EVW1, a Golf that switches automatically between engine and motor, choosing the least-polluting power source for the given speed and torque requirement. Or the Fiat test bus, which can run on battery alone, or draw current from overhead trolley lines, or use a diesel generator — a tri-hybrid.

After the session, engineers remained to define terms and discuss standards for tests and performance and other problems:

- Power consumption by power steering and brake systems at idle.
- Demands of air conditioning and heating systems.
- The need for proper chargers to prevent dirty electricity kickback problems for other utility customers.
- The performance cost of product-liability designing.
- Disposal or recycling of highly caustic battery substances.

The questions and frontiers lent a pioneering atmosphere to the evident enthusiasm.

"It's really a good turnout," said Keller, who presented a paper on Electrotek's testing of the GM van. "It's a lot more satisfying to give a paper in front of this many people instead of 20 or 30 like usual."

VARIOUS ELECTRIC VEHICLES IN USE

Table lists several current electric test vehicles. Some have been tested with various batteries and motors. Range and acceleration times are approximate, as not all have been tested under similar conditions.

Vehicle	Converter	Motor power (hp)	Battery type	Urban range (miles)	0-30 mph (seconds)
GMC passenger van	Vehma Int.	60	Pb	57	12.1
GMC cargo van	Vehma Int.	60	Pb	61	11.9
BMW Elektro-Antrieb	BMW AG	34	NaS	94	9.0
Chrysler minivan DSEP	Eaton Corp.	70	NiF	70	7.5
VW EVW1 Golf*	Volkswagen AG	8	Pb	13	—
Fiat Panda Elettra	Fiat SpA	12	Pb	44	10.0
Audi Duo*	Audi AG	12	Pb	13	—

Battery types: Pb, lead acid; NaS, sodium-sulfur; NiF, nickel-iron
*Dual or hybrid drive. Range and power for electric motor only.

Ford extends rebates, adds '91 Lincolns

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. has extended its incentive program through April 10 with continued emphasis on dealer rebates and the inclusion of 1991 Lincolns for the first time.

Under the new program, dealers will receive nothing for the first 1991 Lincoln sold, $750 for the second unit and $1,000 for the third unit and above. A $1,000 rebate will be added to those payments for 1990 Lincoln models sold — starting with the first unit. The previous program paid dealers $2,000 for each 1990 Lincoln sold, and offered a consumer rebate of $1,500 on 1990 Lincolns.

Ford is paying customer rebates of $500 on the 1991 Ford Escort, Ford Festiva and Mercury Tracer and $1,000 on the 1991 Mercury Grand Marquis and Ford Ranger. Also offered on those models is alternative financing of 7.9 percent for 48 months or less.

Customer rebates of $700 on the 1990 Festiva and $1,500 on the 1990 Ranger also were extended to April 10

Ford also is offering buyers a choice of cash or low-interest financing on selected 1991 models in certain states.

"We will continue to test customer cash incentives or alternative financing on selected models in various regions of the country to ease the transition to this significantly different way of marketing our products," said Robert L. Rewey, vice president of Ford North American Sales Operations.

Since Dec. 12, Ford has emphasized dealer rebates more than consumer programs, a move that was not followed by General Motors and Chrysler Corp. GM's current incentive programs expire April 7; Chrysler's run through March 31.

Elsewhere, Mazda Motor of America Inc. announced consumer rebates of $1,500 on 1991 MX-6 and 626 models and $500 on all 1991 trucks. The program runs through April 3.

ACCORD

FROM PAGE 1

Marysville."

The Ohio cutback — part of a 25,000-unit global reduction by Honda Motor Co. Ltd. in Japan — comes as Honda is increasing its U.S. Accord production and also increasing production at a new Civic factory in East Liberty, Ohio.

Antonius said Honda will probably also need to begin storing Civics at the Marion depot, about 35 miles from the East Liberty plant. A second shift is presently being added at that factory.

At the same time, Isuzu Transport Inc., a branch of Subaru-Isuzu Automotive Inc., is storing as many as 5,000 Isuzu trucks and sport-utilities in two locations in Indiana — one in Indianapolis and another in Remington, about 45 miles north of the Subaru-Isuzu plant in Lafayette.

Another subsidiary, Subaru Forwarding Inc., is storing 2,000 to 3,000 Subaru Legacys at a site near the factory in Lafayette.

The overflow there is in addition to a filled vehicle storage yard that holds 6,800 cars and trucks.

In a further setback, Isuzu Motors Ltd. in Japan decided last month to cut back its share of production at the plant by 1,000 trucks a month until sales increase. Two months ago, Isuzu officials at the plant told *Automotive News* that they would expand U.S. truck output.

The plant currently produces at a rate of 10,000 Legacys and trucks a month, with plans to reach 14,000 a month later this year. But as a result of the new Isuzu decision, the plant will scale back to 9,000 a month for the time being.

Unsold cars also threatened to become an issue at Toyota Motor Manufacturing U.S.A. Inc. in Georgetown, Ky., until the last week or two. That plant's 5,000-capacity marshaling yard was nearly full for the first time in the plant's three-year history. Plant officials were readying adjacent property to park the overflow of new cars, a plant spokesman said.

But the backup has since eased and the yard is now only half full, he said. There has been no off-site storage of cars, he said.

Sales of Toyota's domestic cars dropped 50 percent during the first 10 days of February and 31 percent in the second 10 days.

As a result, Toyota Motor Corp. said it would cut the number of vehicles it exports to the United States by 10,000 in March and April. James Olson, a spokesman for Toyota Motor Sales U.S.A. Inc., said all 10,000 units will be Camrys and Corollas — the two models Toyota builds in North America.

> "Cutting back our domestic production is the cord of last resort for Toyota to pull."
>
> **James Olson**
> Toyota Motor Sales U.S.A. Inc. spokesman

Olson said it is Toyota's policy to trim U.S.-bound exports rather than reduce its U.S. output.

"Cutting back our domestic production is the cord of last resort for Toyota to pull," Olson said. "It would ripple too much through the domestic supplier community."

He also pointed out that Toyota's total North American plant investment now is $3.5 billion and said reducing production would hamper the effort to make that investment profitable.

"Besides that, we have enough flexibility that we don't have to cut production. We're dual-sourcing our cars, and we can divert one source to other markets without interfering with U.S. output," Olson said.

Japanese carmakers typically face a six-week factory-to-dealer pipeline in exporting cars to the United States. Thus, a late-February decision to reduce exports is not likely to be felt in this country before mid-April.

Other transplant factory operations have so far been been less affected by the steep drops in auto sales — due in part to having Big 3 partners or customers.

Diamond-Star Motors Corp., a 50-50 joint venture between Chrysler Corp. and Mitsubishi Motors Corp., said that its production and vehicle inventory is normal because the two parent companies are responsible for removing cars as soon as they are assembled.

That situation is the same at New United Motor Manufacturing Inc., a joint venture between Toyota and General Motors. Neither partner reports a problem in storing unsold vehicles, and a plant spokesman said that production is continuing at normal volume.

Production also remains unchanged at Mazda Motor Manufacturing (USA) Corp. About 2,300 of the 3,500 cars a week that are currently produced by Mazda are Ford Probes, purchased and removed by Ford Motor Co. But Mazda Motor Corp. has still reduced its export plans by 8,000 units so far this year.

Nissan Motor Co. Ltd. also is cutting its U.S.-bound exports from Japan by as many as 5,000 units this month. But officials at Nissan's U.S. operations maintain that sales of its U.S.-made Sentra and pickup truck remain brisk.

So far this year, U.S. Sentra production is 25 percent ahead of last year because of the introduction of a new model.

GM, Chrysler on list of underfunded pensions

General Motors and Chrysler Corp. made the nation's Top 50 list of companies with underfunded pensions, according to the Pension Benefit Guaranty Corp.

The list comes from a survey of corporate annual reports for fiscal years that ended in 1989. Chrysler showed a shortfall of $2.6 billion in 1989 that rose to $3.6 billion at the end of 1990, according to a Chrysler spokesman.

"The listing creates unnecessary fear and our concern is that it doesn't take certain factors into account including the financial strength of each of the companies and the measures companies are taking to reduce underfunded pensions," he said.

Chrysler has a 10-year plan ending in 1998 that will fully fund its pension program. The rise in the projected underfunded benefit is due to improved pension benefits for hourly workers resulting from the labor contract and a decline in the fund assets.

GM had a shortfall of $1 billion in 1989 that a company spokesman said increased in 1990.

He said the agency uses different calculations than GM to determine whether pensions are underfunded, pointing out that GM has multiple pension programs.

The pension program cited by the agency is for hourly workers and is subject to change whenever new contracts are negotiated.

"Our funding policy with all GM pension programs is to contribute annually not less than the minimum required by law, but not more than the maximum amount that can be deducted for tax purposes," he said.

The listing of the pension plans is compiled by the guaranty corporation, a federal agency that guarantees pension benefits in the event a corporation is unable to meet its obligations.

— Charles M. Thomas

Navistar losses rise; $38 million in 1st quarter

CHICAGO — Navistar International's losses continued to mount during the first quarter of its 1991 fiscal year, ended Jan. 31.

Navistar reported a net loss of $38 million during the quarter, up from a loss of $18 million in the year-earlier period. Sales and revenues dropped to $842 million from $886 million a year earlier.

James C. Cotting, Navistar chairman and chief executive officer, said he expects the medium/heavy-truck market to continue to be down, but he believes Navistar's losses will narrow in the second quarter because of a $167 million cost-reduction program in fiscal 1991.

Cotting looks for medium/heavy-truck demand to be off 9 to 19 percent from the 277,385 units retailed in calendar 1990.

RELIEF

FROM PAGE 1

state of the industry. They stressed that a strong auto industry is an important component of a healthy economy.

Elliott Hall, vice president of Washington affairs at Ford, said top Big 3 executives visit the White House about once a year. But last week's visit was of a burning urgency because of the Persian Gulf war and the industry's severe sales slump, Hall said.

"When the war started, consumer confidence fell right off the table. It wasn't just a descending line, it was a precipitous fall and caused a lot of alarm in the industry. Hopefully with the war over, things may change," Hall said.

Policy makers didn't make many promises, Hall said. "They were in a listening mode."

The most important request was for Greenspan to loosen the money supply to create a lower prime rate and consumer lending rates, Hall said.

The visit was arranged by Transportation Secretary Samuel K. Skinner, who grew concerned about the industry's problems during the Detroit auto show in early January.

Skinner promised he would arrange meetings with cabinet members for Stempel, Poling and Iacocca. Skinner has repeatedly said the administration must help domestic makers compete and not overburden them with regulations. He has been the administration's top spokesman in opposition to the CAFE bill sponsored by Sen. Richard Bryan, D-Nev., which calls for a 40 percent increase by 2001.

The chairman also met with Senate Minority Leader Robert Dole, R-Kan., and other senators. They included Sen. Don Nickels, R-Okla., who was thanked for leading the Senate's successful fight last year against the Bryan bill. Also present was Sen. John Danforth, R-Mo., a leading advocate of increasing auto and truck safety regulations.

Cabinet members who heard the Big 3 scenario of dropping sales, rising unemployment and increased competition from Japan included Commerce Secretary Robert Mosbacher, Treasury Secretary Nicholas Brady and Chief of Staff John Sununu.

Sununu has been a major influence on the administration's policies on clean air, CAFE and energy. His repeated softening of policies has been lambasted by environmentalists, who accuse him of catering to business interests and overruling more stringent EPA and energy department recommendations.

"They had an open and frank discussion of all issues, the (Big 3 chairmen) are candid people," said a staff member in one of the Big 3 offices. "Their timing was good; we're faced with regulation after regulation and industry layoffs. We have to jump start the economy and our industry is a part of it."

The visits set off a flurry of rumors among Japanese automaking interests in Washington, firing off speculation that the Big 3 would file a dumping case against Japanese trucks or seek unfair trade reprisals under the 1988 trade bill. None of the Big 3 would comment on the trade issue but confirmed they have talked previously with House Majority Leader Richard Gephart, D-Mo., whose staff is preparing trade legislation.

Year's build trails 1990

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. auto production has fallen behind the 1990 total for the first time this year as automakers continue to battle high inventories and recession-plagued sales.

Year-to-date U.S. auto production through March 2 was 886,345, down 1.21 percent from 1990.

U.S. carmakers scheduled 104,994 units last week, 12.37 percent below the preceding week and 19.94 percent below the corresponding week of 1990.

Truckmakers planned to build 55,709 units last week, 17.54 percent below the prior week and 33.50 percent below the comparable week last year.

So far this year, truck production is 24.38 percent behind 1990.

Idle this week because of slow sales are nine U.S. car plants, two truck facilities and one truck line. Ford Motor Co. continues to run a single shift at the Lorain, Ohio, truck plant.

General Motors is scheduled to idle Line No. 2 of the Flint, Mich., truck facility this week.

The company scheduled build-out at the Flint, Mich., (Buick City) plant to begin March 1. Production of the 1992 Buick LeSabre and Oldsmobile 88 is slated to begin in April.

CANADA: Total vehicle production in Canada was estimated at 41,492 last week, 85.49 percent above the prior week and 12.83 percent below the year-ago week.

A surprise roll-out in Geneva

Rolls-Royce Motor Cars Ltd. landed the unaccustomed role of show-stealer at the Geneva auto show last week. The luxury carmaker took the wraps off the new Bentley Continental R, a $250,000 coupe that Rolls calls a "sporting supercar." The 145-mph car was developed in secrecy and unveiled to the surprise of show-goers. It's the first Bentley in 40 years that has not shared a body style with a Rolls-Royce counterpart. Powered by a 6.7-liter turbocharged V-8 mated to a four-speed automatic, the Continental R is electronically limited to 145 mph. Other news and photos from Geneva on Page 6.

GM develops group to build and market electric car line

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors is building a strategic business unit — which now includes more than 200 people — to market a line of electric vehicles.

The formation of GM Electric Vehicles — a stand-alone group that includes engineering, product planning, market development, marketing, sales and service personnel — has never been announced by the company. No timetable for the start of production of the electric car has been announced, but there are reports that it will be sold as a 1994 model with production beginning in 1993.

To avoid tipping its hand to competitors, GM is highly selective on the information it releases about its electric-vehicle program. Employees at GM Electric Vehicles — known internally as GMEV — have been told not to discuss their work with outsiders. GM will acknowledge the group's existence only if asked.

The manager of GM Electric Vehicles is Kenneth Baker, who was director of advanced vehicle engineering at the Chevrolet-Pontiac-Canada Group and head of the GM Service Technology Group before being appointed to his current post in June 1990, said GM spokeswoman Toni Simonetti. GM Electric Vehicles is part of the advanced engineering staff under the direction of GM Vice President Donald Runkle and Vice Chairman Robert Schultz.

Dealer total dips 433 in '90

Loss is highest since 1982 recession; Big 3 hit hardest

By John K. Teahen Jr.
SENIOR EDITOR

Sluggish sales, the recession and the threat of war caused a 1990 decline of 433 in the number of new-car dealerships in the United States. The drop was substantially less than some early estimates had anticipated.

The annual *Automotive News* census found 24,390 outlets in operation on Jan. 1, 1991, down 1.74 percent from 24,823 at the beginning of 1990. The latest total is made up of 18,984 Big 3 stores and 5,406 that handle only imports. A year earlier, there were 19,382 Big 3 and 5,441 import-only points.

The Big 3 bore almost all of the downturn. General Motors, Ford Motor Co. and Chrysler Corp. had a combined loss of 398 outlets. The import-only stores dipped by 35.

Last year's decline was the worst since 1982 when 974 dealerships closed their doors. In the eight years since then,

Bad days linger: Feb. sales drop; output slashed

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

The U.S. auto industry is in relatively better shape than it was a month ago, but the tough times aren't over yet.

Domestic and import inventories, Page 45

New-vehicle sales showed gradual improvement through February, and the stockpile of unsold domestic and imported cars receded.

Inventory control measures remain stringent as automakers this week idled 21 North American car and truck assembly plants. They also whacked the combined second quarter U.S. car production schedule to 1.5 million units, which would make it the

Women remain far away from auto industry's top jobs

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

More women are working in the traditional male bastion of the auto industry, but few make it to upper management. And those who do make it believe that discrimination and institutional bias still block the road to the top.

Women hold fewer than 2 percent of top management jobs. And most are outside the main flow of carmaking, in such ancillary disciplines as advertising, marketing and public relations.

No woman heads a Big 3 car division; no woman is even close to such a job. It seems unlikely that Chevrolet or Dodge or Lincoln-Mercury — or any other car division — will have a woman at the top in the 1990s because women aren't in the pipeline. They don't hold the types of jobs that prepare an executive for such a position.

The Big 3 won't say much about the high-level jobs that women hold. None of the companies would disclose the number of women on the bonus roll, which is the zenith of accomplishment in the industry. The only big jobs they mention are the obvious ones — three vice presidents and two outside directors at General Motors; one vice president at Ford Motor Co.; and two outside directors at Chrysler Corp.

And things aren't better at the imports or transplants.

Women seem to be making progress in the auto industry. But it's a long, slow process.

Toni Harrington, Washington manager of government and industry relations for Honda North America Inc., says the system is prohibitive.

Harrington, 43, has worked for Honda for 12 years and has been in her current position since 1988. But because she follows procedure and uses "T. Harrington" on all internal correspondence, it was a long time before Honda officials in Japan learned that they had a woman in Washington.

And because there are so few women in industry in Japan, the revelation caused a stir.

Although Harrington has succeeded in the U.S. auto industry, she believes there are still barriers.

"I think there is an institutional bias in the industry because they are not used to dealing with women," Harrington says. "There has been discrimination."

Honda raises Accord incentive, adds bounty for orders

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — American Honda Motor Co. Inc. has increased its dealer incentive for 1990 and 1991 Accords from $300 to $500 for each car sold and is giving dealers another $400 for each U.S.- and Japanese-built Accord ordered by April 2.

Consumer, dealer incentives, Page 48

Together, the programs represent the most aggressive incentivizing to date by Honda, which has 2,000 U.S.-built Accords in storage at a former U.S. Army depot in Marion, Ohio. Honda has trimmed its U.S. first-quarter production by 5,000 units.

The company has used only limited dealer incentives and has shunned retail incentives.

The $500 sales incentive runs through March 31, the same date the $300 rebate was to have expired. Accord wagons and Special Edition models are excluded. The purchase-order incentive runs until April 2. Both of the new programs began March 5. The original $300 rebate began Jan. 8.

Honda also insisted that the second program, which pays dealers $400 per order, is not an incentive but an "advertising allowance."

Honda's first incentive began April 1, 1989, with a stepped program on all models that enabled dealers to earn up to $300 on each unit sold if sales objectives were met. Since then, Honda has had "less than half a dozen" dealer incentive programs, according to spokesman Bob Butorac.

Previous incentives have been $500 or less, except for one in which dealers earned up to $600 for meeting sales objectives.

At least one dealer believes the incentives prove that Honda "is part of the real world now." The dealer, who asked to remain anonymous, said that he doesn't mind Honda becoming aggressive, but he hates Honda having "to get into the same game as everybody else."

The dealer also said he's bothered by the order-incentive program.

"I think that incentivizing dealers to order inventory is not a very gracious way to show appreciation to dealers who've carried a big inventory throughout the fall and winter," he said.

Subaru of America Inc. and BMW of North America Inc. announced consumer incentive programs on selected 1991 models.

Subaru is paying consumers a rebate of $500 on Loyale front-wheel-drive sedans with five-speed and automatic transmissions and four-wheel-drive wagons with five-speed or automatic transmissions. The program ends May 2.

Under the BMW program, which runs through April 30, consumers may choose finance rates of 1.9 percent for 12 months, 4.9 percent for 24 months, 6.9 percent for 36 months or 8.9 percent for 48 months when buying or leasing 318i, 318is, 735i, 735iL and 750iL models. Also, the required down payment on 318i and 318is models has been reduced to 10 percent.

Chrysler ad hits safety

Stunt drivers crash cars to tout air bags

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. has created a commercial showing two stunt drivers crashing their air-bag-equipped Chrysler and Dodge cars head-on and emerging from the vehicles unscathed.

The commercial, which broke on national network television March 9, is part of the manufacturer's corporate campaign aimed at making Chrysler the recognized leader in vehicle safety, said John B. Damoose, vice president of marketing.

"No one has attempted this before, and no one has experienced it except in an actual accident," Damoose said.

The 30-second spot shows a 1991 Chrysler New Yorker Fifth Avenue sedan and a 1991 Dodge Daytona coupe moving toward one another. The announcer says: "Ford, GM and Honda won't have air bags in all their cars until 1994. By that time, approximately 60,000 air bags will have deployed in Chrysler-built vehicles."

Then the cars slam together and the air bags deploy. The two drivers emerge from the cars, apparently unhurt. The ad ends with the "Advantage: Chrysler" tagline.

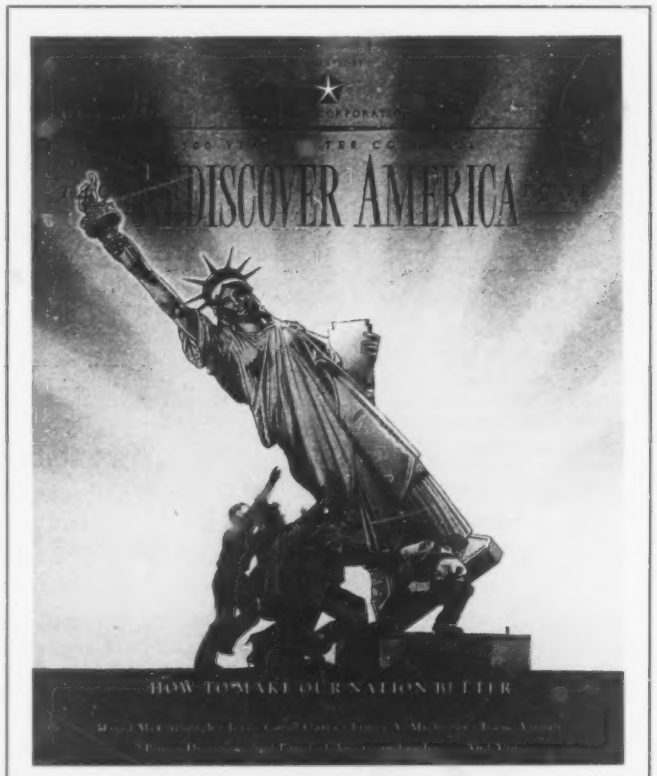
At the moment of impact, one car was traveling 17 mph, and the other was traveling 16 mph, Chrysler said. Engineers estimated the force at impact on the chests of the belted drivers at 25 times the force of gravity. The cars were purchased from a dealership and were not modified, Chrysler said.

Also last week, Chrysler disclosed more details about its "Rediscover America" campaign, a two-year, multimillion-dollar deal with Time Warner Inc.

Under the agreement, Chrysler will use all the media company's properties to market Chrysler products, with a special emphasis on magazines.

Starting with the March 18 issues of *Time* and *People*, Chrysler will launch a "Rediscover America" 16-page advertorial insert that will focus on issues important to Americans. Among the topics to be discussed are education and taxes.

The insert will include a ballot with questions and room for comments. Results from returned ballots will appear in three subsequent inserts. A summary report in the form of a 16-page insert is scheduled for the summer of 1992.



"Rediscover America" is a 16-page advertorial insert sponsored by Chrysler that will apppear in upcoming issues of Time Warner Inc. magazines as part of a two-year, multimillion-dollar advertising deal.

Sales slump continues in Japan

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japanese auto sales fell 4.5 percent last month — the fourth consecutive month of decline — and were off sharply in the luxury-import sector and the key subcompact sector, the Japan Automobile Dealers Association reported last week.

Overall sales fell to 474,160 units, the group reported. But sales of small cars between 660 cc and 2 liters — the largest single segment of the Japanese market — fell 12.1 percent, to 292,459. The small-car segment is usually the first to suffer in a shrinking market and has now declined for five straight months.

Toyota Motor Corp. sales fell 4.8 percent, to 200,399 units, while Nissan Motor Co. reported a 6.9 percent decline, to 116,614.

Honda Motor Co. reported a 13 percent drop, to 33,254.

Mazda Motor Corp. and Mitsubishi Motors Corp. continued to show growth. Mazda sales rose two-tenths of 1 percent, to 37,270, while Mitsubishi reported a 10.4 percent jump, to 35,366 units. Even Isuzu Motors Ltd., which has forecast a loss for this year, showed a 5.3 percent gain in February sales, to 14,714 units.

Sales of minicars (under 660 cc), which are counted separately, continued an upward trend, rising 35.3 percent, to 150,947. Cars over 2 liters also showed remarkable growth, climbing 40.7 percent, to 43,865 units.

Normally, an increase in large-car sales means a boost in the import segment. But import sales have not corresponded to large-car sales for several months. In February, imports declined again. They were down 15.4 percent, to 14,895.

German makes, which dominate the segment, were down 23.2 percent, to 8,944.

Some analysts have speculated that the German makes may be losing some of their snob appeal here. But a spokesman for the Japan Automobile Importers Association attributed the decline to higher interest rates for car loans and double increases in prices of German cars during the last year.

Among the U.S. Big 3, Ford Motor Co. sales slid 51.2 percent, to 246 units, and Chrysler Corp. sales were off 4.6 percent, to 104.

General Motors reported a 26.5 percent gain, to 726 units.

GM shuffles, adds vice presidents

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Lewis B. Campbell has been appointed general manager of GMC Truck Division, where he will gain the sales and marketing experience he hasn't had in his 23 years at General Motors.

Campbell, 44, a GM vice president since 1988, succeeds John D. Rock, who was named vice president in charge of GM's customer sales and service staff.

Campbell

Rock, 55, replaces C.N. "Bud" Moore, 62, who will retire April 1.

Campbell has been manager of the Buick-Oldsmobile-Cadillac Group's Flint Automotive Division since 1988.

His experience at GM is entirely on the manufacturing side — at the former Inland Division, the GM manufacturing staff, the former Rochester Products Division, the Chevrolet-Pontiac-Canada Group, and finally B-O-C.

At B-O-C, Campbell has been responsible for four assembly plants.

Campbell's appointment means that GMC Truck will have a general manager who also is a corporate vice president for the first time since Rock took over direction of GMC's marketing and sales in 1982. At that time, it was called GMC Truck Operations. GMC Truck Division was created in 1987.

Replacing Campbell at Flint Automotive Division is Donald E. Hackworth, a GM vice president and manager of B-O-C's Lansing Automotive Division. Hackworth, 54, has been responsible for six assembly plants.

Hackworth is replaced at Lansing by Thomas J. Davis, 44, who also was elected a corporate vice president. Davis has been chief engineer at Lansing Automotive Division since 1986.

Moore joined GM in 1951 at Chevrolet and has held his current position since 1986. Rock started at GM in 1960 at Buick. Hackworth joined the company in 1962 at Delco Moraine Division, now Delco Moraine NDH.

Correction

A March 4 story should have said that Fred Miller, who had been elected secretary-treasurer of the American International Automobile Dealers Association, has resigned to become chairman of the Americans for Free International Trade Political Action Committee. The AIADA position has been filled by Lee S. Maas, a BMW-Audi-Porsche-Ferrari dealer in Dallas.

Service index shows increase of 2.4% in Jan.

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business in new-car dealerships across the country opened 1991 on the positive side, according to the Automotive News Service Index.

With all five indicators used in the Service Index posting gains for the first time since October, shop business in January amounted to 102.4 percent of the volume for the same month a year ago. Business recorded in December was 95.4 percent of the year-ago volume.

Many dealers who reported a rise in business in January attributed the gain to aggressive advertising and pricing, while those on the downside blamed it on the recession.

The leading indicator in January was repair orders written, which rose 5.8 percent over the year-ago volume. It was followed by shop parts sales (customer-paid and warranty), up 5.7 percent.

Total labor sales, both customer-paid and warranty, showed an increase of 5.6 percent, while gross profit on all labor, parts and accessories — the most important indicator to dealers — was up 2.7 percent. Sales of all parts and accessories climbed 0.8 percent over the year-ago figure.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross-section of the nation's new-car dealers.

SERVICE INDEX
102.4*

	Jan. '91 vs Jan. '90
Gross Profit on All Labor and P&A Sales	+ 2.7%
Repair Orders Written	+ 5.8%
Total Labor Sales (Customer & Warranty)	+ 5.6%
Shop Parts Sales (Customer & Warranty)	+ 5.7%
Sales of All P&A	+ 0.8%

* Survey by Automotive News shows that dealers service and parts business in January 1991 was 102.4 percent of business in January 1990

War spotlights contributions of vehicle repair profession

HERNDON, Va. — The Persian Gulf war might prove to be a benefit to the vehicle repair profession, according to the National Institute for Automotive Service Excellence.

The institute, a non-profit organization which tests and certifies service technicians, also said it will grant one-year extensions to certified technicians serving in the war who are unable to take recertification tests.

"Media coverage of Operation Desert Storm shows virtually all Americans the key role the repair technician plays," said Ronald Weiner, institute president.

"Every day, mobile launchers, Jeeps, personnel carriers, planes, tanks and other high-tech vehicles and equipment are serviced and repaired in the desert. The success of the war depended greatly on these unsung heroes."

The institute, Weiner said, expects this heightened awareness of the repair technician to translate into an improved image among consumers and to inspire more young people to consider careers in the vehicle-service industry.

According to Weiner, recent ads in metropolitan newspapers show automotive technicians among the most sought after and repair technician positions as one of the few jobs seemingly "impervious to recession."

The extension of the certification date is available to reservists, members of the National Guard called to active duty and career active duty military who have been sent to assignments related to the war, Weiner said.

To obtain certification extensions, Weiner said a brief note explaining the circumstances and, if possible, a copy of the orders which directed the technician to active duty should be sent to the institute's headquarters at 13505 Dulles Technology Drive, Herndon, Va. 22071.

Inventory control of parts aided by analytical system

By Angela King
CRAIN NEWS SERVICE

The national accounts department of General Motors' AC-Delco operation currently is testing an inventory control system designed to help aftermarket auto manufacturers and retailers avoid stocking unwanted parts with a computer system that lets them analyze vehicle populations in regional and local markets.

The system, called TELE-PLAN, was developed by Detroit-based R.L. Polk & Co. and uses data from Polk's National Vehicle Population Profile, a comprehensive census data base that Polk compiles annually, said Robert Borthwick, vice president and manager of R.L. Polk Automotive Replacement Market Services.

Borthwick said the firm is trying to help aftermarket businesses reduce excess inventory and improve their ability to fill customer orders.

James Rygiel, an account executive with the auto-replacement market unit, said automotive manufacturers are constantly changing their makes and models, thus requiring more types of parts.

"The proliferation problem is the main one we're addressing with the system," Borthwick said.

The age mix of cars on the road is constantly changing, which contributes to the proliferation problem, said Marty Butler, president of the Distributors Institute, a Park Ridge, Ill.-based information group of auto parts distribution firms.

While cars that had been on the road three to five years used to be the most likely target for replacement parts, that range has risen to cars that are five to seven years old, Butler said. At the same time, cars are lasting longer at the extreme end of the range — 13 years and more. Aftermarket suppliers must have parts for all of these vehicles on hand, Butler said.

He estimated that while aftermarket companies' inventory investment is increasing 4 to 7 percent a year, sales are increasing only 3 to 4 percent annually.

"Today, it's impossible to stock every part for every car, so it makes sense to stock parts for the vehicle mix in your particular trade area," Rygiel said.

Borthwick would not disclose specific sales figures, but said TELE-PLAN sales have grown 25 to 30 percent a year since the system was introduced in 1987.

The system, which is broken down by national, state, county and zip code levels, helps aftermarket businesses plan future inventory, Borthwick said.

With the system, Polk can merge product catalogs with more than 26,000 vehicle descriptions to help customers analyze the selling potential of parts for new and older vehicles, he explained.

In the past, aftermarket businesses have looked at historical sales to determine their inventory, Borthwick said, but that doesn't help with potential sales.

Libbey-Owens-Ford, a Toledo, Ohio-based manufacturer of automotive glass, has been using TELE-PLAN since 1988, according to Mark Van Saun, senior market-research analyst in the company's automotive-glass replacement division. He said that, for Libbey-Owens-Ford, which "tends to offer as broad a range of car parts as anyone out there, it is extremely valuable in that it tells you down to the county level what numbers of which types of vehicles are registered in that particular area."

TELE-PLAN is offered through the auto replacement market services unit of the statistical services division. Polk provides on-site training, user support and database updates throughout the year.

Eighteen companies use TELE-PLAN, including Sears, Roebuck & Co. Bob Naehring, the buyer for Sears' 800-plus automotive stores, said he buys about $260 million worth of auto parts annually.

The system enables Sears suppliers "to get the right part in the right store," Naehring said.

Bar code estimating system bows

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Computer firm Reynolds and Reynolds Co. has introduced a computerized bar code system for estimating vehicle collision damage at car dealerships.

The system was developed under a joint marketing venture with Mitchell International, publisher of collision estimating manuals for the automotive industry.

It uses a hand-held wand that reads bar codes in specially designed Mitchell manuals that list repair times, prices and parts needed to fix vehicles.

Mitchell International, based in San Diego, publishes collision estimating manuals and provides electronic data, service and repair manuals for body shops and insurance companies.

Company officials say the computerized collision estimating system cuts in half the time needed by a service representative to estimate repairs. And it is more accurate than writing by hand the parts and labor requirements on collision damage repair forms.

Another advantage is that the computerized system automatically includes brackets, grommets and screws that are often overlooked by estimators when collision damage forms are prepared.

Dealers have to pay for those parts even though their customers aren't always charged for them.

"Most estimators never fold in the small miscellaneous parts," said Ray Yankowski, vice president of electronic collision database for Mitchell. "The average loss per repair amounts to $100 because estimators fail to write them down."

Though Mitchell has a similar computerized system for body shops, the joint marketing venture with Reynolds and Reynolds will enable the companies to market the system to dealers.

Reynolds will sell the body shop system to dealers with Reynolds' in-house computer systems and will market a stand-alone body shop system for all other dealers.

"Our customers have been very interested in having an integrated body shop system to increase the speed and accuracy of their body shop operations while assisting in their negotiations with the insurance carrier," said Jack Proud, senior vice president for Reynolds' Computer Systems Division.

He said that only 11 percent of the body shops in dealerships are computerized, though 60 percent of the dealerships have body shops.

Yankowski said the new bar code system is the only one of its kind and the only one using Mitchell manuals, which are used in 70 percent of all the body shops in the country.

It enables the estimator to complete a repair order on the computer, order parts, merge with the dealership's accounts receivables department and even retrieve a customer history.

Chevrolet rust ads grate on competitors

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

MILFORD, Mich. — Chevrolet is airing television comparison commercials claiming the rustproofing process on its 1991 Lumina is superior to those used on competitive 1991 vehicles.

The ads demonstrate that Lumina outperformed Ford Taurus, Honda Accord and Mercedes 300E in a corrosion durability test because of the benefits of two-sided galvanized steel.

A standard industry scribe tool was used to penetrate the paint, primer and zinc coatings on the rear fender panels of the Lumina and competitive cars to simulate scratches and nicks that would be encountered during the life of a vehicle, according to Lee Piepho, manager of General Motors' Corrosion Technology Center.

The vehicles used in the ads were subjected to an accelerated aging process, the equivalent of two years in the real world, when sprayed with salt and placed in corrosion chambers during a 30-day period.

Larry Singer, senior development engineer at the center, said that unlike the one-side galvanized metal on the competitive cars, Lumina's two-sided galvanized steel took the punishment in stride.

Galvanized steel has a protective zinc coating that many automakers use on the inside surface of the sheet metal to prevent corrosion on the inside of the body panel, the type of perforation covered by new-car warranties, Singer said.

But this one-side galvanized steel can't prevent rust from forming on the outside of the vehicle after something penetrates or damages the painted surface. In time, the damaged outside area — not covered by most warranties — is subject to widespread corrosion, Singer said.

Lumina and other Chevrolet and GM vehicles redesigned and introduced since 1985 are made with two-sided steel panels except on the roof, where, GM says, it's not needed. The two-sided panels will be added to other vehicles when body styles are redesigned, Piepho said.

GM owner's manuals advise customers that application of aftermarket rustproofing treatments are neither necessary nor required and may, in fact, create an environment which reduces the corrosion resistance already built into the vehicle by plugging moisture evaporation holes placed in the bodies, according to Singer.

While American Honda Motor Co. Inc. declined to comment about the commercials, spokesmen for Ford Motor Co. and Mercedes-Benz of North America Inc. indicated the companies were not impressed with the corrosion tests.

"What the commercials say about Lumina and Taurus is true, but if the whole story had been told, vehicles like Ford Escort, Lincoln Town Car, Mercury Tracer and Ford Ranger would be identified as having two-side galvanized steel," Jim Trainor, spokesman for Ford Parts and Service Division said. "Just about all Ford Motor Co. cars will have two-side galvanized steel by 1992."

While refusing to comment directly about the Chevrolet ad, Jess Miller, Mercedes-Benz staff engineer, said the "vast number of older Mercedes-Benz vehicles still on the road is ample evidence of the car's ability and durability to withstand corrosion."

Chevrolet and Ford offer six-year/100,000-mile corrosion warranties, while coverage for Mercedes-Benz is four-year/50,000-mile and Honda is five-year/unlimited mileage.

CENSUS

FROM PAGE 1

the combined domestic-import count has risen three times and declined five times.

All figures in this article and in the accompanying tables refer to the net change in dealership total.

Despite the disappearance of 433 establishments, the dealership population fared a lot better than it did during the recession of the early 1980s.

In 1980, the first year of that slide, 1,558 outlets went out of business — the heaviest loss since 1956. It was followed by declines of 630 in 1981 and 974 in 1982.

The current recession isn't expected to be that tough on auto dealers. First and foremost, it doesn't appear that it will last as long as the previous downturn. And, almost equally important, dealers are not crushed by the floorplan burden that forced many out of business in the early 1980s.

The floorplan rate peaked at 22 percent in those days. The current floorplan rate is about 10 percent. At 22 percent, a dealer was paying $275 a month to keep a $15,000 car in inventory. The 10 percent rate costs a dealer $125 a month on a $15,000 car, but dealers aren't stocking as many cars as they did a decade ago. Inventory reduction was one of retailers' prime cost-cutting measurers of the 1980s.

Floorplan costs aside, 1990 was a tough year for auto dealers. New-car sales dropped 4.86 percent; the economy was less than robust; and the situation in the Persian Gulf postponed prospect visits to showrooms. Dealer profits were low or nonexistent, and many retailers decided it was time to get out.

Last year's dip in the nation's dealership total was the 26th in the last 30 years. The count rose in 1964, in 1984 (by just three outlets) in 1985 and in 1986.

During those 30 years, the number of new-car stores declined 29.92 percent. At the beginning of 1961, the dealership population was 34,803. The current tally is 24,390, a drop of 10,413.

The number of import-only dealerships more than doubled during those three decades; domestic locations declined 41.56 percent, dropping from 32,482 to 18,984.

Last year's downturn among the Big 3 consisted of losses of 202 dealerships for GM, 123 for Chrysler and 93 for Ford. The aggregate of 418 was reduced to 398 by a change in the number of intercorporate duals.

An intercorporate dual is a dealership that handles — in the same showroom — the cars of two or all of the Big 3. Most of them combine Chrysler's Eagle with GM or Ford lines. Eagle is the former American Motors dealer organization that was taken over by Chrysler in its 1987 acquisition of AMC. AMC was heavily dualed with the Big 3.

For each of the Big 3, 1990's decline was the steepest since 1982.

Saturn kept GM from slipping below 9,000 car dealerships. GM has 8,990 stores that handle Chevrolet, Pontiac, Oldsmobile, Buick and Cadillac either alone or in various combinations. Saturn added 58 to that total. All Saturn dealers have other franchises — 43 have GM lines — but the Saturn stores are stand-alone locations.

In addition to its 9,048 car dealerships, GM has another 435 that handle GMC trucks but do not have a GM car. GM's overall car-truck dealer count is 9,483.

Ford and Chrysler also have some truck-only points. Ford has 104 that handle only Ford heavy-duty trucks; Chrysler has three Dodge truck-only locations and 19 Jeep exclusives. In this article and the accompanying tables, all the truck-only spots are omitted from corporate dealership totals and divisional franchise totals.

On the import side, the 5,406 dealerships consist of 4,276 exclusives and 1,130 that carry two or more import lines but no domestic makes. A year ago, the 5,441 import-only stores comprised 4,356 exclusives and 1,085 duals.

Imported cars are sold in an estimated 22,983 dealerships in the United States. In addition to the 5,406 import-only spots, 16,639 Big 3 outlets have a captive import — a line that is handled only by the domestic company or division that imports it. Domestic duals with independent imports (with no captive involved) make up the balance of the 22,983.

At the beginning of 1991, the Big 3 and the independent imports had 50,505 franchises in force, down 227 from a year earlier. Among the Big 3, Eagle, Cadillac and Geo were the only gainers. Losses ranged from 11 for Lincoln to 100 for Chevrolet.

The largest import increases were Hyundai, up 100; Mitsubishi, up 85; and Alfa Romeo, up 61. The biggest declines were Volkswagen, down 50, and Sterling, off 45.

Most captive imports are not included in the franchise count because they are part of the parent franchise. Exceptions are Chevrolet's Geo and Chrysler's TC by Maserati, which are separate franchises and are listed separately.

30 YEARS OF DEALERSHIP TOTALS

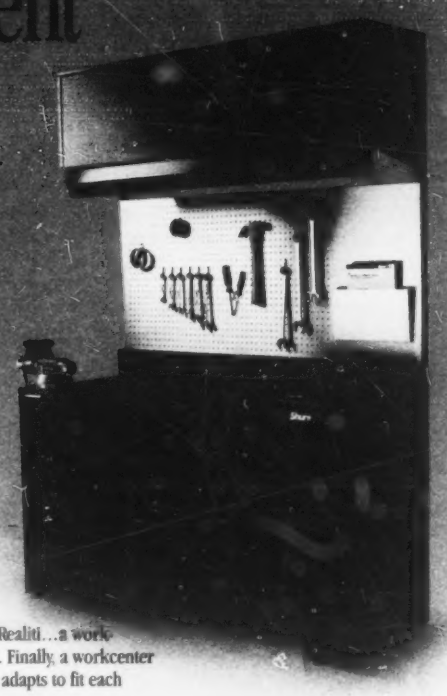
Shure

Make a state-of-the-art investment a Shure Realiti.™



In your business, you're cautious about your capital expenditures and wisely so. You also know that high productivity of your service personnel **makes money**; and that improved productivity can result from good work systems.

Shure proudly introduces The Realiti...a workcenter that is truly state-of-the-art. Finally, a workcenter has been engineered that actually adapts to fit each technician's needs.

The Shure Realiti resulted from our vision of creating a superior workcenter for the professional technician. The Realiti **can actually improve your profitability** by stimulating efficiency, and pride in the work environment. The Realiti translates into performance and productivity.

The workbench is available with a variety of accessory options to suit your operations. It is available with several work surface options including **Shure's exclusive Nat-Flex® Top**.

Call our toll-free number, **1-800-227-4873 Ext. 21,** and we will rush complete details. With the Shure Realiti workcenter, you can expect more than quality and tradition. You can expect a return on your investment.

OBITUARIES

Peter R. Kaputa Jr.

TITUSVILLE, Pa. — Peter R. Kaputa Jr., 75, who owned Kaputa Motor Sales of Tionesta (Chevrolet-Oldsmobile) in Tionesta, Pa., died Feb. 6. He had retired in 1982.

Harvey A. Arnegard

MESA, Ariz. — Harvey A. Arnegard, a Williston, N.D., Buick dealer, died Feb. 20. He was 87.

Elmer George Borchers

CAVE CREEK, Ariz. — Elmer George Borchers, a retired Mesa, Ariz., Honda dealer, died on Feb. 13. Borchers was 71.

Malcolm E. Dorey

FORT MYERS, Fla. — Malcolm E. Dorey, founder of Dorey Jeep Auto Sales in Belchertown, Mass., died Feb. 17. He was 78.

John Arthur Coghlan

PHOENIX — John Arthur Coghlan, 56, owner of Saab Valley Imports in Phoenix, died Feb. 22.

Sydney D. Goldberg

BOSTON — Sydney D. Goldberg, former president of Neptune Motors (Dodge) in Boston, died Feb. 25. He was 81.

Mitsubishi, Mazda deliver flexible-fuel cars

Japanese carmakers are submitting flexible-fuel vehicles to the California Energy Commission and the California Air Resources Board for emissions testing.

The latest vehicles being tested are a Mitsubishi Galant and Mazda 323. Both cars are capable of running on a mixture of up to 85 percent methanol and 15 percent gasoline — as well as any mixture of up to 100 percent gasoline.

Both cars feature more sophisticated engine-control electronics with a methanol concentration sensor. With the sensor and high-powered software, ignition and fuel timing are adjusted to the specific methanol blend.

WHITE DOMINATES CAR COLORS

Americans made white their color of choice in 1990, followed in order by red, black, light blue and silver.

"White captured an average of 21.6 percent of each vehicle category. This unprecedented popularity demonstrates consumers' preference for bright, clean-looking cars," said Robert S. Daily, color marketing manager for Du Pont Automotive Products' Finishes Division.

For the first time in nearly two decades, turquoise/aqua is recapturing consumer interest within an overall trend toward lighter, brighter colors, according to Daily, who expects the color will continue to grow in popularity for smaller, sportier models.

He said technologies affecting vehicle finish color include:

- Graphite pigments that accentuate the contour and sleekness of dark blue and green cars by making the finish look vibrant when viewed straight on, but grayish at an angle
- Micronized titanium dioxide pigments that give light colors bluish highlights, called the "opalescent effect"
- New clearcoat finishes for greater glamor, gloss and durability.

AIR BAG RESTS AS POLE TAKES BLOW

Howard Williams' 11-day-old 1991 Cadillac Fleetwood slammed head-on into a steel traffic signal pole at 45 mph. Bruised but not seriously hurt, Williams realized the air bag didn't fire.

The world's first documented case of an air bag failure?

Not necessarily. It seems the crushed Cadillac's only value is its illustration of when an air bag isn't supposed to work.

Williams said his cruise control was set at 55 mph when he entered an intersection in Evansville, Ind., on Jan. 4 and the Cadillac was struck in the right side by another vehicle. The Fleetwood veered away and struck a 6-inch-diameter steel pole, shearing it off.

"If you had seen the car, you would have thought the air bag should have gone off," said Tommy Kemp, a Henderson, Ky., used-car dealer who helped spark a probe by Cadillac. Williams obtained the car through Kemp.

The car was towed to a dealership in Henderson, where a technician concluded that one of the three sensors that trigger the air bag was crushed in the collision, while the other two hadn't reacted to the crash, Kemp said.

The National Highway Traffic Safety Administration was so interested, it had investigators from the Transportation Research Center at Indiana University-Bloomington visit the crushed Cadillac and walk the accident scene within a day of finding out about the crash.

Ron Drahos, a scientist at the Transportation Research Center, said investigators measured the the dents in both of the cars involved in the initial collision and then ran a computer simulation to estimate the relative velocity of the Cadillac when it struck the pole. The computer determined that the damage sustained by the Cadillac was equivalent to the car hitting an immovable barrier at 14.3 mph, which is slightly above the threshhold in which air bags are supposed to work.

But Drahos said the big qualifier was the pole, which broke away and absorbed much of the deceleration force that would have triggered the air bag sensors.

He said that the car which collided with Williams' Cadillac was a 1990 Dodge Dynasty — also equipped with an air bag. The Dynasty's air bag didn't go off, either.

"Our best guess is the (relative) velocity of the Cadillac was below the threshhold (needed to fire the air bag)," Drahos said.

General Motors, Cadillac and Cleveland-based TRW Inc., which supplies the air bag module for the Fleetwood, declined to comment specifically on the accident.

But Jamie Obermeyer, an air bag engineer at GM, said an air bag is designed to inflate in a front-end accident comparable to running into a brick wall at roughly 14 mph. In that case, two of the three sensors must engage in order to close an electrical circuit, sending a charge from the car's battery to the air bag inflater inside the steering column.

Obermeyer said people frequently assume that an air bag should inflate if a car traveling at more than 14 mph is in an accident. But he said it is the force of the accident, not the car's speed, that determines whether the sensors react.

"I don't know of any cases where the air bag has failed to perform as designed," Obermeyer said. "That doesn't mean there haven't been customers who thought the bag should have deployed. But in all of those cases I know of, the customers weren't injured in any way that the bag could have helped them."

A TRW engineer, who asked not to be named, said the fact that Williams was unhurt and the driver of the Dynasty received a very minor injury was evidence that the accident wasn't forceful to require firing the bag.

"You don't want these things to go off when you don't really need them," the engineer said. "Why would you want to spend $1,000 to replace an air bag if you didn't need it to avoid injury?"

A PEAK INTO YEAR 2000

An upcoming peek into the future may indicate how the automotive business will be running at the end of this decade.

How the U.S. automotive industry will look in the year 2000 and what car companies and their suppliers must do to prepare for the transition are the subjects of a major study and joint venture between Ernst & Young, an international professional services firm, and the University of Michigan's Office for the Study of Automotive Transportation.

Dubbed the "Car Company of the Future Project," the study will include a survey of more than 1,000 executives and senior managers at the Big 3 and their top, middle, and lower tier suppliers, as well as U.S. executives of transplants.

The study will include focus group sessions and one-on-one interviews with top executives, as well as use of secondary research.

Ernst & Young and Office for the Study of Automotive Transportation developed a model for the study and began data collection in January. The program will examine the challenges facing automotive manufacturers as they adapt to changes in industry structure, manufacturing, labor force, and market trends. It will also seek to identify the strategic alternatives for companies as they grapple with these issues and prepare for the future.

"This study should help car companies identify options for achieving their vision of future competitive success. We intend to identify and develop practical approaches to begin the transition today to the successful automotive companies of the future," said Lee Sage, Ernst & Young partner and national director of automotive industry services.

Major results are expected to include:

- Insights into the future organizational structures and characteristics of U.S. car assemblers, suppliers, and transplants.
- Identification of programs and plans within the industry aimed at preparing for the future industry environment.
- New information on creative approaches, techniques and innovations which could be used by car companies as they evolve into a new global competitive standard.

"Most manufacturers and suppliers have a pretty clear idea of where they would like to be in the next 20 years, but it is often difficult to identify the most effective means of getting there in view of their current situation and constraints. This study will help bridge the gap," said David E. Cole, director of the University of Michigan's Office for the Study of Automotive Transportation.

CHARLES KRASNER

Subaru of America is aggressively pursuing the U.S. fleet market. It now has about 8,000 vehicles in fleets, mostly in daily rentals, with the Legacy sedan its most popular.

Start of Something Big?

A trend may be in the making as importers push into the fleet market

By: Charles M. Thomas

Volumes may be small, but the movement of import vehicles into the nation's fleet market is starting to accelerate at an attention-getting pace.

Corporate fleet administrators expect to buy 2.7 percent of their 1991-model vehicles from import companies. That's up from 1 percent in the 1990 model year, according to a survey conducted by the National Association of Fleet Administrators, a 2,000-member group headquartered in Iselin, N.J.

"This increase shows the beginning of a trend in fleet sales," says Gordon B. West, first vice president of the association and corporate fleet manager for Pfizer Inc. of New York.

For years, the fleet market was virtually ignored by Japanese manufacturers because they never had enough volume. That was particularly true in the early 1980s, when Japanese makers were retailing all the vehicles they were allowed to in the United States under a voluntary restraint agreement. That changed when Japanese transplants began U.S. production.

Now, Japanese imports are gaining in the fleet market partly because their companies have the manufacturing capacity in the United States to be competitive with the Big 3.

"Only a few years ago, foreign vehicles weren't even considered for fleets because the manufacturers couldn't provide the product, service and options that fleet managers needed," says West.

But today, foreign-car manufacturers slowly are gaining a foothold in the North American fleet market because they have more vehicles available, they have improved the timeliness of delivery and they are better able to provide the options required by fleet managers.

"We will see many more foreign nameplates in American fleets in coming years," West predicts.

Nissan manufactures the import vehicles of choice for corporate fleet managers, accounting for 0.9 percent of import fleet sales. Its most popular fleet vehicle is the Maxima. Other nameplates include Hyundai, Mazda, Isuzu, Mitsubishi, Subaru, Toyota and Volkswagen.

Even though imports are gaining a foothold in corporate fleet sales, the Big 3 still sell the vast majority of vehicles to corporate and government fleets. But more fleet companies, like Pittsburgh-based LMV Leasing Inc., are adding import vehicles to their sales literature. Four years ago, nearly all vehicle recommendation lists failed to include import vehicles.

Aaron Ashcraft, fleet and lease manager for Nissan North American Inc., says: "There is no question we are seeing the barriers come down."

The residual values of Nissan's vehicles are part of the reason for its success in the market, according to Ashcraft. Last year, Nissan had roughly 20,000 vehicles in commercial fleets and 15,000 in daily rental fleets. "We're controlling the number of vehicles going into the daily rental fleets," he says. "This helps us maintain high residual values on our vehicles."

Ashcraft agrees that fleet managers are beginning to view the automobile industry as more international because of the joint ventures among auto companies. Ford and Nissan have such a venture to produce a minivan.

Nissan, like other importers, maintains a fleet pool to speed up delivery to customers.

Frank Arnot, national fleet manager for Toyota Motor Sales USA Inc., says Toyota has aggressive plans for the fleet market.

"With commercial fleets, you have to go out and convince the fleet management companies that you can deliver the car ordered on time and the way they want it," he says.

"Toyota's advantage compared to other import companies is that we've already developed a lot of systems and dealer networks necessary for success in this part of the business," says Arnot. "We've also shortened the lead time necessary to get cars to fleet clients faster."

He says for some companies, the "buy-American" sentiment is slowly turning into "buy-built-in-America," which he interprets as

Captivating Count

When tallying dealers, captive imports and dualing lead to surprising totals

By: John K. Teahen Jr.

Fact or fiction?

There are more places to buy an imported car in the United States than there are places to buy a domestic car.

If you chose "fact," you've made a good start toward understanding the intricacies of foreign-car distribution in this country.

The annual *Automotive News* census found that 22,983 stores were selling imported cars on Jan. 1, 1991, compared to 18,984 handling Big 3 lines. That's an edge of 3,999 establishments for the imports.

The figures are correct, but somehow the whole proposition doesn't seem quite right. The Big 3 sell twice as many cars as all the foreign nameplates combined. How can the imports have 3,999 more sales locations than the Big 3?

The answer is found in an involved system of dualing and — most important — in the role of the captive imports in inflating the import outlet total. A captive is a foreign-built car that is sold only by the domestic make that imports it.

As 1991 began, an estimated 16,639 Big 3 dealerships were handling a captive import. That was 88 percent of the 18,984 domestic outlets in operation.

Another 5,406 points were "pure" import dealerships — 4,276 that carry one make of imported cars and nothing else and 1,130 that stock a variety of foreign lines, but no Big 3 nameplates. The balance of the 22,983 spots at which imports are sold are duals with the Big 3 stores that do not have a captive import.

As of Jan. 1, the *Automotive News* census counted 24,390 new-car dealerships in the United States — 18,984 Big 3 and 5,406 import-only. So it is correct to say that 94 percent of the nation's dealerships handle an import. But it is not correct to say that the 94 percent are primarily imported-car dealerships.

That is because the captives play relatively minor roles in the operations of the bulk of the outlets that handle them. The domestic makes are the big sellers at those stores.

Geo was a major factor in Chevrolet Division regaining the new-car sales crown from Ford Division last year, but Geos from Japan accounted for only 9.44 percent of Chevrolet sales. Ford also has a captive, but Festiva contributed only 3.98 percent of its sales.

At Chrysler Corp., the Dodge/Plymouth Colt and Vista, Dodge Stealth, Eagle Summit and Chrysler TC by Maserati made up 7.64 percent of new-car sales, although Japanese-built Summits were a much more important part of the Eagle mix with 21 percent.

Elsewhere, Tracer, Capri and some leftover Merkurs chalked up 11.56 percent of Mercury sales, and LeMans had 6.14 percent of Pontiac deliveries.

Every Chrysler Corp. dealership and every Ford Motor Co. dealership handles a captive import. So do all Pontiac outlets and 87 percent of the Chevrolet stores. The only Big 3 dealerships without a captive are the 607 Chevrolet spots that do not have Geo and the Buick, Oldsmobile and Cadillac points that are either one-liners or are dualed among themselves.

The heaviest hitters on the import dealership team are those 5,406 that are devoted completely to selling and servicing foreign-nameplate cars. Note the term "foreign nameplate." A lot of those cars are made by transplant factories in the United States, but they carry the badges of their parent companies and are sold here by holders of imported-car franchises.

Those outlets consist of 4,276 exclusives and 1,130 duals. The exclusives are primarily Japanese — 3,530 of the 4,276 — and the three best sellers head that group. Honda has 788 one-liners; Toyota lists 711; and Nissan counts 541.

Mitsubishi reports that all 500 of its outlets are stand-alone stores, and Lexus also has a 100 percent exclusive ranking for its 121 locations. Acura and Infiniti have only one non-exclusive outlet.

Of the non-Japanese entries, Sweden's Volvo has the most exclusives with 134. South Korea's Hyundai lists 116, and BMW tops the German makes with 106. Porsche, Sterling and Aston Martin report no single-line dealerships.

Duals that team independent imports with U.S. makes are another important part of the imported-car sales and distribution system in the United States, although those combinations do not show up as a separate entry in the overall total of new-car dealerships. That is because those stores are already counted in the Big 3 totals.

Most of them, of course, have a captive import as well as a U.S. car and an independent import in the showroom.

Those U.S. duals with independent imports add an outlet, and often a vital outlet, for the import make involved, and the extra line is likely to be essential to the success of the domestic partner.

A glance at the numbers in the accompanying tables indicates that those stores play a significant role in the retail organizations of many of the major imports.

Toyota, Mazda and Nissan have 350 to 393 duals with the Big 3. That is 29 percent of Toyota's dealer total, 35 percent of Nissan's and 42 percent of Mazda's.

Honda relies less heavily on domestic duals with 126 (13 percent), and Mitsubishi, Lexus, Acura and Infiniti shun the domestics completely. They have no such duals.

At the beginning of this year, import franchises totaled 11,336, compared to 39,169 for the Big 3. The import figure includes the franchises issued by the 31 independent makes sold in the United States.

The captives handled by Chrysler Corp., Ford Motor Co. and Pontiac are not listed separately because they are part of the parent franchise. Geo is a separate franchise; it is included with General Motors' domestic franchises because Geos are made in the United States as well as imported from Japan. □

John K. Teahen Jr. is senior editor of Automotive News. He also wrote this issue's front-page dealer census article.

Import sales dip in 1990

Imported new-car sales in the United States in 1990 totaled 2,452,999 units — the lowest in six years, when sales in 1984 totaled 2,441,713.

The 1990 calendar year total fell 9.09 percent from 1989's.

Japanese makers represented a 70.1 percent share of the import market, while showing a decline in sales of 10.0 percent.

Korean makes, which include Hyundai, Ford captive-import Festiva, and General Motors captive Pontiac LeMans, captured a 9.3 percent share of total import sales. Sales of Korean makes fell 22.9 percent in 1990 from 1989.

European makers accounted for a 20.5 percent share of the 1990 import market. After seeing sales slide since 1987, the European market saw light at the end of the tunnel last year with a 2.7 percent increase over 1989.

European makers, which are mostly manufacturers of luxury vehicles, saw a dash for the finish line in December, as consumers indulged before new luxury tax laws became effective on Jan. 1.

Big 3 captive imports captured 13.5 percent of total import sales — a decline of 2.7 percent and their second consecutive drop in calendar year sales.

Subcompacts, the largest segment among U.S. import sales, accounted for 42.4 percent of the import market, with intermediate models totaling 23.4 percent, luxury vehicles capturing 18.7 percent, compacts totaling 10.6 and specialty models accounting for 4.9 percent.

New models introduced in the 1990 calendar year include: Acura NSX, Alfa Romeo 164, BMW 850i, Dodge Stealth/Mitsubishi 3000GT, Hyundai Scoupe, Isuzu Stylus, Infiniti G20, Mercedes-Benz 350SD and 350 SDL Turbo, Mercury Capri and the Volvo 940 series.

Where There's Smoke

Some importers' advertising campaigns catch fire — but others never spark

By: Arlena Sawyers

With more than 600 car models in U.S. showrooms representing companies from around the world, import advertising and marketing are proliferating — with mixed results.

To set themselves apart in the intense competition, Asian and European marketing efforts have contained everything from entire ad campaigns that don't show the vehicle to product demonstrations that turned out to be embarassingly too good to be true.

But along with the strategic misses, there have been hits as well.

Volkswagen United States scored a small victory with its *fahrvergnugen* ad campaign launched in February 1990.

Literally, the tongue-twisting German word means "pleasurable driving experience."

The whole idea was to create customer interest and increase floor traffic while instituting the company's lower pricing and no-consumer-rebate strategies. Instead of rebates, VW offered value-added marketing such as a money-back guarantee on the Passat sedan.

The campaign caught fire. VW finished the 1990 calendar year with 129,705 car sales, up from 128,503 in 1989, in an overall down market.

Last year didn't turn out as well for Volvo Cars of North America, second to VW as the largest seller of European cars in the United States. The Swedish importer's sales plunged 12.4 percent by the end of the 1990 calendar year.

Volvo is still trying to live down the flap that evolved as a result of its "monster truck" TV commercial hoax.

An embarassed Volvo pulled the ads, apologized and ran corrective ads. Scali, McCabe, Sloves, Volvo's agency for 23 years, resigned the account after news of the ad broke.

Messner Vetore Berger Carey Schmetterer, a New York-based advertising agency, won the $40 million account in last month.

Though Volvo's integrity was questioned, much of the manufacturer's safety image remains intact. In fact, the Volvo 240 was named *Prevention* magazine's 1991 "Safe Car of the Year" in the import car category.

Volvo is running a print ad showing one of its cars crushed at the front and rear. The line underneath the car reads: "We design every Volvo to look like this." The copy goes on to note that despite the frontal and rear crashes, "the car's middle section, however, didn't collapse."

Indeed, safety has become a major selling point for all manufacturers in the 1990s. Japanese makers, which once lagged behind their European and domestic counterparts in incorporating safety features into their vehicles, have joined the fray.

Toyota Motor Sales U.S.A. created a TV spot demonstrating the deployment of an air bag and another highlighting Previa's all-wheel-drive and anti-lock brakes as a woman driver maneuvers her minivan around debris on a rain-soaked road.

In a 12-page print ad, Acura, Honda of America's luxury car division, boasts about its Legend LS model's driver and passenger side airbags, high-strength steel door beams, rigid unit-body structure, padded instrument panel and "smooth, rounded knobs, buttons and switches."

But a safety image is of less concern to smaller import manufacturers. Many, struggling for name and product recognition, have launched campaigns they hope will position them in the minds of car shoppers.

North America, which on past occasions acknowledged that it is suffering from an awareness problem, embarked on a new campaign last month. "Impressions," a campaign for the Alfa Romeo 164, features six different print spreads created by American illustrators. Each spread contains an artist's visual impressions of the product as well as quotes from journalists which speak for the character of the car.

"By presenting impressions of the Alfa Romeo executed in the style of each illustrator, the advertising suggests the separation of Alfa Romeo from conventional automobiles," says Jack Frakes, executive vice president and executive creative director for Ross Roy Advertising in Southfield, Mich.

"It's not a car for everybody," he acknowledged. "We're appealing to people who put a lot of importance on individuality, heritage and some kind of soul in what they want in an automobile."

Mitsubishi Motor Sales of America, in its quest to join the first-string team of Japanese imports — Toyota, Honda, Nissan Motor Corp. in U.S.A. and Mazda Motors of America — is counting on its new luxury car, the 1992 Diamante, to create awareness for the entire Mitsubishi product line.

Daihatsu America, the newest Japanese manufacturer to enter the U.S. market, currently is running a print ad campaign it hopes will heighten its public awareness and dispel a consumer assumption that it is a Korean company.

One ad features a tiny building bearing the Daihatsu name being dwarfed by large skyscrapers with the names Gigantic Motors and Titan Auto.

The copy reads: "When you're not a well-known automotive company yet, you can't expect your humongous neighbors to throw you a block party."

Last fall, the Middle East crisis was brought to U.S. soil in the form of economic uncertainty, falling car sales and a threat of rising fuel prices. That caused some manufacturers — Chrysler Corp. and General Motors in particular — to incorporate fuel economy as a major selling point in their 1991 marketing strategies.

But many import manufacturers resisted. Luxury car manufacturers say they have no evidence that gasoline prices, recently hovering around the $1 mark, are causing customers to switch from one car segment to another.

Japanese carmakers, still perceived by consumers as building economical, fuel-efficient cars, say they can better utilize their advertising dollars by touting other product attributes.

Nissan, in one current ad, makes mention of "range per tank of gasoline," but doesn't include specific information about miles per gallon in its 1991 advertising because "there are so many other aspects of the car we want to promote," says a Nissan spokesman. "Fuel efficiency is something we've always been known for."

Daniel Petit, Peugeot Motors of America national marketing manager, says: "Our dealers don't think (fuel economy information) is a big selling point."

A multi-paragraphed, two-page spread for Hyundai Motor America's new 1991 Scoupe, heralds its "multi-port electronically fuel-injected overhead cam engine," contoured sport bucket seats and three-year/36,000 bumper-to-bumper limited warranty, but omits any mention of gas mileage.

"People already know that; we haven't had to add it," says a Hyundai spokeswoman.

Mercedes-Benz of North America Inc., which believes fuel economy is less important to its buyers than the level of safety and high technology it builds into cars, does not include fuel milage in its ads.

Something import manufacturers have copied from the domestics is dealer association advertising. Under the programs, dealers are assessed either a flat fee or a percentage of a vehicle's invoice. The manufacturer also contributes to the fund.

Created so dealers and manufactures share the cost and control of local advertising, associations are an important part of the import advertising and marketing mix.

Among the latest to create a dealer group is Lexus, the luxury division of Toyota. It launched its dealer advertising association a year ago. Under the program, the dealer ad group builds the creative elements of the campaign and the four regional groups plan the media schedules for their markets.

On the other hand, a few import manufacturers have gotten out of the dealer ad associations business.

Nearly a year ago, Suzuki of America Corp. scrapped its associations because it lacked dealer support.

BMW of North America does not have dealer groups, although its dealers contribute to regional advertising.

Nissan disbanded its dealer groups more than two years ago, replacing them with regional advertising offices solely funded by Nissan. Each region will control its own budget and create its own advertising.

Last October, as an experiment, Nissan directed an estimated $100 million to the company's 11 regions.

The program will be reviewed at the end of this year. □

Your Ad Here.

Pity the poor ad trying to reach the captains of industry and finance.

It takes a place last on line on some of the world's most overcrowded "To-do" lists. It often languishes unread on coffee tables. And gets no closer to its target than the reception area.

Unless the ad appears in Barron's, where it overcomes these obstacles by the simple act of bypassing them.

Barron's is read in that office away from the office called home. By chief officers of corporations who are all but impossible to reach in their weekday workplaces.

In fact, Barron's reaches a greater concentration of professionals/managers holding those titles than Business Week, Forbes, Fortune or any of the major newsweeklies. And we also reach them when they're best able to concentrate. On weekends.

Which means Barron's reaches your audience at the best time and the best place. And for the least money. With a lower cost per thousand than any of the competition.

So if you've ever stopped and wondered whether your advertising is actually reaching its intended target, that alone is reason to consider Barron's.

After all, how many other publications can promise an editorial environment as hospitable as the one pictured above?

HOW THE SMART MONEY GETS THAT WAY.
